## ILLUSTRATION SUPPLEMENT.

This number contains as an illustrated supplement a portrait of the Virginia Deer, drawn by Mr. Ernest E. Thompson. This is the last in a series of four. Those printed previously were: The Moose, Oct. 14, 1893; Woodland Caribou, Nov. 11; The Coon, Dec. 2. The dates of the former series, of which copies can be supplied, were as follows: Sept. 8, 1893, The Panther. Oct. 6, The Ocelot. Nov. 3, The Canada Lynx. Dec. 1, The Bay Lynx. Jan. 5, 1893, Gray Wolf. Feb. 2, White Goat. March 3, Coyote. April 6, Antelope. May 4, Fox.

## THE VIRGINIA DEER.

Of the wild animals of North America none is better known than the common deer. Its range is as wide as the continent, and in one or other of its slightly varying forms it is found from Canada far down into Mexico.

Unlike many of our best known species of wide distribution, the deer has but few common names. In most sections it is known simply as deer—the only deer. But in the books and in cases where there is a possibility that it may be confused with other species—as in the West—it is known as Virginia deer or white-tailed deer. By the old trappers and explorers, and by the voyageurs of the Northwest, it was called the jumping deer or long-tailed deer, to distinguish it from the mule deer and the elk, which last was in the Northwest called red deer.

Every boy knows more about this deer, its habits and the modes of hunting it than we have space to print here, but perhaps every one does not know of the persistency with which the species clings to oldtime haunts, no matter how much they may have been encroached upon by settlements.

In 1877 Judge Caton, in his work on the "Antelope and Deer of America," said: "It may be found to-day in every State and Territory of the United States. It inhabits alike the dense woodlands and open prairies, the high mountains and the lowest valleys, the arid plains and the marshy swamps." Almost the same thing is true of this deer to-day. While there may be no deer in Delaware and only an occasional stray or some introduced deer in Rhode Island and Connecticut, there is probably no other political division of the United States, except the District of Columbia, where this species does not exist in the wild state; and this notwithstanding the fact that the game is persistently hunted by men and dogs wherever it is found.

How it may have been in the beginning we do not know, but it is certain that to-day the Virginia deer is the wariest and most cunning of any of his tribe, and while hundreds of these animals are annually killed by novices and picknickers with the aid of boats, dogs and jacks, there is no task of greater difficulty than to take up the track of a whitetail deer and kill it by fair stalking.

There is a wide range of individual variation in this species. The deer of the Adirondacks are much larger than those of North Carolina, while those of Florida are smaller still, and a still smaller form is found in Mexico. On the other hand, those of the northern plains and the northern Rocky Mountains are often very large, but not invariably so. We have killed in the Rocky Mountains on the same day two bucks, one of which a man could readily lift on to his horse's back alone, while the other

taxed the strength of two strong men to put in the same position.

Albino specimens of this deer are by no means uncommon. Individuals are quite often killed that are more or less spotted with white, and occasionally those that are pure white. As is well known, the young are always spotted, and we once killed a giant buck which had running the length of his back on either side of his spine a row of dappled spots about as large as a nickle five cent piece. The effect was given by a circle of black-tipped hairs about the spots. We have heard of one or two similar individuals, killed, we believe, in Montana.

A number of specific names have been given to forms of this deer, the characters being usually based on size or the length of the tail. There is no doubt that there are well-marked geographical races. To this species apparently belongs the so-called gazelle or fan-tail deer of which the hunter in the northern Rocky Mountains hears now and then. This supposed variety is said to be characterized by small size, small but massive antlers, with many points, and a long and wide tail. It is not known to naturalists, though firmly believed in by many intelligent hunters.

The supplement which we print to-day gives an admirably faithful picture of the male and female Virginia deer.

## THE BILTMORE FOREST.

It seems a singular thing that, although for a dozen years past so much theoretical interest has been taken in forestry in this country, no practical application of the principles of forestry has ever been made by Government or individual until within a very short time. Notwithstanding all that has been written on this subject, notwithstanding the establishment of a Bureau of Forestry in Washington and of similar bureaus by a number of the State governments, absolutely nothing has ever yet been done in this direction.

It was left for a private citizen to take up this subject and to apply these principles to a nearly ruined forest. This gentleman is Mr. George W. Vanderbilt, who recently purchased an extensive estate near Asheville, N. C. Its area is over eleven square miles, or, in acres, 7,282, and of this somewhat more than one-half is woodland, and constitutes Biltmore Forest. Up to the time of its purchase by Mr. Vanderbilt, this forest was owned by a number of different individuals, who treated it in the usual American farmer's way. They cut all the timber that was salable either for saw logs, fence rails or cord wood, and turned the cattle into the forest to graze, often burning the wood over for the sake of the pasturage. The evil results of such a course are sufficiently obvious, and the woodland—never in its best days very good—grew steadily worse.

The timber which grows in it is composed for the most part of deciduous trees, the white oak outnumbering other species, and there being much inferior oak, short-leaved pine, chestnut, hickory and other trees. There are about seventy species of trees growing naturally on the estate.

This forest was put in charge of Mr. Gifford Pinchot, as consulting forester, and in a little pamphlet printed in Chicago, in 1893, he gives an account of the treatment of the forest and the result of the first year's work. This first year's work began to be planned in February, 1892, but the first actual cuttings took place in May, 1892. An account was kept with the forest and the statement of receipts and expenses for the year, running from May 1, 1892, to April 30, 1893, shows a loss of less than \$400 out of total expenditure of \$9,900. This, while perhaps the least interesting part of the story from the forester's point of view, is given in order to show how nearly the work of reclaiming this forest was made to pay for itself, even in the first year when expenses would naturally be largest and receipts light.

Two plans for the improvement of the forest have been undertaken at Biltmore, one of them the regular high forest system, by which greater returns are to be had in the future, but nothing immediately comes back, and the other a selection forest system which entails more labor and less satisfactory ultimate results but quicker returns. For the details of the way in which Mr. Pinchot has treated this forest the reader must be referred to the pamphlet which accompanied Mr. Vanderbilt's forestry exhibit.

In addition to the forestry work done at Biltmore, a very interesting collection of trees and shrubs has been

made under the direction of Mr. Frederick Law Olmstead with the intention of planting them when the proper time shall have come, along the line of a road five miles in length which will run through some of the most beautiful portions of the estate. There are already at the nurseries at Biltmore more kinds of trees and shrubs than there are in the botanical gardens at Kew, and the number is constantly being increased. A record of the treatment given to each species is being kept and a forest botanical library to aid in study is being formed. It is also intended at a later day to make considerable plantings of forest trees, in order that something may be learned of the silvicultural character of American and foreign trees, a subject about which little or nothing is as yet known.

On the whole the forestry work at Biltmore is being carried out in the most intelligent and broad-minded manner, and it is a matter for congratulation that Mr. Vanderbilt has become so interested in this subject as to be willing to make experiments and to carry on work which promise to yield results of the utmost value to the general public.

## SNAP SHOTS.

If that rabbit relief scheme, originating in the large heart and ever fertile brain of our Chicago staff correspondent in chief, shall be carried into effect, the grateful beneficiaries may fittingly give voice to their feelings in the well known rabbit rhymes of Jonathan Swift. The Dean had been invited to dine with two elderly maiden ladies, who having been told that their guest was fond of rabbits, served up the dish to him in generous variety of forms. At the conclusion of the repast Swift gave thanks:

Rabbits young and rabbits old,  
Rabbits hot and rabbits cold,  
Rabbits lean and rabbits tough,  
I thank the Lord I've had enough.

If the shooters to whom Mr. Hough's suggestions are specifically directed shall show the dexterity and deadliness displayed by Emperor William in a hare hunt in Prussian Saxony the other day, we may look for immense train loads of rabbit meat rolling into Chicago. In this hunt, the dispatches report, the Emperor had a detachment of troops to serve as beaters, and six men followed him handing him loaded rifles as required. In two hours he scored 385 hares, an execution at the rate of three per minute.

A million of them. That is the estimate the Secretary of the State Board of Agriculture makes of the Mongolian pheasants in Oregon, sprung from the eleven birds imported by Judge Denny. A trifle exuberant perhaps, but it is enough to know that the birds are past computation in the Northwest, and that they are making their way wherever put out, West or East. The latest report of success with them comes from a point on Long Island, only a few miles from this city. The Wyandanch Club, which is the new named Brooklyn Gun Club, with preserves at Smithtown, procured in the spring of 1893 five pairs of pheasants and a number of eggs. The original eggs and those laid by the birds were hatched under bantams, and the stock at the end of the season numbered 150. Last month, in December of the same year, forty-two cocks were turned out on the club's 800 acres, on a Tuesday, and on the following Saturday the members had their first pheasant shoot, twenty birds being brought to bag. The magnificent plumage of the game and its size and flight aroused much enthusiasm among the participants; and the result of the club's enterprise demonstrates anew the ease and certainty with which a district may be stocked with the imported species. In our game columns to-day, Dr. W. O. Blaisdell, of Illinois, tells an instructive story of his experience with the chuckor partridge, and suggests that from India may be brought this and other species which would thrive in American covers.

The first installment of Secretary Doyle's official report of the Coast Fishery Conference is given to-day. It will be followed by the remainder in our issues of January 13 and 20. This full presentation of the proceedings will be welcomed; and the papers and remarks are likely to constitute a mass of testimony for reference in all future discussions of the subject.

The paper of Mr. Madison Grant, printed to-day, should be read in connection with his interesting illustrated article on the Moose, in the January *Century Magazine*.

## The Sportsman Tourist.

### A NEW YEAR'S GREETING.

The Forests are leafless, the Streams in their flow  
Are fettered and bound in a mantle of snow,  
The Storm King comes down with a howl from his lair,  
While the cold wintry landscape is naked and bare.

We heed not the tempest, as cozy and snug,  
We sit by the fire, our feet on the rug,  
Our pipe 'tween our lips, and recall like a dream,  
Our many bright hours by Forest and Stream.

For close on our table, in reach of our hand,  
Where its many bright columns are readily scanned,  
Lies a FOREST AND STREAM, which at once can recall,  
The verdure of Springtime, the glories of Fall.

We roam through its pages, no need of a guide,  
By the torrent's swift rush, up the mountain's steep side,  
And join in our hearts with the comrades unknown,  
Who have thus made the pleasures of Nature our own.

Then to one and to all, who our moments thus cheer,  
Here's "the best of good luck" and a "Happy New Year!"  
And a health, in a bumper of rosiest gleam,  
To all readers and lovers of FOREST AND STREAM.

VON W.

### PADDLING DOWN THE PATUCA.

#### A Story of Travel in Honduras.

MY Paya guide halted beneath a giant mahogany, on the edge of a high bank. He slipped back from his wrinkled brow the band of tuno bark that held up the bag of clothing and blankets which he bore on his broad brown back. His fellows followed his example, and let their burdens drop to the ground, and I gladly allowed the butt of my rifle to rest on the damp leaves that carpeted the forest; for, while in the morning that gun was as a suckling pig for weight, long before we stopped it had become as a prize porker. Its 7½ lbs. bore heavily on arms and shoulders it had made sore the very first day. When I carried the gun in my hands it seemed likely to pull my arms from their fastenings. It made the miles tremendously long and the hills steep. It made the steady, even pace of those Indians villainously, cruelly fast. And the worst of all was that I could not swear at them, not even suffer a word of complaint to escape me, in face of the fact that those brown rascals had serenely jogged on, with heavy packs on their backs, hour after hour over wooded hill and through somber hollow, with manifest determination to wear out the white man.

Behind us lay full fifty miles of blind trail through a tropical forest. Before I took that little walk I shared with millions the belief, inspired by story tellers like Captain Mayne Reid, by book-taught geographers and by untaught writers, that all forests in tropical America are dense and steaming jungles of bush and vine, of bamboo and thorny palmetto, through which a path must be laboriously hewn whenever any one would go anywhere, reeking breeding grounds of deadly fevers wherein venomous serpents and poisonous tarantulas, centipedes and scorpions vie with the ferocious jaguar and the panther to give zest to life.

But I found those great tracts of virgin forest as cool and clean, as open and easy to traverse, as healthful and as free from snakes and as safe as are the woods of our Northern States. It is true that giant grasses and tangled vines, thickets of bramble and bush wall the banks of the waterways wherever sunshine warmly falls to force to profuse growth. And so they do in our Northern States. But where tall trees shade the ground in the tropics, the undergrowth is small and scattered, and the forest is as open as are our own maple and our beech woods.

Nor is it true of the hill country alone. I have ridden many a mile through cool and fragrant avenues, roofed by lofty arches of bamboo and of palms in countless thousands rooted in alluvium of unsurpassable fertility, where there was no sign of a road. In those vast wilds every passing gust sends whirling down from trees that are forever green showers of the leaves that are forever dying, to join those that carpet all the ground.

From where my Payas stopped that afternoon we looked down on the mountain stream, the valley of which we had followed ever since we sat to eat our 11 o'clock breakfast on the clean rocks, polished by centuries of its rushing floods. Here it widened into a pool wherein the bathing might have been more delightful had not the name of the stream—El Lagarto—been so suggestive. At our right was a broad and placid river. It was the Blanco, the end of our tramp through the woods.

"Well, here we are; what next?" I asked.

"Make watta now and sleep. To-morrow find pipanti perhaps," replied the elder of the Indians.

"Very good. But let one of the men hunt the canoe to-day. Two can get the dinner. See, it is only 3 o'clock."

A few minutes later I was swimming in the Lagarto and keeping watch for the ripples that would mark the approach of an alligator and give me notice to quit. A fire had been started and my hammock was slung between two trees. Three grass stalks about five feet long, tied together near their tops, made a pyramidal frame over the fire. A foot or more above the coals three other stalks were lashed horizontally from one to another of the first three, and made a triangular frame on which rested other stalks, and on these lay roasting pieces of the big black monkey that I had shot that afternoon. The Indians squatted around the fire. Each held close to the coals a bit of the monkey, spitted on the end of a sharpened stick. The drawn arms and shriveled hands were most repulsive to me, for I had then never eaten of monkey flesh; but the odor was most appetizing, for I was hungry, and my supply of frijollitas and tortillas had soured, and I had nothing else to eat but crackers. Crackers do not of themselves make a completely satisfactory diet.

The guide came toward me. He held a stick on which was spitted a thigh of the monkey. The other Indians grinned cheerfully as they watched. Their faces said plainly, "Here is one of a race that thinks itself mighty smart, and you will see that he doesn't know a good thing when he sees it."

"Shall it be said that these illiterate, these savage children can do a thing that a Yankee can not do? Perish the thought!" And I took the stick and ate the meat. I

have never since failed to pot a monkey when in woods where that delicacy is to be found. I am not prepared to say now that tender babies are entirely safe when left alone with me about dinner time.

A loud yell came from somewhere up the river while we were eating. "Boy find canoe," remarked the guide.

In a minute or two the boys ran the bow of the canoe on the sands at the foot of the bank and said a few words to the guide.

"Boy says that the owner of the pipanti wants two pesos," said the old man, turning to me.

"Two pesos. Well, you agreed to take me and my trastos from Dulce Nombre to Pau for twenty-five cents a day for each man. If you pay the two dollars out for the use of a canoe, that is your mal negocio, not mine," I declared positively.

This was manifestly not to the taste of the old man. He spoke earnestly to his fellows, in the Paya dialect, then said to me:

"We will make a balsa. To make a balsa takes much time, much."

"How many hours?"

"Hours! It is days, two days, no less."

The old fellow had me there. Making a balsa would cost more than the hiring of the canoe, and it would take a week to float to the Patuca, if the raft didn't go to pieces on some rapid—as it doubtless would. Therefore I remarked with an air of indifference:

"Very good. We will sleep now; we can talk better after sleeping."

In the morning one of the men cut from a bamboo a piece some seven feet long and six inches in diameter. With his machete he split one side of this, then flattened it on the sands. It made a sort of board, glossy on one side, downy and white on the other, and full of cracks like those in an old-fashioned split lathing. This was laid on cross pieces fitted across the canoe, and made a floor four or five inches above the bottom of the boat.

On that floor our baggage was piled and made a rest for my back as I sat with my legs stretched out before me. It made a more or less comfortable lounge on which I could lie and dream the sunny hours away when we were not making portages or shooting rapids, which was five hours of every six.

The steersman sat perched on the broad stern that sloped slightly upward over the water. Forward of the pile of baggage the three Payas who were to do most of the paddling sat on little round sticks, cut to a length that let them wedge in between the sides of the pipanti, six or eight inches from the bottom—a torturing seat for one not used to it, and not too luxurious for those whose tough hides are accustomed to rough treatment.

I had cut a joint from a hollow tree, the wood of which is as light as cork, and to it fastened one end of a piece of fish line 20 ft. or more in length. The other end I tied to my rifle. Then we were all ready to begin our canoeing. Nothing of interest happened in a long time—fully an hour. I was sound asleep when the guide poked my foot with his paddle. I opened my eyes.

"Tilba, señor, vaca de montaña," he whispered.

"Mountain cow, eh? Where?" I asked softly, rolling over and picking up my gun.

He uttered no word and made no motion, but his glittering eyes showed the way. It was enough. I slowly twisted around in my seat. There he stood, half his slate-colored body hidden by the tall grass that walled the river in. His long, flexible nose twisted about as if he was searching with it for our "wind." I raised my rifle as he turned away and the bullet struck behind his shoulder. He stopped, staggered, then broke through the thick wall of grass behind him.

The Payas had sat as still as stones, but with the crack of the Marlin they yelled like fiends. They dug their paddles into the water as though they would tear the river from its bed. They slapped the surface of the stream with the broad blades of their paddles and yelled again. The heavy canoe grated on the sand, but it scarcely touched before we were on the shore. The Indians ran through the grass, which was higher than their heads. I tried to do so, too, but it was easier to walk. In a moment came another shout that told me that the tapir was saved.

He lay on the ground gasping his life away. The .45 had passed entirely through him and torn a big hole in the side that was furthest from me when I fired the fatal shot. Yet he had run fully twenty rods before falling.

Now that I had murdered the poor beast there came the question: what use is it to me now that I have killed it? But the Payas knew very well what use it would be to them and promptly cut off a hindquarter. I bethought me then that people in these woods might think the flesh of the tapir good to eat and I had the men cut out the loin. The old guide cut off the head and stowed it in the canoe, and we started on our way.

We soon reached a rapid where the river was widely spread among smooth boulders of black granite. A narrow channel, a mere gutter, had been made by rolling aside the boulders, and across this the men laid stiff poles, eight or ten feet apart, the ends resting on the stones on each side. The canoe was unloaded and dragged down the rapid, the poles serving to keep its bottom from touching the rocks. There was in no part of the gutter water enough to help the pipanti down the rapids.

Toward evening a loud, discordant yell echoed through the forest. Again the howl sounded, and was at once answered by another like the first.

"Rain," ejaculated the guide. "The monkey cries because it will rain to-night."

We landed on the first sandbar we came to, and the men hurried to make a big and thickly thatched roof—a watta. Two of them cut down and stripped of their leaves an armful of stalks of grass. They were ten or twelve feet in length and two inches in diameter at the butt. Another man had cut two poles having crotches at the end. These he stuck deep into the sand, and in the crotches laid another pole. From this the grass stalks sloped to the ground. Then all hands brought armfuls of the big leaves of the platanio and with them thickly covered the sloping frame, and our shelter was complete.

While the others gathered firewood, made a fire and set themselves to broiling tapir steaks, the guide was digging a hole in the sand near the camp-fire. When it was a foot deep he paved it with small stones. Then he coolly raked from under the roasting pieces of meat the best of the glowing coals, and on them built a big fire in the pit.

While it was burning he split the head of the tapir, scraped and washed it well, clapped the halves together

again and wrapped them in layer after layer of the platanio leaves. The whole he tied together with a thin liana pulled from the nearest tree.

When they had eaten their supper they raked most of the coals out from the pit, put a layer of green leaves on the few embers that remained, and placed the tapir's head on them. The coals, with those from the pit, were pushed back into the trench and covered by big leaves. Then a fire was started over all. The men squatted about the light, and were still murmuring in soft, liquid tones when I fell asleep on my blankets spread out on my hammock lying on the sands.

At 6 o'clock I awoke after a sleep of 11 hours. Sunshine brightened the tops of the trees; three of the Payas were lazily stretching and yawning around the ashes of the camp-fire, while the fourth knelt and with his hands scraped away the sand and ashes from the pit where the tapir's head lay buried. The layer of leaves, toughened by the steaming, lifted what sand he could not scrape off. The bundle was lifted out and opened, and our breakfast lay steaming before us on the leaves. The proboscis was cut off and offered to me, as being the daintiest bit of the dish. I gave half of it back to the guide and ate the rest. It was tender, gelatinous and altogether good to eat. The Indians offered some of the brains, but I did not want anything better than I had.

Scarcely an hour passed before we started down the river before a soft whistle from one of the men instantly stopped every paddle. Every eye intently searched the river banks, but mine could see nothing to call for such attention, even when the guide whispered, "Tigre! Tigre negro!"

I could see no sign of the presence of the jaguar that had come to the river for a drink after a night out. I earnestly wished to see him. In fact the one animal of all others I wanted to see just then was a black tiger, biggest of the cat kind in all the Americas. 'Twas a good time for such a meeting. My rifle was ready in hand, we were a safe distance from shore, my crew could paddle away faster than any jaguar could swim, and no cat often takes to the water to follow foe or prey.

But peer as I might, I could see no sign of the tiger, not even when the men pointed at the very spot where he stood. What I did see was dim flecks of sunshine amid the dark leaves of low bushes on the sloping bank; and when those yellow spots turned to bound up the bank it was too late to do more than send a bullet humming after them.

My men were disgusted. What earthly good can one expect of a man who can't see a tiger when it stares him in the face? What good can reasonably be expected of a white man, anyway? He can scarcely see, and often he can scarcely hear; he can't find his way without a guide, he can't carry a score or two pounds of trastos for himself; he can't smell a waree even when it is near enough to hit with a stone from the hand; it may even be doubted whether he really knows enough to come in out of the wet—when the canoe turns over?

I confess that I was ashamed of myself. But I declare that the spotted skin of that deceitful brute was so like flecks of sunshine falling on the leaves that I could not distinguish between them before it was too late, and he had left me with my disgruntled crew.

They were polite enough to say little about the matter. What they did say was in Paya tongue, but I felt that it was severe criticism. I was relieved when we came near to a place that demanded all their attention. The river ran head on against a wall of rock, the base of a high hill, and disappeared. That it went somewhere was shown by the fact that it did not come back, and by the dull roar that filled the air.

We landed at the head of the pass. The crew scrambled to the top of the rocks to survey the stream. I followed to see what we were coming to. I saw a river whirling and boiling around a sharp bend, then pitching down a steep slope where the rocks hardly cared to keep themselves hidden. At the lower end of the rapids the stream was choked into a narrow passage, below which was a broad and placid pool shining in the morning sunlight. Pathway beside the stream was impossible.

The Payas steadfastly gazed at the rapids for a full minute. I saw their eyes took in every yard of the way, and dwelt a little on the head of the narrow passage at the foot of the rapids. We returned to the pipanti and they took their places while I took off shirts and shoes, tied long pieces of stout fishline to them and to my bag of clothing, which also held my ammunition, and to the other end of each cord fastened a bit of dry wood. The Indians nodded approval, which may have meant that they thought it was well for me to be ready to go in swimming suddenly.

The guide uttered a single word. The men bent forward, their paddles poised in air. The bow of the pipanti swung out a little, and we closely skirted the polished granite. As we neared the point I held my breath in fear lest the current might seize the canoe and slam it against that solid wall upon which the waters had vainly beaten through the ages.

The bow shot beyond the end of the rock. The men before me dug their paddles deep into the stream and strove to swing the canoe around the point. Behind me the guide labored to force the stern out into the channel. They succeeded, and we were flying down through the Ojo de las Aguas—the Eye of the Waters.

Boiling eddies caught at the pipanti, surging waves slapped at it, and cross currents dragged at it, to hurl us on the rocky shore. Green hillocks smoothly rose before us, to drop into boiling pits beyond the hidden rocks. Black heads of granite reached above the surface here and there.

Possibly a quarter of a minute passed while we were rushing down that rapid, toward the narrow gate, but to me it seemed to be an hour. I had time to think that it would have been far better if a whole day could have been used in making the passage. Such haste tended to give a sense of discomfort. There was a lack of repose, a positive hurry that was not well bred, if it was not actually vulgar.

The whole volume of the torrent poured through the narrow crack in that rocky dam. Near its head the surface of the river became almost smooth. In the contrast with the rush through the tumult above one might have imagined that the boat was standing still, but such fancy would have been changed by one glance at the wall of rocks slipping swiftly past.

Every Indian before me sat like lifeless bronze, his pad-

die held ready above the water. Each knew perfectly his duty, and each was ready to do it as perfectly when the moment for action should come. I sat as still as they and wondered which one of us would crawl out beyond that tumbling wall of white, under which the smooth green steep of water plunged.

Our canoe seemed to me to pause an instant at the crest—then down we went. I had no more than time to note that the surface of the water beside me was marked by fine parallel lines, and that the wind made no ripples on its face. There was a smother of foam, a canoe full of water and empty of men.

It was early for breakfast; nevertheless I thought that it would be better to go ashore at once. Three Indians started to help me as soon as we came to the surface, but they turned to the canoe when they saw me pull for the shore. Fully an hour passed in drying our things, before we were paddling down the river again. The men jested and laughed, and I felt better satisfied than when I looked down on that rapid from its head.

Many a time I stepped overboard and waded among the boulders beside the many rapids in that wild stream, while the men took the pipanti to the deeper water below. As the craft was of solid mahogany, 30ft. long and nearly 3ft. wide, the task took a deal of what an Orkney sailor I know calls "Scotch navigation—main strength and stupidity."

When traveling on wild rivers was new to me, I used to step gingerly from the canoe to the stones at the head of the portage, particularly early in the day, and then pick my way along from stone to stone until my foot would slip, a bucketful of water, more or less, would shoot up my legs and fill my shoes. After that I did not wait to make a landing, but at once stepped into the river and waded ashore when portage was to be made that day. Later I gave up all thought of keeping my feet dry, and found that my comfort was much enhanced. This is easier in the tropics, where the water in rivers is seldom below 74° F. in temperature, than it might be where the water is colder, and rheumatism tugs at one's legs.

Toward nightfall one day one of my Payas lifted his voice in a loud yell and another fired a gun. Then I knew that we were approaching a house, for these signals were but the ringing of the bell, the sending of a card to announce callers, that the ladies may have time to dress for company. Our paddles stopped and we idly drifted while the men put on their cotton blouses, which were their dress suits. From down the river came the melodious notes of a conch shell and we soon after rounded a bend.

Before us spread the broad Rio Uampu. On the high bank at the junction stood half a dozen leaf-thatched huts without a sign of walls. Before them the ground was clean swept, packed smooth and hard by the passing of bare feet of generations. Beyond the houses was a patch of banana, of yucca and of pineapples, which was a blessed sight for one who had become tired of a diet of tapir and turkey, of lizard and of monkey, and longed for fruit and vegetables.

An old woman stood knee-deep in the river at the embarcadero, her back toward us. She pretended to be too old, and wise and dignified, or too well bred, to notice us. With the yucalita, which is a little bowl made of the half of a calabash shell, she showered water over two or three blankets spread on the sands to bleach in the brilliant sunshine. They had been beaten out from the bark of the tuno, that tree from which a gum is drawn to adulterate the India rubber which these people gather thereabout and sell to innocent traders for stuff that they call rum, for slazy cottons from English looms and for sheet iron shotguns from Birmingham. Each of the old woman's blankets was adorned by a curious device drawn with red coloring of some kind that resisted the bleaching action of water and of sunshine.

As I climbed the bank a group of considerably more than half-naked boys and girls scurried away to various hiding-places, from which to peer curiously at the white stranger. Younger tots, as naked as eels, but lighter than eels in complexion, peeped from behind their mothers' skirts—not skirts exactly, perhaps, but guayapins that reached from hips to knees; such garments as their ancestors made of the tuno bark, or of cloth woven in primitive looms from such cotton as even now grows on perennial trees in those regions. The guayapin is now often nothing more than a couple of yards of denims wrapped about the hips.

A white-headed patriarch shook open the best of the hammocks that was swung from post to post across the house. I accepted the mute invitation and seated myself. His buxom young wife, plump, smiling and shining with a fresh rubbing of oil, dipped from a great olla of red pottery a calabash full of yucca. With widespread fingers she raked from the bowl the woody fibers of the root and squeezed them out, then handed the bowl to me. Surely it could not have been seasickness that I felt as I looked at the milky liquid, but a qualm from some other cause. But rejection of that drink offering would have been a hurt to the hostess, if not a distinct declaration of unfriendliness to the whole household. Down went the drink, and I lived unhurt after. The thin white gruel was slightly acid, cool, refreshing and nutritious.

A bare girl of three or four years—one cannot say summers where all the year is like our Northern June—peeped from behind her mother's guayapin. I untied from about my neck a gorgeous triumph of the weaver's art, a turkey red kerchief of cotton nearly a yard square and tendered it to the baby. She was too shy to offer to take the tempting gift from the stranger and far too timid for any white man to approach nearly. So I handed the present to the mother. She promptly and proudly draped it about her darling. That assured me a welcome in every house in that tribe.

A dainty damsel of ten years or thereabout crossed the room before me three or four times before I noticed her particularly. Men are stupid. But I won her forgiveness of my masculine obtuseness by praising the elegance of her dress, the skill shown in her beadwork, the jetty, glistening beauty of her heavy, wavy hair and shining eyes—so like those of her mother. I fixed the good impression by giving to the girl a lovely round mirror that was nearly 3in. across, framed in a zinc case that had a loop of bright, brass wire to hang it by. It was a gift that she will proudly treasure, perhaps until she is old enough to marry. Mayhap it will even help to secure for her a wealthy husband, and she'll need such a provider, for she was a dressy, extravagant coquette when I knew her, and she was but a child.

Then she wore a splendid guayapin, and that was an extravagance, a puttin' on of airs, for a miss of her years should have been content with a palupa of calico at most, or even one of soft bark, if she could not go clad in her native modesty alone, as children of five or six commonly do in her home. But no. She must boast a guayapin that would at once declare her high social standing and wealth of her family, and plant bitter envy in the hearts of all the rest of her tribe.

Her guayapin was a broad yard of cotton from a loom in Yankee land. From the middle of it a glowing golden sun shot its rays to the farthest corner of the red field by which it was surrounded. Around each arm, near the shoulder, and about each leg, just below the knee, was wound a long string of beads of various colors. They were so strung that when wrapped around her plump brown limbs the different colors formed simple devices or patterns.

On her brow orange-colored pigment made a crescent and two stars. Similar designs were on the brow of the mother, but she had on her cheeks crosses and waving lines that were not on the cheeks of her daughter. Possibly the mother's extra adornments were insignia pertaining especially to the family of her husband.

Dinner was served. After I had eaten of the ripe plantains fried in the sweet fat of the black monkey, of yucca roots pearly white and mildly acid, black frijolitas or beans that are better than any other beans, pineapple of vast size and exceeding sweetness, and inguana, white, sweet and tender, I was ready for business. The Indians were astonished. Why one should attend to business after eating dinner and before sleeping was more than they could understand. But perhaps that is the custom of those Americans of the North—anything may be expected of such a strange people. They do not seem to have learned that "manafía es otro día," and since to-morrow will be another day there is no need of hurry, which is undignified.

But I called my crew of Payas and to each of the four I counted out one twenty-cent piece for each day we had been on the way. Each counted his coin, the whole neighborhood generously assisting. I asked each in his turn, "Is it enough? Is it as much as I agreed to pay?" "Si, señor; it is all," each replied, while the chief of the Sumo wagged his snowy head in approval, and his wife wagged her tongue in gentle approbation and broadly smiled on all; for she was a good-natured woman and most motherly in spirit.

Then I opened a bag that had wrung sweat out of one of those Payas on many a hillside, back there in the woods. Out of the bag I took a kerchief for each of the men. Broad grins spread over—around, to be more accurate—their shining brown faces as they bashfully took the goods. The spectators commented volubly on my generosity, and looked envious. I took from the bag a prodigious wealth of pretty beads, and to each of the crew presented a string, and told him it was for his wife; whereat the women laughed delightedly, and joked the two who had no wives. But when to those bounteous gifts I added a round mirror and a coarse comb—I knew that they needed fine combs far more—a gasp of amazement went through the spectators, while the crew were overburdened by gratitude, and astounded that they had not before suspected that their passenger was a person of such boundless wealth; a man who could squander riches with so prodigal a hand. And that they were sincerely grateful I had ample evidences many a time afterward.

D. E. VERAS.

"FOREST AND STREAM" AT THE FAIR.

THE reproduction of World's Fair photographs published in FOREST AND STREAM bring vividly to mind the vanished beauties of the wonderful "White City," and some of them, such as the "Indian" and the "Cowboy," many recollections of long past days in the Indian nation never to return. I have not learned what is to be the final disposition of these statues, or of those of the game animals which formed such prominent and attractive features on the grounds, but I hope that they may be placed where I can renew my acquaintance with them some day.

I also rejoice that "Billy" Hofer's model lounge has been secured by the FOREST AND STREAM representative. I liked that lounge. It was roomy and comfortable, and took me back to the regions and labitations where the choicest boudoirs are furnished exclusively—or nearly so—with raw or dressed hides. I hope again to lunch on that lounge when I go to Chicago and trust that no objection will be raised if "the neighbors" send in the luncheon.

Yes, the hunter's cabin was a good thing, and I have just begun to get at the true inwardness of that old rifle business. When I first entered the cabin there was in authority therein only a Columbian guard. I asked for Crockett's rifle and was shown a weapon which leaned against a saddle hanging on the wall. I poised the gun and said promptly; "That's not Davy Crockett's rifle, neither the one which was given him in Philadelphia nor that which he took on his memorable and fated trip to Texas." The guard supposed that it was, however, a relic of Davy, and, indeed, I was afterward told by one who thought he knew that this rifle was Crockett's and had been sent as such by Mr. Roosevelt. It now appears that it probably belonged to Kit Carson, which is likely. I have seen and handled scores of such weapons in Carson's time. The Villalonga rifle was in its time a very elegant weapon and did good service in its owner's hands.

Ah, well. Time flies, yet I seem to hear the notes of the marimba under the trees of Costa Rica, and to see the ladies sitting about over their coffee among the FOREST AND STREAM representatives, with the mountain hat of Billy Hofer conspicuously in the midst. (Those city editors didn't seem to mind that hat any more than they did my thick boots.) And Billy was a treasure. I came upon him one day in the forest when he was in the act of offering assistance to a distressed wood nymph. He told her that the hunter's cabin could supply the means to meet any emergency, and proved it; for she departed radiant and happy, having been offered a choice of elk skin or buckskin "whangs," or of more prosaic threads for the renovation of her damaged robe, and I observed that she accepted the loan of Billy's hunting knife to sever the whang, or thread, at the conclusion of her task.

I am glad to see that some among those of us who fagged at the FOREST AND STREAM exhibit are giving the less fortunate readers of the paper some of their impressions of the Fair. I had thought to try it myself be-

fore this, but illness prevented me, and indeed while at the Exposition I was scarcely in condition to see it to good advantage.

I have been surprised that in no journal save one (and that last spring), have I seen reference made to the very remarkable collection of ancient arms and armor (not to mention many other articles of interest), which was shown in the German village. Had it been practicable I could have passed days in these rooms without being weary of the sight. There are larger collections in Europe, but few if any better selected, and many of the specimens are, I believe, unique.

I passed along the grim array of knights and men-at-arms, gazed on the numberless weapons of other days, of strange and fantastic ornamentation, wondered how men could do good fighting while burdened with such weight of iron; and as the light grew dim I fell into a dreamy mood, and as I departed I seemed to hear "the straining harsh of each crossbow," the "burr" of the wheel-lock petronels and the sound of the great curved trumpets, of which

"The Kites knew well the long stern swell  
That bade the Romans close."

KELPIE.

HUNT OF THE CATAWAMPUS CLUB.

WHAT lover of the woods does not carry in his mind the fixed resolve that at some time in the not very distant future he will take a vacation in the time of the year which best suits him, and, putting aside the worry and cares of business, will live for a time in closer communion with nature? And how many of us see the years pass in ever-quickenning procession, carrying us rapidly toward the time when our capacity for enjoying an outing must necessarily be less, and our pet dream never realized? Unmindful of the words of the poet, "Labor with what zeal we will, something still remains undone," the worker puts off his going till he has nothing else to do, and, as a rule, he never goes. The only way is to fix a date for the vacation and make other circumstances conform to it.

I do not wish it understood that I have fared so very badly for little seasons of relaxation. I had three very enjoyable canoe cruises on the St. John in the summers of '87, '88 and '89 respectively. In July '91 had a four-day cruise in a tight little canoe-yawl, and in November of the same year four of us cruised in canoes over a large portion of the middle St. John, and got in quite a seasoning of duck shooting. But most of all I enjoy an autumn outing in the big woods, and years had passed since I had had that pleasure. Therefore, last fall, when I received an invitation to join a few congenial spirits on their annual camp-hunt, it did not take me a minute to make up my mind that I would go.

How the club comes to be written of under the present name will appear later. It is an offshoot from the Fredericton Gun Club and includes all the rural members of that body.

Moore, genial, broad-shouldered and energetic, was the leading spirit of the party, and he kept it in very good order. Sometimes when he got a little "top-lofty" two of the junior members of the expedition would endeavor to take him down and sit on him for a while, but being of a build that made him an ugly one to "pick up for a scrimmage" it sometimes ended by said juniors getting amalgamated with the dust themselves. The balance of the male members of the party were known respectively as Will, David (the man who pulls the second trigger first) and W. H. Into the outing was introduced what might very properly be called an innovation. Many of us believe that the purity of language and politeness that were markedly characteristic of the crew of H. M. S. Pinafore were, in a great measure, due to the presence of the "sisters, and cousins and aunts" in the party. But it was rather with a view of introducing a new and interesting feature in our camp life than as a precautionary measure against looseness in conversation that two of the party took their wives and one his sister on the hunt. Thus it was that we had three ladies in our party, whom for the sake of brevity we will know individually as Annie, Ella and Bertie, and collectively as "the girls."

In the matter of objectionable habits our crowd came near being a model one. Neither liquor nor tobacco had any place in our outfit. But one of the boys, owing, no doubt, to a temporary aberration of mind, has the habit of periodically expunging from his escutcheon the cherry tree and little hatchet, usually emblazoned there, and substituting therefor a bow of prodigious longitude. At these times his speech varies through all gradations between mild hyperbole and aggravated Munchausenism. In this chronicle I shall deal generously with him. So far as possible I shall conceal his identity. But in the interests of strict accuracy, I regret to say it will sometimes be necessary to speak of him as the Prevaricator.

We had four dogs. Moore had a pair of red spaniels—excellent grouse dogs—while David had another of the same kind that was one of the best retrievers from water I ever saw. Then there was a nice liver and white cocker puppy that we called Scott Act, because his owner, a genial boniface, had been disciplined for violating a law so entitled.

We had a large A shaped wall tent for a general assembly room, a smaller octagon wall tent for the ladies, and a little oiled cotton A tent for a "calamity house," under which we could store supplies of all kinds.

Moore shot a heavy 10-gauge Ithaca hammerless and W. H. a 12-gauge of the same make and kind. David and Will shot English made hammer guns, the one a 10 and the other a 12.

On the eastern side of Passamaquoddy Bay, which borders on the State of Maine, there empties a small river, perhaps seventy-five miles long, known as the Magaguadavic (Má-g-a-dá-ic), but more frequently spoken of in the vernacular of the country as the "Mac-a-davy." It has its source in a chain of lakes. The first pair of the series, Pequagamus or Lily, and Mud lakes, are discharged by Stony Brook, into Second Lake, which in its turn is emptied into the Big Magaguadavic Lake, from which the river flows in a southerly direction. On the eastern side of Mud Lake and separated from it by a little kame, or horseback, from 20ft. to 100yds. wide, is a lake of perhaps twenty acres extent, called by us Catawampus, but so far as we know unnamed, and not even marked on the plans at the Crown Land Office. At the northeast end of this little lake, in a grove of hemlocks, we proposed to make our camp.

Queer specimens of lakes are both Mud and Catawampus. The water is rarely more than 2ft. deep, and over the

greater part of their area not more than 3in. A canoe propelled across either turned with her bow a furrow as clearly defined as if made with a plow. Both lakes are practically bottomless. Moore pushed a 25ft. sapling down its entire length into Mud Lake without meeting the slightest resistance.

On Oct. 8, a beautifully clear, cold morning, we started from Scotch Lake, on the eastern side of the St. John, on our 18-mile drive to Mud Lake. We had a pair of good, stout horses hitched to a lumber wagon, and our impedimenta, with a week's rations for man and beast, in a hay rack. There had been a hard frost the evening before, and the ruts in the road were frozen hard enough to make the driving very rough. We were to pick David up on the road near the western shore of Scotch Lake. While he was awaiting the arrival of the wagon a rare piece of luck came to him. A flock of bluebills went whizzing by in the uncertain light of the gray dawn, and with a lightning right and left he dropped a bunch of them into the lake. Three were retrieved. One fell so far out that he could not make the dog see it, and a native got in a whole forenoon's shooting on a pair of cripples.

Moore drove the team and the rest of us worked any likely patches of cover that lay near the road. We added one grouse to our bag before we reached Bear Island, the point where we were to cross the St. John. The name, Bear Island, has a gamy sound that harmonized well with our experience there. The outfit crossed the river on a large scow propelled by sweeps, and all the while little bunches of mergansers, with their black, white and cinnamon feathers shining in the morning sun, sailed by within easy range. It was useless to shoot at them, as, owing to the rapidity of the current they could not be retrieved.

A few hundred yards up the Bear Island shore we saw three Canada geese. We drove the team within 70yds., and as they arose, a perfect hail of No. 1 followed them. A snowstorm of feathers flecked the surface of the water, and David called to the scowman to gather them as they came down to make him a pillow. The geese flew across the river, when one let go and fell on a bar. A settler picked him up and he doubtless furnished the base of an excellent meal. Our feelings were akin to those of the man who betteth his money on the bob-tailed nag, when the bay with the blazed face and white heel captureth the race; and raketh in the spoils. Alas! that Moore's big 10-gauge was securely corded up in the center of a blanket roll.

The channel, on the western side of the island, was dry save for a few ponds. Scanning these with a glass, we saw in one of them a flock of black ducks. Our party divided, W. H. and I taking the highland side of the channel, while David and Will approached them from Bear Island way. We thus sandwiched them between two lines of guns, and if they did not rise straight in the air some one was reasonably sure of a shot. We ran into a flock of grouse in a strip of woods a little distance from where we left the wagon, and killed a pair. At length W. H. and I found ourselves looking down on the ducks from the top of a 40-foot bank. This was a new point of view for both of us, and looking at the broad backs of the birds, we adjudged them to be only 40yds. away when they really were 60. When they flushed, W. H. gave them one barrel before he took in the situation. Then they swung to the other boys, who received them with a volley. But this was one of the occasions on which we sowed liberally and harvested not. However, Will and David added somewhat to their stock of natural history lore. They saw a mink, like the smooth, polished slyster of civilization, evidently intent on securing a victim. The ducks did not seem to be troubling themselves much about him; but all the same, they took precious good care not to let him get too near. Sometimes he would slide out on a rock and make a spring at the nearest bird, but the latter would generally manage to be two or three feet away when he alighted.

David thought there was less of the fool about these ducks than about some men. Our road now lay at right angles to the course of the St. John, and as the team had to climb a steep hill all of the boys jumped out and walked on ahead. A young fellow with a light express and pair soon overtook us, and we all got on board and rode several miles, till, at last, as we came to good bits of cover, one by one the rest got out and left me alone with the driver, a lad of about sixteen. He proved to be, like most boys of his age, a regular traveling interrogation point, and had I not laid myself out to give him as little information as was consistent with civility, he would have known our names, ages, occupations and how much money we had if persistent cross-questioning could have elicited such facts. He looked slightly askance at me when, in response to his request for David's name, I explained to him that his father died when he was very young and did not leave him any name. His mind seemed not entirely free from doubt, when an inquiry as to the part of the country from which we hailed, brought him the information that it was the part where all the best men and women were reared. When, however, I made a practical application of the homeopathic principle, "Like cures like," and poured the questions in on him thick and fast, dodging a return here and countering there, a hopeless resignation seemed to settle over him, and he answered in a dull, mechanical way that might have indicated a broken spirit. It is strange how inquisitive the average citizen is. The question, "What might your name be?" is nearly as common as the salute, "Good morning," but as a rule I never impart the information it calls for. It is not good policy to repel it with a snub. Good-natured chaff, judiciously applied, will stave it off better than anything else I know of.

The Prevaricator says that a request for his name, prompted simply by idle curiosity, invariably brings the reply that it is Smith. He says that there are enough black sheep in the Smith family to preclude all possibility of your disgracing the name, and yet there are sufficient illustrious persons connected with it to make it no dishonor to its owner, and lastly, and best of all no one will undertake to unravel your pedigree. When it was pointed out that this plan involved a flagrant disregard of fact, he retorted: "Doesn't the Prince of Wales travel under an assumed name sometimes, and do you expect me to have more regard for fact than he? And haven't I as good a right to an *indeg.* anyway? And don't they insert the aliases of a burglar in his indictment, thus recognizing his right to all of them? And has a reputable citizen fewer rights than a criminal?" It is no use to reason with a man who talks that way.

At length the paths of the teamster and myself diverged, and about a half mile further on I overtook Will and David. On our way through the old Magundy road we had up several birds, but only scored on one. Will killed that. We crossed the Poquiox, and its tributary, the Magundy, the last of the St. John waters, when, as it was nearly noon, we deemed it expedient to wait for the wagon. It came along in about ten minutes. In less time than it takes to tell it the kettle was boiling, and three birds were skinned, drawn and in the frying pan. The style of cooking drew out several healthy protests from the girls.

That dinner by the roadside is one of the pleasantest of memories. What spirits we were in! What appetites we had! What a mellowing influence on the soul had the surrounding scenery, bathed in the yellow light of the midday autumnal sun!

Dinner over, every one was in motion in five minutes. David and W. H. whistled up the dogs, and started up the valley of the Magundy. Some skirmish line firing a little later proclaimed trouble for the grouse family, and when they rejoined us, two miles on the road, they had three birds. Will and I saw a snipe alight in a field near by, and started over to gather him in. We marked him by a little bush, and bore to the windward to get him just right as he arose. But he had not been idle in the meantime. He had run 40yds. right across our line of advance, and finally rose behind us, which same was a scurvy trick. We each got in one barrel, and the snipe got in some mighty good work. He flew over to the wagon, and, as if to show his contempt for the whole outfit, took a look at the rest at about 10ft. distance; and then rising high in the air, struck out for Magaguadavic.

The dogs got up a bunch of grouse in a little wood at the foot of Blaney Ridge, but we failed to reduce any to possession.

Near the outlet of Mud Lake is a large, wild meadow. An astute settler of Blaney Ridge purchased the block of land on which it is situated at nominal figures, and worked a rough road through from the settlement by which he could haul out the hay. It thus happened that we had a not very passable, but a tolerably "jackassable," road to within a half mile of our camping ground. At Black Brook, the first of the Magaguadavic waters, there is a poor bridge, and just beyond it a slough. The latter is capable of giving an immense amount of trouble in wet weather, while the former compels the unhitching of horses, and hauling the wagon over by hand. I was obliged to make a journey almost back to the settlement to recover the bean pot and frying pan, which had dropped from the wagon. The girls and W. H. waited for me. In this way it happened that tent pitching was well under way before I arrived at the place that was to be our home for the next week. On our way in Frisk, David's dog, put up a Canada grouse, which W. H. harvested.

We left the team on the lake shore, near the outlet, a half mile from camp, and the details of gathering hemlock for bedding, fuel for the night and making the horses comfortable, occupied till 9 o'clock, when we had supper and turned in. There was then a faint drizzle which did not amount to anything, and in the morning the clouds showed signs of lifting.

During the night, what the novelists term an "eldritch screech," in the woods by the shore of the lake, had attracted the attention of the campers. Some, like myself, were asleep, and but dimly conscious of the sound; while others were wide awake and heard it in all its hair-raising distinctness. Around the breakfast table, speculation was rife as to the manner of animal that was the cause thereof. The Prevaricator took no part in the discussion until, at length, in a moment of thoughtlessness one of the ladies asked his opinion. "Oh! that?" said he, as if his train of thought on some other subject had been suddenly interrupted, "that was a catawampus." When pressed for a description of the beast, he proceeded to evolve from the recesses of his imagination a truly remarkable creature, built on the same general line as a panther, but (like a liar) with more jaw-power. According to this veracious authority, no menagerie had ever been able to keep one of these animals, on account of their propensity for eating up the steel bars of the cage. But the crowning glory of the brute was its tail, which was long and tapered to a point like a buggy whip. On the edge was a cartilage something like that on the elephant's trunk. This the brute could snap with a report like a pistol. When simply amusing itself its favorite pastimes were yelling and grinding its teeth; but always just before springing on its prey, it cracked its tail. Whether this was to paralyze its quarry with fear, or simply to urge itself forward, deponent could not say. You all know how little it takes to make one laugh in the woods. The burst of merriment at this clumsy little recital was quite general. Ordinarily it would have been the subject of joke for the remainder of the day, and that would have ended its life. But we were destined to hear from the catawampus again—extensively and loud.

The forenoon was occupied with getting wood, ferrying dunnage over from the wagon and getting the team into camp. Moore and David rode the horses around the little lake and Will put up a very good apology for a stable. I ferried the hay over in a boat.

After dinner Will and Moore landed W. H. and David at the upper end of the lake and then proceeded to build some blinds for flight shooting in the evening. I struck out through the woods, and spent the afternoon hunting phantom partridges, sneaking up to the little coves to surprise ducks that never materialized, and exploring well-worn deer paths. I picked a few bog cranberries. Once a fine osprey attempted to settle on the top of a dead tree, and a charge of No. 4s from my left barrel laid him out. This looks like wanton murder, but it was not. Will is a taxidermist and I knew he wanted the bird for his collection. At last I came to a little point that extended out into the lake. On the extreme end a huge pine measured its length in the water. I walked out into the top of this and sat down. Something might come along and I would get a shot. A kingfisher let go his policeman's rattle as he went by; a bluejay rustled around among the treetops, tolling his bell semi-occasionally; a whisky-jack flitted from tree to tree as noiselessly as a ghost; but nothing in the line of game came. Some puffs of smoke, followed by quick reports, showed that the boys at the head of the lake were getting in a "grand rally." A bunch of yellowlegs flew by the blind Moore was building. There were two reports in quick succession and the survivors flew by my stand out of range, regard-

less of the confidence game I attempted by the most seductive notes I could command.

I signalled Moore and Will with an owl call to come ashore after me and thought I saw a hand waved in reply. But I did not find out my mistake till too late to get into the evening shooting. They mistook the call for the genuine article. This was flattering. But I saw the flight come in and had almost as many birds as the rest.

The ducks were mostly of the black or dusky species. There was none of the preliminary circling before alighting so characteristic of the wary bird, but as each little bunch came in high over the lake they set their wings and went down with a noise as of the tearing of strong, new cotton. Moore named them "cotton tearers." Now, here is the problem that confronted the shooters; a bird going through the air 100ft. a second and falling 40ft. the same time. It requires a mathematical nicety of calculation to beat a combination like that. When the boys came in they were pleased at having seen so much game though baffled in having secured any to speak of.

The grand rally that I saw W. H. and David get at the head of the lake was at shelldrakes, otherwise "Jacoby canvasbacks." The Prevaricator called them "Friday birds," because, he said, they were nothing but fish, pure and simple, and could be eaten in Lent, and on Fridays and fast days, without violating the canons of any church in existence. He said that when he shot one he always asked the pardon of the rest of the party, because the bird ranked as game and as such had to be eaten, but the shooting of one was really purchasing a moment's pleasure at the expense of an hour's torture of the others.

The next morning Will took the boat and went out on the lake. W. H. and David set out to find Lily Lake, while Moore and I, after doing the chores, were to build new blinds for the evening's shooting. The cheerful "rattlety-bang" right and left of Will's old gun announced to the stay-at-homes that he had "made a strike," and it turned out that he cleaned up an entire flock of broadbills by a sort of bunco game, which enabled him again and again to get within shooting distance before the birds took wing.

Moore and I had a visitor. A man from the settlement dropped in on us and we entertained him as best we could. The women cooked him the finest dinner the camp afforded. When he thought the rest of us were not looking, Will, with a Chesterfieldian bow and a smile that for blandness would throw that of Bret Harte's hero completely in the shade, presented him with a pair of the "Friday birds" the boys got the day before. Still he seemed loath to depart. Moore and I were anxious to get to work at the blinds we were to make. We were getting fidgety. At last he thought struck me that he was lingering in the hope that, as a sort of crowning grace to our hospitality, a little whisky would be forthcoming. Now, one of our ladies is an inveterate foe to the essence of corn. Waiting till she was present, I remarked incidentally that we had forgotten to bring any with us, whereupon she observed, with such evident sincerity, that to such omission the presence of the women was undoubtedly due, that I congratulated myself on the neatness of the turn. A minute or two later our guest shouldered his "Friday birds" and left us. W. H. saw him two days later, and it took him some time to convince him that I did not extract a part of my joys from the "overflowing bowl." The lady mentioned above says the moral of this is: "He who would not be taken for a whisky drinker should not talk like one."

We had little trouble in locating our blinds. We built bases on the soft marsh of dry cedar ram-pikes, and concealed them with dead grass which we cut with our knives. We had scarcely finished our work when W. H. and David arrived on a catamaran they found on the other side of the lake. They had failed to reach Lily Lake, but had found another small one that discharged into Mud.\* Their bag for the day was one broadbill, which they shot after they embarked on the raft.

Before sundown we took our places for the evening's flight shooting. Moore and I occupied a double blind in a bunch of odd-looking weed, that the Prevaricator named, the "Jimmy-rose-mary patch." Will shot from the boat, two gunshots to the south of us, while W. H. and David held forth on the catamaran, about the same distance to the north. The stands proved to have been well selected. Will made a better showing than did any of the rest either then or subsequently. He shot about a 60 per cent. gait. David made all his kills with the second, after missing with the first. Moore was fortunate enough to secure a male summer duck in full plumage, which he had set up after he went home. W. H. made only one hit. I failed to do even that.

There was joy in the camp that night, either real or well counterfeited, when the Prevaricator learned of the disposition Will had made of the Friday birds. He said, no doubt it was unmanly thus to rejoice at the misfortunes of the poor settler; but it was the way of the world to lose sight of the sorrows of others in our own joys. "Willum," said he, "you shouldn't waste your talents taxy-didymus in birds; you should go into politics. No politician who had properly learned to give away only that for which he had no use, ever made a failure." Will retorted: "Some people might have had the cheek to give the man a pair of mean, measly-looking broadbills, and those large, fine-looking shelldrakes hanging there in plain sight, but I haven't. I am not anxious to earn the reputation of a hog. I gave him the best-looking birds on the string." Some days after when the Prevaricator was asked of which of the camp scenes he would prefer to have a photograph, he replied without hesitation: "Willum a-presentin' the Friday birds to the settler."

The next morning, much to the sorrow of the women, Will took his departure. He could do anything there was to do around camp. When he wasn't working he generally had his eye out for a job, and it is needless to say that he often verified the proverb, "Seek and ye shall find." We were indebted to him for many little conveniences, among which I may mention a table, some seats, a gun rack and a washstand. Besides all this, he is one of the kind that it is good to have around.

Soon after he left there was a little episode. All hands were around the fire. It struck David that it would be a good time to sort over his cartridges and separate those containing different sizes of shot. He found one 12-gauge, and addressing W. H., who was just across the fire, he said, "Here is one of your cartridges," and drew back his hand to throw. Seeing what he was about to do I uttered

\*We have since discovered that this little lake has no visible outlet.

the warning, "Look out." He checked the motion of his hand, but too late, and the cartridge landed in the middle of the fire. With the exception of David, every one went as he looked. He grabbed a stick and tried hard to throw it out of the fire, but it was not to be found. Then all hands awaited the explosion at a safe distance. Like many another expected calamity, it was a long time coming, and nothing much after it had come. It was a full minute before the fire burned into the powder, whereas none of us thought it would take five seconds. Any one three feet from the fire would have been perfectly safe.

The excitement had barely subsided when a newcomer arrived in camp. Mr. Judson Burke had been invited to be one of our party, but through a miscarriage of the notice of our starting, in the mails, he failed to connect with the procession, as it were. However, he got around just in time to keep the original number good.

## Natural History.

### A NEW ALASKAN PIKA.

MR. E. W. NELSON has published in the Proceedings of the Biological Society of Washington, a description of a new species of pika or little chief hare from Alaska which he calls the collared pika on account of the broad collar of dull iron-gray separating the yellowish-shaded areas of the head and back.

The range of this hare, according to Mr. Nelson, extends from the "mountains south of Fort Yukon, about the head of the Tanana River, to the Chigmit Mountains, near the head of Bristol Bay." The usual habitat of the animal is above timber line and its habits appear to be identical with those of the "Little Chief" hare of the mountains of the West. In size, it scarcely differs from its southern relative, the average length of dried specimens studied by the describer being about 7½ in.

The northwest limit of the collared pika coincides with the same limit of the mountain goat and trenches upon the southern part of the range of Dall's mountain sheep. A peculiarity of this Alaskan pika is the very long pelage, especially in specimens from south of Fort Yukon, which have the long dorsal hairs averaging nearly 1 in. in length.

The pikas, chief hares, crying hares or conies are curious and interesting little creatures, and have been the subjects of a vast deal of writing. They live in colonies in the western mountains from New Mexico and Arizona nearly to the Arctic Circle, frequently the highest ranges in the South and descending farther in the North. Their "favorite haunts are the masses of rocky debris at the heels of cliffs, where the animals find safe hiding-places among the boulders, and sometimes congregate in large numbers, making known their presence by squeaking notes which seem to issue from under ground and are very deceptive as to distance."

"Though timid, they are unsuspicious of danger and may frequently be seen perched upon the rocks, uttering their peculiar crying notes, or foraging quietly in grassy spots for their food, of which the provident creatures lay up great stores in their rocky granaries." Owing to their diminutive tails, short legs, squatting attitude, jerky movements and squeaking notes they are among the curiosities of animal life of the West.

## Game Bag and Gun.

### THE MOOSE OF MATTAWA.

IT is quite possible that the moose, now comparatively numerous around the upper Ottawa River, in Canada, are the lineal descendants of those that once abounded in the Adirondacks. Of course, this can never be definitely proved, but there are many reasons that lead me to believe that such is the fact.

Moose are, perhaps, of all the deer tribe, the most impatient of the presence of man, and invariably retire before him, except in those instances where their haunts are shut in on every side by settlements, as is the case now in Maine, where the St. John River is dotted with farms and hamlets, and so cuts off escape to the north and east. The result is that those moose that still inhabit Maine have been hunted back and forth until they find escape impossible, and have become much less restive than their Canadian kin—in some instances they have yarded in the immediate vicinity of railroads, where they must hear daily the rattle of the passing trains. For this reason the Maine or New Brunswick hunter need not be so wary in chopping wood or building fires, for the harassed animal has long since abandoned the idea of leaving the country, for, whichever way he goes, fresh human tracks, or the sound of distant gun shots await him. But in Canada, with the vast half-explored Northland to retire to, he is under no such restraint. When his sense of smell or hearing is offended, the slighted animal moves off with dignity and quickness. Northward, ever northward, he is moving, until at no distant day he will penetrate the stunted forests which grow beyond the Height of Land and reach the range of the barren ground caribou. There he will stand at bay, until the ever-rising price of timber makes even those, his last strongholds, too valuable to be kept from the spoiling hands of the lumberman, and some day, amid the stumps and wreckage of primeval woods, a solitary moose—last survivor of the grandest deer—will turn on his pursuers in sheer despair.

They will go slowly one by one—not in herds like the buffalo or elk, but scattered over a vast extent of country and with even their present wariness increased many fold by a grim process of natural selection, they will long defy the most persistent hunter, long, but ultimately in vain. This is what happened in the story of their extermination in the Adirondacks, and this is what perhaps the next generation will see in Canada.

The moose in the Adirondacks disappeared, with individual exceptions, in the early fifties. At that time the sudden diminution of their numbers was so great that it could not be accounted for by any theory of ordinary extermination—migration alone could have been the cause,

From the natural difficulties of crossing Lake Champlain and the north parts of Vermont and New Hampshire, then fairly well settled, as was the strip of Quebec immediately north of the border, it is improbable that they fled eastward into the moose country of Maine, but rather into Ontario by simply crossing the St. Lawrence and pushing north into Muskoka and the neighboring country. At that time (in the fifties) moose abounded in that section of Ontario, but soon the settlements came and the moose left, going always north, until at the end of the sixties they reached Mattawa and the surrounding country on both banks of the Ottawa. Not that they were unknown there—for there have always been a few in that neighborhood—but they arrived at that time in numbers, and ever since the best moose hunting has been found at this point. This remarkable fact of their sudden arrival around Mattawa is widely known among the older settlers.

At the present day they are leaving in turn Mattawa and passing Lake Temiscamangue on their northward march. An Indian this fall described to the writer the astonished wonder with which some twenty-five years ago the local Indians listened to the tale of one of their number who had found a moose track on the east bank of Temiscamangue. The excited trappers gathered round the speaker with eyes glittering at the prospect of moose coming into their country, but still incredulous of the good tidings. But the news bearer told the truth, and this was the first known appearance of moose on that lake in recent times. At the present day the Little Beau Chêne Lakes are about the center of moose population. Every year finds them further north, at first stragglers, then more and more until the main body has passed, and

NEST OF RUFFED GROUSE.

From photo by A. C. McIntyre.

then one by one they vanish. In the van are ever the largest bulls, whether because the persistent hunting for large horns prevents the bulls in the center and rear from attaining their full growth, or whether the old bulls are driven out by the younger or more vigorous ones, like the rogue elephants in Ceylon. Be the reason what it may, the fact remains, and this year on the northern limit of moose near Lake Kwingwishe, northeast of Keepawa, the writer saw the largest tracks of moose that have as yet fallen to his lot to gaze upon. These patriarchal moose are far from being the most successful fighters, for their size and the complexity of their antlers render them unwieldy and unable to cope with young bulls with sharper and less elaborate horns. The occasional moose which is found dead *sur le champ d'honneur* after one of these duels is nearly always an immense beast with sweeping antlers, which had proved poor defenses against what the tracks about show to have been a mere three or four-year-old stripling.

Cows, too, are sometimes killed by fighting bulls, frenzied by a general run all round, as happens when three or four come together.

The relative merits in such a duel of ranger moose and swamp moose—the two sub-varieties—it would be interesting to learn; but this and many other facts about this fast-vanishing animal will, I fear, remain unsolved.

So, too, will the precise question as to how far moose, caribou and Virginia deer will intermingle when absolutely undisturbed. In Maine and New Brunswick all three live in the same district, but this may be the result of the diminishing size of the forests and not the natural state of things. The caribou is a migratory animal, coming and going without apparent cause, while moose frequent a given district, as do deer. Bull moose, of course, travel a great deal in the rutting season, but they never move off in a body like caribou.

In the west of the Province of Quebec the three animals have practically separate ranges—intermingling in places, but for the most part well asunder. Deer move to and fro in consequence of the movements of the wolves, which are ever on their trail, and which sometimes force their victims into the moose countries to the north. Whether the moose drive out the wolves, as the Indians believe, or whether the deer do not like proximity of moose, the former soon work south again and leave the moose in solitary possession. So we have on the south the Virginia deer, then next in latitude the moose, then the woodland caribou, a scarce animal in this part of Quebec, and last of all, beyond the Height of Land, the barren ground caribou. The center of abundance of this little-known animal is near the headwaters of the Ungava River.

In the Keepawa country, some thirty or forty miles

north of Mattawa, Hay Bay, the northernmost arm of Lake Keepawa, is occasionally visited by caribou of the woodland variety, and they are now sometimes seen in the country to the east. They were formerly quite numerous in the country around the Bois Franc and Kastanan Lakes, but either the presence of lumbermen or the advent of the moose has occasioned a migration beyond the headwaters of the Ottawa, viz.: Lakes Quinze, Expanse and Grand. At the present day in this part of Quebec they live between these lakes and the Height of Land, and it is almost impossible to find any caribou in a trip from Mattawa without immense effort.

It is a pity that some record has not been preserved of the migrations of the different members of the deer tribe in the past—for beyond the above facts, nearly everything is obscure, but the evidence given and other instances of the migration of moose, inclines the writer very strongly to the belief that the moose of Mattawa is a direct descendant of the moose of New York, and the splendid antlers that now come from that country had once their counterparts hanging in the cabin of the first white hunters of the Adirondacks. MADISON GRANT.

### FOREIGN BIRDS FOR AMERICA.

MACOMB, Ill., Dec. 26.—Editor *Forest and Stream*: I read with much interest the account given in your valuable journal of the sportsmen of Maine meeting at Lewiston, called to take into consideration the feasibility of introducing the foreign game birds into Maine. I have had a little experience with foreign game birds, and perhaps I may be able to give this association information that will be interesting to them.

In 1890 I ordered five pairs of the *Francolinus vulgaris* or black partridge, of Rutledge & Co., Calcutta, India. These birds were cooped in a small shoe box with a small dish that would not hold over half a teacup of water; and the result was that all died before reaching me, with the exception of two males and one female, which arrived here safely. They were placed in a large wire cage. One of the males soon killed the other. The pair went through two of our cold winters in good order and stood the climate well. The female one day became frightened and flew so hard against the cage that she broke her wing and died. The other male died this winter from cause not known.

These birds were twice as large as our native quail and truly a beautiful game bird, and would eat anything that a common barnfowl would eat. My object in introducing so small a number was to test them and see if they could stand our climate. I am confident that they can stand any climate that our native quail can stand, and properly introduced into this country would do well. The cost of these birds was \$50 here.

In February, 1893, I ordered five pairs of the *Caccubis chukor*, or chucker partridge, through the Hon. James Currie, U. S. Consular Agent at Karachi, India. Every bird arrived here in perfect health and condition after being on the water and land forty-seven days while making the trip. I fully intended to turn these birds loose on their arrival here and have a law passed protecting them for five years, but our governor not being friendly to game laws vetoed the bill. Therefore we had to keep them in confinement and during the long, hot, dry summer they all died but one pair, which is in fine condition and doing well. This hen laid eighty eggs before she went to sitting. The most of these eggs were hatched under bantams and the little spotted beauties would live till ten days old and fall over and die. We could not find any food that would agree with them. The old bird hatched out seven in September and all died in the course of two weeks with the exception of one, which we fed on grasshoppers till he was several weeks old. As soon as the cold weather came and killed the grasshoppers we put him on to other food, but he soon died. I believe that had these birds been turned loose where they could have roamed at will, and have had a chance to live on worms, ants, bugs and insects, they would have lived and done well. They are a fine game bird about the size of our ruffed grouse. There is no question in my mind but what these birds would flourish in this country. They cost 50 cents apiece in Karachi, the coops \$6, the freight to New York \$20, the express from New York \$20.

India seems to be the home of these game birds and has a larger variety than any other country on the face of the globe. This is the home of the *Pavo cristatus*, common peacock. Thousands and hundreds of thousands of these beautiful birds are found there in a wild state. The *terocles arenarius*, sand grouse, the most beautiful plumaged game bird of India, would do well in the South and the far West.

The Mongolian or Chinese pheasant that was imported from China to Linn county, Oregon, by Judge Denney twelve years ago, have become so numerous in that State that it looks as if they had come to stay like the English sparrow. Twelve years ago eleven of these pheasants were turned loose in Linn county. The secretary of the State Board of Agriculture of Oregon writes me that he is safe in saying that there are a million in his State now sprung from the eleven, and they are fast spreading into California and Washington. Quite a number have been introduced into Missouri, Illinois, Iowa and Michigan, and as far as I have been able to learn they are doing well. Mr. Simpson of Alexis, this State, turned seven pair loose a year ago last fall. They went through the winter well and last summer they could be seen in the cornfields and meadows with large flocks of young. They have introduced these birds into Milton, Vt., and I understand they are doing well in a wild state, living on birch buds, mercury 33° below zero. They are strong and hardy, and would stand the climate of New England. I hope our Eastern sportsmen will make a move and introduce this beautiful game bird. W. O. BLAISDELL.

### Willing but Useless.

I HAVE a young hen, healthy, joyous, sleek and with comb and wattles ruddy as the summer rose, but she is a grand anomaly in the gallinaceous world. For about six weeks she has gone daily to her nest, in which is a plaster nest egg, has come off it cackling with apparent perfect satisfaction but without leaving the sign of an egg. It is the only case of the kind I ever observed. In speaking of it to a lady friend she said she had a hen like this and that for her uselessness she consigned her to the pot.

N. D. ELTING,

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Chicago Wants the Rabbits.

CHICAGO, Ill., Dec. 23.—Last week I put forward tentatively the idea that the shooters of the country would be doing a charitable and useful thing, and one not injurious to themselves, if they should send in to the relief association of Chicago all the rabbits they killed, the same to be used in feeding the unemployed poor of the city. It was stated then that the gravity of the situation could not be over-stated, that thousands of men with families were out of work and hungry, and that wholesome food of any sort would be most welcome to them.

This week we may go further, and announce definitely that the idea is no longer an experiment or a mere project, but a welcome and accepted proposition; that the Central Relief Association of Chicago has heard it, passed upon it, and received it gladly; in short, that Chicago wants those rabbits—not at the serious expense of any local game supply, but all the rabbits which the shooters of America think they can spare, and which they are willing to go out and kill. Chicago wants judgment used in this of course, but if there can be utilized here a source of food supply which otherwise would be left untouched, then Chicago asks that it may be given to the poor now suffering in her streets. Chicago wishes that sportsmanship be not injured in the least of its privileges, but that the sportsmen of the country shall give as they think they ought to give. A day which will afford fun to the shooter may afford happiness and relief and comfort and thankfulness to more than one family in this big city, where so many are now knowing the despair of an honest and hopeless destitution.

Therefore, take down the guns, and get ready for the biggest rabbit hunt that was ever known, the FOREST AND STREAM rabbit hunt for charity. Don't kill all the rabbits in the covers, but kill some, each of you, in Illinois, Indiana, Iowa, Wisconsin, Missouri, everywhere, and ship them here for charity. No side-hunts, no competitions, no general slaughtering, but a conscientious saving of every rabbit killed, and a conscientious shipping of every rabbit saved. We will show that the sportsmen have no war with the people, and that no man's heart is larger than the sportsman's. Get ready for the hunt.

## Ship to 82 Market St., Chicago.

When you kill a rabbit, pull off his head and eviscerate him at once. This makes a lighter weight to carry, and it makes a lighter freight or express rate, a very important thing. Please remember this; then the relief association will not be paying tariff on what it cannot use. Of course, thoroughly cool or freeze the rabbits, if possible, after sewing up in gunny sacks. Mark the tag as follows: "Central Relief Association of Chicago, Mr. Wilmeroth, Agt., 82 Market st., Chicago.—Charity." Also please give the names of the senders and the point from which the rabbits are shipped. Do not kill squirrels, birds, or any other sort of game. Be sure to take off the heads and clean the rabbits. The shipping charges will be paid here by the association. If the shipping agent doubts this, show him FOREST AND STREAM and the following letter:

H. N. HIGINBOTHAM, Treasurer. ROBERT GREER, Manager.

## "MEMORANDUM."

## LAKESIDE FREE KITCHEN,

FOOT OF RANDOLPH ST., AT VIADUCT.

Contributors will please send regular Bill or Invoice with each lot of goods furnished, and state on same, "Contribution." Please state quantities, prices and total value, in order that proper credit may be given.

Cash contributions by Check to order of H. N. HIGINBOTHAM, Treasurer, or by enclosure addressed to him; receipt will be given by R. GREER, Manager.

"DEC. 22.—*Forest and Stream*: I am of the opinion that any number of rabbits that sportsmen would be likely to shoot could be used by the suffering poor of Chicago this winter. Mr. Wilmeroth, of No. 82 Market street, is in charge of the supplies—both receiving and distributing—on behalf of the Central Relief Committee, and I am quite sure he would be willing to cooperate with you. I will take in 500 if they can be sent in one or two lots, and will pay the transportation if not over one-half cent per pound, or if the express companies will transport the stuff free, so much the better. Yours truly,

"ROBT. GREER, Mgr."

## What Will the Express Companies Do?

There has not been time as yet to see the managers of the different express companies, yet I have no doubt that they would carry free any contributions which they were satisfied were to go to the relief association. Of this more later on. As to the managers of the railways, no less should be expected of them, for their liberality has been tried in similar exigencies before to-day.

Out in California they have jack-rabbit drives, and sometimes kill 5,000 hares in one day, which will average \$15. each. Two carloads of good meat in one day. They let it lie, or bury it. Now, I know Mr. W. F. White, the general traffic manager of the Santa Fe Railway, to be this sort of a sportsman: He would, if the relief association wished it, say a word to the freight department of his road which would bring a carload of those big hares across the continent free to the Chicago association, if the California men should see fit to put them on the cars. Mr. P. S. Eustis, general passenger agent of the C. B. & Q.; Mr. Jas. Barker, general passenger agent of the Marion route; Mr. O. L. Stone, general passenger agent of the C. & E. I. Railway, are all sportsmen, and would intercede with their freight associates. Mr. Marvin Hughitt, president of the Chicago & Northwestern road, is a sportsman, and he would do as much for sport or charity as any. But of this also later. It is not necessary now. You can ship your rabbits now, not prepaid unless you like, and they will be thankfully received. Mr. Greer thinks 500; he will get ten fold that this winter. He does not yet know FOREST AND STREAM and the men who support it.

Let us not talk of waste of game. In my days of shooting I have seen rabbits killed and left hanging up in the bushes, "until we come round this way again, you know," enough to make a hundred families happy for a week. Do not let us talk of wasting game. If necessary, only carry to the wagon the rabbits you otherwise would have left on tops of stumps or hanging in the forks of saplings. If rabbits are scarce in your neighborhood, don't shoot any at all for this purpose. In many localities they are so

abundant as to be a pest and a nuisance. It is to these localities that I wish the invitation to apply.

## The Hunt Has Already Begun.

Yesterday morning some young men came into the office and wanted to know where to go rabbit shooting. I told them to go to De Motte, or almost anywhere in the scrub oak thickets along the Kankakee marshes. Then I asked them to bring all their rabbits home and give them to the hungry people. They said they would. "There is some sense in that," they said. They are now absent on their trip.

This morning I got a note from Mr. J. A. Balmer, of Vincennes, and he says:

"I notice your suggestion in FOREST AND STREAM about killing some rabbits and sending them to the hungry people in Chicago. We will act on your plans, and try and get up a rabbit hunt at Bicknell. Will report on the results later."

Will Mr. Joe Freeman and Mr. John Mayfield, at Bicknell, aid Mr. Balmer in this? They are all right in the center of a great rabbit country. I have seen two wagon-loads of rabbits lying in one heap by the railroad track at Bicknell. We want one load here, for charity. This is the FOREST AND STREAM charity ball. Will the gentlemen choose their partners?

Will Mr. Chas. Irwin, at Warsaw, Ind., manage a little hunt and send us a few rabbits? Will the gentlemen of the great rabbit country at Vandalia, Ill., send us some rabbits? I have known of a wagon load being killed there in a day. Will Charlie Parent, of Marshall, Mo., attend to his section? Will Joe Irwin, of Little Rock, Ark., see that his State is represented? Charity, gentlemen. While it's fun, this is in earnest.

## No. 82 Market Street, Chicago.

Remember the address, 82 Market street, Chicago, and the Central Relief Association also must go on the tag.

This address I learned yesterday during my visit to the Lakeside Free Kitchen, down under the Randolph street viaduct. Mr. Greer, the manager, who so generously gives free his own time and the use of the great cooking plant with which he has fed armies of men at the World's Fair and elsewhere, was at the time absent, but Mr. Cox, his assistant, kindly showed me through the rough but clean place where Chicago's unemployed are fed. There were long rough benches, covered with strong table ware, and back of these great steaming vats, large as hogsheads, in which were simmering hundreds of pounds of meat. There were bins of vegetables, and heaps of bread. Over all rose a steamy, meaty, but not unwholesome smell. Outside the doors stood groups of men, idle, idle, and unhappy. Of these I would rather not talk, but I know how they feel, for I have been broke myself, though never quite hungry. It's tough to be idle when you want to work. There is nothing worse in this world. But let that go.

"Could we use some rabbits?" said Mr. Cox smiling quietly. "I should think we could. We fed 5,000 men here yesterday. It takes a quantity of food to keep that up. Our ration is three of these long slices of bread with a good piece of meat, and a bowl of coffee or broth. Rabbits would go well in these big kettles, don't you think?"

"We serve only two meals a day, at 7 in the morning and 4 in the afternoon. No man can now get a meal here who does not have a ticket showing that he has worked on the streets for the city. Three hours' work entitles a man to two meals and a bed. Tramps and those unwilling to work are now turned away unfed. The charity is applied as well as we know how, it being first before our minds that when a man is honestly hungry he should be honestly fed. We are doing the feeding and letting others do the scheming. We charge nothing and want nothing in reward, but we can't have too much by way of good supplies. Mr. Greer will write you. All supplies should go to the storerooms of the Central Relief Association, 82 Market street. I am sure, I think, your idea a good one and I thank you for coming. There has been a great response all over the country. The American people are generous. I am sure none are more generous than the sportsmen. If they help us their gifts will not be misapplied. Their food will go to the hungry, to the unemployed, and only to such as are willing to work when work is afforded. Go with me on the streets and I will show you noble looking men at work. Some of them have families at home. If they could take a rabbit home they would be glad. They are good workers, too. I pity these men."

So will the hearty shooters of this country pity them. Let this pity be the excuse for any failings or shortcomings in this project as viewed from a sportsman's standpoint.

## From the Orient.

From a glance at the *Japan Mail* of Nov. 2, printed at Yokohama, Japan, it appears that the enterprising dog man has penetrated even into the land of flowers. One of the advertisements offers for sale "An English pointer dog, two years old, thoroughly trained." No pent-up Uica confines the sporting interest.

It is in Japan, by the way, that a certain young Chicago enterprise has its extreme roots. Many shooters have seen the grass suits for duck shooting advertised by Frank Lawrence, of Chicago—really a very excellent article—but not so many will know that these suits are all made, every one and in every particular, away over in Japan. The peasantry use them for waterproof garments, and they are sometimes called "Japanese rain coats." The native workmen employed by Mr. Lawrence's firm are very expert in making them. There is nothing of the sort made in this country at all. Mr. Lawrence says it takes him three months to write and get an answer from the Japanese factory. He has improved the coat, applied for patent and is now awaiting the latest returns from the far-away factory in the land of squat-eyed idols.

## Dame Bang Still Lives.

Last week I wrote a very nice little obituary about a pointer dog. This week the said dog can have the pleasure of reading her own obituary, and I hope it suits the lady. Dame Bang, reported by Mr. Barker to be dead, deceased and departed, is still very much alive and in evidence, I am glad to say. Mr. Dubois writes me from Cincinnati thereon as follows:

"John Barker, John Balmer and E. Hough are all wrong about Dame Bang, and I am sorry (for your sake) that the announcement of her death appears in this

week's FOREST AND STREAM. Dame is at this moment well and hearty in the kennel of Mr. Peabody, at Madisonville, O. It appears from a letter I received from Mr. Balmer, that Mr. Barker confused Dame with Winnowing, another dog that ran at Bicknell. I wrote to Mr. Balmer, correcting his mistake, and here I see her obituary again. Is she to get her next death thrust from Bro. Waters? You have killed off Dame Bang on paper, but her 'hant' still walks."

Well, now, we have here the evidence of three men against the unsupported testimony of one. Therefore, according to the statutes, it rests entirely with us whether Dame Bang is dead or not. If we three choose to have her dead, aye, and buried, and blackberries growing on her grave, we can do so, and no one can say us nay. In this case, however, we will let it go, and I beg Mr. Peabody to present my apologies to Dame—if he is satisfied in his own mind that he has the real dog and not a "hant." To-day I have further advices from Bicknell that it was Winnowing that died.

## Ducks in Montana.

Mr. J. C. Haskell, of this city, is lately back from a trip to Montana. He was to have joined his brother, W. H. Haskell, and party, for a big-game trip in the mountains, but arriving at the Leiter mine, near Sheridan, Mont., he found that the party had outfitted and gone in, so he lost his trip. He remained and shot along the streams near the mine, doing most of his shooting along the Ruby Valley. He got excellent shooting at ducks, and he describes the style of the sport, jumping ducks from the willows, as being easy and pleasant in the extreme. This was in the middle of last month. Mr. Haskell says that is a great country for wildfowl, and that the birds stay there very late, resorting to the open places in the streams.

Mr. J. W. Schultz, a well known Rocky Mountain guide of Piegan, Montana, who stopped at the Western office of FOREST AND STREAM for a while on his way West this week, confirms much of what Mr. Haskell says as to the ducks in Montana. Mr. Schultz says that he has killed thirty-nine canvasbacks in one afternoon in a small lake not far from his place. He did not know what they fed on, but found they ate a white, insipid-tasting root, which was not the wopato of the Coast country. Mr. Schultz says he never saw a redhead in his country, though canvasbacks were often there in numbers.

## Wants Fur Country.

Mr. O. Goode, of Chicago, writes as follows:

"Can you kindly inform me in next week's paper how hunting and trapping for fur-bearing animals is in the counties of Taylor and Price, Wisconsin. Also how the land lays."

I cannot answer the above question. Can any Wisconsin man?

## Will Stay in America.

Mr. H. J. Sprengle, who so ably represented the W. W. Greener gun exhibit at the Fair, will not return to England, but will hereafter show the gun over the counters of Henry C. Squires & Son of New York, for which service no one could be better qualified. Mr. Sprengle has been little in England since his connection with the Greener gun, having been assigned the charge of foreign exhibits very often. He spent some years in St. Petersburg, Russia. A bit of a linguist and an expert in his line, he can talk gun to the Queen's taste. Mr. Sprengle tells me that this week will see the last of his goods clear of the customs and on their way to New York, where Mr. Squires will have them. The American gun exhibits were all packed long ago, but the English exhibits were long delayed here, and the boys in Chicago have groaned in spirit over the enforced wait.

## Died.

Last summer I mentioned the call at the FOREST AND STREAM exhibit of Hon. James Crow of Crystal Lake, Ill., and stated that he was one who had read FOREST AND STREAM from its first number. The Hon. James Crow died a week ago, full of years and honors. He was one of the early settlers in his locality, and a man much respected and beloved.

Gen. Dutus E. Coon, who was accidentally shot and killed by a friend while they were out hunting together near San Diego, Cal., a week ago to-day, was one of the early Iowa editors, a prominent officer in the late war, and admired by many friends as a good sportsman and worthy friend.

## Fable of a Duck.

Once upon a Time there was one high in Authority, the same being the Manager of a Newspaper, and he had many Slaves. Verily, said all the People, he had a Cinch. Now a person in a far Country sent to this man a Good Thing, to wit, a Canvasback Duck, and the Duck was passing Fat. But lo! one of the Slaves fell upon this Duck, and took it Home and Ate it. And he was Glad, and so were all the Little Slaves. When the one high in Authority learned that his Good Thing was Gone, he said to the Slave, "Where is my Duck?" And the Slave said, "What Duck?" "Marry," said the one high in Authority, "Come off, also go To, Sirrah. If you eat any More of my Good Things, you will make yourself Persona Non Grata to my Sight. Therefore, have a Care." Then the Slave bowed upon the Ground. But when he went Home, the Slave gathered all the Little Slaves about his Knee, and he said, "My children, in View of the Uncertainties of Human Life, let me call your attention to one Fact, namely, that it is Better to eat your Good Thing first, and then to look for the Shipping Tag afterward." And the Little Slaves laid this to their Hearts, for lo! it was very Wise.

## The Wabash Farmer.

"Git out o' there! Git out, blank you! What ye doin' there; say, you, git off'n that land!" called the bottom lands farmer to a shooter who was following his dog through the corn on the other side of the road.

The shooter paid no attention and the farmer called again, "Say, y' hear me! Git out o' that!"

The shooter turned, came on across the road to where the farmer stood and said, pleasantly:

"Good morning."

"Mornin'."

"How are you this morning, sir?"

"Middlin'."

"Am I on your land, sir?"

"Nope."

"Is that so? Well, was I on your land when you called to me?"

"Nope."

"Why, I thought you ordered me off."

"Did."

"Well, don't you own any of this land?"

"Nope."

"Where is your land?"

"Haint got none. D'ye take me fer a millionaire?"

"Oh, perhaps your neighbors own that land?"

"No they don't neither. Don't none o' us own no land."

On'y man 'at owns any land hyur is Jedge Jinkins, an' he lives in Injunaperlis."

"Oh, then you rent that land across the road?"

"No I don't, neither. What makes ye think thet?"

"Why, you ordered me off."

"Seems like you take a good deal fer granted. So you thought I owned that land?"

"It looked that way."

"Er rent it?"

"Well, yes."

"Humph. Don't none of us own no land 'round hyur, 'n I don't rent thet land ercross the road, 'n I don't rent this neither. I just live hyur, don't never pay no rent."

"Well, then, what in the world do you mean by ordering me off that land?"

"Oh, I was jest a-hollerin'."

"Oh, you were?"

"Yep. I was jest a-hollerin' to be a-hollerin'. Seems like a feller ought to hev some rights in this world."

"Well, you haven't any right to order me off from land you don't own or control."

"Haint, eh?"

"No, you haven't."

"Humph! Say?"

"Well."

"I've just come out of jail."

"You have?"

"Yep. Was in jail six months. Tuk a shote, 'n they proved it on me. Was you ever in jail?"

"No, I can't say I ever was."

"Then you don't know a blame thing erbout it?"

"No."

"You liable to be in jail soon?"

"I hope not."

"Then you aint liable ter know nothin' erbout et?"

"No, I guess not."

"Lemme tell you."

"Well."

"It's mighty lonesome in jail."

"That so?"

"Yep. Nothin' to do, you know."

"I suppose not."

"Nope. 'N then everybody's bossin' ye round all the time."

"Yes?"

"Seems like they kind o' look down on a feller 'ts in jail."

"Well, yes."

"Like they was bettern he wus."

"Yes?"

"So a feller kaint have no good times at all, not in jail, et's so lonesome, you see."

"Yes, I see."

"He kaint boss nobody round, not in jail."

"No, I presume not."

"Humph! Well, now, when a feller gits out o' jail, when he hez been in fer stealin' a shote, fust thing he thinks of is whur he kin find ernuther shote."

"Yes?"

"Yep. 'N next thing is, whur he kin find some one to boss erround."

"Oh, I see."

"Yep. You see, my wife she left me when I went to jail."

"Too bad."

"Oh, I don't know erbout that. But ye see, me a-bein' hyur all erlone, cookin' fer merself, cuttin' all the wood alone, you see—now, hyur I am, 'n I sees you over thur, en thinks I, I'll just holler at thet feller, 'n maybe he'll think I'm boss."

"Oh, I see now very well."

"Yep. Well, why in blank didn't you fall inter line, then?"

"Well, you see, that is—"

"Oh, it is, eh? Say, you, you know what I'd do, if I c'd see my way cl'ar to et?"

"No."

"Well, I'd lick you, right now, ef 'twasn't fer goin' to jail agin."

"You would, eh? Well—"

"Yes, thet's what I would. But you see, et's so lonesome in jail."

"Yes, I see."

"Er I'd show you who was boss."

"I think I'd better be goin'."

"Well, good mornin'. Sorry you got to go. Seems like some fellers kaint git no sort o' chainece on earth. Reckon I'll go over to Bill Johnson's this afternoon. You know why?"

"No."

"He's got a boy 'at hes the rickets so' s't he kaint hardly walk. I low I'll lick that boy. I'll shorely show these yer folks erround hyur who's boss." E. HOUGH.

900 SECURITY BUILDING, Chicago.

#### Preserving the Quail.

MR. S. N. AYERS of Blue Mountain, Miss., writes as follows concerning the manner in which he induces the negroes to refrain from robbing the nests of quail. It is well known that they are very fond of the eggs. He says: "I promised some time ago to give my plan of keeping negroes from robbing quail's nests. I give them a doz'n and a half of hen eggs for every nest they find and report to me, providing the shells are left as proof of the hatching. I have been doing this for two years, and I have had nine nests reported, three last year and six this year. All hatched except one. If every shooter would offer some reward, I am satisfied that there would be twice as many quail left every year where darkies are numerous. Quail plentiful here this season. There are twice as many as there were last year. The hatching season was just right—dry. I have seen some beavies numbering between thirty and forty. \* \* \* One day this season a friend and I killed forty-two quail, though we shot poorly."

B. WATERS.

#### BOSTON AND MAINE.

NATURE does not always favor the game, and it is pretty certain that the last of the open season in Maine is proving disastrous for moose, deer and caribou in the New England woods. Reports speak of snow  $2\frac{1}{2}$  and even 3ft. deep in northern Maine, and covered with a crust in some sections. Will the deer suffer? Ask the lumbermen who are disposed to have a supply of venison. Happily they are not all so disposed. Ask the native who has a pair of snowshoes and knows where there is a herd of deer. There are several reports in the air that the snow is so deep and crusty that the deer cannot run through it; that "they give right up!" Alas, for the herd of deer that some men get into! All the reasonable hunters are declaring that the law ought to cover crusting and slaughtering deer in the deep snow at any time. But who is going to be there to enforce it? The Maine papers are complaining of the shooting of fawns this season. One paper remarks that "the hunters ought to be ashamed of shooting the little deer calves. Many of these little deer—not larger than sheep—are seen on board the railway trains that lead out of the hunting regions." They ought to be ashamed. But are they? Burglars ought to be ashamed of breaking into houses and frightening innocent women and children. Massachusetts hunters who will go down the South Shore gunning, and in the absence of ducks and other large game birds, come back with their belts dangling with the smallest of the woods sparrow family, cannot be trusted in the Maine woods where there are fawns, even if they are not a month old. Alas, for the desire to kill something! The open season on Maine big game ends Jan. 1, and who is not glad of it? It has been a season most remarkable for the amount of game killed, and it is to be hoped that the breeding stock has not been reduced. Reports indicate that in some sections there are deer enough left, while other sections have been most severely hunted. To look at the matter reasonably, it would seem that only the extreme southern or south-eastern range of the deer in Maine had been severely hunted this season, though the number taken has been remarkably large. Estimates vary, while there is little doubt but what 4,000 deer have been taken during the open season in Maine this fall. As for moose, following the reports would indicate at least 100 taken, though the killing of a moose is told of so many times that the reports are a good deal mixed. Of caribou, the number taken must be at least 200, and it would seem that this noble game is on the increase in the wilds of Maine. One has recently been taken by a party of Boston hunters, stopping at Billy Soule's beautiful camps up the Capsuptic. This is explained by a gentleman well acquainted in the section to be the first instance of the taking of a caribou on the Capsuptic for several years. One or two have also been taken north of Andover, according to reports. The lucky hunters to get the caribou at Billy Soule's were R. C. McQuillen, J. S. Clark, Jr., R. A. Davis and H. B. Callender, members of the Massachusetts Yacht Club. It seems that the caribou was shot on the ice in front of the camps, several members taking part in the shooting. The distance fired, the first shots, was 700yds. by measurement. At this long distance the caribou was wounded, and afterwards finished in the woods. It was a fine buck, and the head will be mounted for the club. The party is also reported to have killed twelve deer. Another most remarkable record, and one that speaks volumes for what protection of game has done in that State.

It is hoped that game protection will again be alive in Maine this winter. Game Commissioner Wentworth, of Bangor, is highly spoken of, and he is reported to be greatly interested in continuing the work so ably begun by Commissioner Stilwell, now deceased. Commissioner Stanley says that the border will be carefully looked after this winter. This border is looked upon as one of the best sources of game supply; a great breeding ground, from which the game will gradually drift south and toward the settlements. It is a section that cannot be much injured by sportsmen, on account of its remoteness, but it is the paradise of the skin hunters from over the Canadian border, who operate during the deep snows of winter. It is proposed to cover with extra service a fifty mile section of the border in the Allegash region; another of equal length in the region of Baker Lake and also another at Moose River. During the deep snows of February, and earlier if need be, two wardens will be put on guard in each of these sections. Beside this protection the Megantic Club will take care of a large section with its own men. It now looks like a winter of remarkably deep snows, such as have not prevailed for several years, and it is not proposed to allow Canadian or other skin hunters to destroy the moose, caribou and deer when the snows are so deep that they cannot escape. Indeed it is mentioned as undoubtedly one reason that big game has been so plenty the past season, that the past two or three winters have been noted for light depths of snow, and hence the game has wintered safely. It is not proposed to allow this good feature to be destroyed by the greed of a few hunters who care for nothing but pelts.

A curiosity in Boston market during the Christmas trade was the carcass of an immense bear. The meat alone weighed 250lbs., and it is estimated by Mr. Wheeler, of the firm of Hyde & Wheeler, where the fellow was shown, that alive he must have weighed 800lbs. He was as fat as a hog, and as long as a good-sized steer. He was shipped from Anson, Me. Bears have also been remarkably plenty in Maine this fall. A gentleman, Mr. Charlie Keyo, who has a brother in the Rangeley region, who has lately been on a visit to some of the lumber camps, says that his brother writes that it is the common remark of hunters and lumbermen that on the first snows the following of deer tracks was almost sure to end in the finding of a big bear track. This latter track has usually set the hunters wild, and they have taken up the following of bruin, seeking his winter quarters. A hunter is reported to have come upon the tracks of a big bear in the Capsuptic region, some days ago, which he decided to follow. He kept on a while, though it was drawing near night-fall. Soon he came upon the bear and shot him. It was a big one. Standing over his fallen game and meditating what to do next, as there was but little time in which to get back to camp before dark, he suddenly saw another hunter coming on the trail in hot pursuit. Soon he saw that it was the indefatigable Billy Soule. When Billy saw the fallen bear he exclaimed, "I'm glad you've shot him; it has saved me a night in the woods. I had made up my mind to camp on the old fellow's tracks. You will find

where I hit him, I think. Sure enough; examination showed that the bear had already been hard hit by Billy, who had taken a running shot. Now Billy will pardon me if this yarn is not exactly as it happened, since it was given to me second-hand, and all I care about is the fact that they got the bear. SPECIAL.

#### THAT .22 QUESTION.

PROVIDENCE, R. I., Dec. 23.—*Editor Forest and Stream:* "Diamond Walt" wants to know where "Tode" is. Right on deck with both ears open, and saving up his pocket money for his bets on that coming match between our Western brother and Mr. Fellows. I am "not in it" with the experience of others who have given their testimony in regard to the .22 short, and hardly thought my few notes would bring forth such a torrent of recommendation and condemnation in reference to the little cartridge.

My little Stevens has been lying idle for the past few weeks, and if the experiences of those who so highly laud the range and penetration of the .22 short are true, I shall hardly dare to use the little gun on the practice range, let alone taking it out "into the open air" as "Diamond Walt" suggests, in this thickly populated State.

However, I acknowledge to a certain extent, that I am somewhat surprised at the range of the .22 short. Thanksgiving Day several of us went out for target practice, and I took along both a .38 and .22. At 100yds. good shooting could be done with the .22 short, with no wind blowing, but as for its penetration, some of those wonderful stories must be discounted. In several instances the upright posts that held our targets, were hit, but not penetrated. These were of hemlock stuff, about  $2\frac{1}{2}$ in. through.

A short time ago two gentlemen went squirrel shooting, one using a .22 and the other a .32-40. In several instances squirrels were hit hard with the .22 several times, but lived until brought down by another shot, while those hit with the .32-40 came down at once. Of course, in such shooting a smaller caliber is the best, for if the ball does not strike in the head or shoulders the game is practically worthless, as the larger bullet tears the flesh so badly, still if I were after game and wanted to get it, a larger caliber rifle would be more to my style.

There is no doubt but that if one should hold a .22 high, that the ball would travel several hundred yards, as was shown in the account of Mr. Von Iffland, but this will not do for accurate work.

If "Diamond Walt" comes east to settle his account with Mr. Fellows, I think that silk hat will get the best of it. Of course we know nothing about "Diamond Walt's" ability with a rifle, but are simply discussing the accuracy, range and penetration of the .22 cartridge.

"Diamond Walt's" prairie dog must have been an exceedingly slow one. Those who have tried to kill them with guns that get there quicker than a .22 know that the dogs will dodge at the flash of the rifle, and a .22 ball with so little powder behind it travels pretty slowly as compared with the larger bores. When we were using the Stevens in practice at 100yds., as cited above, we could distinctly hear the "spat" of the ball against the paper target, while in using the Winchester .38 we could not hear the ball strike.

A prairie dog sitting up at 303yds. is a pretty small mark for a rifle with the rear sight thrown up to the last notch, with coarse open sights, and with a charge so light as the .22 short, with a ball traveling so slowly. I should be inclined to think that prairie dog in ninety-nine cases out of a hundred would be perfectly secure. Are you sure, "Diamond Walt" that it was not such a case as was illustrated some few months ago, where one of our correspondents made a rattling good shot on a woodchuck, only to find that he had been stuffed and set up by some of the shooter's friends? Why I wouldn't risk a .22 short on our stupid bull-headed Rhode Island woodchucks here, let alone I could hit one at such a distance.

Citing the instance of the man from the East who went out after grizzly with a .22, which I referred to in my first notes, "Diamond Walt" says he wouldn't take back water if he should run foul of a bear with a .22. Excuse me. I doubt if a man could "hold a gun right" with such odds against him. A bear has got to have a pretty big hole bored through him to make him sick. A number of years ago Jim B. had a sheep ranch out in the Western country and for a number of weeks the bears had taken it into their heads to dine on lamb at the expense of my friend Jim and his partner. They built up a big corral of heavy stuff, but one big fellow climbed the stockade several times, until Jim got mad and said he would get him. He and old Jack (the hunter I mentioned in my first batch of notes) took up their station one night and waited for his highness. He came. Jim's .44 and Jack's big .45 Winchester opened the ball, but the grizzly grabbed a lamb and started over the stockade. It was so dark they hardly dared go after him, but the next morning tracked him up and found him full of holes. On the inside of the corral where he had climbed over Jim swears there was a trail of blood and matter a yard wide. Now what would a man with a .22 do? Probably climb a tree if he could get to one, same as our friend from the East did.

No, sir. Give me the little .22 for home practice, a .38 for target work and deer, and that's as far as I want to go. We took a .45 down in Maine a few years ago, thinking possibly we might come across bear; if we had taken down a .22 the boys would have left us at the last settlement.

Now I trust our Western brother will take no offense at my remarks. I want to see that match between him and Mr. Fellows in the near future, but I don't know, after all this talk, whether it will be safe for me to appear or not. TODE.

#### Game Notes from Illinois.

JERSEYVILLE, Ill., Dec. 18.—A party of our sportsmen, consisting of Judge P. D. Cheney, Hon. T. S. Ferns, J. D. Perrings, Moses Collenberger and J. A. Davis, are down on Red River, Arkansas, in quest of game. Word just received from there announces the fact that game is plenty, such as geese, ducks and turkeys, while a few miles from their camp deer and bear can be found in fair numbers. Quail have been quite plenty with us in this vicinity this season and fair bags have been made. The season now closed leaves plenty of birds, in fact more than for several years, for next season's stock, if the winter is anything like favorable for them. From some unknown cause, rabbits are scarce. L. S. HANSELL.

## BILL CHADWICK'S BOOK.

"The General" sends us this cutting from the New York Recorder, which will interest those who, in the good old days gone by, used to resort to the famous Jersey shooting headquarters:

I BELIEVE it was the quaintest, most old-fashioned house I have ever seen in my life. It originally consisted of a little hovel of three rooms, and the connecting places of the new additions that had been added during the three succeeding generations were plainly visible. As it stood, with the old-fashioned porch running almost around it close to the ground and the ruddy glow of red hot stoves and open fireplaces shining on the window-panes, it presented anything but an uninviting aspect, and we went in.

While my companions were making the necessary arrangements for the gunners and guides and stowing away in them (the guides) the necessary amounts of applejack to bring them in touch with the shooting expedition, which brought us to the Jersey coast, I was attracted by a big, well worn book at the upper end of the bar.

"That's my register," said "Uncle Bill" Chadwick, who stood near me. "I guess it's nearly as old as you are."

He was pretty nearly right, for the first entry was made in the winter of 1863. It runs as follows: "Gilbert Davis visited this house for the first time in 1863 and continued to come till the present time. On his first visit he shot 200 good duck and nine geese. Elijah Cornell and John Thorne were also pioneers in 1863."

Under the date of Dec. 19, 1869, there is written: "The steamer Circassian came ashore this evening abreast this house. Mrs. Ellis, the captain's wife, and passengers were brought ashore by William Chadwick in a life car in one hour from the time she stranded."

A week later there was another wreck when "Capt. George G. Wallace, of Philadelphia, was saved by a miracle from the schooner B. C. Scribner, which came ashore here and went to pieces. Two men were drowned."

I turned to "Uncle Bill" for further particulars. "There was a high sea at the time," said he, "and the captain and his men were washed overboard before the vessel struck. The men went down and the captain grabbed a floating timber and was washed ashore. He was nearly dead when we picked him up."

Some of the early comers were not content with merely writing their names so they affixed their professions, callings and addresses. Here are samples: John Bates, Indian doctor, Flemington, N. J.; Castro De Haven, artist in colors, New York; Charles Smith, mason, Toms River; George C. De Marini, 9 East Seventeenth street, New York; Fred Goodridge, 239 Fifth avenue.

Following the names of three men who arrived Aug. 2, 1870, there are these notes: "Killed 377 large birds in ten days; 74 were marlin and curlew. Best day's bag was 72 at 'Uncle Sammy's.'" "Uncle Sammy" was the name of one of the guides who controlled good shooting grounds near by.

"Horace Greeley goes away to-day with a happy heart and a full stomach, and he got it at Chadwick's, and don't you forget it." I stared in amazement as I read this, and calling my host's attention to it, ran it over again.

"Was he the editor?" I asked.

"Yes, that's him," was the reply. "He signed his name there and one of his friends told him he ought to write something more. He laughed and said nobody could read it if he did write anything. One of the men who was with him said he would write what Mr. Greeley wanted, and that's what he said. He came down here to rest awhile in the spring of 1871."

Here are some of the scores: "Charles T. Jackson, Francis Endicott, New York, wind N.E. A little more apple juice than necessary, but we get there just the same. Killed 60 large birds, middle stand, Sept. 15, 1873.

"Dec. 15, 1873.—Lord William E. D. Vyse, London, England, Crofton Manor, West End. Thomas E. D. Powson, Antonio Raines, George Weber, Thomas A. P. Vyse killed 212 ducks and 14 geese in five days."

An honest confession is shown in this record: "Nov. 28, 1874.—J. H. Spellman, R. K. Buckman, P. G. Sanford, New York, killed 32 ducks in two days, canvasbacks and rednecks. Any one reading this would think we were corks. We cannot tell a lie. Our gunners (guides) killed 27 of the 32 in two days—broadbills, black duck and hell divers. The other five dropped dead from fright."

In the spring of '75 the first fish story was put in black and white. Three men during one day caught 138 bluefish, amounting in weight to 860lbs. The fish weighed from 5 to 12lbs. each. Then as I turned over the leaves I came upon a yarn that set me thinking.

"May 29, 1876.—S. M. Blatchford accomplished the wonderful and unprecedented feat of catching with rod and reel on one hook and at one cast 13 dogfish, the largest weighing 19lbs. This was witnessed by William Chadwick, F. Endicott, W. Fleming and R. D. Offerby, who affix their names as a token of honesty, good faith and truth."

"Why, it's impossible," I said.

"True as gospel."

"How?"

"Well, you see, it happened like this. After a big struggle he landed the biggest dogfish. The brute had swallowed the hook and had to be cut open. Twelve little dogfish flopped out. They were put in the water and swam away."

Here is a man who certainly was a thorough sport, and wanted to be "in it" at all stages. He took up half a page to write these lines:

## NOTICE.

TELEGRAPH TO

WILLIAM A. DAY,

33 West 29th street,

New York City,

Whenever the flight of snipe commences, or there is a good run of bluefish; or canvasbacks evince a desire to be shot. Sure! Sure!! Sure!!!

The next man inscribed the following on one full page:

ON THE AFTERNOON OF THE

3d of June, 1876,

AT ABOUT HALF FLOOD,

THERE DIED

at the foot of the bridge

A STRIPED BASS

Weighing 47 pounds,

KILLED BY

F. ENDICOTT,

with rod and reel in his usual elegant manner.

Witnesses signed: William Chadwick, R. D. Offerby, W. A. Day.

On Sept. 17, 1876, the register was again used for a log, when the following note was made: "During a fearful northeast gale the bark Magdalena Griffin, from Angostura, S. A., for New York, came ashore five miles south of this point. All souls saved. The vessel lost."

There is a good one under the date of Aug. 29, 1877: "The Lazy Club was inaugurated to-day. Bill Chadwick too lazy to join. Jim Lilly voted president; Deacon Berg, secretary; Gil Chadwick, messenger boy."

I looked askance at "Uncle Bill," who stood by my side. "Yes, that's right," he said. "There was no fish running then, and for want of something better to do they started the Lazy Club. Any man found moving faster than a walk had to pay a fine of \$3 or else stand treat three times in succession. If any one talked loud he was fined \$1, and any one who showed any signs of feeling or liveliness, or talked about work had to buy on the minute."

The next entry of interest encountered was on Sept. 15: "P. R. Jones landed a 52lbs. whip ray, 7ft. 5in. long, with rod and reel this day. Tide ebb. He was almost pulled in the water, and in landing the gaff was broken."

Of course there were several names signed to this as responsible witnesses. Not a story of this kind in the book for that matter was without attests and signers.

Again the log book keeper shows his hand: "Oct. 2, 1879. Steamer Charles F. Mayer, Captain Seth Hand, Boston to Baltimore, came ashore here, 17 souls aboard, all saved."

A few passages further the following appeared: "Collector Cook, of Asbury Park, the well-known sport, this day attempted to kill a bushel basket thrown in the air by Gen. Patterson. He missed the basket and wounded Bill Chadwick's only cow. He received one day's notice from the angry citizens to leave, and he left!"

HARRY B. WILSON.

## DEER AND TURKEY IN WEST VIRGINIA.

MEADVILLE, Pa.—I take great interest in your paper, and I never read an article from any one without first noticing the name of the author and wondering what his personality may be. Thinking that other readers of your paper may feel the same, let me introduce myself. I am a teacher and have been for over forty years. Were it not for the benefit I have derived from the many hunting and fishing excursions and outdoor exercise, I would not now be living to pen these lines. I am an all-around hunter, but fox hunting and wild turkey shooting are my favorite amusements. Though only an ordinary shot with both rifle and fowling piece, I am generally very successful, simply because I have made the nature and habits of the fox and wild turkey a life study. I am passionately fond of music and am something of a musician, but the sweetest music to my ear is the deep baying of my hounds when on the trail of a fox, and the *pee, pee, pee; conk, conk, conk* in the deep forests of his majesty, the king of all game birds—the wild turkey.

For many years past during the month of November or December I have alone or with some of my friends taken a few weeks off hunting wild turkeys in the wilds of Ohio, Pennsylvania, Virginia, Michigan and other places, so last month Messrs. A. M. Gundaker, H. A. Johnson, Clate Kelso and myself arranged to spend a week or two in the mountain wilds of West Virginia hunting deer and wild turkeys. Messrs. Gundaker and Kelso went at the appointed time to locate a place and wrote us from Romney. On our way to Cumberland, Md., we met a number of hunting parties, among them one from Washington, Pa., the leader of which was the veteran hunter and presiding elder of the Methodist Conference, Rev. J. F. Core. I think he was the most genial gentleman I ever met—full of fun and good stories. He is a fine looking man and true sportsman. He had by far the finest Winchester rifle I ever saw, and it is said that he is a dead shot.

From Cumberland we took a branch road to Romney, arriving there at 10 o'clock A. M. At Romney we engaged a lively rig to take us to George H. Johnson's, six miles up the Potomac River, arriving there about noon. Gundaker and Kelso had gone out deer hunting, and did not get in till evening. Johnson's is the headquarters of all the hunters in that region, and the Johnson plantation is one of the largest and best known in that part of the State. Mr. Johnson is a true type of the Southern gentleman, and hospitable, a skilled hunter and a good shot. He has three sons, chips of the old block, all stalwart men and sportsmen. Each carries a Winchester and knows how to use it.

The country is very mountainous—a chain of the Alleghenies, and at that place the mountains are from 2,000 to 3,000ft. high, and the surface is covered with a kind of lava or stone, and it is almost exactly like walking on the slag used on railroads. It is extremely hard to walk on and very destructive to shoe leather.

The game, both deer and turkey, is found on the mountains, and to reach the hunting grounds we had to climb at least 2,000ft. All game is on the benches or the extreme top. The hunting grounds are either very open or very thickly covered, and turkeys are found in the former and deer in the latter places. To hunt to any advantage one must use a long-range gun, a rifle and shot for turkeys and a Winchester for deer; and unless he is a good shot and knows something of the nature and habits of deer and turkeys he has no business there.

There are two seasons of the year best adapted to turkey shooting. The first is at the opening of the shooting season, the first of October, while the leaves are on the trees, and the flocks are together, before they are hunted and become scattered and wild; and the other is after the snow falls, about the first of December, till the shooting closes, Jan. 1. After the leaves have fallen, about the first of November, till the snow comes, is the poorest time in the year for hunting owing to the extreme dryness on the mountains, causing the leaves to rattle so a person can be heard walking nearly half a mile. We went too late for the early and too early for the late shooting. I knew this, but as some of the party could not go at any other time we took our chance, and had poor success, bringing home only one deer and two turkeys—small game does not count.

There are many methods of securing a shot at a turkey, but by far the most successful one is to call them up. There are several ways of doing this. The best I have ever tried is to take a bone from the wing of a small turkey. This bone is about as large as a pipe stem and say three to four inches long. Cut off both ends, leaving it

hollow; put one end in the mouth, clasp both hands around the other end; suck the air through vigorously at quick intervals; manipulate the third and fourth finger of the left hand. When closed tightly around the bone the soft notes *pee, pee, pee*, are made, then throw them open, bringing out the louder notes, *conk, conk, conk*. This produces exactly the same sound that a turkey makes, and will deceive the oldest and smartest gobbler living. The Indians use a piece of hard board, mortised by burning, and the noise is made by rubbing their tomahawk handle on it. A knife and a board six inches square, with nails driven into the edge, makes a good call. A patent call resembling a cigar holder is used by many. Any blind nearest at hand when the hunter gets an answer to his call—a log, tree, stump, rock, or even a pile of brush, anything for concealment, till the turkey comes within range. The hunter must shoot promptly or the game is gone, as the wild turkey is the sharpest-eyed game bird in existence.

The trouble with deer driving is the hunter who is fortunate enough to bring down the game has no more claim to it than every member in the party, so the game must be divided or some one purchases the others' shares; thus a hunter often has to buy his own game at a good round price.

Both deer and turkeys are quite plentiful still in Virginia. On one drive that I participated in we routed seven deer and a flock of turkeys so close to Romney that a bullet fired from the bed of the deer or roosting place of the turkeys would have crashed through a window of the court house if aimed at that building.

I found many things of interest while roaming through the wilds and over the mountains, among which were indications of the rebellion. One day I came upon a fort remaining just as it was left 30 years ago. Then the ground around it was perfectly cleared away; now it is covered with a thick growth of trees nearly a foot in diameter. The embankments of the fort and the rifle pits were almost perfect.

Excepting a little jealousy on the part of the local hunters, the people were very kind. A. W. SMITH.

## Out of the Log Into the Dog.

SALT LAKE CITY, Utah, Dec. 22.—*Editor Forest and Stream:* The following remarkable incident occurred in Smithfield Cañon in the early autumn of the present year, and while it may sound "fishy," even to the readers of FOREST AND STREAM, the truth of the story is vouched for by three young men whose veracity is unquestioned by those who know them: My brother and two companions were in the cañon after logs, and were accompanied by a large dog of the every-day variety, which soon found amusement in barking at a timber squirrel treed by him. Fearing the dog would injure his vocal organs, the boys decided to assist in getting the squirrel out of the tree, but no sooner had they succeeded in doing this than the little fellow took refuge in a hollow log open at one end. At this aperture the dog took up his position, and continued his noisy, but harmless attack. One of the boys, with axe in hand, commenced the task of cutting the log in two, while his companions stood in full view of the open end of the log, which was not much larger than the dog's wide, gaping mouth. No sooner had the cutting commenced than the squirrel, becoming alarmed, bounded out of his hiding place and disappeared down the dog's capacious throat, who gave two or three convulsive gulps, and the squirrel was no more. "His dogship" showed no signs of distress after partaking of his unusual dinner. A. H. WOODRUFF.

## Michigan. Winter and the Game.

In a note dated Dec. 12 and published in your paper, I am made to say that two feet of snow was a greater depth than we have had here for some years. It should have read "at that date." Our snows for the last half dozen years have not lain as deep as formerly—seldom exceeding two feet at any time. Just now we have a thaw, with heavy rains. KELPIE.

## Will Dry Out.

"THE HANNAFORD Ventilated Rubber Boots, which I bought in December last have proved as represented. They keep my feet warm, but do not sweat them. I have put these boots on with my socks wet through, and after going over my route found that my socks were dry." Respectfully, GEO. M. WOLFE, Carrier Boston Post Office.

BURR'S GUNOLUM is a new preparation for use on shotguns, rifles, revolvers, and all metals, and is warranted to prevent rust on iron, steel, copper, brass and nickel. It is not affected by heat or cold, and is thoroughly waterproof against salt water. It is conveniently put up in tubes similar to those used by artists, and so can be carried and applied with great ease and handiness.—*Adv.*

## Sea and River Fishing.

## ANGLING NOTES.

## Kamloops Salmon.

A FEW weeks ago Mr. J. M. Buxton, of Vancouver, B. C., wished for information about landlocked salmon, and it not being clear in my mind whether he referred to the fish called ouananiche in Canada and landlocked salmon in Maine, where it was originally found—in other words the *Salmo salar* that has not been to sea, or the newly discovered landlocked salmon, allied to the Pacific salmon, found in British Columbia, I wrote him about both species.

In reply he sent me the following interesting letter, from which I quote:

"The fish I mentioned to your brother is not the ouananiche which I think is found in several of the larger lakes of British Columbia. I have come across at least two distinct species of what I consider were once landlocked salmon, and which I have never seen above 1½lbs. in weight. One, I believe, is the same as the 'sockeye salmon' (this is the red salmon (*O. nerka*) which Bean says is called 'Sawqui' or 'Sukkegh') and the other is the exact counterpart of the humpback salmon. The landlocked salmon referred to in the FOREST AND STREAM as caught in Kamloops Lake, is not a landlocked fish. The writer of the article must have been either joking or ignorant of the fish in British Columbia.

"I have caught the same fish all the way from the salt water itself, in the tributaries of the Frazer, to some

hundred miles beyond Kamloops Lake. It is one of our commonest fish. Millions of all kinds of salmon pass through Kamloops Lake every year on their way to the North Thompson and the tributaries of the Great Shuswap Lakes. This fish, the so-called Kamloops landlocked salmon, rarely goes over 4lbs., and gives one excellent sport with the fly.

"The two species of fish I mentioned above are never seen except at spawning time, and are found in lakes to which salmon have access as well as those that are inaccessible. I will, however, send you a specimen of each, in spirits, next year."

As to the ouananiche being found in the lakes of British Columbia, I think Mr. Buxton must be mistaken, unless they have been planted artificially, for there is no evidence that the Atlantic salmon (*Salmo salar*), for that is what the ouananiche really is, was ever found in the Pacific coast waters. But he does not make a point of this as he does that the Kamloops Lake salmon is not landlocked, and upon this subject he speaks from his personal familiarity with this fish and the waters where it is found.

Who the writer in FOREST AND STREAM may be that is referred to I do not know, but Jordan described and named the fish in FOREST AND STREAM Nov. 10, 1892, although it is not likely that he is the man. Jordan, it is quite apparent, has no personal knowledge of the habitat and habits of the fish, for he quoted the information furnished him on these points, but as to his classification, it will require a brave man to question it successfully.

The same issue of FOREST AND STREAM that contained Jordan's description of this new Kamloops salmon has an article with the caption "Salmo Kamloops," but it sheds no light upon the subject in question. It is possible that the small landlocked salmon mentioned by Mr. Buxton may be Bean's *O. kennebecensis*, a landlocked salmon found in British Columbia and Washington, and reaches a weight a little above a pound. When the promised specimens arrive next year they will undoubtedly aid to solve all difference of opinion on the subject that may now exist as to the identity of species.

Sturgeon Eggs.

Dr. Bashford Dean writes me, supplementary to his paper on "Spawning Conditions of Sturgeon," printed in FOREST AND STREAM Dec. 16, as follows: "The fish were all brought in by fishermen—in poor condition, out of water several hours, and in most cases probably stunned at time of capture. The fertilization, nevertheless, was readily accomplished. The eggs are easily taken from the spawning fish and the name given these locally, 'runners,' shows the fluid manner of egg extrusion.

"Several estimates were made of the number of eggs spawned, and it is safe to say that 2,000,000 is perhaps the average. In three fish I think they ran 2,300,000, 1,830,000 and 1,950,000."

I have not had any extensive experience with sturgeon fishing, but in the little that I have had, which was lake fishing, the fishermen, as the net was lifted and the sturgeon's head came within reach, gaffed the fish with a short-handled gaff like a meat hook—oftentimes two men gaffed the fish at the same time, and then proceeded to belabor it over the head with a club until it was dead, when it was thrown into the bottom of the boat to remain for several hours perhaps before the boat even returned to shore. I have often wondered if under such conditions the vitality of the spawn was destroyed, and judging from Dr. Dean's letter that I have quoted from, it is not.

The Howietoun Fishery.

I think that it will be admitted generally that at the Howietoun Fishery, Sterling, Scotland, of which Sir James Matland is the proprietor, fishculture is conducted as carefully, thoroughly and scientifically as in any similar establishment in the world. I have recently received the circular of the Howietoun Fishery for the season of 1893 and '94, and upon comparing it with the circular of 1892-3 I find a marked change in the language used when that was issued.

Speaking of trout for stocking or restocking waters: "If there is any depth of water, big two-year-olds will always be the safest and the speediest mode of stocking, but in many lakes, and in some rivers, the quantity of fish required is so large that, in the interest of due economy, time must be sacrificed, and some mode of stocking cheaper than by two-year-olds resorted to. If there are many small, gravelly streams suitable for young fry from alevinage to six months old, and clear water in abundance, their ova sown in redds is undoubtedly the best method; if there are small streams feeding the water to be stocked, but not sufficiently clear to insure the success of ova sown in redds, then three-month-olds fry are to be recommended; but our experience is that there is no half-way house between ova sown in redds and three-month-olds fry. Younger fry are too risky; they may do, but only where ova would do as well, and at half the cost." It may be well to say in this connection that "redds" are not unlike spawning beds, artificially prepared, in which the eyed ova, at the point of hatching, is planted. The circular continues: "Yearlings are, *par excellence*, the size for general purposes. They are strong enough to find their own food, thus avoiding the principal cause of mortality among fry, namely, starvation; they are easily carried, and stand the journey well; they accommodate themselves with the greatest facility to new water, and they thrive so fast in ponds that they will be found a very profitable investment."

These are excellent reasons why yearlings should be used for planting, and I have faith that it will not be very long before those who now advocate the planting of fry the moment the umbilical sac is absorbed will be converted to the use of yearlings.

I see that fish are cheaper in England than in the United States. Native English trout, *fario*, cost as yearlings, delivered at the railway station, \$50, and two-year-olds cost \$125 per thousand each. In this country our native trout are held, as yearlings, at \$65 per thousand, and as two-year-olds at \$150 per thousand.

Pennsylvania Fish Commission.

In a personal letter from Fish Commissioner Demuth, of Pennsylvania, occurs this paragraph: "Our hatcheries are in good shape this year. At Allentown and Corry we have 1,600,000 eggs each in process of hatching, and we expect to have at least 3,000,000 trout fry for distribution in the spring of 1894. We also intend to build a hatchery for shad on the Delaware River, and be ready to operate it on the spring run of fish. We will have trouble with

our applications for fish this season, as the Legislature passed an act making it necessary for all applications to be signed by a member of the House or Senate before going to the hatchery. We have always endeavored to give every applicant fish, without regard to location, if the waters were suitable." This is a strange provision on the part of the law makers, and smacks too much of politics and "pulls," and that sort of thing. Even New York has not got to that point, although it was once advocated by one of the superintendents some years ago, and I understand he tried to put this method in practice. Fish Commissioners are appointed for the purpose of making the very best use of all the fish raised by the State, and it is for their own interest and to their credit to make the fish go as far as possible in stocking the suitable waters of the entire State, and to a man up a tree it would appear that the whole matter of fish rearing and fish planting could be left in their hands, without interference on the part of a middleman to approve of applications, who in the very nature of things is not supposed to know as much about proper waters for certain fish as the men to whom the applications would otherwise go direct.

A. N. CHENEY.

Mississippi Fish Slaughter.

CHICAGO, Ill., Dec. 23.—The Dubuque (Iowa) *Trade Journal* prints the following in its November issue. Will the present or incoming Fish Commissioners of Iowa please copy into his hat:

"Vandalism in regard to the fish in the Mississippi River at Dubuque is on the rampage. Seiners are dragging the stream to the complete destruction of the life therein. Cartloads of the fish appear in the market, of all sizes, from the largest down to five inches in length, the latter weighing probably two ounces. Smaller fry are thrown on the bank to perish. All kinds of game have been exterminated in this region, and the fish in the noble river seems similarly doomed. And this, too, notwithstanding the fact that it is understood that the Government has to some extent been restocking the water. Is there no way to stop this wholesale slaughter of the finny tribe? Wisconsin has taken the matter in hand and those draggers of seines and owners of nets are liable to penalties as far as its shores extend. Iowa ought to copy its laws, if not, make more stringent ones, and sportsmen and others ought to see that they be enforced." E. H.

Fishculture and Fish Protection.

THE COAST FISHERY CONFERENCE.

Proceedings of Conference Held to Consider the Subject of the Exhaustion of Coast Line Food Fishes.

OFFICIAL REPORT BY SECRETARY E. P. DOYLE.

THE conference was held pursuant to the following CALL.

NEW YORK, Nov. 15, 1893.

DEAR SIR—The growing scarcity of edible fishes along our coast line, from Maine to Virginia, is a matter of importance that should not be overlooked by the States interested. The cause or causes of this diminution should be ascertained, and some remedy, if possible, should be applied at once by the enactment of simple and uniform legislation in all of the seaboard States, before the now reduced supply becomes further exhausted. With this object in view, and with a desire for a full, impartial and thorough examination of the whole subject, we, the undersigned citizens of the State of New York, have determined that some effort should be made to obtain a conference of the Commissioners of Fisheries, as well as other citizens of the seaboard States interested, who have made the matter a study, in order that some plan of action be adopted to secure the protection and preservation of food fishes. We, therefore, invite you cordially and request that you will personally invite such citizens of your State as may feel sufficient interest in this matter, to attend a conference to be held at the office of the Commissioners of Fisheries of the State of New York, at No. 53 Broadway, New York city, Wednesday, Dec. 13, 1893, at 10 o'clock A. M. This invitation or request will be extended to all members of the Commissions of Fisheries of the States of Maine, Massachusetts, Rhode Island, Connecticut, New Jersey, Pennsylvania, Delaware and Maryland, and the Commissioners in addition will be requested to invite such citizens of their States as would be likely to take sufficient interest in the matter to attend such conference.

We sincerely hope that your State may be represented by you, as well as by other citizens, at this conference, and that the results may prove of benefit to all the seaboard States.

Please acknowledge the receipt of this communication as promptly as possible, and give such expression of your sentiments on the subject as you may entertain, and advise us whether you will be present at the conference. We remain yours very respectfully,

Austin Corbin,

L. D. HUNTINGTON,  
W. H. BOWMAN,  
DAVID G. HACKNEY,  
ROBERT HAMILTON,  
A. SYLVESTER JOLINE,

Commissioners  
of Fisheries  
State of New York.

The convention was called to order at 10:30 A. M. Wednesday, Dec. 13, 1893, in the reception parlor of the Gerlach, 55 West Twenty-seventh street, New York city. William H. Bowman, one of the Commission of Fisheries of the State of New York, was elected chairman, and Edward P. Doyle, secretary and engineer of the same Commission, was elected secretary. The following delegates were present: Bushrod W. James, Philadelphia, Pa. E. A. Brackett, Commissioner

of Fisheries, Massachusetts. Leonard Hulitt, Asbury Park, N. J. D. T. Church, Tiverton, R. I. Sylvanus Smith, Gloucester, Mass. David Banks, 10 West Fortieth street, New York. B. T. De Butts, Boston, Mass. H. B. Joyce, Boston, Mass. Atkins Hughes, Truro, Mass. J. M. R. Southwick, Commissioner of Fisheries, Newport, R. I. A. Walling, Jr., Keyport, N. J. James F. Edge, Asbury Park, N. J. Caleb Haley, Fulton Market, New York. George M. Vail, Orient, L. I., N. Y. J. O. Lewis, Wickford, R. I. Luther Maddocks, Boothbay, Me. George N. Bliss, East Providence, R. I. Parker W. Page, Commissioner of Fisheries, Summit, N. J. Robert D. Foote, Commissioner of Fisheries, Morristown, N. J. James B. Church, Tiverton, R. I. John T. Hargard, New York. James F. Church, Bailey's Island, Me. A. W. Rowe, Philadelphia, Pa. A. E. Potter, New York. Edward G. Whitaker, New York. Alfred Hand, Philadelphia, Pa. Charles F. Chamberlayne, Bourne, Mass. Nelson Lockwood, North Long Branch, N. J. S. M. Johnson, Boston, Mass. Henry C. Ford, Philadelphia, Pa. H. O. Wilbur, Philadelphia, Pa. John F. Sudler, Commissioner of Fisheries, Maryland. C. H. Angus, New York. A. M. Spangler, Philadelphia, Pa. B. L. Douredoure, Philadelphia, Pa. Jas. H. Miller, Philadelphia, Pa. Cyrus S. Detre, Philadelphia, Pa. Harry W. Quick, Philadelphia, Pa. Wm. Thompson, Philadelphia, Pa. George Coe, Bay Shore, L. I., N. Y. Edward Thompson, Northport, L. I., N. Y. George T. Moon, New York. I. C. Young, Long Wharf, Boston, Mass. Wm. Findlay Brown, Philadelphia, Pa. Henry A. Reeves, Greenport, L. I., N. Y. Robert B. Chalker, Saybrook, Conn. I. Spicer Leaming, Cape May City, N. J. Colonel Marshall McDonald, United States Fish Commissioner, Washington, D. C. Dr. Bashford Dean, Columbia, S. C. Robert F. Walsh, New York. Fred Mather, Cold Spring Harbor, N. Y. Dr. John D. Quackenbush, Columbia College, New York. Edward Sternfeld, New York. Robert E. Follett, Commissioner of Fisheries, Connecticut. Judge Henry P. McGown, New York. Edwin R. Kelsey, Connecticut. Col. John Gay, Commissioner of Fisheries, Pennsylvania. Joseph Belser, New Haven, Conn. L. D. Huntington, Commissioner of Fisheries, New York. W. H. Bowman, Commissioner of Fisheries, New York. Robert Hamilton, Commissioner of Fisheries, New York. David G. Hackney, Commissioner of Fisheries, New York. Edward P. Doyle, Secretary Commission of Fisheries, New York. Albert E. Cochran, New York. Robert B. Roosevelt, New York. Dr. William M. Hudson, Hartford, Conn. Mayor Frank L. Ten Broeck, Asbury Park, N. J. Alvin P. Hildreth, Riparian Commissioner, New Jersey. William T. Fox, New York. Watts T. Miller, New York. Dr. Tarleton H. Bean, Washington, D. C. Sakaye Sawatari, Japan. Frank J. Amsden, Rochester, N. Y. Isaac Smith, Staten Island. M. F. Collins, Staten Island. M. Fitzgerald, Staten Island. M. Fitzgerald, Jr., Staten Island. J. Warren Pond, Chief Game and Fish Protector, Malone, N. Y. C. B. Reynolds, New York. John A. Githens, Asbury Park, N. J. Robert Potter, Long Branch, N. J. A. Val. Woodruff, Brooklyn, L. I., N. Y. F. R. Jorgensen, Gravesend, L. I., N. Y. Julius Nelson, State Geologist, New Brunswick, N. J. John Hennessey, North Long Branch, N. J. J. W. Adams, Boston, Mass. M. C. Lohrens, Belford, N. J. Pulaski Benjamin, Fulton Market, N. Y. J. R. Reed, Boston, Mass. Owen E. Houghton, D. D. S., Brooklyn, L. I., N. Y. A. A. Adams, 199 Fulton street, New York. L. P. Streeter, Morristown, N. J. Louis Streuber, Commissioner of Fisheries, Harrisburg, Pa. W. F. Round, New York. W. B. Williams, New York. Alexander Taylor, Jr., Mamaroneck, N. Y. James Allen, New York.

Mr. W. H. BOWMAN, on taking the chair, stated the object of the meeting, and said that there was no purpose in it other than to learn the truth as far as possible, and to ascertain the reasons for the complaints of the scarcity of food fish for hook and line men and anglers; that this interest, and the invested capital on a large scale, if found to conflict with each other, should endeavor so to adjust their relations toward each other as to remove friction in order that all might enjoy fishing privileges, and at the same time the food fishes of the coast be preserved by some efforts to be devised toward that end, should it be found that a depletion is going on.

At the suggestion of Mr. Roosevelt, the representatives of the various firms and interests in attendance upon the conference had their names and the names of their principals recorded.

MR. JAMES M. R. SOUTHWICK (Rhode Island) criticised the call as being "upside down," in that he construed it as beginning with a statement that there is a scarcity of fish and concluding with requesting an investigation.

THE CHAIR said that the object of the call was to get an assemblage of those competent to speak, and that there was no thought of pre-judging the merits of the matters that were to be discussed, that it was earnestly desired that every one should have the fullest opportunity to express his views, and if the necessity presented itself to the minds of the majority, the example occasionally afforded in politics could be followed, and they could "repudiate the platform and go the man."

MR. SOUTHWICK (R. I.) said that he represented no particular class of fishermen; the interests of the hook and line fishermen should be considered as well as the interests of the net fishermen, and he thought the objects of the conference would be better expressed by the following, which he offered:

*Resolved*, That the purpose of this conference is to inquire into the general condition of the coast fisheries and to consider what, if anything, can be done to improve them.

MR. GEORGE T. MOON (N. Y., Fulton Market) said that it seemed to be a waste of time to discuss shades of meaning; it was clearly enough expressed as to the object of the conference. An expression of opinion was the thing wanted as to whether there is a diminution of fish supply on our Atlantic Coast, and if so, would legislation, and what legislation, protect the interest of the people. To arrive at a satisfactory conclusion statistics were necessary, and he hoped that gentlemen were prepared with facts and figures and that the meeting would proceed to the business in hand with the least possible delay.

MR. CYRUS S. DETRE (Philadelphia) said it had been his privilege and pleasure for years to go a-fishing six months of each twelve along the New Jersey coast, and lately he had been on the coast of North Carolina; that he had noticed frequently the operations of the menhaden steamers. He said that it is his experience that the supply of game fishes is rapidly disappearing from the Atlantic seaboard, and while the menhaden industry as carried on does great havoc, he was convinced that the pound nets are far more disastrous. It seemed to him that the menhaden are disappearing rapidly, and he thought that by reason of their exhaustion the evil would regulate itself in the menhaden affairs, for the business would not pay. But the effect would be also felt on the food fishes supply, especially in the case of the bluefish, which, if they could not find bunkers, would feed on other tribes of food fish, such as weakfish and striped bass, which would also be deprived of the food supply that they had heretofore found in the menhaden. He did not speak with bias, nor as an uncompromising and out and out rod and reel man, but as an observer. There is no question that the food fish are being depleted, and it is true of the North Carolina coast. He had been told by net fishermen there that the two last successive seasons had been bad; that they are beginning to recognize the evil of what they are doing, and his informant said to him, "I will take up my pound if my neighbor will take up his." But I want to speak especially of the pound nets along the New Jersey coast. I understand there are about 28 pound nets between Barnegat Inlet and

Sandy Hook, or around Sandy Hook. These pound nets a few years ago did not do the damage that they are doing now, for the reason that they did not extend far enough into the sea. But within the last few years they have put on an extra leader that leads out into another pocket, and that pocket goes out to the bar and over the bar. We all know, or ought to know, that fish in feeding up and down the coast run in and out the inlets, especially striped bass, and feeding fish sometimes run along the bar, and over the bar, and between the bar and the shore. Therefore, fish that years ago used to escape by keeping a little further off are now picked up—all sorts of fish are picked up, all sizes of fish are picked up. These pounds are put out early in the season. Sea bass are caught with spawn and shad are caught with spawn; that destruction goes on all summer and immense numbers of weakfish are caught. I have seen 30,000, 40,000, 50,000, 60,000, 80,000, 120,000 lbs. of fish taken out of one pound in one day. Fishing will have an end if that destruction is continued year after year. They used to tell us that the buffalo could not be exterminated, nor the salmon. I do not know much about mackerel, but they tell me that they are disappearing. In addition to the destruction in the early summer and in the spring, the baby fish are caught in the fall, and in the nets a great many, large and small, are crushed, especially the small ones. So many fish are sometimes thrown overboard that they become a nuisance on the shore. There is no question that the shore fish are disappearing.

MR. CALEB HALEY (N. Y. Fulton Market) called for papers and statistics.

A member of the conference inquired what method could be employed for taking fish for market were the pound nets to be taken up.

MR. CHAMBERLAYNE (Mass.) moved that the resolution that had been offered by Mr. Southwick be laid on the table and that a call be made for papers.

MR. A. WALLING, JR. (Keyport) offered as a substitute the following:

*Resolved*, That this conference adopt as the basis of its action the declaration of its chairman that the object of the meeting is a full and free consideration of the matters within the general purpose of the call, and that a general expression of views be invited.

This substitute was accepted, and the question being put it was carried.

The following gentlemen then indicated their purpose to present papers: D. T. Church, Rhode Island; J. M. R. Southwick, Rhode Island, Chas. M. Vail, Orient, L. I.; Chas. F. Chamberlayne, Massachusetts; Henry C. Ford, Pennsylvania; E. A. Brackett, Massachusetts; Henry A. Reeves, Long Island; Robert F. Walsh, L. D. Huntington, W. T. Fox, W. T. Miller, Albert E. Cochran, New York.

MR. WM. FINDLAY BROWN (Philadelphia) suggested as a time-saving expedient that the papers be read under a call of States, but this proposition was deferred for the present, and the conference acquiesced in the motion made by Mr. Roosevelt that the paper of Mr. Huntington be first read.

MR. HUNTINGTON being temporarily absent, Mr. Daniel T. Church was heard. [Mr. Church's paper was given to a reporter, and up to time of this report going to press a duplicate had not been secured.]

MR. D. T. CHURCH went on to say as follows: In Holland they tried for 300 years to do with their fishing what these gentlemen are trying to do with our fishing, and as a consequence their fishing industry was almost destroyed. But now they let it alone, and since they have had "free" fishing they have been prosperous. A restriction interfering with fishermen and their apparatus is against public policy.

Now, as to mackerel. In 1884 they were as plenty as they were ever known before. The porgy in 1890 made its appearance on the coast of Rhode Island, and between Buzzards Bay and Sandy Hook that fish since 1890 has been as plenty, or plentier, than ever before known in the history of the fishing business. In 1881 sea bass appeared from Virginia to Buzzards Bay, all about one size, and in 1884 more sea bass was on the coast of the United States than has ever before been known in this century. As to striped bass, seven or eight years ago there were more striped bass on the coast of New England than had been known before in the last fifty years. In the year 1892 tautog were plentier than ever before known in the last forty or fifty years, as Fulton Market fishermen can show you. Menhaden in 1887 were as scarce as we ever knew them; but in the year 1888 there were more menhaden between Penobscot and Sandy Hook than has been known in a century. The firm that I represent, in 1887 had twelve fishing gangs fishing from the commencement to the end of the season, and all we caught was less than 140,000 barrels of fish. In the year 1888-9 one gang of fishermen got more than twelve gangs in 1887, one of the best illustrations of the constant fluctuations of fish. As to weakfish. Men put themselves on record that weakfish are scarce. Not in the history of the business has there been as many weakfish present on the coast of the United States between Buzzards Bay and New Jersey as there has been this year. The water has been literally jam full of them. There have been thousands and thousands of barrels lying idle, left in the nets, for the reason that it would not pay to ship them. Gentlemen think they can always catch fish when they are on the water. In Narragansett Bay there is no question that there have been more weakfish than ever before known, and on inquiry among fishermen I have yet to find one man who has caught two weakfish with hook and line, out of this immense number present. The fish were so thick that at some places you could take a gaff and haul them ashore for hours at a time. Fulton Market men will all tell you that there are thousands and thousands, many thousands of barrels of weakfish shipped into Fulton Market that do not pay for the freight and ice and barrels and usual expenses. It makes no difference whether man catches them, or not; it is only a short time when they are going to be scarce. When tautog were plenty in 1892 not one in a million was taken, of course. But in 1893 there was not one tautog in the water where there were a hundred before. That scarcity is bound to come, and man is not to be figured in those periods of scarcity. We are prepared with any amount of statistics and facts to make that plain to everybody. I say to these sportsmen of wealth and leisure that we are not your rivals, we are not in any way interfering with you. When fishing is good, it is good for all; and when there are no fish, there are none, and the fisherman is "not in it" in any way or shape. If you knew the facts you would stand on our side, and do all you could for us to help us along, instead of driving us. We are only 200 years old, or 300, as a country, and our fishery industry as a rule is prosperous because it has been free. But if you restrict us, and drive us out, we shall be the same as fishermen on the other side of the ocean.

Mr. Huntington's paper was then read as follows:

## EXHAUSTION OF COAST LINE FOOD FISHES.

### The Cause for this Exhaustion and the Necessary Remedy.

By L. D. Huntington, President Com. of Fisheries, State of New York.

THE growing scarcity of edible fishes along our coast line, from Maine to North Carolina, is a matter of importance that should not be overlooked by the States interested. The cause or causes of this diminution should be ascertained, and some remedy, if possible, applied at once by the enactment of simple and uniform laws in all the seaboard States, before the now reduced supply becomes further exhausted. Such were the convictions of the signers of the call for this conference, and this I feel assured is the honest conviction,

not only of those here assembled, but of every citizen along the coast of our seaboard States that has given the subject his consideration, excepting some of those whose vocations are such that their pecuniary interest in fish, either directly or indirectly, makes them indifferent to the supply of the future. This growing scarcity may be more pronounced at some given points of our extensive coast line than at others.

I am pleased to see that we have here with us gentlemen representing a good portion of our coast line, and well advised upon this important subject, especially so as to their section, who I feel assured will indorse as a fact the growing scarcity of edible fish.

So far as the waters of our bays, estuaries and along the shores of the State of New York go, there can be no question in my judgment, formed from observation and experience, that there is a growing scarcity, especially so for the last decade, accepting as a fact that the edible fishes have greatly decreased. The two important questions then are: First, the cause or causes. Second, a remedy.

What are the causes? There are probably a number. Possibly in certain prescribed waters, sewerage, the refuse from oil and gas works, and the discharge of other deleterious matters, might account for the fish not now frequenting prescribed waters wherein they were formerly abundant. If it were not for the fact that in adjacent waters entirely free from such causes, we find a growing scarcity, our migratory fish varying as to their abundance, some years more, some years less, they nevertheless, with possible exception, as well as our local fishes, show at every decade a decrease, we might name the above as the sole cause.

There may be other local causes suggesting themselves to those who have given this subject careful attention, especially in localities other than I mention.

Gentlemen, there are two real causes that are responsible for the growing scarcity. The first cause (which is a natural one) has led to the second, which is susceptible of remedy. The first cause I refer to is the fact of increased population, consequently increased consumption of fish food, thereby increased demand. This increased demand has called forth the ingenuity of man to invent improved methods of capture, whereby he can take more fish with less labor than with former apparatus. Therefore, of late years we see the purse net and the pound net in use in our bays and estuaries and along our shores, and the indiscriminate use of nets in general and of the purse net and pound net in particular, with no restrictions as to size of mesh or mode of use, is, to my mind, without doubt one of the principal causes for the growing scarcity of our edible fishes along our seaboard.

It is a well-known fact that our coast shore is literally lined with pound nets, many of them extending a great distance from the shore, taking all kinds of fishes that attempt to pass them or feed near them. There can be no doubt but what the pound net, to the extent and in the manner used, is the cause of the destruction and wanton waste of large quantities of valuable food fishes yearly.

Further, that it is the cause of driving off from our shores (at least along this section of the coast) large quantities of fish that follow the shores to enter our bays and estuaries, not only for the purpose of food, but for the purpose of reproducing. As evidence of this, I might cite Barnegat Bay, the Great South Bay and west end of Long Island Sound. The two bays mentioned, until within a few years past, were noted for their abundance of such valuable food fish as the striped bass, sheephead, bluefish, weakfish, kingfish, etc., while at the west end of Long Island Sound there were to be found striped bass, bluefish, weakfish, kingfish, etc. For the past few years these favorite feeding and spawning grounds of all these valuable food fish have been deserted by them, and the thousands of men of limited means who have made an honest living by taking these fish in moderate quantities within these waters, coupling with it the furnishing of boats and bait for the thousands of anglers, are compelled, from no fault of their own, to seek some other vocation to earn a livelihood for themselves and families, and I have no doubt but what this applies to a good portion of our coast shore equally with Barnegat, the Great South Bay and west end of Long Island Sound and waters adjacent thereto.

It is claimed that the use of the purse net along our shores, in our bays and estuaries, is in no way responsible for the growing scarcity of our edible fishes. I have heard it said by those interested in the menhaden fisheries that the purse nets do not take edible fish enough to supply the hands on board the boats using the nets. To any person at all familiar with the purse net as used for taking menhaden, this statement cannot for one moment be credited, as it is impossible to use this net, as the menhaden fishermen do, in waters that do not exceed the depth of the net used, without taking all fish which the net surrounds when set, unless they be so small that they escape through the mesh, or so strong that they break through the net.

I submit for consideration the following problem: Let a purse net, say 1,500 ft. long (there are much longer ones used), be set in a circle with the ends meeting (as they always are). You then have a flexible wall from the surface to the bottom, inclosing a circle of 500 ft. in diameter, or containing an area of some four and one-quarter acres. The net is then pursed along on the bottom until it is closed, thus forming a big scoop-net. Now, how do the food fish that are in this inclosure of four and one-quarter acres escape, and how are the menhaden only taken?

I herewith submit for your consideration some valuable evidence upon this point in the evidence of Capt. Nathaniel B. Church, one of the firm of Church Bros., of Tiverton, R.I., before the Senate committee in 1882. (Report 706, p. 7):

Q. Now, if you have caught food fish, state to what extent? A. We have caught so very few that we have not caught enough to eat really. On this trip of 2,000 barrels we brought in yesterday, we caught one bluefish; that is all in the whole lot. We caught probably a hundred sharks, and for the last six weeks we have been fishing off the Cape of Delaware; there, in the body of menhaden, we have not caught fish enough to eat; nowhere near enough. We catch sometimes a bonito, half a dozen bluefish, a weakfish or two. We caught three Spanish mackerel for the year, and three sheephead. We caught very few mackerel in the spring. We always make a point to pick out all the food fish we can.

Q. What do you mean, throw them back? A. No, sir; throw them on deck, to eat.

Q. You take in your fish by steam power, do you not? A. Yes, sir. Q. I suppose it is impracticable to make any careful selections? A. Yes, sir. The fish come in in quantities of five barrels in the net. They go down the same as on this floor, and they spread out. Of course you would not have time to see the whole.

Q. How are they deposited in the vessel? A. In bulk.

Q. What in? A. In a hold made on purpose. The compartment holds anywhere from 500 to 1,000 and 1,700 barrels.

Q. And the fish are brought in in the landing net, they are thrown into that? A. They are dumped down right into the box; the same as this room, exactly.

Q. What is the depth of the hold? A. The depth of my boat is about 8 ft.

Q. How much square? A. It hold 1,600 barrels. It is 33 or 30 ft. long, about 30 ft. wide and 3 ft. deep, I think. I do not know the exact dimensions; that is as near as I can guess.

Q. If you capture sufficient you throw them into that until you fill it? A. Yes, sir.

MR. OSCAR O. FRIEDLANDER, seven years a Menhaden fisherman, before the same committee (p. 23), testifies on this point as follows:

Q. Have you ever seen bluefish as large as that caught in your seines? A. An odd one here and there, sir; a straggler.

Q. The seine is unloaded into the hold of your ship pretty rapidly, is it not? A. Yes; they unload about a thousand a minute; quicker than that even. They have steam hoisters on board the steamer, and hoist them out.

Q. And the opportunity to see what kind of fish they are is to see them as they are thrown out into the bins? A. Yes, sir.

Q. They are never examined afterward, are they? A. Well, we see them at the factory as they come in.

The testimony of Samuel B. Miller, of Brooklyn, N. Y., a fish dealer, before the same committee (p. 39), is in interesting contrast:

Q. The captains of four or five of the menhaden fish steamers have testified that they rarely catch food fish of any kind; it is an exceptional fact if they take them. Have you any knowledge in regard to that? A. I have knowledge that I received 70,000 lbs. from one of Daniel Church's steamers within the last thirty days.

Q. What fish? A. Weakfish.

Q. Do you remember the name of the captain? A. His name is Church. I think he is one of the brothers.

Q. Which brother? A. I do not know any one by name except Daniel.

Q. Well, Daniel does not fish? A. He does not now; has not for a number of years. I have been acquainted with them since they were very young; they are very nice men. He claimed that they thought they were a school of bunkers.

Q. That is, menhaden; they claimed to have taken them by mistake? A. Yes, sir.

Q. And they were put on the market? A. There were 10,000 lbs. of them put on the market.

Q. What was done with the balance? A. Barren Island, that is the load I spoke of. I should think there was 70,000 lbs. weight.

Q. Do you recollect how long ago it was? A. It was within thirty days. It is not much more than two weeks ago. I sent a check to Daniel Church for what he had sold here.

Q. With that exception, what knowledge have you, if any, as to their taking food fish? A. I have no knowledge of their taking food fish, other than they have sent to market. They have had mackerel and sent them up to market to be sold in the market.

Q. What market? A. Fulton Market; but I have no knowledge of their taking any that they sent to be tried out, except those that were used for sale. They sent these to market, but they could not be disposed of there.

Q. They describe the hold of the ship as a bin 20 ft. wide, 25 or 30 ft. in length and 3 ft. in depth; and I should judge from their description that they put fish in there at the rate of about a thousand a minute; they estimate their scoop will take a thousand, and say they can throw a scoopful of fish in a minute into the hold of a vessel that way. I suppose food fish, if thrown in that way, would not preserve long in a condition fit to use? A. They throw them right into the hold of the vessel. It is heated. The whole steamer is heated. Then they turn water in on them to cover them.

Q. That is new to me. A. And when it has lain there some time they blow it out.

Q. How the water out? A. Yes, sir. If he catches any food fish, which he does in the spring, fine mackerel, he generally sends them up to me and we dispose of them.

Q. What captain do you speak of? A. Daniel; all his captains. These fish were very fine indeed; some they dressed on deck coming up. I took out enough to make 10,000 lbs. It was night; too late to take care of them, and those down in the hold were heated. Next morning there were none taken out; they were used for sale; the captain came up to see me and I told him to haul right out.

Q. I want to inquire, to be general, if food fish are caught with menhaden in their mode of taking fish, whether they would be kept in condition for use as food fish? A. Put in the way they put in menhaden, I do not think that those that were caught in the below the surface could be fit in three hours. I think they would heat in less time than that.

Q. The extent to which they take food fish, if they take them at all, is not, I suppose, within your means of knowledge? A. No, sir.

Q. How many have you purchased of menhaden boats this season? A. I had a smack come up with a load that she took from one of the menhaden steamers, dressed them and put them below and iced them. She was down there and had her ice in. They were brought for market.

Q. Give an estimate of the cargoes you have purchased this season? A. She must have had 15,000 lbs.

Q. From the menhaden boats? A. Yes, sir; they were in pretty good condition.

Q. Do you mean in addition to the 70,000 lbs. you mentioned? A. Yes, sir.

Q. What description of fish? A. Weakfish.

Q. Any bluefish? A. I do not think there were any in that boat; in the 70,000 lbs. there were some bluefish; perhaps there might have been 500 lbs. That is all I know of coming to our market this season from any of these menhaden fishermen.

The evidence of Maurice Cresse, of Cape May City, is to the same effect (p. 154):

Q. Now, you know something of the habits of the fish. Wherever a school of menhaden is found and surrounded by a purse net is not it a necessity that whatever food fish are pursuing them are taken in with them? A. Oh, yes. I have fished a purse net myself.

Q. For the purpose of oil and fertilizers, the catching of menhaden and other fish, I suppose, is a valuable industry to the people? A. Yes, sir.

Q. Which do you regard the most valuable, that or the right of the people to have the reason for it? I regard the right of the people to have the food fish, and the destruction is very great. Now, I never saw them, but if they should catch a vessel load of what we call bluefish or weakfish, they would put them into the general cargo and boil them up. They would not get much oil, but they would get the refuse, the fish scrap, which is worth \$3 a ton.

The evidence of Mr. Eugene G. Blackford is confirmatory (p. 48):

Q. Please state in your own way what your judgment is as to the effect of the menhaden industry upon the quantity of food fishes, and the reasons for it; I would like to get your view upon it? A. My attention was called to this fact from parties calling upon me to make complaint to me, as Commissioner of Fisheries, that the menhaden fishermen were catching food fishes and carrying them to their factories to be made into oil and scrap. I replied to all those parties that my position as Commissioner of Fisheries gave me no authority whatever; that there was no law to prohibit that, and that no interference was made with the business. I have noticed, of course, as I have with everything connected with the fish questions coming up from time to time, that the menhaden interest up to within two years was a growing and expanding interest; that the number of boats was increasing year by year; that our coast was fished from Maine to North Carolina persistently from the time the menhaden appeared until the cold weather; that those points where the fisheries were commenced and most active prosecuted seemed to be exhausted after a few years—I speak more particularly of the coast of Maine, where it is called porgy fishery. They call them porgy, which is a different fish from what we know as porgies. It is the menhaden there, and that, from my own knowledge, every year those fishes which feed upon menhaden grow more scarce. The quantity diminishes most notably in the striped bass, and the present year has been one of very marked scarcity in this, one of our choicest fishes. It is not scarce in one particular point, but it is scarce all along the coast, where it is usually found. There have been several instances which have been spoken of here, of my own knowledge, where the menhaden vessels have taken large schools of food fish and have brought them to the top and made a very large catch of 1881, about a year ago, just about this time of the year, was the principal catch of weakfish. Some four or more vessels came up to Fulton Market with a cargo, a quantity of at least 200,000 lbs., nearly all weakfish, and out of that 200,000 lbs., about one fourth of it was marketed.

Q. Where had they been taken? A. They had been taken probably not over five miles from where we sat, right along this coast here, the coast of Long Island.

Q. The outer coast of Long Island? A. As I recollect, it was right in the vicinity of Rockaway they were taken. About one-fourth of those fish were in good condition—fit for food. These are fish that were lying upon the top layers, so to speak. The fish had been taken and dumped into the holds of the vessels, and it being very warm weather, heated of course where they lay packed in underneath with the weight of those on top and men were put to work discharging the fish, distributing them to every dealer who would take them, and assignment to sell. They were sold as low as one cent a pound. There was an effort for immediate distribution of the fish because of the warm weather and they needed immediate attention to keep them any time. The balance of those cargoes were sent to the factories. The vessels steamed away with them, and they were rendered into oil and scrap.

Q. Do you know to whose factory they went? A. No, sir. That is the most notable instance. That all the menhaden fishermen would rather bring their food fish to market than to put them into oil and scrap is a self-evident fact, if they were provided with proper facilities for the care of the fish; if they were fitted for market fish.

Q. Yes, I understand that they are not a desirable fish to manufacture? A. No, but you take a bluefish in the fall of the year and it is very fat.

Q. Now the other part of my question, as to the effect of the menhaden fishery upon the food fish and the reason for it; can you state that? A. In my opinion the effect of the great amount of fishing that is carried on for menhaden all along the coast breaks up the schools of fish which are followed by the striped bass and bluefish, and has a tendency to make those fish seek other feeding grounds. I speak more particularly with regard to the striped bass, as that is a voracious fish on the menhaden. The striped bass two years ago were found in more or less quantities during the entire summer and late in the fall. Very

large catches were taken on the Long Island coast, as many as 20,000 per day coming to Fulton Market. That quantity has been steadily diminishing year by year, and this year the scarcity is more marked than ever before.

The evidence of Thomas J. Horner, a fisherman of Atlantic City, N. J. (Report 706, p. 170), bears internal evidence of truthfulness:

Q. Has the supply of the fish used by the people for food increased or diminished during your experience? A. They have decreased. They have also increased in these last four years. Previous to that they diminished. When I first followed fishing if we did not catch a hundred fish a day and come along the street with less than that the old fisherman's song was sung to us. I think it is seven or eight years ago that father and I built the first fish factory that was ever built on the coast of New Jersey.

Q. You mean a menhaden factory? A. A menhaden factory. It was built for a man that belonged in Connecticut. We were the contractors to build the house. The first load of fish that came to that factory was a load of menhaden; the second load was a load of weakfish, and a full load. The next load that came to that factory was a load of drumfish. They were thrown into the waste heap as the weakfish were. I said to my father then, "Father, we have done something we ought not to have done. We have done something that we thought was going to benefit the community which will never benefit it." "Why," he said, "boy, how you talk." "Well," I said, "it is so. In less than three years from now in our little village where we go to get fish, given to us for nothing, we will pay ten cents a pound for fish in drawing your same old menhaden." A. Sometimes we caught a good many food fish, and another time we caught a very few.

Q. Well, on the average would there be a considerable quantity of food fish? A. There sometimes would be quite a number of food fish among them, and other times would be very little; whatever there was within the bounds of the net.

Q. There is a thing in your experience to justify the theory of some of these witnesses, that the menhaden were always found by themselves exclusively; that they were not largely intermixed with the food fish? A. On that I can only tell you my experience. I seldom ever made a haul but what I always caught a certain quantity of food fish. I seldom made a haul but what I caught more or less drumfish.

Q. Did you fish in shallow water? A. I calculated to fish in ten fathoms if I wanted to make a haul.

Q. Did your net reach the bottom? A. Yes, sir; the net was sixteen fathoms deep.

In a statement of Prof. G. Brown Goode, before the International Fisheries Exhibition, London, England (quoted in 79 Con. Rec., p. 4783), he says:

There can be no doubt that the extensive fisheries prosecuted by menhaden steamers in the Gulf of Maine were prejudicial to the shore fishermen by driving the fish they formerly caught for bait out to sea and beyond the reach of their nets.

The reason is also furnished by the same gentleman (Misc. Docs. 49, 2d Sess. 45th Cong., p. 117):

The purse seine is doubtless more effective than any other fishing apparatus ever devised. By its use a school of almost any size can be secured without the loss of a single fish. The enormous demands of the oil factories can be met only by fisheries conducted on the grandest scale, and the purse seine is used by the factory fleets to the exclusion of all other nets.

Mr. S. L. Boardman, of Augusta, Me., in an interesting report to the State Board of Agriculture, of which he was secretary, (1875, p. 60), states the facts as follows:

Parties engaged in taking menhaden now go off 10 or 20 miles from shore, whereas they formerly fished near the coast, and now they find the best and "most profitable fishing at that distance." This fish is included among the shore fishes described by Prof. S. F. Baird as having suffered "an alarming decrease" among the fisheries conducted on the United States, owing partly to excessive fishing throughout their spawning time in order to supply the oil factories.

Prof. G. Brown Goode, in his "Short Biography," says:

In estimating the importance of the menhaden to the United States, it should be borne in mind that its absence from our waters would probably reduce all our other sea fishes to at least one-fourth their present extent.

For various evidence to the same effect, see Misc. Docs. 49, 2d Sess. Cong., p. 75. In the same document, Prof. G. Brown Goode states this fact at p. 144:

Constant fishing on the Northern coast has driven the menhaden out to sea, though in the South their habits are much the same as of old. In New England the menhaden fishery has become to a certain extent sea fishing and is prosecuted on the grandest scale.

In Misc. Docs. 48, 2d Sess. 45th Cong., p. 111, it is said by Prof. Goode:

It is the commonly received opinion that purse-net fishing is destined evidently to destroy all the menhaden in our waters. \* \* \* The same may be said regarding pound-net fishing. It is doubtless true that the fisheries in a given locality may deplete the immediate region in which they are prosecuted. The cod and halibut may be fished for upon a single bank until the local supply is exhausted.

From the report of the United States on menhaden fisheries I find the following as to the habits of the menhaden:

They prefer the shallow places along shore and some years crowd in great numbers into the brackish sounds and inlets, and ascend some of the larger rivers for a long distance, until the water becomes too brackish for them.

Prof. Goode says (Misc. Doc. 49, 2d Sess. 45th Cong., p. 70):

They seem particularly fond of shallow waters protected from the wind, in which, if not molested, they will remain throughout the season, drifting with the tide in and out of the shallow indentations of the shore and into the mouths of creeks and rivers, on the surface of the water; but the gill nets will take them long after, and they have been so taken as late as New Year's, when they are quite plenty. This shows that they are not gone at that time. Who knows but what they are close by all winter?

"As to their habits," I would say that while they were generally credited with being an off shore spawner, U. S. Commissioner McDonald informs us that he had their habits investigated along our coast during the season of 1892, and from evidence so procured, he has no doubt of their being an inshore spawner, and that they seek the shallow, brackish water along our shores, bays and estuaries for the purpose of spawning."

This fact of itself, without taking in consideration the destruction and waste of edible fish, warrants the prohibition of the use of the purse net for the purpose of taking this fish along our shores, at least during the spawning season.

I desire to call your attention for one moment to the words of Prof. Baird, in relation to the spawning habits of fish and its importance to future supply. In his Report of 1871 he calls attention to extermination or decrease of fish by taking, thereby reducing their reproduction, as follows:

As most fish require from three to five years' growth before they are capable of reproduction, and in many cases remain in the open sea until this period is reached, it will follow that for several years after the establishment of an exhaustive fishing the supply may appear to be but little interfered with, since there are several successive crops of fish to come on at the annual intervals, and not until the entire round has been completed do the injurious agencies begin to present the evidence of their severity. It is easy, then, to understand why, after five or ten years' fishing, the supply of fish in a given bay or along a certain strip of coast will be reduced to a very considerable degree.

Prof. Baird, in his report of 1871 (Misc. Doc. No. 61, 2d Sess. 42d Congress, page 28), says:

It is not a sufficient argument in reply to this (the danger of fish extermination) to point to the enormous number of eggs laid by a single fish in each season, amounting in some instances to perhaps from five thousand to hundreds of thousands, or even millions, since the immense fecundity is an absolute necessity to preserve the balance of life under water. The eggs and the young fish furnish the appointed food to an immense variety of animals, many species of fish as well as crustaceans and other animals depending entirely upon them for support. Among the particular enemies of the eggs and the young fry may be enumerated the small minnows, cyprinodonts, the atherinas, silver sides or friars, the cunners or chogses, the young of many larger fish, the different kinds of crustaceans, including also the lobster, etc. These were not interfered with to any material extent by any form of net, as they are too small to furnish profitable employment in their capture, and they pass readily through the meshes of any nets that would be set for other purposes. Although, therefore the amount of spawn and of young fish may be materially less than a previous average, the predaceous animals just referred to will probably still destroy as many as ever, since they have every opportunity for picking up their prey at all times; and whatever the scarcity at first, they are likely to get all they require.

Prof. Baird, in his Report of 1871, at p. 18, also says:

In all discussions and considerations in regard to the sea fisheries, one important principle should be borne in mind, and that is that every fish that spawns on or near the shores has a definite relationship to a particular area of sea bottom; or, in other words, that as far as we can judge from experiment and observation, every fish returns as nearly as possible to its own birthplace to exercise the function of reproduction, and continues to do so, year by year, during the whole period of its existence. \* \* \* It is an established fact that salmon, alewives and shad, both young and old, have been caught on certain spawning beds, and after being properly marked and allowed to escape, have been found to reappear in successive years in the same locality. \* \* \* The principle is rather more difficult to establish in regard to marine fishes, but experiments have been made by competent men on our coast and elsewhere, which prove the existence of the same general principle in relation to them.

There were in use, during the year 1880, 82 steamers and 366 sailing vessels employed in taking menhaden. Now, let the 82 steamers average three hauls per day and the sailing vessels average but two hauls per day during the season of say 160 fishing days with a purse net of average length of 1,200 ft. This would be 978 hauls per day, each haul covering an area of 2½ acres would be 2,639 acres per day—430,240 acres of our waters along our coast strained every year of all the fish that happen at the time to be in it.

Gentlemen, can this be done yearly without decreasing the food fish along our coast? My figures are low estimates.

A small portion of the hauls may be made in waters deeper than the net used, in which case there is possibility of the edible fish escaping. Now, what is the effect of the constant use of this net upon those edible fish fortunate enough to have escaped it, when hauled in the shallow waters along our shores, in our bays and estuaries—the feeding and spawning ground of many varieties of our most valuable fish—but to drive them to deep water away beyond the reach of those who for a livelihood fish with hook and line, those who angle to obtain the fish food for their families, as well as those who angle for recreation, health and for pleasure?

It has been my privilege to listen to the same arguments used by those interested in a pecuniary way in taking fish with nets for market, as well as for oil and guano, also those who have a pecuniary interest in handling them after they are taken, as we are likely to hear at this conference; and right here, gentlemen, allow me to suggest that if I or you were so pecuniarily interested it is possible that we, too, would want no restriction whatsoever, regardless of waste and destruction of valuable food fishes, to in any way interfere with our making the last dollar possible, and that right now, regardless of the supply for the future. There are those so interested who claim that this important question is only a conflict or controversy between the rod and reel angler on one side, and, as they term it, the commercial fishermen on the other side. Thereby, while masquerading as men of commerce, they ignore altogether the existence of a large and worthy class of citizens, from Maine to North Carolina, whose individual capital invested, it is true, is but small and very often consists of all they have of this world's goods, but who in numbers as well as in aggregation of capital exceed by far that of either the menhaden or the pound net fishermen, or both. I refer to men, who in a small way, generally with hook and line, mostly supply local demands with their moderate catches, as well as procure bait, care for and hire boats to the anglers. Many of this worthy class of hard-working citizens are no longer able, by the growing scarcity of edible fish in the shoal waters along our shores, to make a living, and are thereby compelled to seek other vocations.

There is another class, and they are poor people, but numerous, who, when not employed, angle for the purpose of securing food for their families, and there are those termed anglers, who, for the love of the sport, as well as for recreation and health, prefer to catch their fish from the water rather than at the markets, with a zealous eye to the supply of edible fishes for the future as well as the present, they make honorable efforts to protect the fishes from destruction, wanton waste and thereby depletion.

Instances are well known where very large catches of edible fish have been made by menhaden fishermen where the quantity taken at a single haul was so large as to induce the fishermen to take them to market, the incentive being that they could realize more money for so large a quantity by selling to the market than by manufacturing them into fertilizer.

Having lived near the water at the west end of Long Island Sound for nearly sixty years and resorting to the water very frequently each year, I have had opportunities for a full observation of the use of the purse net, and I can say that I have seen bluefish, sea bass, butterfish, porgies, lobsters and oysters in the nets of the menhaden fishermen when hauling for menhaden, and could produce citizens of my locality in numbers who have seen various species of edible fishes in their nets, only in moderate or limited quantities, for the reason that edible fish in the waters of the west end of Long Island Sound are not abundant and are getting scarcer year by year.

After a full and exhaustive discussion of the subject at the annual meeting of the American Fisheries Society, in May, 1892, the following resolution was unanimously adopted:

Resolved, That the purposes and aims of this society are in direct antagonism with any business which leads to the depopulation of the waters to enrich the land, and we therefore condemn purse seiners of menhaden or any fish food or food fish for the purpose of grinding the same into guano or oil, within three miles of the shore at low water mark.

Prof. Huxley is often quoted by the purse net men, as well as by some of the fish dealers, those who look first to the percentage of gain from the fish caught and handled, regardless of the destruction and waste caused by the manner of catching. These people tell us that Prof. Huxley once said that "man was not a factor in the increase or decrease of sea fishes." This opinion was expressed by Prof. Huxley on sea fishes. Much use has been attempted to be made of it, but it fails to apply to the object of this conference, as expressed in the call, which limits the scope of our inquiry to the shallow waters along our shore, in our bays and estuaries, and to the fish therein destroyed and wantonly wasted.

Fishes which seek these waters as their natural feeding and spawning grounds, and, with one exception so far as their habits are known, remain near the shores, are the fishes which this conference was called to consider.

The deep sea fishing, as referred to by Prof. Huxley, is, in its entirety, a subject wholly under control of nations, while the shore fishing, the object of this conference, is wholly under the control of individual States.

Before leaving the subject of Prof. Huxley and his oft-quoted opinion, I would like to refer to another remark

made by the same eminent scientist. This remark, not quoted as often by fishermen as the other, was to the effect that no class of people know as little about the habits of fish as the men who catch them.

Many here present will recollect the efforts of the menhaden purse-net fishermen in 1892 to have Congress enact a law (known as the Lapham Bill) giving the purse-net fishermen the right to use that net for catching menhaden and mackerel in all waters along our coast, limited only by tide and navigable water—the laws, habits or customs of any States to the contrary notwithstanding. Strenuous efforts were made to secure this law, but fortunately it failed, and its failure saved the trouble and expense of testing its constitutionality.

The impression prevails that the menhaden fishery is an oil and guano industry, whereas it is a guano and oil industry, the value of its product of guano being larger than its product of oil. I will submit a few figures taken from the United States Report of Fish and Fisheries, Sec. 5, Vol. 1. This report gives credit to the oil and guano association for the figures as used, the figures being for the year 1890, the only year for which full figures are furnished in the U. S. Reports, although from partial figures given for the years from 1872 to 1882, the year 1880 appears to have made the largest, or best showing. The capital invested was \$2,362,841; value of product, \$2,116,887; number of fish taken, 776,000,000; steamers employed, 82; sailing vessels, 366; number of men employed in fishing, 2,543; in factories, 1,092; total 3,635. The number of gallons of oil products, 2,035,000; number of tons of guano 71,000. The value of the oil products, \$783,424, and the value of guano, \$1,362,866; the percentage of the value of products being, oil 35%, guano 65%.

There is another important matter to be considered in connection with the use of the purse nets along our shores, and that is the taking and driving therefrom of the menhaden, the natural food of the bluefish and the striped bass. The habits of these fish are to seek this food. A further serious effect upon our supply of edible fishes along our coast from the use of the pounds and purse nets is wrought by driving and preventing fish, those fortunate enough to escape the nets, from their spawning grounds, thereby preventing to a great extent reproduction, which, it must be admitted, is the foundation of our future fish supply.

As I have (qualifiedly) mentioned net men and fish dealers as being indifferent to and at least in part responsible for the growing scarcity of food fish along our shores through their desire for gain of the dollar, still there are very many honorable exceptions, and I trust the good work looking to the future supply of edible fish will receive their earnest support.

I would respectfully suggest the following remedy for the preservation of the supply of edible fishes along our coast:

First—That the use of any net in the tide waters of the coast with mesh less than about 1½ in. bar be prohibited under a penalty of say \$100, with destruction of net.

Second—That no portion of any pound net, or other known device of the kind, shall be allowed to extend more than 500 ft. from the main shore, or shore of any island, beyond the ordinary low water mark, with a penalty of say \$100 for violation of its provision, and destruction of net.

Third—That no purse net, or like device, shall be used in any waters along the coast within one or two miles of the shore, or the shore of any island, from ordinary low water mark, with a penalty of say \$100 and destruction of net.

In my judgment, if this remedy in substance could be applied by being made a law in all of our seaboard States from Maine to North Carolina, it would do no injustice to any interest, but would in time work a benefit to all.

I will but briefly refer to the growing scarcity of the lobster, not because it is of no great importance, but because I have reason to believe that there will be those present at this conference who are thoroughly competent to and will speak a good word for this valuable crustacea.

The demand through increased consumption and by the numerous canneries along the Eastern coast has become so great that they are extensively caught and used at so small a size as to greatly interfere with reproduction, which seriously threatens the already depleted supply. To remedy this evil and preserve this valuable food is a matter of very great importance, and as with the edible fish along our coast line, requires the united action, to a reasonable extent, of a number of our seaboard States to prevent the taking, killing, or possessing lobsters less than at least 10 in. long from nose to tail.

Mr. E. G. WHITTAKER (N. Y.) said: There is no portion of the policy of the State so little understood and so greatly misconstrued as its policy of fish protection. It is looked upon by a large number of people as favoring one class to the exclusion of another. This is in no sense true. It has a semblance of truth arising from the fact that the legal restrictions on taking fish afford sport and healthful recreation, advantage of which is taken by people of means and leisure. But the matter of amusement in no sense whatever enters into the spirit and reason of the law, which only tries to protect the fish in order that the food fish supply may not be diminished. It is a mere coincidence that the authorized methods afford sport, for they are the only ones consistent with fish preservation. The authorized methods inure to the benefit of all, without distinction. It is not for the delectation of those who enjoy hook and line fishing that the use of nets is prohibited in inland fresh waters, and their use in salt waters regulated. It is because such prohibition and regulation are necessary in order to avoid absolute depletion of the waters. It is not for the delectation of the hook and line fisher that the use of hooks and lines is permitted; but simply because that is the only means that does not materially diminish or injure the steady supply of fish. I want to assure every member of this conference that the Fish Commission of New York is not engaged in an attempt to preserve fish in order simply that hook and line fishermen may find sport. It is moved simply by a desire to preserve the fish for the benefit of all the people, in order that they may get fish food at the lowest possible price. But fish are intended for food, and no class of business is justified in monopolizing a food article for private gain in the manufacture of fertilizer.

MR. DANIEL T. CHURCH rose to reply to the paper submitted by Mr. Huntington. The net fishermen might seem to be inconsistent when they admit the taking of one 100 or 200 barrels of food fish after having denied that they take any food fish. But there is no inconsistency. When one looks over a field he sees that horses are in one body, that cows keep by themselves, each species keeps by itself. So it is with fishes; the menhaden go in schools; the mackerel, the weakfish, the striped bass, each in its own school, and rarely are they mixed. But once in a while two or three kinds will be caught at once. This will explain the incident of the lot of fish at Sandy Hook that had been referred to. But while a barrel containing 200 lbs. of menhaden were worth about \$1, a barrel of 200 lbs. of food fish would be worth 2 cents, 4 cents, 5 cents and sometimes 12 cents a pound. Occasionally, in the 20 or 30 years that we have been in the business, we have caught food fish in quantity and sold them for a good sum of money. Such catches are not carried to the factory, but to market, and that is a matter of common sense. Now, if it can be proven that there is no diminution of supply, and that the public are getting 20 fish where years ago they got only one, it must be that we are on the side of the public, and not their enemy.

MR. A. M. SPANGLER (Philadelphia) inquired how long such a catch would remain in marketable condition, and what preparations had they on hand for the purpose of keep-

HOPS (SALTER'S MIKE—SALTER'S ROMP).

ing the fish in proper condition until they could be taken to market.

MR. CHURCH said that a chance catch of 200 or 300 barrels of food fish would not long remain fit for marketing, but as a rule they did not make those catches; and such catches were matters of accident; in the twenty or more years of their being in the business, and the millions on millions of barrels of menhaden that they had taken, he did not think they had put into the market more than half a dozen times. We do not catch food fish because we want them. In 1881 squire were as plenty as they have been this year, millions and millions of them, and they could hardly be sold for enough to cover freight, barrels, and other incidental expenses. One of our captains this year caught 60 barrels in Narragansett Bay, and thought he had a prize. I said "Don't do it."

## The Kennel.

### POINTS AND FLUSHES.

[By a Staff Correspondent.]

Clubs and Handlers.

The interests of a field trial club member in his capacity as such are entirely different from the interests of a professional handler, yet many field trial clubs accept field trial handlers into their membership. In their anxiety to get a membership and a revenue, they do not consider that they are accepting members whose interest in connection with the club's affairs is not the club's interest.

A handler who is a competitor has his own personal business interest to consider as a handler, and his bread and butter or his business advancement will be always of more importance to him than the club's interests. In his participation in the club's affairs his voice will not be tuned, in all probability, in full harmony with the club's best advancement. There is always a possibility that he may have some personal advantage in what he advocates.

All handlers might not do so, in fact, I know some whom I firmly believe would not. But whether they would or not, the principle is wrong. It is an injustice to other handlers, who are not club members, to compete with a handler who is a club member. The handler-member has a voice in all the club affairs. He can be heard on the amount and conditions of the purses, the time and place where the trials will be held, the rules under which they will be run, the stakes, who will be judges, etc. Other handlers, who are not members, of course have no voice in such matters. Thus there is the incongruity of a competitor in a public stake competing under conditions which he had a part in arranging, while other competitors had no such part. That is not just in principle. Members who are interested from love of sport are thus brought in contact with members who are interested for business reasons.

It is the same old professionalism appearing in another form. Among club members, whose interest is in promoting

sport, it is sure to be as disastrous in the end as it is to the amateur in competition. The best business interests of the handler in his capacity as a competitor for the club's prizes are not the club's best interests as a promoter and supporter of sport and the best advancement of the dog.

I have heard a handler denounce in unmeasured terms the judgment of the judge who was not so favorable to one or two of said handler's dogs as said handler thought he ought

JINGO (MAINSRING—QUEEN II.).

to be, thus fomenting a most unseemly quarrel, one which nearly disrupted the club, the handler at the same time being a member of the club for which said judge was acting. The handler also was a competitor for the club's prizes.

The judge was under the club's protection, and courtesy and respect were due him from every member, but the said handler's private interests entirely obliterated all his membership responsibilities and courtesy, although from any point of view there was nothing to justify the conduct.

I am not writing against handlers as handlers. There are some whom I know and esteem highly for their gentlemanly qualities and love and observance of fair play. It is only of those to whom these remarks are applicable that I write, and of abuses which are growing stronger and more harmful. If, on calling the roll, there are none to whom these apply I will admit error.

### The Unpleasantness of Judging.

In this connection a few words in respect to clubs, judges and handlers may not be amiss.

It is constantly becoming more and more difficult to secure judges. The invitation of a club is not accepted now with the pleasure and promptness of a few years ago. It requires the pressure of personal influence or the prospect of a liberal money payment, in most instances, to secure desirable judges.

Why is it so? I believe that it is due largely to the offensiveness of some handlers and some owners. Some handlers are blatant, obtrusive and malicious "kickers." They make offensive remarks, regardless of time or place, if the judges' decisions do not fit their own ideas of what is just and proper in respect to the merits of their own dogs. Some "kick" out of pure, chronic ill-temper. They delight to make remarks which will be offensive enough to excite the applause or wonder of their admirers. Some will scold and rant within earshot of the judges purposely, so that their remarks will be overheard. Once in a while one will interview the judges, sometimes honestly to get information in regard to his dog's performance, oftener to get an opportunity for argument and a vent to his resentment, afterward recounting the details of his insolence under the mistaken idea that he had been commendably courageous.

In the evening it is not an uncommon sight to see a large circle of handlers discussing in the most public manner all the peculiarities of the judges, their mistakes, their characters, their histories, all with more or less acrimony, vituperation or censure. Their integrity is questioned, their judgment condemned, and their merits are generally bandied about till there is little left of them to discuss. The noisiest and most offensive generally conclude with the assurance that they will never again appear at those trials or under such and such a judge; yet there they are as big as life when the cycle of time has brought the trials and judges around again.

### Meum et Tuum.

I have always believed that it would be better for sportsmanship and field trials if such discordant elements would really fulfill their threats and stay away. The little support they give in the way of entry fees is trifling in comparison to the harm they do by their malevolence.

I have often, too, been surprised at the cheerfully stupid

manner these same men will thus quarrel with their bread and butter. The bombastic threat to injure the sporting world by remaining away from it means only direct injury to themselves. When a handler or owner sends his entry fees to a club with the threat that unless such or such a judge is dismissed or some other one appointed, or that he will never run again under such a club, as has been done several times, he is losing in the long run, though he may have some idea of immediate advantage. Clubs have permitted themselves to be sandbagged too much by this threat to withhold support or influence.

This again brings up the question why a man will quarrel with his bread and butter. If a handler succeeded in destroying a club against which he had a grievance, and another handler succeeded in destroying another club, etc., there wouldn't be a club left in existence. If every judge against whom there was an alleged grievance or grievances were rejected there would be no judges available. Who would be the loser? The gentlemen who paid certain dues every year to maintain the club and its competition, who made themselves responsible for debts of deficits, that is, the members, would not be harmed, for they are in it from love of sport. They, from a purely economic standpoint, would be gainers in time, peace of mind and money. Therefore, to do anything tending to destroy the organization, even if it wholly destroys it, works no material loss to the members.

But to the handlers it is a loss, a serious loss. It means that a large sum of prize money will not again be theirs—money distributed by men of whom they never gave a thought of commendation. It means less advertising of the merits of their dogs in the reports of the details of the competition. It means less sales because they are cut off from meeting the assemblage of sportsmen who attend field trials often with a view to make purchases, and it means a falling off in general interest and a decline in prices. It means that they have had a quarrel with some inoffensive bread and butter and were victorious. It means that pure sport can take care of itself, while pure business as a sport can not. It means, too, that if handlers do not show more civility and appreciation they will accomplish these results. Gentlemen get wearied of banding together, putting up \$1,000 or \$2,000 in prizes, inducing a judge to act, and in return suffer round abuse from those directly participating. Abuse of a judge is directly abusing the club which he represents. He is the embodiment of the club's confidence; he is acting by the club's appointment—insult to him is insult to the club.

I remember, last month, while at a field trial, observing two gentlemen, residents of the town at which a field trial

MAID OF KENT (KING OF KENT—HOPS).

was held, who were standing in the office of the hotel where a number of handlers were gathered in a circle. As Southern gentlemen habitually do, they had called to welcome the strangers and make their stay pleasant. Their bearing and manner proclaimed them to be gentlemen. The handlers were engaged most fluently in airing a choice, ancient stock of grievances, sometimes two or three talking at a time, each one clamorous to be heard. The gentlemen stood in the middle of the floor, amazement depicted on their faces. I never saw them again. In fact, now that I think of it, no town ever passed resolutions of esteem or admiration for the sayings of the handlers.

From the Sportsman's Standpoint.

The competitive element never has had a full exposition from the club member's standpoint.

The professional, having strictly a business interest, is apt to take for granted that the club and its interests are also purely from business motives and from a business basis. The following excerpt from a letter recently received from Mr. Thomas Johnson, of Winnipeg, will explain the matter in a few words better than I have in many lines. It has the ring of true sportsmanship. He says: "I am quite willing to give my time and a little money—a thousand dollars a year for the past seven years would not reimburse me—for the advancement of field trials, or anything else that comes under the head of sports. I would encourage professional handlers to run their dogs, but would not be subject to their insolence. The reason I intended to abandon any participation myself as a competitor was so that there should be no cause for a cry of judges to favor me."

Referring to a letter from Mr. Brailsford, of England, in which he says: "One thing I am delighted at is that our good friend Wells has got to the top of the fence, and with the bitch you thought so highly of on your prairies."

On this point, Mr. Johnson remarks: "His allusion to Mr. Wells's victory at Chatham shows the spirit that should prevail in field trials."

While in Canada, I observed among resident sportsmen a much more gentlemanly acceptance of the judge's decisions. They do the judge the honor of considering that he is competent. If they differ, they are civil, talk it over quietly among themselves, and refrain from being offensive or discourteous to the judge. The unpleasantness in times past in Canada in reference to the judges has been started by parties from this side of the line. I hope that the Canadian sportsmen will have the good sense not to copy us, which there is little danger of their doing. In fact, we are far be-

CONSCRIPT (KING OF KENT—HOPS).

give you my opinion before asking yours. The trouble seems to me to be in most part that breeders and exhibitors do not see enough of each other at shows, and therefore the whole thing is looked upon simply as a question of business by many, and by others of getting the best of the award, and then home to get something ready for the next show, and so on, instead of business, pleasure and good fellowship, com-

there they split up into little parties. Certain of them think they have a grievance, and what they don't say about Brown they say about Robinson, etc.

Now, if instead of this arrangement the Toronto management (headed by the genial Stone, who, although he rolls quite a lot looking after the comfort of all hands, still finds time to gather some moss) would engage a large private room for show week, where all could get together and have a sociable smoking concert and a plain soda (dogmen seldom want anything stronger), a sociable evening would be spent, and who knows what sores would be healed, what friendships renewed and cemented under the benign influence of "Auld Lang Syne" and similar ditties.

How often you hear the saying, "We don't have the jolly times we used to have." Now, what are the good times referred to? Take Syracuse, Buffalo, London, Albany and other shows of a few years ago and remember the quiet evenings spent at those never-to-be-forgotten shows. If New York, Boston, Philadelphia, Toronto and others would try my suggestion, and, at their shows the coming year, arrange for some place where the boys could get together and spend a sociable evening, I am certain the close of the coming year would see a return to the times I have referred to, and instead of a wordy newspaper war over every little trifle, a few words at the reunion while the iron is hot would settle the whole business amicably.

Now let us have your views on the subject, Mr. Editor, and why not ask for correspondence on the subject from your readers? A letter from that prince of superintendents, Mr. Mortimer, would do much to give the idea a boom, for everybody knows that though years may come and years may go, he will always be with the boys.

SOLUS.

United States Field Trials.

Editor Forest and Stream:

The date of starting this club's field trials at Grand Junction, Tenn., has been changed by request of many of the club's members and patrons from Feb. 19 to Feb. 12. This change will enable handlers to reach Grand Junction from the Southern trials in plenty of time, as their trials will be finished about Feb. 9.

The Grand Junction trials will be judged by Dr. N. Rowe, Mr. W. W. Titus and Mr. Royal Robinson, with Mr. J. A. Balmer in reserve. With such an array of talent in the saddles we hope to have a very pleasant meeting.

The annual meeting of the club will be held in Chicago March 15.

P. T. MADISON, Sec'y-Treas.

INDIANAPOLIS, Ind., Dec. 29.

The well known poodle champion Dexter has been sold by Mr. E. H. Morris to Mr. A. A. Cobb of Wilmington, Del., who intends taking up the breed.

On Wednesday last the *Fanciers' Journal* Publishing Co. made an assignment to Mr. V. M. Haldeman for the benefit of its creditors. Mr. Haldeman will sell off the copyright, good will, fixtures, etc., at public sale within a couple of weeks. It is rumored that Mr. C. T. Thompson will buy out the concern.

RIP RAP (KING OF KENT—HOPS).

COSSET (KING OF KENT—HOPS).

hind the English in these respects. Their competitions are friendly, sportsmanlike assemblages of competitors, and not an aggregation of rampant savagery. There are some more points I desire to touch on before beginning the manner of handling at field trials, but there have been some hints herein which may indicate room for improvement in the handlers themselves. If their traditions and usages of the past are unalterable, they need not look for any wide or rapid improvement in field trial interests in the future.

The U. S. F. T. Club's Trials.

The date fixed for holding the United States Field Trials Club's trials has been changed from Feb. 19 to Feb. 12, thus following immediately after the Southern trials. As previously fixed, there was a week intervening between the two trials, which, if the date had not been changed, would have occasioned a loss of time and extra expense to the owners and handlers.

The auction sale of the Cumberland Kennel Co., Nashville, Tenn., Dec. 21, resulted as follows: Mr. Frank Seagriff bought Melac for \$475; Minerva, \$135; Phoebe, \$150; Cumberland Flora, \$35; Cumberland Queen, \$20. Mr. P. Hager, Nashville, bought Zella for \$170 and Norman for \$55. Mr. H. L. Goodman bought Jennie for \$70 and Victoria and Lotta, Italian greyhound bitches, for \$10 each. Another party bought the Italian greyhound dog Prince for \$12.50. The kennel fixtures, including horse, harness and wagon, sold for \$172; total \$1,224.50. A delay in receiving the letter containing the above information made it too late for last week's issue.

B. WATERS.

609 SECURITY BUILDING, Chicago.

A New Year's Time Suggestion.

Editor Forest and Stream:

Reading over notes of shows held from the year 1886 to 1890, and those from the latter date to the close of this year's fall circuit, I could not help but remark a contrast.

The good feeling that seemed to actuate dogmen, with few exceptions of late, seems to have changed into one continual snarl. Jealousy, ill feeling and abuse are rampant in dog circles, and instead of breeders, exhibitors and judges working together for the good of our four-footed friends, as one united brotherhood, all the good old feeling and friendly rivalries seem to have passed away and little else remains in the hearts of many but the wish to run down the other fellow and his dog.

Why is this? And where are we to find the cause of this much to be regretted state of things in dogdom? and is there a remedy and a cure for these evils? are the questions I would ask you, Mr. Editor, and to put it properly, I first

## FIXTURES.

## DOG SHOWS.

Jan. 16 to 19.—Saratoga Poultry and Kennel Club, at Saratoga, N. Y. L. W. Clute, Ballston Lake, N. Y., Sec'y.  
 Jan. 23 to 25.—New Orleans Fanciers' Club, at New Orleans, La. G. W. Senteil, Jr., Sec'y.  
 Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
 Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y.  
 March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welch, Sec'y.  
 March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y.  
 March 20 to 23.—St. Louis Kennel Club, at St. Louis, Mo.

Saratoga entries close Jan. 6, with Lyman W. Clute, Ballston Lake, N. Y.

## DOG CHAT.

## Huber vs. Schell.

The case of Huber vs. Schell has been exciting considerable interest among fanciers on the Pacific coast. The case was decided Dec. 4 at a meeting of the officers of the Pacific Kennel Club. The trial lasted from 8 P. M. till 12 o'clock, and was conducted with the utmost fairness on both sides. Both men were represented by counsel. The cross-examination of Schell resulted in much exposure of prevarication, contradiction and admission of falsehood on his part, finally admitting that he knew that the pointer pup Joker, which he had sold to Mr. F. C. Klein, was not by Duke of Vernon, as he had stated at the time of sale. This was the principal charge against him. The other was in connection with the St. Bernard bitch Lady Gladys, Mr. Schell having told several people that he had bred this bitch to both Duke of Edinburgh and Judge. As it was not proven that any one saw the service, this latter charge fell to the ground. Further evidence will, however, probably be forthcoming in this case. The P. K. C. officials decided to hear Mr. Schell's charges against Mr. Huber before giving their verdict in the first case, so on Dec. 11 another meeting of the club was held, and again both men were represented by counsel as before. The charge against Mr. Huber was that he had sold several pups out of Sally Brass II., though only one lived. Mr. Huber completely exonerated himself by proving that he had sold five pups out of Sally Brass II. and five out of Bella T., and proved satisfactorily, by his own testimony and that of his witnesses, the death of the rest of the litter. The meeting lasted from 8 P. M., Dec. 11, to 2:30 A. M., Dec. 12, and the following verdict was unanimously given:

SAN FRANCISCO, Dec. 12, 1893.

The committee on the matter of the charges preferred by Mr. Henry Huber, a member of the Pacific Kennel Club, against Mr. E. P. Schell, also a member of the Pacific Kennel Club, decide on investigation that Mr. Schell was and is guilty of having sold to Mr. C. Klein the pointer puppy Joker, giving the pedigree of said Joker as being sired by the Duke of Vernon, which pedigree was proven to be false. We therefore declare Mr. Schell to be guilty and unfit to be a member of the Pacific Kennel Club and hereby expel him from the Pacific Kennel Club.

In the case of Mr. Henry Huber, a member of the Pacific Kennel Club, against whom counter charges were brought by Mr. E. P. Schell, we find that there is no proof of Mr. Huber's having deceived any one in the sale of dogs, or of having given any false pedigrees whatever. We therefore exonerate Mr. Huber and declare him not guilty of the charges preferred against him.

(Signed,) E. W. BRIGGS, President,  
 F. R. WEBSTER, Vice-President,  
 H. W. OREAR, Corresponding Secretary,  
 C. A. HAIGHT, Treasurer.

## Our Pointer Pictures.

It has always been Mr. Edward Dexter's ambition to produce a kennel of pointers of a certain build and of uniform type combined with the best field trial qualities. In this he has been ably seconded by Capt. McMurdo, who with C. E. Buckle attends to the training and developing of the dogs of the Charlottesville Field Trial Kennel. That Mr. Dexter has succeeded to a great extent in carrying out his views may be seen by a glance at the portraits of several of his dogs which we publish this week. The Charlottesville Kennels struck a happy nick in the King of Kent—Hops union, and few kennels can boast of having had two such handsome and intelligent field performers as Rip Rap and Maid of Kent. There have been others resulting from this union, who, while they lived, performed well in public. Hops has passed away, but this kennel has plenty of the blood to carry on the strain. To Mr. Dexter are due the thanks of pointer men in general, for blow hot or blow cold, he has persistently run his pointers against the setters and thereby done no little toward creating a confidence that led others to persist and which no doubt directly results in the good showing which the pointer made in open competitions this year and last.

Mr. Schallenberger, of Alma, Neb., whom we had the pleasure of meeting at the Chicago show, in writing us of the sale of the St. Bernard Aristocrat, says he has a new dog for the open class in Alton III., a litter brother of the well-known Altoner. He is said to be very like Altoner, though much larger, and Mr. Schallenberger's friends think he is the best dog he ever owned. This gentleman found, upon his return, that his Valkyrie, by Watch—Betty S., had whelped a litter to Aristocrat, and Columbiana, by Sir Bedivere—Columbia Venus, had whelped to Saladin. He remarks further, incidentally putting in a word for Nebraska: "My dogs never were in better health. The weather here is delightful. I have worn no overcoat since my return, and if one works at all outside he must lay aside his coat. Nebraska against the world for fine climate."

The prices received for the Cumberland Kennels' great Danes must be considered good according to the idea that prevailed among great Dane men at the Chicago show, as it was thought that Melac, considering the circumstances under which the sale was held, would not bring more than \$200. Melac is a good, strong, active great Dane and should be well worth the \$475 paid for him.

## Boston Terrier Club Meeting.

The regular meeting of the Boston Terrier Club was held at Young's Hotel, Boston, Dec. 26. Meeting called to order by President W. A. Pover. After the regular routine of business had been disposed of the treasurer made his report, showing that the club is entirely free from debt with a balance in the treasury of \$82.01. The secretary reported that the silver medals of the club had been offered at all of the

leading exhibitions throughout the country, and had been duly delivered to the winners. Regarding the petition of H. Clay Glover, and others, of New York, relative to the abrogation of certain rights, etc., heretofore existing between the manufacturers and dealers in dog specialties, it was voted that as the B. T. C. does not hold exhibitions this matter is outside of their jurisdiction. In regard to the application of J. A. Boutelle, and others, of Providence, R. I., regarding the formation of a club in that city, it was voted that the secretary be instructed to suggest that they name the club the Boston Terrier Club of Providence, R. I., and to extend every possible courtesy to them; also that he be instructed to offer them the use of the club's standard and constitution and to encourage them in every possible way. The next meeting of the club will be held the fourth Wednesday in January. Mr. G. H. Huse is the secretary.

The rumors of dissension in this club are evidently without foundation, and friends of this smart little dog will doubtless feel pleased to hear that the club is on such a sound basis.

A meeting of the Philadelphia Kennel Club will be held Tuesday night, Jan. 9, at the Aldine Hotel, Philadelphia, and will probably have important results. It is expected that the show committee will report and the club come to some decision as to whether they will hold a show this coming spring or not. It is said there is some difficulty in getting a suitable hall. Mr. James Watson stated last week that while nothing definite had been done, it was probable that the Keystone Kennel Club would hold a show as usual. Two shows will not go in Philadelphia, that is certain, and the Keystone Club might well rest on their laurels for a year and let the older club try once more. Although not a member of the A. K. C., the P. K. C. has many friends of the fancy among its members, and would be sure to poll a good entry with a proper prize list.

It is by no means certain that the doctor who cauterizes the wound made by the bite of a dog suspected of rabies, and then orders the dog shot, ought not to be shot himself for making two such cardinal professional blunders.—Evening Telegram.

## Controversies.

The tradition that "Peace and good will toward all men" should reign at this season evidently does not obtain in the minds of two kennel editors on the Pacific slope. Surely these gentlemen, who control the columns of the only kennel journals on the coast, should set a better example. The playful terms which they apply to each other are not calculated to elevate dogdom on the coast. Such personal squabbles are of no earthly interest to any but themselves, and "Namquoit" has rubbed shoulders with dogmen long enough to know better, and we would draw his attention to a sentence from the pen of Joseph Cairn Simpson on "Controversies," in his own journal of Dec. 23: "It is quite true that when controversy degenerates into unseemly wrangles, when arguments are forsaken and personalities take the place of logic, when the amenities of debate are thrust aside and ill-temper, violent rudeness, perhaps disfiguring nearly every sentence, it is time to condemn. But opposite views, conveyed in terms which do not offend the most polished reader without exhibitions of vulgar passions, are not out of place; in fact, controversies of that kind are potent educators. With only one side of a question presented there would be small room for improvement." There is a lot of "horse sense" in those remarks.

The St. Bernards that Mr. Thomsen brought over from Switzerland for the World's Fair show and which were afterwards exhibited on the "Midway," have been taken to San Francisco and will be exhibited at the Midwinter Fair. A building is now being erected for their accommodation. Mr. Thomsen has only succeeded in selling one of his team, but one cannot but admire his pluck after meeting with so many disappointments.

The white poodle Pretty, owned by Mr. Elmore, sporting editor of the Toronto Mail, died Dec. 25. Pretty was a great favorite with his owner and, we are told, had won several prizes.

A writer in the Toronto Globe, takes a serious view of our recent comment on Mr. Jarrett breeding white collies, and in alluding to the fact remarks that among all the cockers bred in the Province memory recalls but two white ones. One bred by a Belleville breeder not long ago, and another that Mr. Geo. Bell bred which died when a puppy. "Uncle Dick" says he can breed a black spot anywhere you want it on a white dog, why not try for the other oddity—a white cocker?

Preparations are being made to make the Boston show a record one this year. Boston is always a good show town and somehow there is a sentiment attached to the show among exhibitors that is equalled only, though in a different light, by that surrounding the W. K. C. show. The club has some good fanciers at the helm, and they deserve every support.

We regret to learn that Robber Chieftain, almost as well known to show-goers as his renowned sire, had one of his legs fractured recently. The limb has been set, but it is doubtful if he will appear on the bench again.

Pointer men will be sorry to hear that Mr. J. H. Winslow's pointer Admiration died of blood poisoning one day last week. This dog has won several prizes this year, and was imported by his late owner. Mr. Winslow, one of our most popular fanciers, has not had the best of luck with his dogs, but good luck or the reverse will scarcely make much difference in this whole-souled fancier, and he will probably last as long as any other.

## Bob.

Mr. C. A. Sumner, secretary of the Southern California Kennel Club, has written a very amusing and interesting book in the form of an autobiography of his foxhound Bob, who came originally from Mr. Belmont's kennels. On every other page we find a half-tone depicting some scene in Bob's happy life. These pictures were "snapped" by Mr. Sumner and are really the best and most realistic studies of dog life that we have yet come across. "Bob, You're a Father," "In Disgrace—'I Killed a Hen,'" "I Made a Rush for the Water and She Played a Horse on Me," "On a Sunday Afternoon We Rested," "Run to Earth," "At Drill, I Gave the Word of Command—'Attention!'" "And Then—'Left Dress!'" "Homeward Bound We Rode; I Took a Corner and Jim the Other, With the Three Girls in the Middle," "Who's There?" and "Coming, Sir?" are among those that are especially good, and our thanks are due to the author for giving us such a treat. We suppose the book will be for sale, Mr. Sumner's address is Los Angeles, Cal.

## Mastiff Brampton Beauty.

Since we published the fact that the celebrated mastiff bitch Brampton Beauty had been purchased by Mr. W. Norman Higgs for exportation to America, it has been a matter for considerable discussion as to who had purchased her. Mr. Winchell kept his peace, but now we learn that this crack bitch is on her way to this country and will enter Mr. Winchell's kennel at Fairhaven, Vt. Brampton Beauty will

no doubt take the place of C. O. D. in the estimation of mastiff men. Although only a little over two years old she has won at the largest and principal shows. First in novice and open classes and special for best in open classes at Cruft's show; first open class at Preston, first and special at Sheffield and cup for best mastiff in the show; first and special for best in show at Darlington and the same at Gloucester as well as the O. E. M. C. cup (breeder's prize); first and special at Edinburgh; first and three specials at the Crystal Palace, as well as the O. E. M. C. breeder's prize; first and cup at Birmingham and first in challenge class at Cruft's show in 1893 is the record that stamps this mastiff as one of the best of the day—she holds an unbeaten record. These prizes she won when yet untrained. The appearance of such a bitch on our show benches will certainly create an interest in mastiffs that is very much needed. Brampton Beauty has been sent out here for exhibition and for sale. With Mr. Winchell's Beaufort's Black Prince and this bitch on exhibition admirers of the mastiff have a treat in store. With such kennels actively represented as those of Dr. Longet, Mr. Winchell, Dr. Glazier and Mr. Bunn a class of mastiff will soon appear at our shows that will go far to bring these dogs into popular favor again and make them the favorites they were when such breeders as Dr. Perry, Winlawn Kennels, Mr. Moore and others of that class were seen at our shows with the best they could breed or buy.

## A Sporting Match.

Some dog breeders or owners will consume yards of paper and quarts of printers' ink in showing how not to make a match; others will talk together five minutes and the thing is done. Such a match was made the other evening between two well known pointer breeders for \$200, that Hempstead Luck (Duke of Hessen—Woolton Game) cannot beat Chancellor (Lad of Kent—Lass of Kent), John Davidson to be judge and the match to take place the first week in May.

## New Orleans Show.

The premium list of the New Orleans Fanciers' Club's show was received too late for review in our last issue. The show will be held Jan. 23 to 26 in a good hall in the heart of the city and convenient to hotels, etc. The list is well arranged and the prizes are worth trying for. Challenge classes are made for mastiffs, St. Bernards (each breed), great Danes, greyhounds, pointers, all setters, Irish water spaniels, cocker spaniels, collies, bulldogs, fox-terriers and pugs; the sexes compete together with the exception of pointers, where they are separated; the prizes are \$10. In open classes \$10 and \$5 are given to all breeds excepting toy terriers, whippets, toy spaniels, Italian greyhounds, Dandie Dinmont, Skye, Yorkshire, black and tan terriers, dachshunds and poodles, which get \$5 and \$2.50, while Chesapeake Bays, Newfoundland and Russian wolfhounds get \$10 and \$15, sexes competing together. Kennel prizes of \$20 are given in mastiffs, St. Bernards, great Danes and Newfoundlands; and with the exception of St. Bernards, which require four, five dogs must be shown. Other kennel prizes of \$15 are given for the same number of dogs in the most important breeds. They also devote \$200 to the handlers. The one who has the largest number of dogs in his care wins \$125, but he must show at least fifty dogs; second \$50, and third \$25. Dogs handled are to be named on the entry blanks. These prizes are not open to local competition. The entry fee for mastiffs, St. Bernards, great Danes and Newfoundlands is \$3; for all others except toy terriers, pugs, toy spaniels, Italian greyhounds and whippets the fee is \$2.50, and for those mentioned \$2. If the fee for Newfoundlands is put on the same basis as that for mastiffs, the prizes should be the same, with sexes divided.

There is one objectionable feature however in this prize-worthy schedule, we refer to the rule that is becoming too general now-a-days—that if there is only one entry in any class, one-half of the prize money will be withheld. Show committees should display a little more prudence in this matter. It is not likely a handler will bring a big string of dogs, with this rider attached to his possible winnings. If a club cannot afford to stand by its prize list and take the risk of entries being large and small, they should either reduce the prizes or not hold a show at all. There has recently been much dissatisfaction on this score among exhibitors. The latter risk enough as it is to make shows possible, without asking them to partake in a chance game. The show is under A. K. C. rules, and Mr. John Davidson will judge all classes. The Adams, Wells Fargo, Pacific, United States, American and Southern express companies will carry dogs under the usual conditions. Entries close January 15, with G. W. Senteil, Jr., 190 Gravier St., New Orleans, La.

We learn from Mr. H. F. Peck, secretary of the Akron Poultry and Kennel Club, that he is getting together a good team to take to New Orleans show.

## Saratoga Show.

The D. & H. C. Co. sets a good example in offering to carry all dogs free to and from Saratoga show. The Ashmont trophy will be offered if the club secures 400 entries. Additional specials are \$20 for best four fox-terriers, \$5 for best beagle. Railroad and hotel rates have been reduced and the prospect for a good show is flattering.

Col. Ridgway, Francis S. Brown, William Ridgway and John S. Leisnring have leased 5,000 acres of land in North Carolina for shooting purposes, and intend building a club house, shooting lodge, with quarters for servants and dogs.

Mr. Jarret is well pleased with his recent trade in collies, and Chesterford Marvel will be re-registered and known as Marvel. Mr. Roberts's Donna, of Chicago, and Mr. Frank Carswell's Lady Moll have already been bred to Marvel. The pointer bitch, Bessie Girl, by Graphic III. ex Bessie Wyant, which Mr. Jarrett bought from T. G. Davey at the Chicago show, he has sold to Mr. C. M. Lea, of Philadelphia.

## A Kennel Club for Maine.

Again we hear rumors of a kennel club being formed in Maine. This time it is thought that a State kennel club will be organized. The Bath fanciers are very eager to see something done, and if the other towns do not take hold they will form a club in that city and hold a show the week after Boston. Mr. T. B. Catland, of Lewiston, and Mr. Wm. Ledyard, of Bath, are the active movers in the affair, and they are trying to bring the other towns into line. There is no reason why a good strong club should not be organized in Maine, as the State has many dogmen, several good pointers and spaniels hailing from the Pine Tree State.

## W. K. C. Show Judges.

THERE has been considerable anxiety lately among dogmen as to who would be the judges at the Westminster Kennel Club show, to be held Feb. 20 to 23. Although the list is scarcely complete there is little doubt but that those invited will accept. As we go to press we learn that mastiffs will be judged by Francis T. Underhill, Oyster Bay, L. I.; St. Bernards, Newfoundlands, Miss A. H. Whitney, Lancaster, Mass.; great Danes, basset hounds and dachshunds, G. Muss Arnold, Tuckahoe, N. Y.; bloodhounds, Russian wolfhounds, deerhounds, greyhounds, English retrievers, Irish and Gordon setters, beagles and miscellaneous class, John Davidson, Monroe, Mich.; pointers, Chas. Heath, Newark, N. J.; English setters, American foxhounds and Chesapeake Bay dogs, Major J. M. Taylor; Irish water spaniels, Clumber, field and

cocker spanies, A. Clinton Wilmerding, New York city; collies, Dr. L. C. Sauvau, Chestnut Hill, Philadelphia, Pa.; black and tan, white English and toy terriers and Italian greyhounds, Dr. H. T. Foote, New Rochelle, N. Y.; poodles, Irish, Dandie Diamond, Scottish, Skye, Bedlington and Yorkshire terriers and toy spaniels, Dr. M. H. Cryer, Philadelphia, Pa.; wire-haired fox-terriers and old English sheep-dogs, R. F. Mayhew, New York city.

Those invited, but who have not yet accepted are Trenor L. Park, New York city, for bulldogs; C. Albert Stevens, Hoboken, N. J., for bull-terriers, and Lewis L. Rutherford for smooth fox-terriers.

It makes but little difference who judges at New York, so far as entries go, as everybody that has a dog worth anything will show. The adaptability of most of the judges for their breeds can be explained. Dr. Foote, Dr. Sauvau and E. T. Underhill are the only untried ones, and are identified with the breeds they will adjudicate upon. The selection of Dr. Cryer, who has been identified only with pugs, to pass upon such now important breeds as poodles and the different rough terriers, is scarcely treating the breeders with due consideration. It is to be hoped that Messrs. Park, Stevens and Rutherford will accept, as they have all owned good ones. Mr. Heath knows a pointer well, and should be well indorsed by his fellow-breeders. The others have faced the music before many a time.

The premium list will be issued shortly and will not materially differ in the amount of regular prizes from that of last year.

St. Bernards at Providence.

THAT a mistake has evidently been made somewhere in the awards of the mastiff and St. Bernard classes at the last Providence show is very evident from the following letter. We may here remark that FOREST AND STREAM awards were identical with those reported by Mr. Fellows, the judge, in *Fancier's Journal*:

*Editor Forest and Stream:*

I noticed the correction in FOREST AND STREAM in regard to the mastiff and St. Bernard classes at the Providence show. But you make the corrections under protest, I should infer by your letter to me, and I don't much wonder when you come to look at the reports in all the other papers, and especially the judge's report in *Fancier's Journal*. In this report you will notice a discrepancy in the criticisms which follow the list of awards. Mr. Fellows does not seem to find but two dogs in these classes to criticize, that is, the mastiff Abe, which really was Philip, and the St. Bernard Eulalie, which was Abe, the St. Bernard. The judge did not see Eulalie after awarding first to her in the puppy class on the stage, as his report was made after the classes were all judged. To assist in convincing you further that my version is a correct one, I would say that Abe won second at the Pawtucket show a year ago to Mr. Moore's well-known Melrose, first, and if you refer to FOREST AND STREAM of Jan. 5, 1893, you will certainly experience a revelation, as your own criticisms of Abe then are in the main identical with the reports on Eulalie as per FOREST AND STREAM and *Fancier's Journal* last week. We all had a good time at the Providence show, but somebody got mixed. Who you think it was?

G. W. PATTERSON.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

C. W. B., Trenton, N. J.—You had better advertise for English hares.

M. H. L., Williamsport, Pa.—There is no such breed as English waterfroids.

S. H. S., Cleveland, O.—Yes, the article on bulldogs has been well received, but we do not recommend breeders. Consult our advertising columns or advertise for what you want.

J. D. C., Concord, N. H.—I have a foxhound two years old, and the enamel is coming off his teeth, chiefly around the base of the teeth, and his breath smells very badly. He seems to feel well when out hunting and eats well, keeping in good condition. Have treated him for worms and I do not think he has any. Did you ever hear of the enamel coming off from the teeth of so young a dog? Ans. The enamel only becomes diseased after distemper and then only in patches. From your description I think it is only an accumulation of tartar on the teeth. Remove this tartar, and the offensiveness will disappear—apply the following wash to the gums:

R. Acid carbol.	.....m.x.
Tr. card.	.....3 ss.
Tr. myrrh.	.....3 i.
Alum. exotie.	.....grs. x.
Aq. ad.	.....3 iiii.

Mix. Lotio.

H. J. H., Seattle, Wash.—Two weeks ago my bull-terrier bitch Bess in a short fight received a wound extending from the inside of the lower lip to the outside of the opposite jaw, passing below the skin and under the points of the jaw. A few days later while standing with her forefeet on a bench (I had shortly before dressed the wound and was then sponging her mouth as she slobbered a great deal), she slowly turned half round on her hindfeet and fell unconscious. She recovered in a few minutes sufficient to move around very slowly. This occurred in a very warm room. Last Thursday morning while she was following a cable car on a steep grade and having only gone 120 yds., the last part very slowly, she reared up and again fell senseless. When I reached her she had recovered somewhat, but her tongue was a bluish color. Previous to receiving the wound she was very lively and strong, but now is quiet and mopeish. She is now developing a case of distemper. Her age is 16 months and her puppies are 4 months old. She has been cut very badly in other fights, but has been all right till now. A half-brother has fallen in convulsions several times, both while walking and running. A neighbor has a setter pup between four and five months old, whose hindlegs appear to be paralyzed. His appetite is good and he is otherwise in good condition. Ans. The bitch may have simply fainted or may have had a fit. Keep her quiet. Allow no exercise. Dress the wound daily and give the following mixture:

R. Quinine sulph.	.....grs. xxiv.
Acid hydrobrom. dil.	.....3 ss.
Ferri phos.	.....3 i.
Aq. ad.	.....3 vi.

Give one teaspoonful three times a day.

For the setter puppy treat for worms. Give the following pills:

R. Ergotine.	.....grs. xii.
Ext. nucis vom.	.....grs. ii.

Mix and make 12 pills. Give one twice a day for 10 days and then three times a day. Give milk after meals. If there is no improvement after this use galvanism.

Hunting and Coursing.

FIXTURES.

Jan. 15.—Brunswick Fur Club's winter meet. Bradford S. Turpin, Secy.

**Altcar Coursing Meets.**

THERE is evidently a poetical sentiment abroad in the Altcar Coursing Club, for we find the following old couplet at the head of their programme of the coming meeting:

"Say thou wilt course; thy greyhounds are as swift  
As breasted stags, ay, flatter than the roe."

The inaugural meet of this club will be held at Goodland, Kan., on Feb. 20 and following days. The judge will be Wm. Green, and stipper Ralph Taylor, as previously announced. The Altcar Stake will be run, for 32 or more alleged greyhounds at \$10, winner 50 per cent. and \$15 added; runner-up 25 per cent. and \$45 added; third and fourth, 12½ per cent. and \$10 each.

Goodland, Kan., is located about 175 miles east of Denver, on the Rock Island road. A special railroad rate has been applied for, and will be made. The hotel accommodation is good; the grounds are ideal, and hares strong. Water excellent. Saddle horses and teams plentiful, and can be hired at very moderate prices. Any further information will be given by the secretary, Sam W. Vidler, Colorado Springs, Col. Intending nominators are requested to notify Mr. Vidler as soon as possible, as another purse will be made up if entries warrant.

HUNTING AND COURSING NOTES.

Mr. Thos. Hitchcock, Jr., will hunt the country round Aiken, N. C., three days a week during the winter, having taken a pack of foxhounds down with him. The country is good and foxes plenty, so excellent sport is expected.

On Dec. 27 the West Chester, Pa., hunters had a novel experience. Dropping a fox at a point north of the town, ten couple of hounds were laid on and the fun commenced. After running a short time reynard turned from his line at right angles, and entered the town of West Chester at West Gay street, and ran its entire length into West Goshen. By this neat move the fox saved his brush, as the hounds lost the scent, and the fox going away toward Frazer made good his escape, hounds and hunters being entirely at fault.

The English courser George Gragson still follows the hare and the hounds, though he is 80 years of age. He was the owner of Roaring Meg, the Waterloo Cup winner of 1862.

The winter meet of the Brunswick Fur Club will commence at Freeport, Me., Jan. 15, and continue one week. Headquarters will be at the Harraseeket House. Freeport is on the Maine Central Railroad, with three trains daily from Boston. The club meeting will be held Jan. 15 at 8 P. M. Fox-hunters will be heartily welcomed. A standard for judging foxhounds will be submitted.

Mr. S. S. Howland will hunt the Annapolis hounds this winter two or three days a week. The pack has been strengthened by twenty couple of good hounds from England. Foxes gray and red are plentiful in that country, and the soil is sandy and freezes only on rare occasions. The fields are of good size and fenced with rail and snake fences. The farmers are in sympathy with the sport and will join in the fun themselves. The meets will be arranged so as to afford sportsmen in Baltimore and Washington every opportunity to participate.

Mr. S. C. Bradley, so well and favorably known in field trial circles, has returned from the South to his place at Greenfield, Conn. He writes us that foxes are plentiful in his neighborhood and he can have a run almost any day.

The best fox hunt of the season took place Dec. 25, at the Three-mile House, Lancaster township, in which a large number of huntsmen participated. Reynard had a start of fifteen minutes and gave the horsemen a run of fifteen miles before he was pulled down. During the run he circled Chestnut Hill, coming back to the starting point with hounds in full view but evading them by a cunning trick finally crossed Little Conestoga Creek. Nearing historic Wheatland, the home of President Buchanan, the hounds ran into him, Mr. Hambricht being the only rider in at the death.

Dachting.

So much has been said in American papers concerning the "ballast crew" of Vigilant, that it is rather extraordinary to find an English paper, and above all the *Field*, attempting to depreciate the value of this sort of shifting ballast. As applied to Vigilant rather than to an imaginary vessel, the *Field's* assumption is that the two tons of ballast, if not carried on the deck, would be placed below the present keel; but a much more plausible assumption is that the designer has already disposed the bulk of his lead at the lowest desirable point, and that if his two tons of crew were denied him by the committee, the weight would necessarily be made up by inside lead, stored (as we assumed in our consideration of the subject) above, and not below, the existing keel, and hence less effective.

In comparing the effect of ballast in various positions, several methods of investigation are possible, but in all the controlling factor is the horizontal separation of the various weights and the center of buoyancy, and the most direct is by a simple comparison of the horizontal distances within the ordinary sailing angle of such a wide vessel. Of course the height of the weight has an effect on the result, but in the case in question, of Vigilant at her ordinary sailing angle, it is too little to be worth considering. Even admitting that the general method employed by the *Field* is correct and applicable, any man who has sailed a wide boat in summer weather with both fixed and live ballast in turn will deny the accuracy of a calculation which seeks to prove such an extremely low value for live ballast on the weather rail as compared with the same weight of lead stowed below.

The New York *Herald* of Dec. 24 contained an excellent article on stability and the metacenter, by Lewis G. Nixon, late naval constructor in the U. S. Navy and now with the Cramp Shipbuilding Company. Mr. Nixon is an expert, and his clear explanations are in strong contrast to the many blunders that the *Herald* has lately made in treating on naval matters.

A Cheap Cruise.

(Concluded from Page 574.)

FINALLY I found myself at St. Nazaire, a dreary little port on the great, shallow Loire, and by the next day I was scudding under a fresh N.E. wind westward ho! again. That night I anchored off Penoit, having done one hundred miles in fourteen hours. But it was anxious work among all those rocks. For from the Ile de Groiz, off Lorient, to the Quimper River there are miles of rocks; and well lighted as the dangerous coast is, yet every danger cannot be provided against, and the old pilot who came off to see me next morning declared I must have crossed a very dangerous patch called the Basses Jaunes, near the Glennan Islands. I don't believe I did, for there was no water on it when I passed, but I have no doubt I went very near. One gets used to an intimacy with rocks off the coast of Brittany which would startle a stranger.

The return journey to England was a little ticklish, as the crew had to sit foot and hand to do the work. The wind was ahead all the way and very strong at times, so much so that I had to lie to and strike the topmast during a heavy thunder squall. But the old boat comes out well under these circumstances, and it is then one appreciates her great b. a. m. We were two days and two nights crossing.

After a short stay in Falmouth, we took a run up to Cowes in time for the regatta week, and then returned westward. By the middle of August I was back at Falmouth, and my trekked one said he wanted to go home. He had sailed many miles, and was anxious to play the hero to his father's customers. Besides, he did not wish to go round Land's End. I now had to find another crew.

At Fowey I picked up a capital man. He was hunchbacked, but very strong and willing. He agreed to go round to Aberdovey in N. Wales for 25s. a week, finding himself, or £2 10s. the trip. I found he thought we should be a fortnight or three weeks over the voyage.

We started at 8 on Saturday morning, Aug. 26; by 10 that night we were off the Longship Light off the Land's End, and by 4 the next afternoon we were entering Padstow Harbor in a strong breeze from N. N. E. The sea was heavy outside, and it looked like worse coming. I had never been round on the west coast before and found the sea in the Bristol Channel as bad as I had been led to expect.

Padstow is a wild harbor to make for. One has to go so close to the cliffs on the west side that there is a notice board put up telling mariners to keep close in. I can't say I had much time to read this, as the wind was nearly dead aft and a heavy sea running, and it took me all I could do to prevent gybing. There are no buoys to mark the channel, and the anchorage off Padstow is limited in space as well as shallow. Next day, as the wind had lulled and shifted to the S. E. I started early. By 1 o'clock I could just see Lundy. I landed away on my star-board beam, and by 10 o'clock at night the Smalls Lighthouse was visible bearing N. by W. The wind had been playing about all day and had finally settled down right ahead.

We had sailed over 100 miles, however, since 7 that morning. All that night we made little way. The tide was sweeping out of the Irish Channel and the breeze was with it.

By daybreak next morning I could just make out what I took to be St. David's Head, looming like an extinct volcano against the crimson and gold of the coming sun.

All that day we had a hard breeze right ahead. By nightfall we were 7 miles to the north of Port Cardigan and well into Cardigan Bay. By dint of a most unjustifiable bit of audacity I had cheated the tide race off Strumble Head and slipped into Fishguard Bay, thus saving three hours' rough and tumble on the edge of the tide. The coast is very high here and I had the first idea of the coming glories of the Welsh scenery.

As for the Breton coasts there is nothing strikingly pretty or grand after passing the neighborhood of Brest. The most striking part is the rocky nature of the coast, but that is what I tried to avoid. Here the coast was mountainous; most; splendid headlands and wild cliffs, deep bays and narrow inlets, rock-studded and tortuous, opened up rapidly as we neared along the Cardiganian coast.

When night fell we were nearly landed in the very center of the great Bay which has St. David's Head on its south and Bardsey Island on its north for its limits.

We made perhaps 14 miles that night. I was afraid we might pass Aberdovey in the dark, for I had never been here before, and had not even a chart of the coast after leaving Padstow. All I had was the index sheet of the Admiralty charts, which was about as useful as the map of a railroad route.

When day dawned I found we were approaching a hilly shore, Smoke and mist hung over a dark patch in a valley, and I judged we were coming to Aberystwith.

As the day grew the wind freshened. In another hour we were opposite the town which I took for granted was Aberystwith, and sped on toward a large indentation some 6 miles ahead.

This might be the Dyvee estuary and these ridges are the Welsh Mountains so settled in my mind when I searched about for an opening in the long line of sand heaps which formed such a brilliant contrast to the purple mountains behind, rising ridge on ridge to a rugged peak which towered over all. There was no doubt about the beauty of the scenery; I was looking upon Cader Idris and some of the loveliest districts of Wales.

By sounding I soon found we had every need to be careful. The coast was so settled in my mind when I searched about for an opening in the long line of sand heaps which formed such a brilliant contrast to the purple mountains behind, rising ridge on ridge to a rugged peak which towered over all. There was no doubt about the beauty of the scenery; I was looking upon Cader Idris and some of the loveliest districts of Wales.

It had taken us four days to sail round from Fowey and we had sailed over 400 miles to get to Aberdovey, but we had the wind ahead all the way. I was glad I had agreed to pay by the week instead of the trip. However, my hunchbacked one left me here to join his ship for the winter season.

For a fortnight I was captain and crew of my old vessel once more. Finding my day-dog must either stay or go, I decided to keep him clear out before the next spring tides came on, and having explored the lovely scenery all round, I decided on putting to sea again. A tall, delicate-looking young fellow said he would like to go with me for the same wages he had received on his last voyage. He frankly said he was not a seaman, but then I had been used to that, provided he would do what I told him that was all I wanted. So the bargain was struck and we set sail with a falling tide. I found myself anchored in Cardigan Bay with a strong westerly wind and during the strongest spring-tide can be nasty. I beat over to the shelter of the long promontory which juts out from the Smodon district and ends in the wild headland of Braich-y-Pwll (don't ask me to pronounce it). There, by dint of dodging round some islands called St. Tudwells Islands, I managed to keep ourselves from harm, and then took the first chance of making for Holyhead. We spent five days in dodging the gale, but reached Holyhead in a day's sail from St. Tudwells Roads. The wind was ahead as far as Bardsey Sound. Then it fell calm. Then it blew hard and we flew across Carnarvon Bay to be tossed wildly in the fierce race off the Sauterstack Lighthouse until the final shelter under the magnificent breakwater of Holyhead was reached by midnight.

Here we remained for three days while the gale blew itself out. I decided to set sail for Douglas, Isle of Man. After three days I started again, northward, and by midnight I found myself anchored in Loch Ryan in Wigtonshire, but the seventeen hours' sail from Douglas had been a very stiff one. All went well until we were fairly across from the Isle of Man to the Mull of Galloway. Then a black and very fierce squall came down, and amid the fury and darkness of it the old ship was driven out of her course. When the misery was over a black rock was close to us on our lee, the Mull of Galloway was away to windward, and we were headed into the great inlet called Luce Bay.

It was a dead beat to windward, with a strong tide against us; for two hours we made little progress. By dark we were four miles to the north of the Mull, and from that time onward it took me all my sailing to judge where we were. It was black; I could see no light except the masthead light of many steamers, for we were right in the track of the Liverpool and Clyde traffic. I knew the shore was close on our lee, but I could see nothing of it. However, all worries have an end sometime and somehow. We reached the Mull of Galloway by midnight and anchored off Stranraer Harbor in three fathoms.

At Stranraer I experienced the first taste of Scotch cleverness. I was induced to go inside the harbor for the purpose of scrubbing. The tide never fell low enough to do it and the harbor master wanted to make me pay 10s. harbor dues and 10s. for scrubbing. I have since found that the able character of the harbor master is well supported by the rest of his countrymen with whom I have had dealings.

Leaving Stranraer we had a splendid run up to the Isle of Arran, past the well-known Ailsa Crag, and anchored in Lamlash Bay. Of course it rained hard and blew strongly most of the time; it would not have been Scotland if it had not, but the scenery between the squalls was beautiful.

From Arran I took the old ship through the Kyles of Bute, up Loch Ridd and down to Rothesay, passing between the narrowest channel of the Burt Islands. Here I had a little "fish" but it was not just as I was entering the very narrow ditch—for it is nothing more and blew strong right ahead. I had no room to wear and was obliged to work through. The tide was against me, too. By dint of hauling over the boom to windward and much care I got through without touching, but I could have touched any one of the four beacons easily with my hand. I have never been in such a tight place before.

I did not like Rothesay. It blew a gale from the S.W. and I came away under the trysail and flew up Lough Long. At one moment the old boat was nearly gunwale under, even under her trysail; the next she was bolt upright and all the sails limp and motionless. At one time the ensign blew out from the S.W., while the burgee was flying stiffly from the N.E. At this period I was not calm.

Loch Long is a most picturesque. The yachtsman anchors against the mountain side, and the boat is anchored half-way up it. I got out, climbed to the top. I think I saw all over Scotland. Anyhow, I saw the Ailsa Crag and Wigtonshire one way—the Firth of Forth and the east coast another way, and Ben Nevis and the Grampians the other way. There is not much more of Scotland to see, I don't think.

It is not often a yacht takes you half up a mountain.

From Loch Long I sailed down to the Gare Lock, where the old ship will try and spend the winter. But it can't stay any longer.

Now, I have tried to make all this as short as I could, but there were a great many places to be touched upon. Of course one does not do all these miles in a yacht almost single-handed without many adventures and risks. I had my share, and if the yachting editor would allow me space I could spin a good many yarns which might point a moral and give instruction. I have not the object of my writing this. What I am driving at is to show how very gloriously does one find a man may visit some of the most delightful, out of the way, picturesque or famous places in the Old World, simply by paddling one's own canoe. Such a sailing vessel as I am writing this paper in offers every comfort. There is no "pigging" it. I have carried my house with me down the Bay of Biscay, into every Breton nook and corner. Among the most interesting of the French passantry, where Old World ideas of religion of custom of the French people, stranger, where the memories of Lancelot du Lac, of Du Guesclin, of Anne of Brittany, of the Chouannerie of La Vendee are still realities.

From the heather and rocks of Britany to the heather and rocks of Cornwall, that kindred land, to the cultured world of latest fashion and most fin de siècle life, the Isle of Wight in Cowes week. Back

again along the sunny southern shore to the rugged Land's End, across the turbid waves to the rolling uplands and lonely peaks of the Welsh Highlands, where fairy legend and Bardic mystery hover round the summits of Sunodon and Clader Idols, or linger in the shades of Hanboris and the Vale of the Mawddwy.

From Welsh loveliness to Scottish highlands, to the land of loch and moor and mountain fell, I have sailed my course. Free from hotel bills, saved from lodging hunting, at ease and comfortably I have had a holiday which has covered four playgrounds of the tourist world and at what cost? Six months for sixty pounds. This has covered crew, insurance of the yacht and every expense, and has paid the journey of over 2,000 miles. Why don't more people do it? By the way, I have never employed a pilot; chart, lead and common sense have been my only guides.

### Shifting and Fixed Ballast.

THE *Field* of Dec. 9 indulges in a rather severe criticism of our remarks on the value of shifting ballast, and in an effort to justify its original assumption of the small value of the big ballast crew carried by Vigilant, it goes still further into the mathematics of the question. We might dispute the accuracy of the *Field's* calculations, but, assuming that the figures are correct as far as they go, in our opinion the question is one that can only be thoroughly considered from the practical point of view of the man who has sat well outside the plankstee of a yacht with his lap full of sandbags, rather than from the theoretical standpoint of the naval architect. We reprint the *Field's* remarks, as the calculations may interest our readers.

In the issue of *FOREST AND STREAM* for Nov. 25 there is an attempt to criticize our demonstration of the relative effect of weight on deck and weight on the keel on stability. We say attempt, because the writer displays an acquaintance with the most elementary laws of statics, and the conclusions arrived at from the illustration given are not only misleading, but might also be dangerous. The writer says we introduced the height of the center of gravity in the question, which needlessly complicates the matter; but the fact is the "matter" cannot be explained without introducing the center of gravity, even by aid of a quasi geometrical illustration such as given in *FOREST AND STREAM*. The statement made by this paper is as follows:

"In a wide, flat boat, at least, the height of the center of gravity need not be considered, and, the real question being the advantage of a certain weight at 4 (Fig. 1), on the weather deck, or stowed as low as practicable inside, the actual conditions are nearly as shown in the following diagram.

FIG. 1.

"While this section is not correct, it represents quite nearly enough that of Vigilant, and the angle of heel shown, 15 degrees, is about that at which such a model will do its fastest sailing. The advantages of five ballast depend so much on the type of boat that we have, in the diagram, attempted to represent as closely as is possible the true section of Vigilant, the position of her lead, the amount of freeboard, and the angle at which she is at her best. The lead keel is shown by the solid black, the center of buoyancy in the upright and inclined positions is indicated approximately, the weight of the crew on deck is shown at 4, and that of the same weight of lead stowed as low as possible by the shaded section at 6.

"In its first position, at 4, this weight is at a distance of about 12 ft. from C. B. 1, while in the position 6 it is about 4 ft., its righting power being measured in the one case by the lever arm 12 and in the other by the arm 4, or a gain of 3 to 1."

Now as a matter of fact the "lever arm 12 and the other arm 4" no more discloses what the effect of the different positions assigned to two tons has on the general stability of the vessel than it does the name of the captain's wife. Obviously, as the heeling of the vessel increased the lines drawn through 4 and 6 would approach each other until at last when the vessel became heeled to forty degrees, they would coincide, as shown in Fig. 2, and then the distance from the

FIG. 2.

vertical line through the center of buoyancy would be the same for both, and the 3 to 1 be thereby extinguished; whereas the actual effect of the weight on the statical stability is exactly the same for either condition of heeling. To again demonstrate what does actually take place by having a crew or equivalent weight put on the deck of a

FIG. 3.

yacht, we will choose a somewhat different form of illustration, which more approaches the A B C of the problem. In Fig. 3 the general center of gravity of the vessel and all she contains, including crew, will, it is assumed, be at *a* and also that this is the location of the

center of buoyancy, as this will simplify matters. Then, if a weight be placed on the deck at *b* the center of gravity will be raised, and the distance can be determined by the equation

$$\frac{W \times F}{D}$$

where *W* the weight (at *b*), *F* the vertical distance it is above the center of gravity, and *D* the total weight or displacement of the vessel, including the weight at *b*. If the weight is 2 tons and the distance 8 ft., and the weight of the vessel 150 tons (including the 2 tons on deck at *b*), we have

$$\frac{2 \times 8}{150} = 0.107 \text{ ft.}$$

the distance the center of gravity is raised. Next, supposing the 2 tons, instead of being placed on deck, is put underneath the keel at *c*, 1 ft., below *a*, and increasing the draught by 3 in. or 4 in., then by the same equation the center of gravity would be lowered 0.147.

But in continuation, we will consider that the weight at *b* has been shifted 12 ft. out to *d*; then by this movement the center of gravity will be shifted horizontally in the direction of the arrow 0.16 ft., the common result of the two movements (putting the weight at *b* and shifting it to *d*), being that the center of gravity of the vessel is moved in the line *a d*, say, to *e*, and the vessel would heel until the center of buoyancy again came in the vertical line of the center of gravity at *e*. It should be noted that the new position of the center of gravity could be found by the equation by putting in it the distance *a d* instead of *F*, but this method in the end would be more complicated.

The net result on the stability will be next determined. In Fig. 4

FIG. 4.

it is assumed that the vessel is heeled to 15°, and that her metacentric height is 7 ft. As the vessel heels the center of buoyancy at *a* shifts to some point, as at *f*, and the distance *a f* is the length of the righting arm on which the weight of the vessel acts, in a downward direction, through *a*, and the equal force of the buoyancy in an upward direction, through *f*.

The intersection *m* is termed the meta center, and in this illustration we have assumed it to be 7 ft. above *a* (the center of gravity.) If the metacentric height is 7 ft., then the length of the righting arm at an inclination of 15° will be 7 ft. × sine angle = 1.819 ft.

If the center of gravity is raised by putting 2 tons to *b*, then the metacentric height will be diminished by 0.107 ft., or, say, 6.893 ft., and the righting arm *a f* will be reduced to 1.785. If, on the other hand, the weight is lowered to *c*, then the metacentric height will be increased to 7.147 ft., and the righting arm to 1.851 ft.

Finally, if the weight on deck is shifted to *d*, the righting arm of 1.785 ft. (for the weight in its position *b*) would be increased to (1.785 × 16) 1.945 ft., or a net gain of .133 ft. of righting arm; and a net gain of .044 ft., on the righting arm which would exist if the 2 tons had been put on the keel at *c* instead of on deck at *b*.

The advantage, therefore, for the deck position at *b* would be as .132 to .044, or, say, as 14 to 1.

As to the *Field's* criticisms, the main question is not of the effect of the movable fraction of the ballast on the "general stability" of the yacht at all angles, but only within such a very limited angle as is essential to speed, if not safety, in a shoal wide boat. There is no need of figures to prove to the catboat sailor that the center of gravity is so far to windward that if caught aback, his crew and sandbags will capsize the boat; nor that, once heeled beyond a certain angle to leeward, her crew must swim as certainly as her sandbags will sink.

The case of Vigilant, with so larger proportion of her ballast on the keel and so little on the weather deck, is quite different in degree from that of an open sandbag boat or a sliding seat canoe, but a man with any practical experience of the immense gain in lying out over the water instead of sitting upright on the deck edge, or of edging himself out another half inch on his sliding seat, will be very slow to believe that, even in the case of Vigilant, the benefits of live ballast to windward over the same weight of lead in the keel can be as insignificant as the *Field's* figures assume to prove.

### Editor Forest and Stream:

I was much interested a few weeks ago to see in your paper the representation of an approximate section of the Vigilant, with calculations of the effect on her stability of the weight of her extra large crew carried well to windward on deck, and a comparison of this effect with an equal weight stowed on top of her other ballast. I felt much interest in this, as no doubt did many yachtsmen of the calculating sort, and this interest was increased because I had previously seen an attempt in the *Field* to deal with the same problem. There was a wide difference between the results given in your paper and those shown in the *Field*, and I was impressed with the much greater accuracy and also by the greater simplicity and necessarily greater certainty of your method.

This arose from the fact that, allowing that the midship section shown was approximately a correct one, the factors entering into your calculation were practically known quantities. The center of buoyancy and the two positions treated of for the weight with their relations to the center of buoyancy and with each other could be shown without danger of serious error, and the value of these weights as righting forces, at any defined angle of heel in the vessel, could be very readily and very clearly estimated.

By the *Field* method figures were introduced, as it appears to me, quite needlessly, the gravity of the vessel, and its center of center, and the effort was made to show the relative effectiveness of the movable ballast through its modifying influence on the position of the latter, instead of by a comparison of the moments of the movable ballast in the positions in question, acting on the vessel's center of support (C. B.).

Now, it must be evident to a novice even that neither the gravity of the vessel nor the position of its center can be satisfactorily assumed, and that an error in locating it position would seriously affect the result of any computation such as that under consideration, and make of little value any conclusions formed through such assumption.

For the purpose which your article of Nov. 25 had in view, that of showing the relative effectiveness of two tons of ballast used in either of two positions at an angle of 15°, it appears to me that your method was simple, easily comprehended and correct, and that its conclusions might be accepted, as it dealt only with practically known quantities. With the *Field* it appears to me the case is otherwise.

I was therefore somewhat surprised in looking over the last number received here of that journal to see that its yachting editor comments unfavorably upon the method you have employed and the conclusions arrived at.

I cannot, however, find that he anywhere points out an error in your statement, though there is a plain inference from his remarks that you have somehow made such; and there is some asperity shown in the remark, "Now, as a matter of fact, the lever arm, 12, and the other arm, 4, no more discloses what the effect of the different positions assigned to the two tons has on the general stability of the vessel than it does the name of the captain's wife." I do not derive from your interesting article that your purpose was to show what the effect would be upon the stability of the Vigilant of two tons of ballast placed near the weather rail if she were inclined 40° or 50°, or at some impracticable sailing angle; but that your purpose was to correct the misleading conclusions of the *Field's* article, and to show how much more effective in a heavy yacht is two tons of ballast placed well to windward than would be any like weight placed near to the keel when such a vessel is sailing at a practicable angle of about 15°. For this purpose, it appears to me, your method is correct, while that of your antagonist, for reasons which have been stated, is correct only to the extent of the accuracy of his assumptions; and it is, moreover, as it appears to me, for your limited and express purpose, about as ill-adapted as is a deep-sea lead to take soundings in a duck pond.

NEW YORK, Dec. 23.

BONSTAY.

Alga, cutter, owned by the late Chas. Longfellow, has been sold to R. F. Perkins.

### New Yachts.

MR. N. G. HERRSHOFF is now at work on an improved Dilemma for his own use, employing a spare fin and bulb made for the 36-foot Drusilla. Mr. Gielow has an order for a schooner similar to Loyal, the dimensions being: over all 70 ft., 1 w. 58 ft., beam 17 ft. 7 in., draft 8 ft. She will be built of wood. He has also an order for a steam launch for Robert Shoemaker, Jr., of Philadelphia, to be 47 ft. 7 in. over all, 46 ft. 9 in. 1 w., 7 ft. 4 in. beam, 2 ft. 4 in. draft. Several yachts of about 20 ft. of the Cape Cat and "knockabout" types, are building about Boston.

### Columbia.

The new steam yacht Columbia, designed and built by the Cramp Shipbuilding Co. for J. H. Lusk, made a trial trip on Dec. 19, running from Larchmont to New London, 50.3 miles, naut., in 4 h. 43 m. 57 s., an average speed of 17.35 knots.

### YACHT NEWS NOTES.

The opening lecture of the Seawanhaka Corinthian Y. C. was given at the Yacht Club house on Dec. 22, the lecturer being Dr. Frederick A. Cook, of Brooklyn, and last speaker being Greenland and Eskimo life. Dr. Cook was a member of the first Peary expedition, and also made a second trip last summer in a small schooner to the shores of Greenland, and his remarks were specially directed to such Arctic work as may be safely and comfortably done in any well-appointed yacht. There were present three natives brought last summer from Greenland, a girl, a boy and a dog. The interest of the lecture was greatly increased by a large number of lantern views made from photos made on both expeditions.

At the annual meeting of the Harlem Y. C. on Dec. 21 the following officers were elected: Com., Walter A. Boody; Vice-Com., John Wimmer; Rear-Com., Henry Soch; Fleet Captain, W. Seardfield; Fleet Surgeon, Dr. H. M. Cox; Meas., W. D. S. Hyer; Treas., T. C. Allen; Fin. Sec., H. B. McAllister; Rec. Sec., P. Macy; Cor. Sec., F. W. Creggan; Stewards, M. L. Gertz and J. C. McCarthy; Board of Directors, D. Ryan, J. F. Lior, F. J. Fitch, W. Towner, E. M. Griffiths, F. Davis and A. G. Austin.

Mr. Clarence L. Burger, Larchmont Y. C., is still working for the passage of the bill prepared by him last winter for the protection of the distinguishing flags of yacht clubs and steamship companies. The bill passed the House last year but was too late for the Senate.

The annual meeting of Oak Point Y. C. was held on Dec. 19, the following officers being elected: Com., John Corbett; Fleet Captain, R. D. Lenge; Vice-Com., John Lee; Treas., J. W. Wakeling; Rec. Sec., George Gent; Fin. Sec., Nicholas Schmidt; Cor. Sec., R. A. Blank; Steward, Morris Deutsch; Meas., John Fraser; Sergeant, W. Newbeck; Board of Directors, F. Freeman, Chairman; O. Steinhilber, J. E. Baxter, C. Durifelt, T. Hagarty; Regatta Committee, V. Roz, Chairman; V. Clark, B. Barry.

Natalie, steam yacht, after sailing from Port Jefferson on Dec. 1 in charge of Captain Wm. Kirk, has not yet been reported. The yacht, which had been purchased by strangers, was nominally bound for Philadelphia. Rumor connects her with the Brazilian troubles.

El Chico has been sold to Willard E. Case of Auburn, N. Y., and is now being fitted with a larger cockpit and prepared for shipment, under the direction of Mr. J. Beaver Webb.

In answer to various inquiries about ice yachts, we would call attention to the advertisement of F. Weslaw on another page. Mr. Weslaw is prepared to furnish the boats complete or the separate parts.

The Christmas number of the *Yachtsman* has been greatly delayed in the home post office, but arrived with the New Year in New York. Capt. Haif, who has been in Gen. Paine's employ since 1887, has been re-engaged for this year, before Gen. Paine decided to build, he transferred Capt. Haif's services to Rear Com. Rogers for Colonia, and later on engaged Capt. Barr as the sailing master of the new Jubilee.

Mr. Watson has an order for a 10-rater from Messrs. R. G. and S. Allen, of Glasgow, to race against Mr. Henry Allen's new Herresford 10.

A correspondent asks the address of a builder of the Barnegat sneak-box; possibly some of our readers may be able to aid him.

### Canoeing.

### THE LOG OF THE FRANKIE.

The '92 Cruise of the Shenandoah C. C.

BY THE COMMODORE.

(Continued from Page 515).

We landed at the spring below the falls a few miles further down (which we easily passed by means of the boat channel, or the left hand end) for a drink and a smoke. The "Pig Path" rapid, or fall, was next successfully negotiated, and around the next turn to the right the mill and dam at Bixter's was sighted. There proved to be an open shoot in the dam, over near the mill, but as it was a perpendicular cataract some 4 or 5 ft. high, with no depth below it, the fall coming upon the rocks without sufficient depth for the bows of the canoes to go down below the surface, as is the case at the big shoot at Goode's dam, George and I promptly declined it.

Lacy, however, who was in a reckless mood, and who hadn't had as much experience in shooting dams as he acquired a few minutes later, insisted on taking it, so, as there was no reasoning him out of it, we removed the foot log, which barred the top of the shoot and let him go. His canoe made the plunge gallantly, but her bow brought up with a crash among the rocks at the bottom just as we told him it would, and there she hung in the shoot—bow on the rocks below and stern on the dam above. She heeled until he was all but spilled out, while the water rushed in a sheet several inches deep over his decks and around his waist into the cockpit until the canoe was full. He finally, by vigorous shoves with his paddle, managed to free his canoe from the bottom of the chute, when she dropped on over into the swift, race-like channel below, down which she shot like an arrow some 50 yds., finally bringing up high and dry on the rocks at one side of the channel, with her bow and stern projecting out into space like Noah's Ark on Ararat.

There was nothing left for Lacy to do but disembark and lift her down off the rocks, which he did, first unpacking his kitchen ware until he got hold of a bucket, with which he dipped most of the water out of her. He then ran ashore a short distance below the mill and unpacked her and made a careful investigation to see how much damage she had sustained, and was most agreeably surprised to find that she had escaped with no more serious injuries than a smashed nose, her stern oak stem having smashed into splinters at the bow just above the water line where she struck on the rocks.

In the mean time George and I, after finding that Lacy needed no assistance from us, easily p. rated our canoes by getting out of them, and after tightly closing the hatches and fastening the aprons, letting them drop easily down over the shoot, which they did safely after being lightened of our weight.

We then went into an early camp by the roadside a hundred yards below the dam, by a clear spring in the bank, where we fixed ourselves quite comfortably for a stay of a night and a forenoon, for it is our intention to stop here until to-morrow afternoon. George and I fished a little at dusk this evening. I took one nice bass, while George didn't get a rise.

Sunday, Aug. 7, 1892.—Morning dawned with a fog so dense that an early start would have been out of the question, even had it been contemplated. I got up ahead of the boys and let them sleep on without disturbing them, and pattered around the camp with divers and sun dry little duties until they awoke. I put a new seat on my camp stool, as the old one was broken down, shaved, wrote up my log, etc., until in due time they crawled out of their snug little cabins and we proceeded to prepare and stow away an elegant breakfast of bacon, fried potatoes and onions, fresh bass and hot coffee and biscuits.

We had a lazy, comfortable forenoon of it, idling around in the shade by the side of the beautiful river, whose musical murmur sounded a ceaseless soothing lullaby in our ears. We read, wrote letters, etc., and put out all of our things for a good hot sun bath, including some small washing in which we all took a hand. An occasional day, or even half a day, in camp is a great convenience; in fact, almost a necessity, for things will need attention and overhauling.

We lunched at 1 and by 2 everything was packed and we were again afloat for a short cruise of eight miles to Menifee's. Quite a little crowd collected on the bank to see us off. This is a capital camping place, but being so close to the ferry and ford is rather too public, and I am afraid our tents were an annoyance to more than one driver of skiffish horses.

We had a most pleasant afternoon cruise to Menifee's, where we found, as I knew before hand, a fine spring in the reefs that put out from the high, steep bank into the river, affording an excellent camping place. We enjoyed the afternoon run exceedingly, although a heavy rain caught us in the reach below the mouth of Hawkbill Creek, which we rode out dry and comfortable clad in our rubber

### Empire Rifle Club Prize Shoot.

The two days' gallery prize shoot of the Empire Rifle Club was brought to a successful close at a late hour on Monday night—Christmas. The programme put up by the club called for twelve prizes, ranging from \$25 down to \$1. Tickets three shots each and three tickets for \$1, two tickets to count. Many of our expert gallery shooters were on hand and struggled hard for the first position on the prize list. The cheapness of the shooting was an inducement to the contesting shooters to try, try again, and the re-entries were many and often. The closing hour of the shoot found Messrs. Dorrier, Flach and Holges a tie for the first three prizes, each having a total of 146 points out of a possible 150. The scores:

F. Flach	73-146	O. Hufsch	71-142
M. Dorrier	73-146	B. Zettler	71-142
H. Holger	73-146	G. Zettler	68-140
B. Zahn	73-145	L. Busch	69-139
W. Rosenbaum	73-145	O. Boag	65-136
F. C. Ross	72-144	O. Zettler, Jr.	60-136

### Schlicht Rifle Club.

The Schlicht Rifle Club held its weekly gallery shoot Dec. 25 on the Schlicht ranges, 10 shots per man, 25-ring target, distance 75 ft.: Geo. Schlicht 242, G. Dorrier 237, J. Diehl 229, G. Lautenberger 217, E. O. Breilenthine 217, J. Schlicht 216, A. Andrews 215, F. Thürk 215, W. Schlicht 214, E. Hummel 213, J. Enders 210, S. Graver 209, J. Graver 202, C. Greck 215, C. Schlicht 187, L. Dorrier 182, A. Deubline 169, P. Man 174.

### RIFLE NOTES.

The fact that the Miller Rifle Club should abandon its advertised Christmas Day prize shoot, without giving the New York shooters previous notice of such action on its part, has created a feeling of dissatisfaction in the minds of those riflemen who went to the trouble of packing their rifles over to Hoboken, only to find that there was no shoot on, that will take a long time to overcome. Clubs, like individuals, to be successful must meet their obligations, or at least give due notice of their inability to do so.

The greeting of the California shooters to the eastern brotherhood will probably result in a delegation of New York riflemen making a visit to the Pacific slope in March. Poor business and the hard times will no doubt tie up many of our experts. There is no doubt that those who do find it possible to make the visit will meet with a royal reception from the California Schuetzen.

During a meeting of the members of the Zettler Club at their weekly gallery shoot on Tuesday night of last week, there was considerable talk upon the subject of individual match shooting, and the outcome was that the proposed match between Messrs. Ross and Dorrier was pushed along the path leading to a final adjustment. While this interesting subject was being ventilated two other members of the club present, Messrs. Busse and Flaisted, looked over their respective abilities as shooters, and the consequence was that the two were matched to shoot a 100-shot race on Jan. 12 for \$50 a side. Busse, winning the choice of ground, named Washington Park, so while the boys are waiting for the two experts to develop their proposed contest, they can fill in the time canvassing the merits of Busse and Flaisted.

## Trap-Shooting.

### FIXTURES.

Jan. 4.—Union Gun Club's live bird tournament, at Springfield, N. J. Jan. 9.—New Jersey vs. Kings county, team shoot, on Al. Heritage's grounds, Marion, N. J.  
Jan. 15.—Grand live and artificial bird shoot, \$1,000 guaranteed, by the Hamilton Gun Club. J. E. Overholt, Sec'y.  
Jan. 23.—Open shoot at 25 live birds, \$25 entry, on Erb's grounds, Newark, N. J. Entries close Jan. 22.  
Feb. 2.—White Plains (N. Y.) Gun Club tournament.  
Feb. —Reading Shooting Association tournament; two days targets, one day live birds, at Three-Mile House, Shillington, Pa.

### DRIVERS AND TWISTERS.

ONE of the greatest live bird contests ever shot in this country, one which will be "for blood," with no dropping for place, will take place on the Marion grounds of Al Heritage, next Tuesday. It will be the long talked of contest between teams of twenty men each, representing New Jersey and Kings County, N. Y., arranged by "Uncle Jake" Peitz of the Newark Gun Club, who will shoot at 15 live pigeons, under modified Hurlingham rules. The "consideration" will be \$10 a man and the price of the birds. The contest will begin at 9.30 A. M. This contest should be on to attract an immense crowd of spectators, as it is almost sure to be closely contested. Al Heritage promises to have on hand as good a lot of birds as money will buy, and the handling and driving will be carefully attended to. The composition of the teams has not been finally decided upon, but the following names have been submitted by the managers and from this list the teams will be selected: New Jersey team, Samuel Castle, C. M. Heden, R. H. Breintall, Ebenezer Francis and Fern Vanhlyke of Newark. Justus Von Lengerke of Orange, John Rigdott of Rockaway, William Sigler of Montclair, Fletcher Walters of Arlington, Charles Smith of Plainfield, James L. Smith of Hackensack, W. F. Lindsey and Ed. Collins of West Hoboken, A. W. Money and G. Money of Oakland, James Van Brackle and George Cullberry of Long Branch, T. W. Morley of Patterson, E. D. Miller of Springfield, Oscar Hesse of and E. M. Cooper of Red Bank. Kings County team: Mort. Van Brunt, Samuel Northridge, A. A. Hegeman, Dr. Van Sil, Fred'k Pfander, Garry Cropsey, Henry Balzer, D. C. Bennett, James Bennett, D. Deacon, George W. Smith, Richard L. Smith, J. H. Hackett, J. H. Hackett, Charles Winger, C. E. Morris, C. Ferguson, Jr., Charles Plate, L. T. Duryea, J. D. Voorhees, Dr. W. Wynn, Charles Dettleson. In the list of New Jersey men appear the names of several men who, in our judgment should not have been included, while on the other hand we were rather surprised to see that the names of Wm. H. Green of Harrison, J. W. Hoffmann of Orange Valley, and Dr. P. J. Ziegler of Vanarsdale were omitted. It is without doubt that the contest will be a fine team shoot in the State, while Ziegler and Hoffman are far safer than some of the men chosen. Still there is not a really weak shot on the list, and the team will make a good showing. The Kings County team is comprised of fairly good shots, but here too are included the names of some who are without doubt weaker than others who are left off. To reach the Marion grounds, where the contest will be held, take the Pennsylvania railroad to Marion station, where stages and hacks will be in waiting. There will be plenty of lunch on the grounds and the coffee will be kept boiling all day.

PUTNEY, Vt., Dec. 21.—The Putney (Vt.) Rod and Gun Club will open up its season about April 1, and will probably hold an open tournament in May, with big inducements for shooters from other States. Putney is a town of about 1,500 inhabitants, pleasantly situated in southern Vermont, on the Connecticut River, and is quite accessible by rail. Our club numbers about twenty shooters, but the most remarkable team shots in the State, while Ziegler and Hoffman are far safer than some of the men chosen. Still there is not a really weak shot on the list, and the team will make a good showing. The Kings County team is comprised of fairly good shots, but here too are included the names of some who are without doubt weaker than others who are left off. To reach the Marion grounds, where the contest will be held, take the Pennsylvania railroad to Marion station, where stages and hacks will be in waiting. There will be plenty of lunch on the grounds and the coffee will be kept boiling all day.

The Buffalo (N. Y.) Courier tells the following good one on genial Jacob Koch, one of the leading shots of the Union Gun Club of that city: "Years ago before Jacob Koch was recognized as champion of the city, he was always on the alert to find out where the leading sportsmen went field shooting, and how many birds they bagged. One day George Stauber and Arthur Combs went out to Eden and killed eight English snipe. Coming home, Arthur suggested that George take them all to his place, as Jacob was waiting to see them there on time. Pretty soon Koch came tripping into the place as light as a feather. He went to the icebox, and his eyes stuck out like onions as he looked at the 8 beauties. 'You didn't kill 16 of 'em, did you George?' 'No, 8.' 'I felt worried, and Stauber knew it was only a matter of a few moments before he would be 'legging it' down to Combs's, so he quietly dispatched a messenger with the birds for Arthur's place, with strict orders to tell him that Jacob was waiting to see them. In came Koch a moment later, puffing like a porpoise and never stopping to say good morning until he had his grip fastened on the snipe to the icebox door. 'What luck to-day Arthur?' 'Eight beauties, kr,' was the response, which seemed to come from the bottom of the

Englishman's heart. Jake yanked open the door, and there enough there they were. 'Well, by thunder,' he roared, fully convinced that he was being bagged by the two, and to this day he doesn't know the difference. But he has changed his opinion, and he is now in the shooting box, and the other fellows like to peek into his ice-box."

ALLEGHENY, Pa., Dec. 22.—The annual meeting of the Eagle Gun Club was held yesterday. Samuel McCarty was elected President; Wm. Yellowy, Vice-President; George Whorrell, Secretary; E. Brown, Treasurer, and Wm. Kline, Captain. The directors are: A. Garloch, E. Ziemer and G. Farrand. The club has been in existence five years and has a membership of 40. It has made remarkable progress during the last two or three years and has held some of the most prominent club-bird shoots in western Pennsylvania. The club has an excellent bank account and a very large stock of live birds. The club is a member of the State Sportsmen's Association. The first members of the club were Wm. Yellowy, H. Sander, Wm. Schnaebli, E. Spencer, Wm. Parker, E. Parker, G. Whorrell, R. French, R. Hillard and J. Hillard. The first shooting ground of the club was on the bar just ahead of Bruno's, and on the same day ago the club made excellent grounds on Marshall avenue. The club has four principal shoots each year, viz., Decoration Day, July 4, Thanksgiving Day and Christmas Day.

In response to a request from several of the prominent trap shots of this vicinity there has been arranged a contest at 25 live birds, \$25 entry, to be shot Jan. 23 on the famous "Old Stone House" grounds of John Erb on Bloomfield avenue, Newark, N. J., beginning at 10 o'clock A. M. This contest will be open to the world, and invitations have been sent to a large number of experts of New York, Pennsylvania and New Jersey. A large lot of birds will be furnished and there will be no favorites played. The prize will be \$25, and no more larger than a 12-bore allowed. If the entries do not exceed seven there will be two moneys; eight to fourteen entries, three moneys; fifteen or more entries, four moneys. Hurlingham rules to govern except as to boundary. Entries along with a forfeit of \$10 will be received at the club, Jan. 22, by C. H. Townsend, trap editor FOREST AND STREAM, 313 Broadway, New York.

PENNY AMOY, N. J., Dec. 22.—A shooting match at five birds took place to-day on the grounds of the Penny Amoy Gun Club, between William F. Hartmann, of this city, and Lee B. Campbell, of the River side Gun Club of Red Bank. The stake was \$100 a side. They shot at 25 birds each, and trap and handle for each other; one barrel and one trap. Considerable money was wagered on Hartman to win, who, on Thanksgiving Day, made clean scores in the four sweepstakes at live birds. Campbell was favored in the betting by a number of the members of the Midway Club. He won by one bird. The presence was strong and fast, and many of the kills were warmly applauded. The score was 16 to 15.

The Orange Rod and Gun Club held its first shoot under its new management on Christmas on its grounds on Watching Mountain, West Orange. There were 14 members present, and both live birds and targets were used. In one event at 5 live birds George Fisher killed 5, Samuel Schwab 4 and C. Jacobs 4. Wm. Farnham was scorer. After the shoot the members dined at the Christmas dinner at Dunn's Llewellyn Park Hotel. This club held a meeting on Dec. 19 and reorganized, electing the following officers: President, Chas. C. S. Young; Vice-President, Frank B. Storms; Financial Secretary, Hamilton Miller; Corresponding Secretary, Samuel Schwab; Treasurer, William P. Dunn.

PUTNEY, Pa., Dec. 22.—The annual meeting of the Iroquois Rifle and Gun Club was held yesterday, and the following officers were elected: President, C. D. Duetz; Vice-President, L. G. Graul; Secretary, A. C. L. Hoffmeister; Treasurer, James P. Zoeller; No. 1 Shooting Master, A. F. Hoffmeister; Second Shooting Master, Henry Eglesdorf; William Miller, Aug. Goldstrom; Gun Shooting Committee, W. G. Ulick, Aug. Goldstrom; Board of Directors, Aug. F. Hoffmeister, Albert C. L. Hoffmeister, William Miller, Fred. Miller, Aug. Goldstrom.

On Elmwood avenue, in Irvington, N. J., where the Myrtle Park Gun Club holds its first shoot of the season, was heard nearly all of Christmas Day, although the attendance was light. Although one of the youngest this club is also one of the strongest clubs in the State, and on any other day would have attracted a good list of entries. The sport comprised five events at ten targets each and the results follow: Event No. 1, Smith 10, Young 9, Osborne 8, Momm 7. No. 2, Baldwin 6, Smith 6, Osborne 6. No. 3, Smith 8, Osborne 8, Young 6, Baldwin 6. No. 4, Smith 10, Young 10, Osborne 6, Momm 4. No. 5, Young 9, Smith 8, Baldwin 7, Osborne 7, Momm 5.

Arrangements have been perfected for the organization of the Peconic Gun Club, which will be situated at Jamesport, Suffolk County. The prime movers in the matter are Edward J. Carey and James J. Noonan, who are connected with the Long Island Railroad Company. It is intended to lease and fit out a clubhouse near the shore of Peconic Bay, and, with that end in view, the men above named will shortly go to the island and select a suitable location. At a meeting held on Dec. 18 last, the following officers were elected: President, Edward J. Carey; Vice-president, James J. Noonan; Secretary and treasurer, I. Clark.

The New York Tribune of Dec. 23 did a grave injustice to the South Side Gun Club of Newark, by publishing an item stating that on Christmas Day, when the club held a live bird shoot, two boys were severely injured by stray pellets. There was no shoot on the above grounds on Christmas Day, and moreover, live birds are never shot there, the club devoting its grounds exclusively to target shooting. The two boys in question were shot at Wiedenmayer's Park in Hamburg place, while trying to flush lazy birds. They were severely stung about the back and shoulders, but their injuries are not thought to be serious.

The Brighton Gun Club, an enterprising organization of East Orange, N. J., held a shoot on its North Park street grounds on Christmas Day, targets being used. The attendance was fair and the shooting was witnessed by a large crowd of spectators. In the main events, at 25 targets each, S. Badgley broke 30, J. O'Connell 28, Canfield 17, Jos. Gower, Jr. 16, G. Kutcher 14, R. Baldwin 13, J. Ackerman 9. A 10-target shoot, which ended the day's sport, resulted as follows: O'Mealey 7, Badgley 8, Canfield 8, Gower 6, Baldwin 6, Kutcher 5, Ackerman 4. The scoring was done by Mayne Potter.

Rapidly the months are passing by, and the passing of each one brings us closer to the dates selected for the great big tournament of the Knoxville Gun Club. With \$1,000 in solid cash added to the purses during the three target days, and a day's live bird shooting to follow, it ought to be a big shoot, and it surely will be a big one, with at least 100 entries in the target events. This is a very high figure to count upon, but then high prizes will always draw the shooters. You must watch our columns for the programme which we are sure to publish several weeks ahead of our esteemed contemporaries.

There is a rumor afloat that J. A. R. Elliott, of Kansas City, Mo., is desirous of meeting John L. Brewer in one or more matches. While Elliott is conceded to be a credit for being a rattling good marksman, we still incline to the belief that he is no better than a contest with Mr. Brewer if the latter is in anything like his own form, and that on first-class birds Mr. Brewer could defeat him in seven out of ten contests. We have no doubt of Mr. Brewer's willingness to meet the Kansas City man at any number of birds or for any amount of money.

An interesting affair, and one that would attract an immense crowd of spectators, would be a contest with the four leading professionals (who are the best shot in the country) against the four leading amateurs of New York, each man to shoot at 100 first-class birds under American Association rules. It would seem that in the trap-shooting ranks of the Riverton, Westminster, Carteret, Hollywood and Larchmont clubs there could be found four men who could well sustain themselves in a shoot against a quartette chosen from Brewer, Elliott, Budd, Fulford and Claas.

An elaborate programme and one which should attract a big entry list, is that published for the fourth annual shooting tournament of the Hamilton (Ont.) Gun Club, on January 16th, 17th and 18th. The great event on the first day will be at 20 live birds, \$10 entry, with fourteen moneys, ranging from \$200 down to \$15. On this day there will be one 15-target and two 20-target events. On the second day there will be two 10 and two 20-target events. On the third day a live bird, miss and out event, at 10 live birds, two 15-target events and one at 20 targets.

The appended list of officers has been elected by the Frankford (Pa.) Gun Club. Edward Beck, President; Benjamin Bourne, Vice-President; David D. Mercer, Secretary; H. Leachard, Treasurer; Elmer Betson, Field Captain; E. Beck, Assistant Field Captain; John E. Crowther and Benjamin Bourne, Trustees. The club has its headquarters on Orthodox street, below Frankford.

The White Plains (N. Y.) Gun Club claims Feb. 22 (Washington's Birthday) for a live bird and target tournament, and hopes to see a big turnout of New York and New Jersey shooters. Shooting will begin at 9 A. M. and continue until candle-light. The grounds can be reached in thirty minutes from the Grand Central Depot in New York city.

The Harrison (N. J.) Rod and Fishing Club held their second shoot for a silver cup on Christmas, each man shooting at 15 blue rock targets. J. Crawley, who won the first contest, was again successful in getting the top score, breaking 11; W. Crowley broke 8, O. Sanford 7, W. Coyle 5, J. Rosmer 4, J. Purcell 2, Harry Wardell 0.

At the medal shoot of the Riverside Gun Club at Red Bank, N. J., on Dec. 22 each man shot at 25 targets, Irvin breaking 24, E. Cooper 19, E. Throckmorton 17, J. S. Hoyle 16, Little 18, L. Davis 5, Corwell 14, Hesse 21, John Cooper 21, Chas. Throckmorton 11.

Wm. H. McQuoid of New York and David C. Roe of Middletown, N. Y., shot a match at ten live birds each near Middletown on Christmas Day. McQuoid won by one bird. The stake was \$50 a side.

The annual shoot of the Hamilton (Ont.) Gun Club will be held on Jan. 16, 17 and 18, and will attract a big attendance. In the live bird contest there are usually from 75 to 100 entries.

The Clyde (N. Y.) Gun Club has elected the following officers: President, James H. Streeter; Vice-President, G. D. Barrett; Secretary-Treasurer, Anson C. Burnett.

The San Antonio (Texas) Gun Club, which shoots twice a week except during the open season, used over 100,000 targets during 1893. Go to Marion next Tuesday and see the great match between the New Jersey and Kings County teams.

Hurry in your entry for the 25-bird sweep to be shot at Erb's Jan. 23. J. A. R. Elliott expects to attend the Hamilton shoot.

C. H. TOWNSEND.

### Birds and Targets at Dexter Park.

LOUIS MILLER's annual Christmas and New Year's shoots are always looked forward to by his patrons with that sort of inward anticipation that is likened to the good boy who sees the first preparations in the family kitchen for the opening of the mince pie season. So when Louis's notices for his Christmas shoot went out some days ago, his targets said, "Hullo, here comes our annual feast of birds, targets and turkey again." As the days advanced the regulars began their preparations for the anticipated pleasures of Christmas, 1893. Christmas morning opened mild and pleasant, lacking nothing in its April appearance but the song of the amphibious frog. Many of the expectant shooters were on the grounds at an early hour getting the lay of the land and a few preliminary shots at the targets. The day's sport was divided into three divisions. The first was devoted to targets, the second to turkey, and the third to live birds. The programme devoted to targets was divided into four events.

The first, at ten targets, had nine entries. Short and Kneebly, Jr., tied with seven and divided first money.

The second event called for 10 targets, with twelve entries. W. Levens took first money with nine, Schortemeier second with eight, Short third with seven.

The third event was at fifteen targets, with twelve entries. Fessenden 13, first; Levens 12, second; Kneebly and Schortemeier 11, third; Wright 9, fourth.

The fourth event, at ten targets, had eight entries. Lions, Wright, Fessenden, Schortemeier first, with six. Short second with five.

The second or intermediate stage of the day's sport having arrived, an adjournment was taken to visit Mrs. Miller's department and discuss the turkey question. Having settled this matter to the satisfaction of all, then came the third, last and most interesting part of the shooting programme, the live bird events.

The first was at 5 birds, with eight entries. The birds were A1, and made lively sport for the contestants in their efforts to stop them within the boundary. Schortemeier was the only man to kill his 5 straight. Bowen, Fessenden and Osterhout tied with 4.

The second event, at 5 birds, had eleven entries. Schortemeier, Bowen and Kraft tied for first money with 5 each.

The third event, at 5 birds, with fourteen entries, developed some fine shooting at lively birds. Dr. Little, Kraft, Schortemeier and Lair tied with 4 scores of 5 kills each.

The fourth and last event of the day called for 3 birds, with six entries. Schortemeier, Lair, Hopkins and Brannwell killed 3 each. Scores:

No. 1, 10 targets:			
Levens	101011010-6	Smyth	0001010000-2

### Phoenix Christmas Day.

FR. DOVER, Ont., Dec. 27.—We inclose herewith scores made by the Phoenix Gun Club on their Christmas Day shoot. Owing to a perfect gale blowing at the time of the shooting, and from right behind the traps, the scores are very good, and better than was expected.

No. 1, 12 blue rocks:

Back	011001010001-5	Ansel	11010000110-5
Lark	110000110101-7	Watts	0000000000-0
Barrett	011010110101-7		

No. 2, 12 blue rocks:

R. Skey	010100010111-6	Barrett	1001100010101-5
E. Skey	00000110001011-7	Lawrie	1001110101101-7
H. D. Williams	100110101001-6	Fick	11111101101101-10
O. Coe	1111101101101-10	Ansel	00001100010100-3

No. 3, 8 targets:

Ansel	011111111-9	Fick	101010-3
E. Skey	111111111-8	R. Skey	0111-6
Scofield	1101111-5	Williams	1111-2

A. W. LAWRIE, Sec'y.

### Springfield Christmas Shoot.

SPRINGFIELD, O., Dec. 26.—The Springfield Gun Club celebrated Christmas with a successful shoot at its range. The day was an ideal one for the sport. It was so warm that there was no need for a fire in the club house. Following are the scores:

First, 10 singles: Hughes 9, Barton 5, Bimmel 3, Shell 7, Strong 10, Hutchins 3, Downs 9, Young 9, Tibbets 5, Elder 6, Fleming 6, Lessner 6.

Second, 15 singles: Hughes 11, Strong 12, Shell 9, Bimmel 2, Hutchins 5, Barton 9, Downs 10, Jenkins 0, Young 14, Tibbets 4, Lessner 11, Nell 3.

Third, 10 singles: Shell 6, Strong 9, Hughes 6, Bimmel 4, Barton 5, Williams 7, Young 10, Lessner 3, Fleming 6, Elder 3, D. D. Hootch 7.

Fourth, 4 singles and 3 pairs: Hutchins 5, Bimmel 1, Shell 3, Foley 1, Williams 6, Barton 3, Downs 7, Hughes 5, Fleming 5, Tibbets 6, Strong 10, Lessner 4, Young 7.

Fifth, 15 singles: Foley 4, Hutchins 10, Lessner 12, Strong 12, Shell 7, Tibbets 9, Downs 12, Young 12, Barton 5, Bimmel 9, Lessner 11, Shell 5.

J. A. EREN, Sec'y.

### Vernon Gun Club.

THE monthly shoot of the Vernons at Dexter Park on Dec. 23 brought together only eight members in the club event. The Vernons are another of the few clubs who have adopted the old Long Island rules. They shoot at 7 birds, handicap distance. Dr. Little was the only member to kill 7 straight. Osterhout lost his fifth bird on account of his gun being above the elbow. Scores:

Vischerth	110121-5	Spadoue	031210-5
Dr. Little	111213-7	F. Thompson	062212-5
Osterhout	030101-3	Cole	030101-3
W. H. Thompson	112101-6	Brown	102101-6

### Hall Beats Bogardus.

Chicago.

TRIALS OF GEORGE HOLDEN

CHICAGO, Ill., Dec. 23.—Once upon a time, a long while ago, George Holden, of this city, otherwise known as "Husky" Holden, was by some mischance elected secretary of a gun club here. Somehow or other his name got into the grooves of time, possibly through some published list of gun clubs, and since then George has been a man the world will not willingly let die. He can make the public believe that he is no longer the secretary. To the contrary, though he has long since gone into private life, he still gets all sorts of letters from all sorts of people and all sorts of places, wanting him to do all sorts of things. I have earlier described how a man once wanted him to buy two ring-tailed monkeys because he once was a secretary. This was only one of the trials. Yesterday he hove in sight with care on the snow and bathed in a perspiration induced by wrath and grief. "Now what do you think of this?" he said, as he slammed down a letter with a vicious bang.

The letter came from New Jersey, from a place which we will call Macedonia, because this was a sort of call from Macedonia, and it was signed by one whom we will call — for short. It read:

N. J., Nov. 11.—Mr. Geo. Holden, Secy. Dear Sir: Enclosed please find one of our posters, which will explain our motto. Will you kindly read it and then to your club members and explain it. You will like to help us out. We have just started, and we are trying to get on our feet. Would you, as brother sportsman, take a ticket to help us out, and place us so we can help ourselves. — Secy.

The poster was about a yard long, and in very black faced type. It announced that "on Dec. 25, a new double breech-loading gun, valued at \$40, would be shot for, the price of ticket for the gun to be \$5.50, including 5 live birds." I would not have been surprised if the poster had got his friends to take some, for the sake of the struggling Jersey Club?

Of course, Mr. Holden did not take any tickets, and he did not answer the letter. He classed it as only one more of the trials incident to his having once been secretary of a gun club, years ago. Yet I hope this may fall under the eye of the writer of the above letter, and that he will know in time how he was getting into the way to build up a gun club. Moreover, Chicago is poor this winter. More over again, George Holden isn't any secretary, hasn't been for years and doesn't intend to be, doesn't want any ring-tailed monkeys, and isn't in need of helping anybody till after Christmas.

AUDUBON PRIZES.

Audubon Club of Chicago held its last season shoot this week. L. M. Hamline won first prize for the year's record, Roll Organ second. Mr. McAnley protests second prize on a question of handicap allowed him.

GARFIELD GUN CLUB.

Garfield Gun Club of Chicago, will hold an all-day live bird shoot New Year's Day. There will be plenty of birds and it is hoped plenty of members on hand. E. Hogen.

Christmas on the Union Grounds.

It was by no means seasonable weather that was dealt out on Christmas Day; indeed, with the thermometer marking 52° above zero one is likely to imagine himself in the South instead of in a climate where ulsters and earbats should be in requisition. And even under the star of the Springfield and the Union Grounds, N. J., where there is usually some semblance of a cooling breeze even during the summer months, there was none during the early hours of Christmas to take the warm edge of the sun's rays. Right below the highest peak of these mountains are situated the grounds of the Union Gun Club, an organization which numbers among its members nearly all the expert target shots of New Jersey. The grounds and house as well as the practice running of the club's affairs, are in the capable hands of Enoch D. Miller, one of Jersey's most expert marksmen.

On these grounds on Dec. 25 there assembled a representative gathering of trap-shooters, the attraction being a series of open sweeps at live birds and targets, and two team contests between the Union and Maplewood gun clubs. The sport began about 10 A. M., when a number of shooters were on hand, but the bulk of them did not report for duty until about noon. Christmas is a rule one of the poorest days of the year on which to hold a shoot, as nearly every one prefers the comforts of home on that day. But the majority of the Maplewood members are so situated that they are unable to leave business except on legal holidays, hence the selection of this day for this affair. Among those on the grounds were "Uncle Jack" Harrison, of Dover, N. J.; Sigler, of Plainfield; Tom Brantingham, Dan and Scott Terry, of Plainfield; Dr. S. P. Jackson, of Millburn; George Pudney, of Springfield; A. Siskey, of South Orange; Mr. and Mrs. M. F. Linsley, of West Hoboken; R. H. Breintnall, C. M. Hedden and W. R. Hobart, of Newark; O. L. Yeomans, J. W. Smith, J. Van Idersine, W. C. Drake, of Orange; E. O. Geoffroy, of Newark; R. Sopher, of Plainfield, and J. W. Hoffman, of German Valley.

The birds supplied by Mr. Miller were a good lot and would have been still better with a little colder air and some wind. The first event on the programme was at 4 birds, \$3 entry; No. 2 the same; No. 3 at 5 birds, \$5 entry; No. 4 a miss-and-out, \$1 entry; No. 5 at 7 birds, \$7 entry. The scores of these are shown below:

	No. 1.	No. 2.	No. 3.	No. 5.
Yeomans	10111-3	2102-3	2121-5	
Hedden	1312-1	0111-3	1111-2	011122-6
Sigler	1121-4	0221-4	1121-5	
Hoffman	1222-4	0221-3	1221-5	
Miller	1121-4	1121-4	10121-4	111111-7
Linsley				212121-7
Geoffroy				1230121-6
Breintnall				212121-7
Sigler				111121-7
Wands				200201-2

In No. 4, the miss-and-out event, Drake, Geoffroy and Williamson missed and went out on the second round. Hoffman went out on the fifth round. Miller, Yeomans and Hedden kept on until they had killed 7 each, when they concluded to divide before the price of the birds should exceed the amount in the pot.

At this time was called one of the principal events of the day, the scores of the live bird contests between teams representing the Union and Maplewood gun clubs. In the first contest of this series the Maplewoods were victorious. The teams comprised five men each, and each man shot at 10 live birds, under American Shooting Association rules. This time the Unions braced themselves for hard work, and by careful work on the part of Linsley and Miller, both of whom ran straight scores, they won the match. The result is as below:

	Union.		Maplewood.
Sigler.....	011112122-9	Geoffroy.....	202211021-8
Hoffman.....	121222120-8	Yeomans.....	222112021-8
Breintnall.....	200121110-7	Meeker.....	0211122121-9
Linsley.....	222222222-10	Siggins.....	010101212-7
Miller.....	111212111-10-44	Hedden.....	0101221221-8-40

The final live bird event of the day was a \$1 miss and out. Yeomans left the lists on his second round, Linsley on his fifth and Miller and Sigler on the fifth each.

The live bird traps were now removed, screens adjusted, target traps put in place, and in a remarkably short time Keystone targets and live birds were engrossing the attention of the shooters. Event No. 8, \$1 entry, was at 10 targets, four moneys, and the scores were:

Fisher	110101011-6	Yeomans	111110111-9
Geoffroy	111101111-9	Hedden	011111110-8
Hoffman	201011110-7	Sopher	111100011-7
Breintnall	001010011-7	Terry	110001011-4
Drake	101101101-7	Linsley	110001011-4
Siskey	111101111-8	Miller	101111111-9
Van Idersine	001001011-4	Brantingham	001001111-6
W Smith	110001001-5		
Sigler	101000001-3		

Then came another team race, the second of a series of targets between the Unions and Maplewoods, the first shoot of the series having resulted in a tie. There were nine men on a team, each man shot at 25 targets under rapid firing rules, and here are the scores:

	Union.	Maplewood.
Van Idersine	001001010101111101101-16	
Sigler	11001011110011111011-18	
Dr Fisher	001000011100011110111-15	
Yeomans	01111101000111101111-19	
Siskey	11110111110101011111-21	
Geoffroy	01011110110110110111-16	
Hedden	01100011101101101111-16	
Drake	011101011101101111011-22	
War Smith	111101111111111110111-22-165	

	Union.	Maplewood.
Breintnall	110111111101011101101-19	
D Terry	111100111101011110110-19	
Linsley	111100100110111011011-13	
Sigler	111101101111011011011-13	
Bryant	0110101101110101100110-16	
Scott	111010101111000010010-15	
Brantingham	0011100000100101011000-12	
Hoffman	101111111101110111111-22	
Miller	111111110110111111111-22-158	

From this until dark was devoted to sweepstakes shooting, the results being as follows, all events being at 10 targets, \$1 entry.

No. 10: Yeomans 10, Smith 8, Geoffroy 8, Hedden 8, Hoffman 8, Scott 8, Miller 7, Sigler 7, Terry 5, Linsley 4.
No. 11: Hoffman 10, Siskey 9, Miller 9, Smith 8, Sopher 8, Geoffroy 7, Sigler 7, Yeomans 7, Scott 6, Hedden 5, Linsley 4, Fisher 5.
No. 12: Yeomans 9, Scott 8, Geoffroy 8, Hoffman 8, Miller 8, Sopher 7, Fisher 7, Sigler 6, Smith 5.
No. 13: Yeomans 8, Geoffroy 8, Hoffman 8, Miller 8, Scott 8, Fisher 7, Sopher 7, Linsley 6, Sigler 6, Smith 5, Jefferson 4.
No. 14: Smith 9, Yeomans 8, Miller 7, Hoffman 7, Fisher 7, Linsley 5, Geoffroy 4.

C. H. TOWNSEND.

LIVE BIRD CONTESTS OF 1893.

BELOW will be found a table giving the date, place, winner's and loser's scores of all the important contests at live pigeons shot during 1893. The table does not include the results of any of the open sweepstakes shot during the year, covering only individual and team contests.

Date.	Place.	Winner's Score.	Loser's Score.	Shot at.

On the Old Stone House Ground.

A holiday without a live bird shoot on John Erb's Newark grounds would be a sorry holiday indeed. Christmas like each and every holiday for the past twenty years, brought a choice shooting coterie to the grounds to practice on a hard-flying lot of birds. There were only five in the party but still there were trapped 230 birds during the afternoon, each man taking part in four events at 10 birds each, \$5 entry, and one 4-bird event. The results:

No. 1.	No. 2.	No. 3.	No. 4.	No. 5.

Club Team Shoot at Paterson.

7 The popular shooting grounds at Willard's Park, Paterson, were visited by a large number of sportsmen on Thursday, Dec. 28, and they were treated to an exhibition of good shooting at good birds. The attraction was the contest for club teams of three men each, at 15 live birds per man, \$30 entry, Burlington rules to govern excepting boundary which was 50yds. For this there were five teams entered, the New Utrecht Gun Club team having failed to materialize. The small number of entries was undoubtedly due to the weather, which was decidedly unpleasant up to noon. During the morning flakes of snow alternated with a drizzling rain and soon the ground was in a disagreeable condition. After 1 o'clock the weather was better. Had the morning been clear the list of entries would probably have reached 8 or 10.

The teams that entered were the Climax Gun Club of Fanwood, Cosmopolitan Gun Club of Plainfield, Union Gun Club of Springfield and the Newark Gun Club (two teams). Their composition was as follows:

Climax: Chas. Smith, Plainfield; E. D. Miller, Springfield; Neaf Appar, Erona.

Newark No. 1: C. M. Hedden and Samuel Castle of Newark; W. H. Green, Harrison.

Newark No. 2: M. F. Linsley and Ed. Collins of West Hoboken; Dr. P. J. Zeglio, Warrenville.

Cosmopolitan: John Rothaker, Germantown; A. W. Money, Oakland; T. W. Miller, Paterson.

Union: J. L. Smith, Hackettstown; N. G. Money, Oakland; J. W. Hoffman, Orange Valley.

Previous to the big shoot, a couple of sweepstakes were shot at 7 live birds each, \$5 entry, three moneys. The results:

No. 1:				
Castle	1011111-6	J. L. Smith	1111111-7	
N. G. Money	1111111-7	Hoffman	1100111-5

C. Smith	112121-6	Zeglio	

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making; there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oölogy of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9½ in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breech-loading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to, make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeealand. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor *Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14½x12¼. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

# FOREST AND STREAM BOOK LIST.

We are the largest publishers and importers in the United States of Books on Outdoor Sports. For fuller descriptions of many of these works send for the (free) Forest and Stream Illustrated Catalogue. All books sent postpaid on receipt of price. Forest and Stream Publishing Co., 318 Broadway, N. Y.  
No books exchanged. Registration, if desired, 10 cents extra. Our responsibility ceases after goods have been mailed.

## ANGLING.

	Price.
American Angler's Book. Memorial edition. NORRIS.....	\$5.50
American Fish and How to Catch Them.....	1.00
American Fishes. Large 4to. GOODE. Illustrated.....	3.50

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 13, 1894.

VOL. XLII.—No. 2.  
No. 318 BROADWAY, NEW YORK.

## CONTENTS.

<b>Editorial.</b> Looking Forward. Dogs and Men. Fads and Field Sports. New York Supervisors' Laws. Snap Shots.	<b>Hunting and Coursing.</b> Beagle Hunting in England. Coursing in California. American Foxhounds.
<b>The Sportsman Tourist.</b> Danvis Folks—XX. Hunt of the Catawampus Club. Changes in the East.	<b>The Kennel.</b> The Canadian Kennel Club and the A. K. C. The Russian Wolfhound. Points and Flushes. Kennel Notes. Dog Chat. Answers to Correspondents.
<b>Natural History.</b> Experience with Quail. The Yellow Bear. "Sounding the Alarm."	<b>Canoing.</b> Cruise of the Frankie. Reform in the A. C. A. News Notes.
<b>Game Bag and Gun.</b> A Deer Hunt in New Jersey. Cephus Dodge's Two Shots. Chicago and the West. Notes of a Shooting Trip South. An Available Route to Cooke. The 32 Shot. Adirondack Notes. Another "Arabian Spike Buck."	<b>Yachting.</b> A Summer Cruise to Mackinac. Challenge to American Yachtsmen. Shifting and Fixed Ballast. News Notes.
<b>Sea and River Fishing.</b> Angling Notes. "Fisherwomen." Maine Fish and Game Association. Protecting the Headwaters. Maine and Massachusetts.	<b>Rifle Range and Gallery.</b> Jerseyman with the Targets. Denver's New Year's Shoot. Rifle Notes.
<b>Fishculture.</b> The Coast Fishery Conference. Fishculture and Food Fish.	<b>Trap Shooting.</b> Manufacturers' Trap-Shooting Association. South Sides' Annual. Record of Climax Club. New Year's Day at Dexter Park. Drivers and Twisters. Answers to Queries.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## LOOKING FORWARD.

WITHOUT seeking to magnify his office, it may be said for an editor who is good for anything, that he is never satisfied with the doing of to-day, but has an eye always to the greater achievements of the future. He takes pride and pleasure in the success of his work, if haply it be successful; and contemplates with satisfaction the record of the garnered years; but his gaze is forward, not backward, and he dreams and plans and works for the larger success and the brighter records to be won in the years that are before.

It has been the good fortune of the editorial staff of the FOREST AND STREAM to have many kind words from old and new readers, expressive of approbation of the volumes, which one after another have had their growth, each one taking on its weekly accretions like the rings of the growing tree trunk in the forest, until there now stand on the office shelves forty-one bound volumes, embracing the endeavor and accomplishment of half as many years. But need it be said that there are anticipations of yet better things to come, and plans for volumes yet to outline those already closed? For the year 1894—this is the ambition of those who are in conduct of it—the FOREST AND STREAM is more adequately than ever before to fill the requirements of a sportsman's journal. To the attainment of such accomplishing is asked the co-operation of friends and contributors old and new. If the FOREST AND STREAM is to-day the sportsman's favorite journal, it is such because the sportsman himself has made it so. He spoke happily and truly who said that the paper was like more than anything else to a club of congenial fellow sportsmen, who gathered to tell their stories to one another through its columns, to exchange their experiences and to meet and to part with good will and good cheer.

Is a sportsman's paper a luxury or a necessity? The fact, that in these hard times when we are all cutting down on luxuries, the subscription list of the FOREST AND STREAM is holding its own, appears to demonstrate that one sportsman's paper at least is a necessity, or a necessary luxury.

A report of the annual meeting of the New York State Association for the Protection of Fish and Game at Syracuse, Jan. 11, will be given in our next issue.

## NEW YORK SUPERVISORS' LAWS.

THERE appears to prevail general indefiniteness of information respecting the authority of county supervisors of New York State to enact local game and fish laws, and respecting the relation of such supervisors' enactments to the general game and fish codes of the State. The section of the general law conferring upon supervisors authority to modify its provisions in their counties is very explicit, and leaves no room for uncertainty. It reads, the italics being ours:

POWERS OF SUPERVISORS.—SEC. 273. Boards of supervisors may pass at their annual session such laws and ordinances as shall afford additional protection to and further restrictions for the protection of birds, fish, shell-fish and wild animals, except wild deer, and to prohibit the taking and killing of the same, but no such ordinance shall be operative until a duly authenticated copy thereof shall have been filed in the office of the clerk of the county, and published in the papers in such county in which the session laws are published, and filed in the office of the Secretary of State, and it shall be the duty of the Secretary of State to furnish a copy of such ordinance to the chief game protector, and to print all such ordinances in the volume of session laws for the current years. No such ordinance shall take effect until the first day of May next after its passage.

This means that supervisors may not abridge a prescribed close season, but may lengthen it; may not authorize any mode of hunting or fishing forbidden by the general law, but may prohibit modes of hunting or fishing which the general law permits.

County and other local laws adopted under authority conferred by this section are to be interpreted in connection with the general law. Thus, the State law makes the close season for rabbits from January 1 to September 1, and does not prohibit the use of ferrets. But in Sullivan county a supervisors' ordinance of 1893, now in force, prohibits the killing of rabbits between September 1 and October 1, and forbids the use of ferrets at any time. In Sullivan, then, the general close season, from January 1 to September 1, is extended one month, and covers the term from January 1 to October 1; and ferrets may not lawfully be used even in the open season.

## FADS AND FIELD SPORTS.

FOOTBALL—the college athletic fad of the times—is the subject of an interesting discussion in the January *Forum*. In the course of his paper on the merits and demerits of the game, President Warfield, of Lafayette College, bears noteworthy testimony to the value of field sports. "While I am a strong believer in college athletics," he writes, "I am not at all of the opinion that they are the best form of bodily exercise. I fully agree with the view expressed by Professor Mahaffy in his 'Greek Thought,' that not athletics of the gymnasium and the *palestra*, but 'field sports—hunting, shooting, fishing—have produced the finest type of man.' The virtues of horsemanship, shooting and fishing are more akin to mastery of self, and the close relation of man to nature. They beget the larger and the broader man. But they require time and money beyond the scope of college life. Even at Oxford, tandem driving has long been reckoned the eighth deadly sin, and fox hunting, which my reverend tutor indulged in each Thursday during the season, came next in the *index expurgatorius*."

Field sports expensive? Yes, in a degree; yet it will surprise the novice to discover how meagre and trifling is the actual necessary "bed rock" expenditure of money required for his moderate and reasonable participation in the sports of rod and gun. In these days of perfected appliances, cheap rods, cheap guns, cheap ammunition and cheap camp equipments, a young man of very limited means may count himself among field sportsmen and find the money question by no means a discouraging problem.

One decided advantage field sports have over other forms of exercise and recreation is that the taste acquired for them in early life is likely to be permanent. Their charms and enticements and zests and rewards do not grow stale as the young man merges into maturity and acquires the ripeness of age. He who in boyhood days takes pleasure in shooting and fishing has found in those pursuits a lifelong heritage of opportunity for health up-building and brain refreshing and spirit mending, such as his less fortunate brothers can never know.

Compared with these outdoor recreations of abiding virtue, all others are passing fads and violent crazes—violent and passing not only in the life of the individual, but in the favor and participation of the public. One

form of popular amusement succeeds another, is followed madly for the moment and then is forgotten in the next craze. But the interest in shooting is with its votaries as fresh and vigorous as the very woodland itself, which, though it may seem to be dead in the bleakness of winter, is but sleeping quiescent, to put forth new life through all its million sturdy trunks and outstretching arms in the springtime; and the love of fishing, born in the barefoot boy on the home farm, endures with him into old age and persists so long as the heart beats quicker at the sound of the splashing mountain stream, and the senses are pleased by the grateful scent of the wood mould and the flickering of the sunlight on the moss.

If these sports are manly, and make the youngsters manly, are they not also youthful sports, and do they not make the old man, for the hour at least, young again! If such be the rare and potent virtue attached to field sports—and thousands can testify that this is so—the man who in his college days cultivates a taste for the rod and gun is laying up store for his renewing in after years something of the gladness of his youth.

## DOGS AND MEN.

IN Lovell's "Panælogicominalogia" are enumerated all the rare medicinal properties attributed by the ancients to dogs. It would require a more extensive work, and one, too, which should be no less formidable in title, to detail the various physical, mental and moral qualities ascribed to the dog by ancients and moderns.

An ancient Latin couplet, quoted by one of the story tellers of the *Gesta Romanorum*—that curious collection of moral tales told by the mediæval monks—runs thus:

In cano bis bina, et lingua med' cina,  
Naris odoratus, amor integer, atque latratus,

which is to say: "In a dog there are four things: a medicinal tongue, a distinguishing nose, unshaken fidelity and unremitting watchfulness."

In the quaint homily based on the story we are told that priests ought diligently to cultivate these four canine qualities, *first*—that their tongue possess the power of a physician in healing the sick in heart; *second*—as a dog by keenness of scent distinguishes a fox from a hare, a priest by the quickness of his perception in auricular disclosures should discover their true character; *third*—as a dog is the most faithful and ready in defense of his master, so priests should show themselves staunch advocates of the faith; and *fourth*—as a dog by barking betrays the approach of thieves, so the faithful priest is the watchdog of the great King.

It is to be said for this monkish preacher of the Middle Ages, that he had quite as true an insight into dog nature and discovered in canine qualities material for precepts fully as edifying and instructive, as did the English clergyman who some hundreds of years later wrote in his "Divine Songs for the Use of Children," the well known lines:

Let dogs delight to bark and bite,  
For God hath made them so.

For the nature of dogs is like the nature of men, two-sided; and if as Isaac Watts teaches we should learn in infancy to shun the bickering ways of quarrelsome dogs, it is none the less true that we have not yet outgrown the time when we may readily discover, as did the monk, some other canine qualities which are well worthy human emulation.

A NEW YORK man brought suit against another man for having purloined letters addressed to him under an assumed name. The court threw out the case on the ground that when the plaintiff had had recourse to an alias he had put himself outside the protection of the law. There are hotel proprietors in the woods and restaurant purveyors in the town who carry this principle to a further extreme in their close-time traffic in game. They themselves bestow the outlawing alias, and following the adage, *Give a dog a bad name and hang him*, they convert venison into "mountain mutton" and quail into "royal birds" and ruffed grouse into "European partridges;" and do a brisk trade until the game protector happens along and "rounds them up" in court, where they discover that the penalty for birds out of season is equally as severe, whether the illicit game be dubbed by the fantastic cognomen of "royal birds," or go under its plain, every-day American name of quail.

## The Sportsman Tourist.

DANVIS FOLKS.—XX.

### A Rainy Day.

It was a May day with April weather. The rain had poured down in intermittent showers during the night. In the morning the rising sun transmuted the gray mist to floating gold and turned the tremulous strings of sun-drops on every bending twig to resplendent jewels.

The sheep began to scatter over the pastures, mumbling out calls to their lambs as they cropped the wet grass.

But the robins sang vociferously for more rain, the sun veiled itself with a drifting cloud, bordering it with gold and shooting from behind it broad, divergent, watery bolts, a film of shower was trailed along the mountain side, the blotches of sunlight narrowed and faded into the universal somber gray, and after a brief pattering prelude the rain poured down again and swept across the blurred landscape in majestic columns that fled along the earth while they upheld the narrow sky.

Then it stopped as suddenly as it began, the sun shone out and revived the drowned splendor of the earth, the bedraggled robins sang again and the murmur of the swollen brooks rose and fell more distinctly with the puffs and lulls of the inconstant wind. Then the sky would darken and blot out the patches of blue and the half-built arch of a rainbow, and the new showers chase away the straggling sunbeams and the pour of the downfall overbear all other sounds.

Thus it was pouring, when Uncle Lisha came into the shop from the house and put on his apron, stooping low as he tied the strings to look out through the blurred panes upon the narrow landscape. The innumerable jets of the puddles leaping up to meet the rain, the pelted dodging leaves of the plum and cherry trees bending over their fallen blossoms, that like untimely snow lay beneath them, where a group of fowls stood, bedraggled and forlorn, with shortened necks and slanted tails.

Beyond, all objects became flattened and more indistinct till in the gray background, mountain and sky met and dissolved in each other.

An umbrella was coming up the road, dodging from side to side as the bearer avoided puddles and sprang across rivulets. The misty fabric materialized into blue cotton, and presently entered the shop, closed, with its depressed point streaming like a conduit, followed by Pelatiah, who set it to dribble in a corner as he said "Haow de do" and then "Gosh" as a sufficient comment on the weather.

"I'm turrible glad you've come, Peltier," said Uncle Lisha, searching among his tools for his pipe, "fer it's a lunsome kinder day, an' I wan't expectin' nob'dy. It's kinder chilly, an' I don't b'lieve but what you'd better whittle up some kindlin' an' start a fire in the stove."

Nothing loth, Pelatiah got some wood from the box, and kneeling before the stove, whittled some kindling, laid and lighted it, and still kneeling, intently watched the slow progress of the flame.

"Wal," said the old man, looking at him with kindly anxiety, "haow be ye gettin' long? Feelin' any comf'tabler in yer mind?"

"It aches contin'al," Pelatiah answered.

"You don't go to Hamner's no more?"

Pelatiah shook his head as he got on all fours to blow the reluctant fire, and answered, "Not sence you gin me a talkin' tu 'n under the bridge."

"You done almighty well, boy, an' you jest stick to 't. When you haint tu work, you go a-fishin' as often 's ye can, an' when it gits so 't there haint no fishin' go a huntin', an' twist 'em, they'll fetch ye aout. Sick tu yer fishin'."

The two doors opened almost at the same moment, and Sam entered from the kitchen leading his now toddling boy, followed by his father bringing in an ox-bow to whittle and scrape where litter offered no offense, while Solon and Antoine came in from the rainy outer world.

"Hoddy do, all de company?" Antoine saluted, "What you'll said 'bout fishin's? Ah spouse probly you an' Peltiet tink you felt pooty plump for ketch so much feesh antit." He got beside the stove steaming in the growing warmth and preparing also to smoke. "Wal seh, Onc' Lasha dat ant nothin', nothin' for wat Ah'll do wen Ah leave in Canada."

"Naow lie, dum ye," Uncle Lisha growled.

"Haow many tam," Antoine demanded with grieved impressiveness, "Ah'll gat for tol' you Ah ant never lie? M'sieu Mumpson, he'll read me 'bout George Washins Son chawp a happle tree wid hees new saw, an' tol' hees fader he'll do it 'cause he'll can't lie. Ah'll chawp more as forty happle, probly feerty tree fore Ah'll lie, me. Yas sah. But Ah'll goin' tol' you. Great many tam, but one teeky tam Ah'll go feeshins an' Ah'll row meh hook wid nice waum on it an' de traout was so hungry in hees belly an' so crazy in hees head dey'll go after it so fas, de fus one git it, de nex one touch hol' hees mouf of dat ones tail an' de nex de sem way till dey was twenty probly 'f dey ant fifteen all in string, an' Ah'll pull it mos so hard Ah'll cant, an' seh, Ah'll gat all of it honly de middlin' one was kan o' slumber, an' broke off, so Ah'll loss de hine en' of de row. Hol' on," as Uncle Lisha began to open his mouth, "Ah'll ant finese. Wen de traout in de water see where Ah'll sot mah deesh of waum on de bank, he'll beegin jompon de bank for gat it, an' tumble top of herself for gat hit. Den seh, Onc' Lasha, Ah'll peek up mah deesh an' shook it, an' holly 'caday, caday' an' dat traouts folla me home so fas! Ah'll had to run an' shut de door for keep it from feel up de haouse."

"Ann Twine," said Uncle Lisha, heaving a sigh of relief and sinking back into his seat till the leathern bottom creaked, "I was raly afeared you was a-goin' tu tell one o' your lies." Then bending over his work and as he drew the threads, grinning as if that might insure the perfect closing of the seam, "I s'pose I c'n pooty nigh match ye, Ann Twine, on'y my story 's true."

"Ah'll wan' hear you tol' jus' one o' dat kan, soh."

"Wal, onte aout West, where I was in Westconstant, the was a man went an' chopped a hole in the ice in a crik tu water his cattle, an' there was a dozen bull paouts come up in the hole, an' he begin a-heavin' on 'em aout tu kerry 'em hum fer his dinner, but fust he knowed, it filled up full, an' he run tu git a bushel baskit tu scoop

'em up, an' when he got back the hole was a-runnin' over wi' fish, jest a-bilin' over on 't the ice, an' kep' a-duin' so till they run over on 't the shore furdur an' furdur, till he begun tu be afeared they 'd kiver up his farm an' spile it. But the folks begin tu hear on 't an' come wi' their teams f'm twenty mild off, an' hauled the bullpaouts away in reg'lar percessions, thirty, forty, sled loads in a string, an' fed 'em to the hawgs, an' m'nured the land wi' them. till folks didn't know whether they was eatin' pork or fish, on'y fer bein' no bones, an' the hull kentry smelt like a fish kittle all summer."

Uncle Lisha looked around upon his audience, all of whom wondered silently, except Antoine, who asked:

"You'll see dat, Onc' Lishy?"

"Wal, no; it happened the winter afore I went there, an' I didn't exactly see it, but I smelt it."

"Wal, you ant miss much, Onc' Lishy. It ant be much for see jes' few bullpawt. If Ah'll ant gat so hol' Ah'll fregit for rembler mos' all Ah'll see, Ah could tol' you someetin's."

"What's the reason you don't tell us more o' your experiences aout West, Uncle Lisher?" Solon asked.

"What's the reason," the old man demanded, with a twinkle in his eye, "at you an' Ann Twine don't tell us some o' your experiences upon the maountain 't other day?"

The treasure seekers stared at each other in blank amazement, wondering how their secret could have escaped their keeping, when in fact it was only shrewdly guessed at by their host.

"Why, we haint got nothin' tu tell," said Solon at last. "Wal, I haint, nuther, not 't appears wuth tellin'. Say, folks," during which the mischievous twinkle of his gray eyes brightened, "du you know 'at two men, which they names I wont call, went up on't the maountain a-sarchin' arter money 'at the man 'at baried it hisself couldn't find agin? O, the's fools an' allus will be, but I call 'em the two 's the beatin'."

"If the was sech men, which I don't omit the was," said Solon, breaking the awkward silence, "they wan't huntin' nothin' but onnat'ral cur'osities, er minnyrils, er Injin relishes. Wal," as a gleam of sunlight patched the littered floor and the baby struggled between his father's knees to reach it, "the sun is a divulgin' aout, an' I guess I'll be a moggin'. Goin' my way, Antoine?"

"Did they, raly?" Sam said, with a smile broadening on his face as the door closed behind them.

Uncle Lisha slowly nodded his head and Sam laughed outright, while the little boy reached for the intangible sunbeams.

"Can't git it, bubby, no more'n they could what they was arter," chuckled the old man.

ROWLAND E. ROBINSON.

## HUNT OF THE CATAWAMPUS CLUB.

(Concluded from Page 5.)

WE all spent the day around camp. We got wood enough to last the remainder of the week. We cut a road through the woods to the outlet of the little lake. By way of variety there was a shooting match with Will's little .32 Remington, in which Bertie tied Moore for first place.

Then there was a game of "five and forties" to see who would stay and keep camp with the women. It fell to Judson's lot, but David insisted on taking his place. David is one of those fellows who, if they had squarely won a place within the pearly gates, would be willing to share it with some less fortunate individual.

To explain why it was necessary for one of us to stay in camp with the girls I will have to tell a story, which, I suppose, properly belongs to an earlier part of the chronicle.

Wednesday evening, after the flight was over, Moore and I sat for some time in our blind. It was the kind of evening that makes one feel that the world is beautiful and a good place to be in, at times. There was a broad band of orange, gold and crimson in the west, which reproduced itself in the smooth surface of the lake. The western shore, shadowed by the trees, was inky black; the east and north were immersed in the soft yellowish light of the after-glow. There was something suggestive of peace in the whole scene. It will be essential, therefore, to explain why we sat there, with our guns across our knees, saying nothing.

At last a sound, weird, tremulous, and withal not very distinct, echoed among the hills away to the northeast. It was about over before it attracted my undivided attention, though I was in a measure conscious of it when it commenced. In answer to the look of inquiry I gave my companion he said, with a laugh, "The catawampus." Then came, loud and hoarse, the *h-o-o-o-t! h-o-o-t! hoot-hoot! hoot-hoot!* of an owl. Moore resumed: "I guess that's the fellow that made the noise. The variety of their notes is endless. The celebrated 'Dungarvon whooper' was nothing but an owl. I heard it myself." While he was yet speaking the report of a rifle rang through the woods on the eastern hills. "Wasn't that the Winchester at the camp?" I asked. "Yes; what do you suppose is up?" "Oh, I don't know, perhaps Burke has arrived and they are firing to let us know." "Well, we had better be going, anyway," and we gathered the crowd and went.

The passage from the shooting ground to the camp was tedious, and probably occupied 45 minutes. "Oh! we thought you never would come," greeted us in a chorus of three female voices, and in a tone that showed they were mighty glad to see us. "Why, what's wrong?" "The catawampus has been here." The laugh at this was general, as it was derisive. "Did you hear him grind his teeth?" asked one. "He couldn't have snapped his tail, or there would have been no one left to tell the story," said another. "Owl," said the Prevaricator, laconically, thus deliberately going back on his own addition to the fauna of North America after its existence had been recognized by no mean authority. "Oh! it is all very well for you men to make fun, but something did come, and we are not going to stay here alone any more, so there. This is an uncanny place for three women to be, and no man within a half-hour's journey." It was evident they were in no mood to stand any nonsense, and the attitude of the boys at once grew conciliatory. David suddenly remembered that he had always thought it wasn't right to leave them there, without the fear-destroying influence of masculine society. Then it was surprising how quickly the rest discovered rust-pits in their consciences from the same cause. The Prevaricator declared that he didn't care much for shooting, anyway, especially when he got

nothing; but he knew of no greater pleasure than to sit around and talk to two or three nice women. This would probably have placed him a lap in advance of the rest, in the estimation of the women, had it not been for the feature of his character that was responsible for his name.

Moore asked them for their story. "Well," said one, "we were busy cooking when we heard the awfullest yell away off there in the woods, and it kept coming nearer and nearer—" "An owl is always restless when he has a disordered stomach," interjected the Prevaricator, but no one noticed him. "And at last it sounded right there on the hill back of the camp. And when the horses began to snort and the dogs to growl, we thought it about time to get scared, too, and Bertie went to the tent for the rifle and sent a bullet in the direction of the sound. The next time we heard it it was further off, and it kept right on away from camp." Moore asked them to describe the sound. "Well, the beginning of it was something like the roaring of ice in a large lake in winter—" "Jest the noise an owl always makes when he has a bad attack of cramps. Now, when I first heard that owl to-night—" but here Bertie interrupted the speaker with a quiet "See here." She fixed her eye on him and continued: "I was born not very far from the big woods, and I have lived there the greater part of my life. I have heard all the noises which owls make. That may have been a catawampus, for I don't know the animal, but it was no owl."

It is impossible to say with any degree of certainty what the animal was. The panther does scream; but in my opinion this was not a panther. The common red fox has a cry that will almost curdle the blood of a tenderfoot. The *toupe cervier*, or lynx, can make a noise that will send swift chills up and down the spinal column of the person who hears it for the first time, in the still hours of the night. But, even about the noise this animal made, there was a halo of uncertainty that would have been joy to the heart of a professional gambler. The most we could learn from the girls was, that it ranged somewhere between the roar of the pugnacious "butter-milk cow," that haunted the back pastures of our fathers, and the wail of the slumber-disturbing didymus cat, that frequenteth the yard fences of mankind in general, and city-dwellers in particular.

Returning to the evening shooting: Moore and I occupied the "rose mary" blind; Judson had the raft all to himself and W. H. shot from the boat away up toward the head of the lake. On his way up he made a brilliant double on two birds, which proved to be coots or mud-hens—the first I ever saw in this province. They were therefore valuable specimens for the taxidermist. I improved on my shooting of the previous evening. Moore shot his same old gat, while Judson did not seem to be able to master the reversed parabolic curves of the mud lake duck. One incident of the evening I will not soon forget. The flight had slackened, and we were debating the advisability of returning to camp, when there was a rocket-like roar, and a "cotton-tearer," which had probably selected the site of our blind as his alighting place, passed within three feet of my head and came near smashing himself against the gun-barrel. I threw up the gun, caught as good a sight as I wanted, and fired. The smoke cloud hung for a second, and when the bird rose above it, he was so far away that the greenest greenhorn would not have thought of firing the second. I have made many misses for which I could easily account, but I can only explain this on the theory that the shot never overtook him. We left our boat that night at the outlet, and walked to camp by our newly cut road, lighting our way with birch bark flambeaux. It was a weird-looking procession.

Our evening programme varied but little. It was usually late when the last of the work was done. Then sometimes a part of the company would try a rubber at cards, while the rest sat round the fire and talked. Some of the party could sing; and semi-occasionally they favored us, though not quite so often as they were asked. David had a little song of his own, but he never rendered it save when he was appointed overseer of the frying pan. It was set to the music of the "White Cockade," and to make the tune suit the rhythm, the last word of each line had to be spelled. It was sort of a apostrophe to Moore, who besides being easily the first man of the party, bore the name of the first man in the world—Adam. The following is the first stanza:

"When I have some h-a-m,  
A-frying in the p-a-n,  
I don't care, A-d-a-m,  
For you, or any man."

Friday morning, two expeditions set out for Second Lake. Judson and W. H. went by way of Blaney Ridge, and Moore and I by the wilderness route. Both parties were cheered by the sight of much game. Out of eighteen rises W. H. and Judson brought down three birds. Moore and I were more fortunate. We scored our first within a quarter of a mile of camp. Several succeeding rises netted us nothing. Then Moore dropped one into the middle of Stony Brook. We took a short cut over the hills and though the dogs put up several, when we reached the lake we had added nothing to our bag. Second Lake is a lovely sheet of water—clean, its banks well wooded, with a fine sandy gravel beach at the point where we struck it. It must be seven or eight miles long with an extreme breadth of about a mile. I would have liked to launch a canoe on it, but then we are always longing for the unattainable. While we were examining the tracks of some deer, on the shore, we missed a good chance at a flock of grouse the dogs put up. We followed the shore up to the point where Stony Brook discharged. The fresh breeze bore a gentle quack to our ears, and in an instant we were on the alert. I crept back into the woods, and climbed a tall pine. There they were, four of them in a little branch across the stream. Moore was almost within range; I tried to attract his attention with a sharp hiss, but he did not hear me. The ducks saw him and jumped. There was a lightning double, and three lay on the mud. It is exceedingly frigid weather when Uncle Adam is far behind on a jumping shot. We went up the stream to look for a chance to cross over, and I ran into and killed another partridge. On my road out to where the ducks lay I saw a snipe near me, but he sailed away while I was exchanging a 7 for a 10 cartridge. Then I saw the dogs making game on the edge of the woods, and I got there in time to cut short the career of another grouse out of a bunch the dogs put up.

After a brief consultation, we abandoned our idea of going around the head of the lake and hunting some nice cover on the other side. We decided to follow Stony

Brook back to Mud Lake. Alas! that foresight is so much rarer than hindsight. Moore with one dog took the left, and I with the other the right bank of the stream. For a time everything went well. Moore bagged a bird. We ate our luncheon on a driving dam at the edge of a large wild meadow, covered with a rank growth of "blue joint," which, by the sign, had furnished many a dainty meal for the deer. We found a line of mink traps, and at the head of the meadow a temporary camp of the trapper, evidently an Indian.

It being early in the day, we were tempted to follow the left branch of the stream up to Lily Lake, but very fortunately, as it proved, concluded that it would be a good trip for the morrow. Proceeding, one on either side of stream, we struck a swamp covered with young tamaracks a dozen feet high, as large as a man's thumb, and as plentiful as hair on the back of a dog. Next came a vast region of shin-hopple of a size transcending anything I ever saw in my travels. This innocent-looking shrub creeps along the ground for about two-thirds its length, and then curves abruptly upward. It is as difficult a customer to get along with as a man two-thirds humility and one-third arrogance. Its scientific name I know not unless it be *Ursellus overendicus*. In this instance, the curved portion was about five feet high, and really, I wish we could get one single useful crop to grow as thickly. To make any progress you have to walk on the humble portion of the stem, and force your way through the thicket formed by the standing part. Then perchance a creeper, with a little less humility than its neighbors, will catch you on

was yet plenty in the hope that there would be enough on the morrow to give us both a taste of this fascinating sport. His self-denial is thoroughly appreciated, and I may say here that he is not the only member of the party who has allowed me to share in chances which he could easily have monopolized.

David thought he had fun enough for one day and did not care to join us in the flight shooting that night. W. H. and Judson didn't get back till dark and so Moore and I had it all to ourselves. The former took the rose-mary blind while I shot from the boat near where Will did his good shooting a few nights before. The flight was not so good that night as it had been. The incessant pounding at the birds was beginning to have its effect. The principal event was a long shot made by Moore. He missed a "cotton-tearer" with his right and doubled him up like a wet rag with the left at 70 yds. with No. 5 shot.

Saturday dawned bright and clear. W. H. was unwell and stayed in the tent. Moore and the girls went beech-nutting. David, Judson and I started out for a season of unalloyed bliss in the snipe pocket. We had a little seance with a grouse down at the outlet. He offered Judson a straightaway shot, which he failed to accept. Then he curved back toward me and I handed him one which the bird failed to accept. He went right over the head of David who unfortunately was at that moment a few feet from his gun.

The snipe pocket was a piece of marsh of moderate firmness to all appearances. Yet the water oozed out around the foot at every step. And if one stood still for

tree, and she brought him down at the first essay, with a strictly off-hand shot. She intended to have the skin set up, but it was spoiled by the bullet.

In the afternoon Judson and David went to the settlement for some apples, and got not only them but the week's newspapers, which were sent us by the man Will presented with the Jacoby canvasbacks. They returned too late for the evening shooting. W. H. went out on the lake for a paddle. Moore and I strolled away on the beech ridge that extends northward from the camp.

I have frequently lamented my inability to take my reader with me, and make him see the things as I saw them. If I could do this now he would have no difficulty in understanding why, that afternoon, when we got nothing save a big gray owl for Will's collection, was the pleasantest I spent in the whole week.

The ridge was a "horseback," perhaps 100 yds. wide and the same number of feet above the level of the lake. It was mostly covered with a growth of beech. The trees were so wide apart that a horse could be ridden at a canter the whole length of the ridge without the rider being inconvenienced by them; still their foliage was dense enough to exclude the "undiluted" rays of the sun. Here and there was a bunch of rock maple, birch or hornbeam, or three or four giant hemlocks, 4 ft. in diameter and 75 ft. high. The surface of the horseback was remarkably level and free from "cradle knolls," but every hundred yards or so there was a bowl-shaped depression. These varied in size from 20 ft. in diameter and 8 or 10 ft. deep to 50 yds. in diameter and 60 ft. deep. They were very symmetrical

YELLOWSTONE NATIONAL PARK—GRAND CAÑON OF THE YELLOWSTONE.

the shin, and lucky you are if you do not go down. After I had got over about eighty rods, I pushed through to the bank of the stream in the hope of finding better traveling; but it was the same on both sides clear to the edge of the water, and the stream was too deep for wading. There was Moore, his head only visible, and his jaw set, tramping doggedly forward, with a tumultuous accompaniment of swaying shrubbery.

All things earthly have an end, and so, at length, I came out on a wide, open barren. It would appear now as if my troubles were over, but not so. At every step I sank half way to my knees, and my bootmaker will tell you that is no mean distance. The barren had been once covered with a sparse growth of scrubby spruce. This had died and the trunks were disposed on the ground after the criss-cross manner of jackstraws. These had to be avoided, or stepped over. Worse than all, the trail had taken an abrupt bend and I had "overrun the trail" a half mile. The sun appeared to have focussed his rays on that plain. My blood seemed to be at fever heat. What I could see of my face was of the color of a boiled lobster. Dash was trailing along at heel and he seemed to wish that nature had favored him with a few inches more of tongue that his panting might do the occasion the better justice. Moore had been in as bad a fix as I. The water of the stream was dead, and so deep he could not wade it, and so he was also carried a half mile out of his way. We at length got together and found a deer path that led us out to the head of Mud Lake. Blessed be the deer!

We would have been overjoyed to see David out on the lake in the boat, but he was not. And although the two miles to camp were over ground rough, bouldery and ram-pike strewn, it was as a beaten track compared to what we had just passed over.

We read of a certain scriptural character "choosing the good part." That is what David did, all unconsciously, when he elected to stay around camp. A phenomenal piece of luck was this, and it fell on a deserving head. About 10 o'clock in the forenoon he went over to the lake. While prospecting around he struck a snipe pocket and with sixteen shells killed fifteen birds. But he happened to remember that snipe shooting was my particular "weakness." So he withheld his hand while game

any time the ground would gradually sink till the water poured in over the boot tops. The cranberry bogs were the nearest approach to solid land.

We were scarcely ashore, when a pair arose to David, and he missed both. I soon made a Dutch double on another pair, and to perfect the sequence Judson followed on a single. Then we sprang out, and the fun began. The snipe rose in singles, pairs and little wisps. In circling, those started by one would often come within range of some of the others. Then there would be a puff of smoke and very probably a small gray body falling through the air. Once I marked down a pair about 50 yds. apart. I walked up to the nearer, which flew to the right and fell dead to my first barrel. I made a mental note of the place he fell, but feared to pick him up lest I lose my line on the other, which I went on and killed. It should have occurred to any one with common sense that a living snipe would be easier found than a dead one, but it did not so strike me. I failed to find the first, but during the search I started the largest Wilson's snipe I ever saw and killed him at a good strong 40 yds. with No. 10s.

The best snipe we started I missed with both barrels. We marked him down, and not to hurt my feelings David went over and missed him some more in the same way. Again we marked him a quarter of a mile away, and all three of us closed in on him. I was given the first chance, and I went in and beat the ground through and couldn't start him. Then we sent in the dog with a like result. David, who had exhausted his supply of fine shot loads, asked me to lend him my gun that he might go in and try his luck. He at length kicked him out of a tuft of grass, within two feet of which I had passed several times. A half suppressed "you son of a gun," mingled with the spiteful crack of the little hammerless and the bird was added to our bag, bringing the total up to thirty-four.

We found a bog covered with a small kind of bog-cranberry known as the "greyhound," and after eating all we wanted, picked enough for a stew.

During the morning around camp there was another rifle shot in which the writer tried in vain to equal Bertie's record on the birch bark Catavampus target. W. H. challenged her to try a red squirrel high up in a fir

in shape, the rims being always perfectly circular, and the slope of the sides very uniform. They looked as if they had been marked out by compasses, and excavated by machinery. Their sides and bottom were covered with a thin dwarf growth of hardwood, similar to that on the rest of the ridge. For want of a better name we called them "pot holes."

The afternoon was cloudless and there was not a stir in the air. The foliage of the trees was of a bright yellow color, and enough leaves had fallen to cover the ground. With a golden canopy over our heads and a golden carpet under our feet, who can blame us for imagining that we were treading the aisles of one of nature's palaces? It must have been under the spell of an afternoon like this and amid similar scenery, that one of the greatest of our American poets wrote:

"Ah! it were a lot too blest  
Forever 'mid thy leafy shades to stray,  
Amid the kisses of the soft southwest,  
To rove and dream for aye,  
And leave the vain, low strife  
That makes men mad—the rush for wealth and power;  
The passions and the cares that wither life,  
And waste its little hour."

We wandered away for a couple of miles and then loafed along back. We did some talking, but it was mainly in the line of calling each other's attention to something to admire. First it would be a lot of thrifty, smooth beech trunks; then a grove of giant hemlocks; then a particularly symmetrical "pot-hole;" and again, a view from the edge of the horseback over miles of ever-green forest.

Our attention was rudely distracted from the landscape when we neared camp by Dash running into a porcupine. While we were extracting the quills, the other dog, who is one of the few that can worry a quill pig without sustaining punishment, treed the animal, and Moore went on to camp to get Bertie to come and shoot it with the rifle. I was left on guard. After waiting long enough for him to go to camp and return several times over, I shot the brute. Two minutes later they arrived. Not finding the women in camp, Moore had followed them out to the

cranberry bogs. I trust I have been forgiven for my indiscreet haste, but the memory of it still lingereth.

Again Moore and I had the evening fight shooting to ourselves, and to say truth there was not much of it. It is the privilege of sportsmen to behold Nature in her various moods; and I would not have missed that evening on the lake for more money than I have made any day this year. Thick clouds had risen suddenly and completely filled the sky. The air was still. The silence was so intense that you could almost hear it. Every report of Moore's gun was followed by the shrill shriek of the shot and the irregular, spattering sound as they dropped on the surface of the lake. Then it would echo, and reëcho, and "re-o-echo," as I once heard a budding orator say, till it gave one the impression of a range of mountains tumbling down about his ears. The eastern ridge first caught the sound and flung it to Flat-top Mountain in the west, which passed it over to Blaney Ridge on the south, and it ended in one long, wild roar down the valley of the Magaguadavic. Each discharge warned every duck within ten miles that there was trouble in the Mud Lake district; and they were not slow to profit by the hint.

Sunday was a still, cloudy day. It looked as if it might rain at any moment but it did not. We spent it loitering around camp, the lake shore, the beech bridge, and the cranberry bogs. Two of the women took a boat and went out for a paddle on the little lake. After they came in, another lady and her husband went out on Mud Lake. This was the indirect cause of a little accident that is better related impersonally. The feminine member of the expedition was the head of the cookery department, and her arrival in camp was somewhat later than the usual hour for commencing preparations for supper. We had only flour enough for a single batch of bread. Instead of graduating the water to the quantity of flour, she, in the excitement of the moment, reversed the process, and "drowned the miller," as the saying goes. Then there was woe and lamentation. We had some "store biscuit" but these were needed for a lunch on the road the next day. We memorialized the cook to prepare it for the table as best she could, and we would attend to the rest. We assured her that we only needed nourishment; the form did not so much matter. At length she complied with our request, and placed before us a cross between a very thick "slap-jack," and a mighty heavy "short-cake." The Preparator called it a "dough-godger." When it was turned out on the table, each man hastened to do it honor. To break it was impossible. So four of us each grasped a side and pulled. It stretched to the form of a Maltese cross, and the women who did not make it laughed till the tears came. Then it gave away with a rebound as of India rubber. With the exception of one, who generously shared his piece with another who had none, each wrestled manfully with, and finally vanquished the part that fell to his share.

Our last night in camp differed very little from the rest, except that we remained out of bed slightly later, and the deck of cards rested in their case. There was apparently no touch of that shade of sadness which usually fore-runs the breaking of camp. Everyone seemed in good spirits.

Monday morning was still and very cloudy. The work of striking tents, packing and getting breakfast went on simultaneously. By the time it was fairly light we were ready to move. Though all were sorry the end had come you could see no evidence of it in any countenance. For we were not as people without hope. And then there was a necessity for immediate and energetic action, and work is a sovereign remedy for useless regrets and vain repinings. David, Judson and I packed the dunnage down to the outlet, thus shortening the ferry one-half. The women spent the time carving the initials of the party on a tree.

About sunrise the canopy of cloud that had hung over us for the last forty hours began to lift in the west, and this promise of a lovely day was fulfilled to the letter. About the same time Moore and David pulled out with the horse. A week's vacation had put the brown on her mettle, and she objected in true Western fashion to allowing David a seat on her back. The difficulty was partially adjusted, when they passed out of sight. Then we heard a wild thrashing in the brush, coupled with an exhortation liberally adorned with quotations from standard literature; and we knew the mare had been temporarily victorious. David afterward acknowledged that she bucked him off in fair fight.

To Judson and me was assigned the duty of escorting the women down to the outlet. We were standing around the camp-ground just before forming our little procession. We heard a dog give tongue out on the burnt land, and then a grouse sailed in over the sprouts and alighted in a hemlock overhead. One thought of how useful he would be about noon, and then I walked to the rack and picked up a gun. A second later and a headless bird lay on the ground. "A shame," you say? That was the unanimous verdict of the women. And I set down naught in extenuation. I probably would have done it even had we not been short of provisions.

A walk of two and a half miles through woods, a slight delay in helping the team over Black Brook, and we were on the ridge overlooking the place that for a week had been our home. Had we been less strong in the hope that we would see the place again, we would not have bidden it good-bye so cheerfully. It had afforded us slim opportunities for slaughter, still, we got enough game to supply the camp. Including the snipe, we got considerably less than a hundred head in all. But whatever was lacking in quantity was made up to us in variety. Our list of ducks included the black mallard, or dusky duck, the gadwall, bluebill, broadbill, wood or summer duck, sheldrake and mudhen. In snipe, we had Wilson's and the summer yellowleg, while our grouse embraced the ruffed and the Canada. We had many valuable specimens for the taxidermist, the rarest of which was a wood-drake or male summer duck in perfect plumage.

The bracing air appeared to have an invigorating effect on the people, horses and dogs. Scott Act pitched into every dog that showed himself on the road; and none waited for either revenge or second nip. Perhaps they were not so cowardly as their actions indicated. They probably reasoned, that if the other dogs were so blood-thirsty as the pup, they would as lief take their chances with a pack of hungry wolves.

We took a slightly different road from the one we came, and it led past the scene of a famous tragedy of twenty years ago—"the place where Teague was shot." The trouble that ended in the death of Teague was caused chiefly by bad rum; and the end was more in keeping

with the eternal fitness of things than is usually the case, for it was the rumrunner that was killed. He was shot by Charles Davis, a blacksmith, while trying to force an entrance into his shop. Davis himself made the pistol with which the deed was done. He has served out his fourteen year sentence, and disappeared.

At Lake George, about two miles from this spot, over fifty years before this, there had occurred another murder, of peculiar interest to the sportsman as well as to the historian. It marks one of the very few instances in the history of the Province when a collision between the red and the white man ended in bloodshed. John McGeorge, the first settler at Lake George, shot a caribou. This the Indians held to be an infringement of their rights, and one of them shot McGeorge. The enraged settlers set out to hunt down the murderer, but instead got on the trail of his companion, who was captured after a two-days' chase, during which time he had not a bite to eat. If I remember aright, the unfortunate Indian suffered death, and the man who fired the shot never was taken.

We made our noon camp in a wood not far from the residence of Mr. Alexander Rosborough. David putting on the brogue of a near friend of the Rosborough's, gave us a list of the names of the family. "There is Ritchie and John Ritchie, and Ritchie P., and Henry, and curly-headed John (these are the back field ones, d'ye mind), and there's Aleck, and Thomas Samuel, that lives ferbye Skipton's, on the main river." We always mention the place of this halt as our camp "ferbye Aleck's."

While we were here something happened that served to illustrate the truth of the saying that "it takes all kinds to make a world." A horseman passed by on a "pale horse." He was elegantly dressed. The "shine" or gloss on his stand-up collar was just lovely. His waxed mustache had about the right turn, his soft felt hat about the correct crease. His saddle and bridle were the best of their kind, as was also a field glass case that was strapped about him. But his horse looked as if his appearance might be improved by a more generous ration, and he was decorated with certain dun-colored maps of the great continents, those of Africa and South America on either quarter, and the others, with sundry islands, scattered over his body. The sight was enough to inspire any one with the instincts of a horseman with a desire for a short private interview with the animal. To the accompaniment of a currycomb and brush. The rider looked neither to the right nor to the left. It is anybody's privilege to salute another on a country road, and Moore gave this man a cheery good-day that ought to have brought a response from a wooden man; but he honored it with neither word, look nor gesture. "Ah!" said David as the horseman disappeared over the hill, "there's nothing in that fellow but—" and his eyes had in them a far-away look that indicated mental abstraction, as the reason for the unfinished sentence.

Here Judson left us. During the short time he was with us he had shown the mettle of a sportsman and we hoped to meet him again. On our way to the St. John River David picked up one grouse. At Bear Island we waited some time for the ferry-boat that took us over a week before, but it was propelled by another man whose way of getting around easily accounted for the delay. Here David collected the mail for his neighborhood, thus getting it a day in advance of the regular service. But he did not do this work impartially. One missive for John Touch he did not bring and two that he did get he failed to hand over to the postmaster. The name on the letter was not John; in fact, I think she would be exceedingly angry if you called her John. But I believe she got the letters sooner than if they had been left at the post-office.

On our way out we had a whirl at a grouse which afforded us quite an amount of fun, and did not hurt the bird. If W. H. had not mistaken the end of the top lever for the safety of his gun, he might have called him down, for he was offered one of the prettiest shots I ever saw.

And now the time for breaking up our little party was approaching. The flow of talk and good-natured chaff which had scarcely failed since we set out, ceased of a sudden. Every mind seemed abstracted—preoccupied. Now and then some one would break out in a little fragment of song, and those of the rest who knew it would join in, all singing in a subdued voice. After a while some one hummed a bar of an old hymn that has stood the constant wear of a quarter of a century, and which will probably survive the present generation: "The Sweet Bye and Bye." The chorus breathed the wish of the entire party. Instantly it swelled loud and clear. And though there be those who would take exception to the application of the term "beautiful shores" to those of our little lakes, we all hope to meet there again in the "Sweet bye and bye."

L. I. FLOWER.

#### Put a Note in Your Local Paper.

DANVERS, Mass., Dec. 31.—The open season on game birds of Massachusetts expires to-day. Game has been scarce all the season, consequently hunting has been limited. Many quail were winter killed last year. The ground has been covered with crusted snow, trees and bushes full of ice for the last four weeks, so it has been unfit to do any hunting. I think much game has been spared. I never knew of a month of December more favorable for the preservation of game birds than the past. Let every true sportsman notify his local paper for publication that it is now illegal to kill any game birds and that there is a heavy fine for so doing, and that the complainant will be rewarded by a conviction in sharing the fine. I always make it a rule to keep our village paper posted and it has a tendency for good. J. W. B.

Sandow, the strong man, is the owner of a Great Dane that is said to be very intelligent, like most of these dogs. Sandow is now performing in New York, and among feats of strength is an act in which he sustains on a stage, a grand piano and a whole Hungarian orchestra. This the dog does not like at all, being afraid that his master will get hurt. One day recently the platform on which the piano was placed got wet by accident and became slightly warped. When it was placed on Sandow's chest that night and the piano was lifted to it several loud cracks were heard. The dog had been watching the performance as usual from the wing, but when he heard those cracks he began to howl dismally, and it required the united efforts of several stage hands to keep him from dashing on the stage. When the curtain finally dropped on the act the dog rushed at Sandow and rising on his hind legs, licked his master's face and jumped about him in an ecstasy of joy. Now they have to keep the dog locked in a dressing room until Sandow has finished his performance.

#### CHANGES IN THE EAST.

As Seen by Western Eyes.

THE people in the East can scarcely realize how their country is changing. No one except one who at long intervals revisits the scenes of his childhood and wanders through the woods and along the streams he loved when a boy.

The amount of timber is in many places much greater than it was forty years ago. I found last year that old fields in New Jersey where I used to clip the whistling wings of the dove as he rose from the blue sheets of bugloss were grown over with timber of very respectable size. What used to be mere brush or second growth saplings now begins to look like virgin forest. Yet you may stroll through it day after day without hearing the leaves jar beneath the spring of a gray squirrel or find any crumbs that have fallen from his lofty table. The bugloss still shows in the adjoining field, yet you may walk half a day without seeing the arrowy line of bluish gray that marks the course of the dove, and still longer may you wait before across the yellow harvest field you hear the soft, sweet call of Bob White.

One could hardly expect to see the ruffed grouse rise roaring from every laurel glen or hear as of yore the woodcock's twittering wing in every bit of swamp. But surely one has a right to look for the striped sides of the chipmunk along the old stone fence, or the flash of the red squirrel's coat amid the darksome grove of hemlocks.

Here and there at long intervals the mottled breast of the wood thrush lit up the somber shades, and his pure silvery notes made a welcome contrast to the rattle of the buckboard of the modern country Jake in the highway near by. But where was the lustrous dark blue and crimson of the redstart that used to shine in every bit of wood, and the bright scarlet of the tanager that used so to fire my young love of the woods and all their inhabitants?

The great glory of the maple is as bright as ever, and the broad head of the beech looks as if time had made no impression upon it. But I looked almost in vain for the rich livery of the oriole that used to make them so cheerful, and from the broad hickory that still stood out in the old field the brown thrasher poured no more the sweet volume of his evening song. Where the axe had spared the chestnut and walnut they looked as bright as ever and the ash and the basswood seemed in the heyday of existence. But the red and white of the woodpecker flashed no more amid the green and mute was the voice of the cuckoo that used to make the woods of late summer seem so mournful. The gum tree smiled still in brightest green and in early fall turned into as rosy flame as ever, long before most of the other trees knew that the summer was over, but in vain looked for the gold of the highholder that used to come for the bluish berries; and even the robin that used to keep him company at his morning and evening meal, though the most abundant of the birds yet left, was none too plenty here. Down in the tangled shrubbery the mellow voice and varied song of the chat is heard no more and a glimpse of his golden breast, always hard to get, seems now impossible.

The butterfly weed still flames in the meadows beside the blue of its cousin the milkweed, but where is the bobolink that hovered over it while his little soul bubbled so sweetly forth, and where that silvery ripple of song that used to fall from where the upland plover was winging his way across the summer sky? The golden breast of the meadowlark, once so common, shines rarely now amid the elder's bloom, the thistle sheds its down as silky and abundant as ever, but the cheerful chirrup of the yellowbird is rarely heard above it as he rises and falls in wavy flight, and along the ledge you may watch for hours before you hear the catbird tune his pipe or the wren come out to speak his little piece. In the open ground the bluebird yet warbles and around many places the robin is still abundant. But this is probably on account of protection, for when you go to the thicket you may range for miles without hearing the friendly greeting of the chewink or seeing his ruddy breast along the ground as he scratches up the leaves. And beneath the giant elm where you spent so many pleasant hours in boyhood you may now sit half a day without seeing the little creeper or nuthatch stealing along the limbs and looking under the leaves for slugs, for from the end of some dead limb will you often see the little pewee flutter out and catch his fly and come back to tell you his little plaintive tale before he starts for another.

The cause?

Breechloaders, boys and bonnets. The English sparrow seems to have little or nothing to do with it. The disposition of the wite man to get away with all that is fair in nature as soon as possible is enough to account for it when it is aided by a cheap breechloader with cheap and good store ammunition, what wonder the country girl knows the indigo bird or the oriole only from her bonnet when every lot that can "rustle" five dollars together can now get a gun and ammunition that will shoot better than most of the guns of forty years ago as we knew how to load them?

It was to be expected that game would become scarce. But who ever expected to hear woodcock talked of about as we talk of grizzly bears in the mountains of California? In Farmer Scrump's woods a cock was seen last month. Major Swipes saw borings of one last week five miles west of town. Colonel Buckstapper is alleged to have shot at one yesterday some ten miles east. And General Snagby is said to have a couple staked out somewhere in the big swamp at Huckleberry Run waiting for him to get time to take them in. At 3:35 (dawn) of the opening day a score of high bred pups with pedigrees as long as the faces of their masters pointed each other on the spot in old Billick's swamp where somebody had seen some borings the week before.

The brooks seem to have changed as much as any part of the land. Many of them now go dry about the time the ground is in good walking condition after a rain. Some that we used to have boats in and swim comfortably in for many a rod are now foaming torrents during a storm and nasty little slimy sewers a few days after. Along their dirty shores the little teeter snipe trots no more. The kingfisher has left, perhaps because the water is not deep enough for him to dive with safety. No more by day do you see the green heron or the bittern standing pensive and well fed along the bars, or at night the snowy plumes of the night heron droop over his long neck as he settles down upon the shore for his evening meal. Upon the ripples the sucker no longer suns himself and the old time deep hole where the sunfish used to lie is deep on

with mud and tin cans or old boots. For miles along it you may stroll at night without seeing the rippling wake of the muskrat or smelling his fragrance in the night air, and along the banks of the stream a muskrat hole is about as rare as elephant tracks. The little eels that used to wiggle about in the little coves, the little crawfish that used to shoot backward out of sight under the stones, even the little skaters and water beetles that used to dart and circle on the clear waters seem to have gone from most of the small streams.

The woods and dales are no longer the places they were. However heavy the timber or the underbrush, if anywhere within a few miles of a town, or along the highway between two cities, tramps' nests and loafers' trails disfigure its fairest shades, the spring, once so clear, with such delicious water that you used to turn considerably out of your way to go to it, is now nasty with mud, broken bottles and remnants of tramps' dinners, while the mossy banks on which you used to pick the fragrant red berries of the wintergreen is now rolled flat with dirty pants and littered with scraps of paper, bits of rag, fragments of old stockings, tobacco sacks and bones.

The severe drought undoubtedly had something to do with it, but surely could not fully account for the difference I found in the wild flowers. The jewel weed that used to wave so gracefully above the brook, with its curious orange-tinted flowers shining amid its deep green so long in the summer was surely not as abundant as it once was; and in late summer I looked as vainly for the purple-tinted snake head of the chelone as I did for the yellow and white petals of the dicentra in the spring. Rare was the gold of the evening primrose, and scarce ever the day-blooming variety that used to be so common. The lovely lavender of robin's plantain, so much like an aster, was seen only at long intervals; the ground cherry, once so common, I looked for in vain; places once so fragrant with pennyroyal were bare of anything, and even the delicate, reddish tint of the sorrel was scarce. Along the roads the yarrow grew dense and white, and the adjoining fields were snowed over with the carrot or dotted and starred with St. Johnswort or Black-eyed Susans, but the delicate little pink phloxes, the soft hue of the bluets, were as rare along the opens as in the woods; the pure white of the pyrola or Prince's pine, or the tender pink of the Arctostaphylos in the meadow.

LOS ANGELES, CAL.

## Natural History.

### EXPERIENCE WITH QUAIL.

IF I do not mistake, the history of Bob, a domesticated quail, was published in the FOREST AND STREAM many years ago; but be that as it may, the *Youth's Companion* and other publications afforded thousands of readers the pleasure of reading his history, which was not less wonderful than interesting.

When I got him he was somewhat over half grown. Having been hurt in some way, he was delirious, but thoroughly recovered in a day or two, upon which he exhibited the fear and shyness common to the bird. I had taken the precaution to clip his wings, and when he ran in terror out of the house I easily caught him. By extreme care and gentleness in handling I could plainly observe his fear subsiding, and knowing that he must be experiencing the pangs of hunger, I held him to the window within reach of a fly. To my astonishment and pleasure, he seized and swallowed it. He tamed more quickly than any other bird I ever saw. A house chicken will get out of one's way, but Bob made you step over him. His tameness lost him one or two of his toe nails, which fact made him a foe to the human foot, which he would peck at and with a good hold strike at in the manner of the domestic cock. At that time I had a Gordon setter with a scent keener than any other dog I ever owned. With him I concluded to get a companion for Bob. Accordingly, my son and I went out before quail were full grown, and the dog made a point. I took off my coat with which to cover the bird. So accurately did the dog point that we hit the spot exactly, and the bird was a prisoner. It was a female, a cunning little beauty, but she had toes with a slight lateral curvature, and so we named her Crook. We made a second attempt to get a bird in the same way, and succeeded. It was a male. We called him Grouse, as his conformation approached that bird more nearly than do most quail.

The first year Crook did not lay, although she acted as if she would like to show us an albuminous specimen of her own creation; but the second year I put the birds in a roomy aviary and she laid twenty-three eggs. I had put some small boxes on the ground in which were holes for the birds to enter and in one of these she laid her eggs; but for some reason they would be scattered outside the box. Whether she or the males did such a seemingly unnatural thing I could not ascertain. But Bob had made as neat a nest as ever bird made in the grass a few feet from the box. The question arose in my mind, had Bob tried to get those eggs from the box into his own nest? Possibly, I would put them back into the box which was shielded from the sun and did not want them in the nest Bob had made, because the summer was exceedingly hot and I feared the heat would spoil them.

Crook acted as if she wanted to set, but really did not. So I took the eggs and put them under a hen. She broke all but one, which she hatched. Did the little newcomer show the fear so proverbial of the young quail? Not a bit of it. It would run after me with its constant peep, peep, peep, almost from its very birth. The fourth day of its existence I accidentally set a picture frame on it and crushed it. Did I mourn for that wee bit of a bird? I did, and perhaps foolishly, but my grief was keen and to this day I cannot recall the circumstance of its death without emotions of sadness.

Soon after this Crook died and I concluded to get eggs from the field. I put some under a bantam and she hatched eleven. Thinking the birds were very hardy I took them under my own care. I fenced them in near the window so that they could get plenty of sunlight. I fed them on chopped whites of eggs principally. For one week they were lively as bees and altogether an interesting family. At night I covered them with cotton. But they came to grief and I with them. One day as I came home at noon my boy said he had given the birds a grand feast of grasshoppers and that their strife

for the possession of the choice morsels was amusing in the extreme. Of course, I was pleased, but at night I noticed that the birds were drooping. After that they began to die, one or two daily. Two of them, however, lived three or four weeks; one of them could fly upon a chair.

I will say that these birds did not exhibit the fear of man as they do in the field. I now wish I had left them with the bantam hen, for she might have raised them, and yet I doubt it, especially in an aviary. I once paid about \$10 for California quail eggs. They were sent to me from parties in that State, but were so badly shipped that none of them hatched. Thus ended the scheme that was the dream of my life—raising quail. I am now without a pet of any kind and don't think I will have one unless some one donates me a parrot, which would probably outlive me and for whose demise I would not be called to mourn.

WEST VIRGINIA.

N. D. ELTING.

### THE YELLOW BEAR.

AT a recent meeting of the Biological Society of Washington, Dr. C. Hart Merriam, Chief of the Bureau of Ornithology and Mammology of the Agricultural Department at Washington, describes the skull of five bears from Prairie Mer Rouge, Morehouse parish, La., which he regards as belonging to the yellow bear mentioned in the year 1800 by Shaw and described in 1821 by Edward Griffith who, in his work on the carnivora, named it *Ursus luteolus* and gave a colored plate of it. His remarks are called forth by a recent paper on "Species of North American Bears" by Mr. Arthur Erwin Brown, published in FOREST AND STREAM of Dec. 16 last.

By Shaw the yellow bear is said to inhabit Carolina and by Griffith to be abundant in Louisiana. It is said to have a "more pleasant and agreeable countenance" than the European bears, the forehead to be "more convex, the nose more conical than in the black species; the ears also stand further back; the physiognomy may be said to be more fox-like and the hair not so long or thick. It is gentle in disposition, which, indeed, is expressed in the countenance of the animal very decidedly."

The material which Dr. Merriam describes consists, as has been said, of these five skulls. Contrasted with old skulls of male black bears from the Adirondacks, the three old male skulls from Louisiana are longer and flatter and are also longer in proportion to breadth. The molar teeth are larger than in any known species of the black bear group, the last molar being particularly large. There are also some details as the cusps of the molars, but this is a character which varies widely in the individual and with age. Dr. Merriam concludes that the remarkable skull recently described by Mr. Arthur Erwin Brown can not be *cinnamomum* of Audubon and Bachman, but is *luteolus* of Griffith.

At the same meeting Dr. Merriam read a paper describing four new mammals from southern Mexico, collected by E. W. Nelson. These are a hare, a squirrel and two species of pocket gopher.

In an earlier paper Dr. Merriam describes eight new ground squirrels of the genera *Spermophilus* and *Tamias* from various localities in California, Texas and Mexico.

### Editor Forest and Stream:

As Mr. Brown has given us lovers of sport such a treat about the natural history of bears, I am going to tell about a family of bears I ran across in the Clearwater country in 1865.

Along in the summer I received a letter from my father in the States saying that he expected to be in Walla Walla about the first of August. My brother and I had been discussing the matter, and as we had not seen him for four years, we thought that one of us had better go down and meet him, get everything fixed comfortable for the family and return. On Saturday we cleaned up our boxes, re-torted our gold in a fry-pan, and made our weekly division after the grub bills had been taken out. It was decided that I was to start early next morning for Walla Walla.

On the way I met Indians, but as they were Nez Perces I knew they were friendly; they were going to the buffalo illi, so they said. I had crossed the mountain and had got well down, when, as I came out from a fir thicket into an opening, not more than 20yds. ahead of me there was a black bear with four cubs—two cinnamon and two as black as coal. When they saw me they started off for the cañon. I dropped pack, jerked out my navy revolver and took after them, intending to capture a cub if I could. Two of the cubs took to a big pine tree, but the old bear and the others got to the thicket in the cañon. I went back to the tree and there the little fellows were, away up near the top. I sat down and watched them for half an hour thinking the old bear would come back and hunt her lost cubs, but getting tired of watching I went on as there was no way for me to get them down without shooting them, which I had no intention of doing as I could not use the meat.

This summer, while I was at Wilbur, Wash., the stable keeper had two bears which he had bought from an Indian, who said they had one mother, yet one is as red as a cinnamon stick while the other is a coal black. He tried to sell them, but as he was only offered \$4 each he said he would keep them and kill them when their robes were prime, for then he could get more. LEW. WILMOT.

### "Sounding the Alarm."

If there is any sport I enjoy more than another it is hunting squirrels. The article in FOREST AND STREAM "Sounding the Alarm" was so true to nature that I venture to give its counterpart. Probably some other squirrel hunters, "A. L. L." among the number, may have had the same experience. Several years ago, while I was waiting for a gray squirrel to come out of a hollow tree into which he had gone, my patience was nearly exhausted and I was on the point of leaving him to some other fate, when a large ivory-billed woodpecker alighted on an old chestnut tree within twenty feet of the tree the squirrel was in and at once sent forth his shrill call. He had hardly done so when out came the squirrel and I shot him.

Last fall a party of four of us camped up Licking Creek about the middle of October to hunt squirrels for a few days. We had a squirrel dog with us and when he would tree a squirrel that would get into a hollow tree one of the party would wait on the squirrel to come

out, while the others would go on with the dog. About 11 o'clock, when within about one mile of camp, the dog treed one in a large oak and I sat down to watch. I had waited nearly an hour without a sign when I recalled the circumstance of the woodpecker's call, and I thought, why would not the call of a turkey answer as well? Acting on the thought, I took out my turkey call and had given but three calls when out popped the squirrel.

Now, do you not think that in both these instances the squirrel associated these calls with safety? Knowing the woodpecker to be a very wary bird he believed that when he alighted so near the coast was clear; and for the same reason in the second case the wild turkey's call was notice that no danger was near or he would not be there. If some of the wild creatures cannot reason they have a way of arriving at conclusions that amounts to the same thing.

SANCIO PANZA.

### Protection for Skunks and Foxes.

BINGHAMTON, N. Y.—*Editor Forest and Stream:* The Broome county Board of Supervisors have passed a law protecting the fur-bearing animals of the county—fox, skunk and muskrats. It is needless to ask what the effects of such a law will be. Who as a close student of nature has not noticed the destructive depredations of the skunk and fox upon our only game, the ruffed grouse? Many a nest of eggs in various stages of incubation are destroyed by the repulsive skunk. Aside from what he catches in summer, what person accustomed to the woods in winter has not seen the oft-told story of reynard's tracks leading to a single disturbed place in the snow's surface, the scattered feathers of the noble grouse which had sought shelter from the cutting winds telling the rest all too well?

I have gunned in nearly every part of the country, and I do not know of a place where this bird can be so generally found as here, consequently there is no place where such a law would work more harm. In Pennsylvania, or some parts of it at least, a bounty is paid on fox skins, which is the proper thing, and from observation gained from being afield nearly every day of good weather of open season, I find birds far more plenty in such localities.

H. W. B.

### Some Queer Things in Canada.

BELLEVILLE, Ont., Jan. 3.—A few days ago a remarkable incident happened in the township of Murray, a few miles from this city. While Mr. Andrew Spencer was going home at night from a neighbor's he was attacked by some animal. To his surprise he, after a short struggle, knocked down an owl which measured 4ft. 8in. from tip to tip of the wings. Mr. Spencer's injuries were slight.

On New Year's Day a fawn, which had apparently been pursued by dogs, ran into the barnyard at Mr. James Murphy's, Hungerford Township.

A robin, which sang with spring time vigor, was seen in a garden here last week, and a large garter snake was killed by the wheels of a wagon on a road near the city.

R. S. B.

### Short-billed Guillemot in Connecticut.

AFTER the severe storm of wind and snow which swept along the New England coast about Dec. 20, a disabled bird was picked up by a little daughter of the care-taker at the Hammonasset Fishing Association club house and kept by her for a few days as a pet. It was called a duck and efforts were made to feed it on corn. One of the club members who happened to be at Hammonasset about this time saw it and identified it as the short-billed guillemot. It had evidently been blown in by the storm and thrown down here, a dozen miles north of Madison, the nearest salt water point. When seen it was pretty lively, sitting up in its box and turning its head from side to side, but no doubt it has since perished.

### Lectures on Birds.

LECTURES by the official staff of the American Museum of Natural History, this city, will be given Saturday afternoons at 3 o'clock, in the library, illustrated by specimens. The first course will be given in January on the "Birds in the Vicinity of New York City," by Frank M. Chapman, Assistant Curator in the Department of Ornithology and Mammalogy. Jan. 6—"Why We Study Birds. How to Study Birds. Our Winter Birds." Jan. 13—"The Birds of March, April and May, and the Spring Migration." Jan. 20—"The Birds of Summer. Birds' Nests. Birds' Songs." Jan. 27—"The Birds of Fall and the Fall Migration. Birds in their Winter Homes."

### A Long-Lived Canary Bird.

*Editor Forest and Stream:*

Thinking it might be of interest to some of your readers to know how long a Canary bird may live, I send you the following account of the death of a bird which belonged to my sister. In a recent letter she says: "I am sad over the death of my little bird. He died last night. I have had him twelve years and have taken care of him every day. Do you wonder that I miss him? Mrs. P. gave him to me when the Captain died and she had the bird for ten years; so he has lived for twenty-two years—a most wonderful age for a Canary."

MRS. H. F. HENSHALL.

### The Linnæan Society of New York.

A REGULAR meeting of the society will be held at the American Museum of Natural History, Eighth avenue and Seventy-seventh street, on Tuesday evening, Jan. 23, 1894, at 8 o'clock. Papers: Leverett M. Loomis. (1) "On the Causes that Necessitate Bird Migration." (2) "On the Views Held Concerning the Migration of Young Birds of the Year." C. B. Riker: "Experiences During Collecting Trips on the Amazon River."

ARTHUR H. HOWELL, Secretary.

### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3)

## Game Bag and Gun.

### A DEER HUNT IN NEW JERSEY—1893.

NEAR the close of the deer season in New Jersey, a chase occurred lasting two days which seemed to me to be worthy of record in *FOREST AND STREAM*, and I have persuaded a gentleman who participated in the hunt, and in fact, directed it, to write out its particulars for publication, and his account is subjoined. Supplementing it, from what I know of the ground, and from conversation with my friend, I will say briefly that Port Elizabeth, the village near which the chase took place, is near the Maurice River, in Cumberland county, and three creeks, Manantico, Manumuskia and Muskee, empty into that river near the village. The "deer woods" of New Jersey, consisting largely of scrub, oak and pine, approach within three miles of the village. These "woods" are of considerable extent, and if the Russian Jews do not continue their advance into them, will for many years to come, preserve the deer, which are fairly plentiful. My friend, the Colonel, has omitted to state that on the first day of the chase some shots were fired at the deer without effect, however, on the second day no shooting was allowed, it being agreed that guns might be used after 4 o'clock in the afternoon, if the deer were not previously captured. As the deer was killed by the dogs no shot was fired on the second day. Further, as the chase progressed tired dogs were brought to heel, until they were rested, and then put on the trail fresh, so that the deer was always pursued by fresh hounds, until about 4 o'clock of the second afternoon the whole pack was loosed upon her. The doe weighed, dressed, 90lbs.

F. S. J. C.

#### The Story of the Chase.

A southerly wind and a cloudy sky proclaimed a hunter's morning, as a party of us tumbled into an open wagon at 5 A. M. on the seventh day of this month (December). After a ride of four miles we were on the ground, and each hunter silently sought the stand he had selected, while the driver, with a couple of fine deerhounds, entered the woods on a drive. The morning was indeed a typical one, still and frosty, with just a suspicion of air from the southwest. Hardly had the dogs entered the "neck" when the buglelike cry of Old Jock went echoing through the woods to the distant stands. It was immediately taken up by Jule, and in ten minutes the game was afoot and flying for life before the eager hounds; now leading off a mile straight, then doubling on her (it was a doe) tracks, dodging in every direction for an hour or more, when, finding it impossible to shake off her pursuers, she broke out of the neck and headed for Jones's Mill Pond, intending to take water there.

Two of our party had been delayed until 9 o'clock getting off that morning, and while on the way to join us suddenly ran into the deer coming down the road. They stopped, cast the leash from their hound, and the deer, meeting this unexpected obstacle, turned and ran back for a mile or so. The two hounds, "catching the double," now joined in, and the three were pressing the doe closely. She changed her tactics and again tried short doubles, and after an hour's furious run succeeded in throwing the dogs off for five or ten minutes. They soon picked up the lost scent, and the deer having considerable start, another hour was spent in short runs and circling. All the hunters being thoroughly acquainted with the woods, left their stands and were closing in with the chase, thrilled with the music of the hounds and as eager as they to catch a view.

About noon the deer took water in Manumuskia Creek, near Reeves's Mill, waded up the stream about 400 yds., went out, made a short circuit on the opposite side, and again entered the stream and waded up to a point where the stream divides out into a number of shallow rivulets encircling numerous small islands. Selecting a hummock of grass on one of these, she lay down to rest and await results.

The hunters searched each side of the stream for a mile, but failing to find where the doe had come out, got a boat and believing her to be concealed on one of these islands, proceeded to search them out in detail. About 4 P. M. she sprang from her hiding-place not over 30 ft. distant from one of the hunters, and in five minutes six dogs were on her flying heels. Straight away on her back track she flew for a couple of miles, and then commenced dodging in short, sharp circles until dusk, when, finding it of no avail, she again headed for Manumuskia Creek, taking water about half a mile above our village, Port Elizabeth.

It was now dark and we succeeded in calling off the hounds, with one exception, Old Jere swimming the creek and picking up the trail again on the opposite bank. The doe now went straight away for another two miles through open meadow, but finding she could not shake off the hounds, made for Maurice River, opposite the village of Buckshotem, where it is 200 yds. wide. She swam across and the chase ended for the day.

We gathered our hounds, gave them a good warm supper and bed, then waited eagerly for the morrow.

At gray of dawn next morning we stood upon the banks of Maurice River with a boat in readiness to cross, awaiting sufficient daylight to see. The stillness was only broken by the crowing of the cocks on the surrounding farms, or by the occasional cry of the eager youngsters of the pack, or the suppressed whine of the older dogs. We crossed, unleashed the dogs and were "casting" up and down the bank when a long note from Martin announced the finding of the trail. It was open meadow for miles, and the doe had walked out of the water the evening before and lay down in a bunch of rushes 100 yds. from the bank. Soon the pack opened on the trail, and in another moment the game sprang up in full view of dogs and hunters, making straight for the river, into which she plunged, heading for the opposite bank.

We all tumbled into the boat and it was a race for the opposite shore. The deer breasted the river like a tug, with head and neck only out of water, and landing first, started across a mile of meadow and open farm land for the woods, being in full view of hunters and hounds the entire distance. In three minutes the dogs were on her track and the villagers were aroused from their slumbers by the deep-mouthed chorus less than a mile away. The day was as lovely as the preceding, and every bush and leaf sparkled in the quiet dawn with its frosty jewels. On

reaching the embankment of the West Jersey Railroad the deer doubled back and struck north to Manantico Creek, but not wishing to take water yet swerved back to the left, and for three hours tried every available tactic with which to throw off the hounds, but failing in this, she took water in the Manantico, fording it and entering a dense swamp, lay down a half mile from the bank.

We had lost twenty minutes going half a mile up stream to an old mill dam and crossing. On the opposite side the dogs were again let loose and the chase was soon on again. For an hour she ran in long leads and then adopted entirely new tactics. After gaining considerable space on the dogs by short doubles she would take an old lumber road where there were no bushes to catch the scent and speed away down the middle of it for half a mile, then turn short on her track and run back a quarter of a mile, where she would leap off, and after running a short distance commenced doubling and back-tracking again.

For a while this gave her an advantage, the dogs overrunning the track where she dodged off and losing the trail for five or ten minutes. We soon caught on to the trick, however, and whenever a fault occurred with the dogs, two of us would hastily take back a hound on each side of the road and soon pick up the lost trail.

So went the chase until about 2 P. M., when the deer again took to water, crossing the creek and laying down on the opposite hillside. We crossed and beat down the bank, when the doe sprang from her bed in full view of dogs and hunters. The dogs were cast loose and again the race for life commenced. It was very evident to us all that the deer was greatly fatigued, as were we likewise, but the knowledge that the game was well nigh spent infused renewed life, and away we all went, deer, dogs and men, the latter scattering in different directions, each one anxious to be in at the death.

The deer now ceased to make any long leads, confining herself to short doubles, abrupt turns and back-tracking, all in the space of a mile square. Every now and then a quick, sharp burst of music (not to the deer) told us that the dogs had caught a "view," and we now changed our policy of silence to loud and encouraging cries to the pack, urging on the laggards to renewed efforts.

Round and round the circle flew the chase; a "view hallo" from some one told the deer was in sight; shorter and shorter grew the circles, until, just as the sun was going down behind the low trees, a wild chorus of bays told us the chase had ended. Running up from all directions the hunters closed in to find the deer down and surrounded by the pack of baying, tired hounds. Pipes were lighted, a pole cut and the quarry lashed to the middle, and as darkness deepened we entered the village. That night, around a warm fire and amid circling smoke, we discussed the "points" of the hunt until nodding heads carried us one by one to our homes, where we continued the unflagging chase—in our dreams. J. H. W.

### CEPHUS DODGE'S TWO SHOTS.

OCCASIONALLY I see accounts of some notable shots recorded in *FOREST AND STREAM*, such as killing two woodcock at one shot, or two grouse at one shot. This brings to mind that I once shot two ruffed grouse with one bullet. It was not a very remarkable shot, however. I had been hunting deer one sunny day in October, without even getting a chance shot. They seemed to be laid up somewhere out of sight; and as I was somewhat tired, I sat down on the dry leaves, leaning my back against a long log, when I heard the queerest of all queer noises. I couldn't guess what it was until I looked over the log; and then I saw about three rods distant two old cock grouse walking slowly around on a little circle of two or three feet diameter, each one keeping opposite and facing the other, all the time keeping up that low cawing noise. They made no attempt to fight, but appeared to be having a serious quarrel. Now, the most natural thing to do was to lay the rifle across the log, and when both necks came into line to cut both heads off; and this I did. "Potted," did you say? Well, perhaps so. But I thought then, and think now, that the birds made a cleaner broil than if they had been killed on the wing and filled full of No. 6 shot.

I remember many remarkable shots made by old-time hunters, some of which may be worth mentioning now. Away back somewhere in the '30s there lived a man in Ashtabula county, O., by the name of Cephus Dodge, who for aught I know might have been grandfather or great-uncle of Ira Dodge, of bear hunting fame in Colorado. At that early day the country along the northern border of the State was sparsely settled as compared to the present population. Deer and wild turkey were plenty, and Dodge was a noted hunter, and was considered a dead shot on deer. He used a heavy rifle with large bore, as such guns were thought to be a prime necessity then and there, where the face of the country was comparatively level, with rather open but heavy timber, and mostly clear from thicket and underbrush; consequently deer were shot mostly at long range.

It was after a fall of snow in November that Dodge came out of the woods very late one night, and said he believed that he had broken the record of all the remarkable shots that were ever made.

His story was about as follows: Early in the day he started five deer, which kept together and which he followed a roundabout way during the day, without getting a shot within reasonable distance. Toward night they began to bunch, as he said, but would start again before he could get in shooting distance. It was getting near night, cloudy and stormy withal, and he concluded to shoot into that bunch when he should see it again, let it be short or long distance. A half mile of travel brought him in sight again. As he said, he couldn't tell heads from points, but he held high and pulled for the center, when the bunch vanished at once. On going up he found one deer which had fallen dead in its tracks, and, following, in less than eighty rods he found two more. Now it rather strikes me that had I made such a shot I would have gathered up the slain and gone home satisfied. But Dodge knew well enough that the two live deer which were left would not go far without a halt, so he followed the trail until he saw a dark spot in the distance which he thought might be the broadside of a deer. He drew up and fired, it being so dark that he could barely see the sights on his gun, and the two deer started off on a run. He found spots of blood on the snow, but night had closed in and it had grown so dark that he could follow no further, so he left for home.

The next day the two deer were found; shot plumb through and near where he had left the track the night before; those with the others were hauled in with a team, and Dodge was ready to make oath that he had fired his gun but twice at the five deer.

As might be expected, they proved to be an old doe and her two fawns and two yearlings, supposed to be the fawns of the year before, that were still following the doe. In the early days it was not rare or uncommon to find one yearling and sometimes two following the mother doe irrespective of the later family of fawns; but in later times such families were generally broken up and scattered by hounding and hunting. Had those five been a miscellaneous lot of old deer they would not have kept together ten minutes after being started the second time.

GRAND VIEW, TENNESSEE.

ANTLER.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### Rabbit Money.

CHICAGO, Ill., Dec. 29.—From North Dakota I have the following letter:

"I have just finished reading your appeal to sportsmen on behalf of the hungry people of Chicago, and wish you to know that I am in line with the kind of charity you suggest. Jack rabbits are abundant in North Dakota, but sending them to Chicago would benefit the transportation companies more than it would the hungry; so I inclose \$2 cash and will ask you to hand it to the proper committee or wherever it will do the most good. Just hand it in as from a reader of *FOREST AND STREAM*, as I desire no acknowledgment in print or otherwise."

I do not counsel the sending in of one cent of cash by sportsmen outside of Chicago to feed the poor of Chicago. It is like a drop in the bucket, and settles nothing. Moreover, it is Chicago's bucket, and Chicago ought to feed her poor, and no one's else. Therefore, I have sent back the \$2 with as much thanks to the giver as though it were used. I am not a philanthropist, and I don't want anything but a carload of rabbits, the freight on which the relief committee will pay, at 82 Market street. We shall be hearing of the *FOREST AND STREAM* fast rabbit freight for the Chicago poor next, but I don't want to joke about this. Let the fat and wellfed laugh. The hungry are not laughing. Send the rabbits.

#### Foxes.

"C. D. F.," of Hunter, N. D., has the following to say about foxes and fox colors:

"For many years I have studied closely the habits and nature of the fox, and have successfully hunted and trapped them in several States. I do not think I ever lived in a locality where black or silver gray foxes were not seen now and again by farmers, teamsters and amateur sportsmen generally. They see them but never catch them, and methinks a closer inspection would show them to be the gray or the cross fox, or perchance some homeless dog.

"Few men have lowered as many brushes as I have myself, and I have never seen a living fox that I for an instant supposed to be a black or silver gray. The cross fox wears a beautiful coat and when the sun strikes it just right has quite a silvery look and is doubtless sometimes mistaken for his more aristocratic neighbor. With this variety, however, as well as the still more plebeian gray I am quite familiar.

"Once, some dozen years ago in M. Ryder's wholesale fur store in St. Paul, I was shown a skin of what they called the black or silver gray, and was at that time informed that both names were used for the same animal whose fur was in some cases almost black, while lighter in others and more of a silvery gray. I have before me as I write the latest price list from Back, Becker & Co., of Chicago, who quote black fox, \$75 to \$100 and silver fox \$50 to \$100. If by the latter is meant the silver gray, they are considered of different values at least, if not of two distinct species. I will say in conclusion, that a veteran fox chaser of my acquaintance claims the black or silver gray to be a sport or freak bred from the common red, and stoutly avers that he once unearthed a family consisting of a mother red and four young cubs, one of which was black and suckling side by side with three golden colored chaps, all of which he captured and all of which died on his hands soon after. What a group that would have been for taxidermical skill."

The veteran fox chaser mentioned has solved "C. D. F.'s" question, though no fellow can find out just how or why some red foxes are black, some silvery and most red, any more than we can tell why one bear cub is cinnamon and the other dark in color, as sometimes happens. The Natural History department of *FOREST AND STREAM* could tell some interesting things on this subject if it would.

#### Auxiliary Rifle Barrels.

An "Enquirer" writes as below in regard to auxiliary rifle barrels:

"I am intending soon to change my habitat to the wooded parts of Wisconsin. I shall be where deer and black bear are plentiful, and am considering what kind of a gun I shall use. Can you tell me about the auxiliary rifle that is so largely advertised for use with shotgun? I have never had an opportunity to examine one. Do you consider it an effective weapon, and would the strain from an auxiliary of large bore—say .45-70—be too great for a shotgun of 8 or 9 lbs.? I want the combination of shot and rifle, and I want a large caliber for the latter. I have lost many deer shot through and out with .38 cal. The shock is not great enough to stop the game at once and the hole when small is apt to close and prevent bleeding externally. No small bores for me in future."

I regret that I can not give advice as to the purchase of guns, as the matter is so much one of personal preference, and there are so many good ones in the market. I will say, however, that I have not known so large an auxiliary barrel as .45 cal. Will the readers of *FOREST AND STREAM* give their experiences hereon?

#### Near New Orleans.

"W. L. B." wants to know and says: "Will you please inform me, as soon as convenient, of the nearest place to New Orleans that good quail shooting may be obtained. None of my friends have hunted in that vicinity, and I ask this of you as you are looked upon as the great source of information concerning the game haunts of the country."

Thanks. The people are not on to me yet. About New

Orleans near-by shooting I don't know much. Magnolia, Miss., not far north of that city, used to offer good quail shooting, and from there on up along the Illinois Central there is good quail country, the supply, of course, subject to local conditions, as is always to be remembered. West of New Orleans, into the cotton country, how near depends on what "near" may mean. I have always found Mr. A. Cardona, Jr., of H. T. Collam & Co., New Orleans, about the best posted and best natured shooter on earth, though I do not feel privileged to send letters or inquirers directly to him.

Is No Dog Man.

The following letter from Mr. W. W. Peabody, Jr., of Cincinnati, O., I offer not as bearing upon the *res adjudicata* of Dame Bang's death, but as proving beyond a peradventure that Mr. Peabody is no good dog man:

"The FOREST AND STREAM, and especially the Western department thereof, is usually correct, and I seldom differ with the editorial staff in any statement they may see fit to make, but I must really take exception to the obituary notice of my pointer Dame Bang, for I really feel that you do her an injustice. Dame is not dead, but on the contrary is enjoying most robust health. I am at a loss to know how the rumor started, and I am quite sure you will be pleased to know it is without foundation. I was disappointed at Dame's field trial performance this fall; not that she was unplaced, but because her work in public was so absolutely devoid of merit. Since then, however, I have shot over her three days and she proved herself all right again."

I will file this as additional proof that Dame Bang has perhaps not yet joined Molly O'Brien. Three of us say Dame is dead, and only two say she isn't. Legally she is dead, and cannot be officially recognized without additional proof. But what I want to call attention to is the unheard of admission on Mr. Peabody's part that his dog's public work was "absolutely devoid of merit." What is the world coming to? No such statement as that was ever before published in the sporting press. We will let it go in, but it must not be accepted as a precedent. True dog men can only look at it in grief and pity. Till now, all unplaced dogs have been victims of the grossest ignorance and injustice.

The telegraphic brevities have the following, all too brief:

"Cook Colgate, abandoned by the Carlin party, has been heard from and a party will be sent for him."

It would be a strange thing indeed if Colgate should be rescued, but the matter seems too improbable.

Mr. T. Benton Leiter, once prominent in Mak-saw-ba Club of this city, has for the past two years been in Montana in charge of the Leiter mine, near Sheridan. He owns a quarter interest, the remainder belonging to his uncle, L. Z. Leiter, one of the wealthiest men of Chicago. The mine is running twenty stamps and cleaning up the trifling of \$1,000 of gold a day, so it looks as though Benton could keep the wolf away from the door for a while. This I learn from Mr. W. H. Haskell, who has just been out visiting and shooting with Mr. Leiter for a time. Mr. Haskell killed four mountain lions on the trip, two of them kittens. He saw an old one and four kittens in one bunch. On his last hunt up into the mountains of the Upper Gallatin the party killed four elk and thirteen deer. The canvassback shooting on Red Rock Lake, not far from the mine, was very good this fall.

Mr. Herbert G. Rich and Mr. Frank E. Rich, described to me as two very pleasant young gentlemen, called when I was absent. Their cards do not give their residence, so I can't locate them. I am sorry we couldn't locate each other.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

NOTES OF A SHOOTING TRIP SOUTH.

TO ONE whose nerves have been worn to the quick by the ceaseless hurry of city life the easy-going ways of the South are balm and healing. A poor pilgrim from the North, condemned to hustle and elbow and push lest he get eternally left, cannot but envy the fearlessness of the morrow that is everywhere shown, and the pleasing disregard of Father Time, whom he has been accustomed to respect and worship as coequal with the Almighty Dollar.

I stood on the deck of the little steamer Norman L. Wagner, plying from Edenton, N. C., to points on the Chowan River one day a few weeks ago, and watched the negro stevedores take life easy as they lay prone on cotton bales on the dock or sat with their legs swinging idly over the side of the boat. The warm Southern sun shone overhead and a thick-lipped songster whistled melodious appreciation of it. Their trucks were lying where they had last been used, and their bale hooks served only as playthings to hack chips from the wharf stringers.

Presently another steamer for which we had been waiting hove in sight, and the negroes all went over to see her make the landing. Apparently they had no further interest than as spectators. A few parcels were run off the newly arrived vessel, and then a passenger or two of those who had landed came straggling our way. The captain whistled, and some passengers who had gone uptown on various errands, came down and sauntered aboard.

The captain meanwhile was sitting in the pilot house with both feet comfortably out of one of the windows, and when questioned would not venture any opinion as to when the boat would leave. At last, some time after the last passenger had come aboard, and he had made up his mind that sufficient time had elapsed and he could leave with propriety, the captain withdrew his feet from the window, and appearing at the door gave orders to cast off. The boat had gotten under full way and was already some 100 yds. distant, when a negro was seen running down the wharf waving his arms and showing other signs of excitement. His voice came borne faintly over the waters:

"Hol' on dar, bar'l cabbage done got left."

"Oh, pshaw!" was the captain's only remark, as he philosophically proceeded to turn the boat back.

I left New York Tuesday night and arrived at my destination, Avoca, N. C., Thursday, having stopped one night in Norfolk. Had I been in any special hurry I could have gone through in nineteen hours. After leaving the railroad at Edenton, N. C., one has to go about three miles by steamboat. There is no special inconvenience attached to this, however, as the boats are in waiting for the trains and the transfer is simple.

Avoca is the name of a large plantation belonging to Dr. W. R. Capehart, late judge of the department of fisheries at the World's Fair. It is also a post-office and connected with the Norfolk & Southern R. R. by steamer from Edenton. Its name, which is aptly given, is derived from Tom Moore's poem "The Meeting of the Waters." It lies at the head of Albemarle Sound, which is here fresh water, and into which, within a radius of a few miles, six streams of considerable size pour their water. Near the doctor's fine old mansion Salmon Creek, and the Chowan River unite, and a mile or two eastward four more rivers, including the Roanoke, enter the infant sound. The land comprising the plantation has long been under cultivation and is as a rule high land. Here and there it is intersected by belts of pine woods or timbered lowlands, which afford cover for numerous wild turkeys and a few deer. Elsewhere the land is devoted to raising crops of corn and cotton, and peanuts and peas. Peanuts and peas, chosen food of the quail. What a theme for an epic! On them the little brown denizens of the autumn fields grow sleek and fat, till they are fit to burst their skins, but unfortunately, also, they grow independent. An hour or two feeding in the morning and the same time in the evening gives them all they can hold, and for the rest of the day they follow their inclinations and it is hard to tell where to find them. Sometimes they are flushed in the scrub pines, sometimes in the straw fields and at other times they refuse to be flushed at all. In average hunting with a good dog a man should get up half a dozen coveys per day without exertion. An energetic man who wanted to make a record could do much better, but there are plenty of quail for steady, every-day shooting, and the supply is not likely to become exhausted.

Dr. Capehart built an attractive hotel at Avoca a few years ago. It had a glass-enclosed veranda where the ladies could sit while their husbands and brothers were off shooting, and the furniture and service were both modern. Good shooting and good accommodation are not to be found in conjunction every day, as most sportsmen know, and the hotel at once entered on a prosperous career. But unfortunately it was burned to the ground last winter. Dr. Capehart is caring for some of the hotel guests at his own place this winter; but to many sportsmen the burning of the hotel was a great misfortune. Quail this year are flushed in the inclosure where the hotel stood last. They have short memories.

The Doctor is talking of rebuilding for next year. He plans a central hotel and dining hall, to be surrounded by cottages. This plan, which has met with so much success in the Adirondacks and other Northern resorts, should prove popular.

The quail are more abundant at Avoca and neighboring points on the Norfolk & Southern Railroad than last year, if anything. In the center of the State, from Weldon north, there is no shooting worthy of the name.

At Mount Airy, N. C., the birds are again found in quantities. Last winter was one of the coldest ever experienced in the South. Broad rivers were frozen over, and people crossed on foot where in former years there had been uninterrupted navigation. The effect on the quail crop in certain localities was disastrous. Along the coast, however, they did not suffer to any great extent. The natural cover protected them from the snow and furnished them means of ingress and egress. Moreover, they have not been hunted in a great many localities on account of the general impression that the crop was small. Mr. Wood, the station agent at Edenton, hunted two days recently with a friend and bagged fifty quail. He wasn't at all satisfied with the result, and said it was due to poor shooting, and that they could have easily bagged that many in a day.

"It doesn't seem quite fair," my wife wrote in a letter, "to shoot turkeys at night on their roosts." I had something this same idea myself when I first tried it the night of the day after I arrived in Avoca. Between me and the full moon a great turkey was crouching close to the limb of a tree and I was just out of gunshot. I had stolen along cautiously with my dinky guide through the woods toward the roost, and if ever an honest man felt like a chicken thief I did. But just at that moment the turkey straightened out his long neck, and by the "moonshine" I saw that he was perfectly aware of our presence. He showed his exact knowledge of shotgun range by taking wing the next moment; and as I saw him majestically sail away through the treetops my feelings underwent a sudden revolution. At that moment I realized that it was a case of misplaced sentiment. I determined the next time a wild turkey came my way to throw sentiment to the winds and take with thankfulness any unfair advantage fate might offer.

I had often heard of the wild turkey's cunning, but one never learns except by experience. During my short stay at Avoca I saw turkeys no less than six times, but I failed to bag one. The first day after my arrival while walking within less than a mile of the house, I unexpectedly came on a dozen or more feeding in a little neck of a field that ran down into the woods. I had a rifle with me for just such game, and fired twice at the turkeys as they started for the cover of the woods. Two who had not seen me took to trees near by and a third flew to a tree some distance back in the woods; what became of the others I could only surmise. To all intents and purposes they might have been swallowed up, for I did not see them again.

For ten minutes I squatted in a most uncomfortable position, hoping to get a shot at the turkeys in the trees, which were hidden from me by the dense web of interlacing branches, though they could not have been more than fifty yards distant. First one leg went to sleep and then the other. I could imagine that the turkeys, sitting still as statues, enjoyed my sufferings. Finally one of them began to yelp, and then walked out to the end of the limb on which it had perched. I could just make it out by its movements, but could not see any part of its body clear of the branches. The turkey was going to fly and I had to shoot. Bang! The turkey never moved. Bang! Still it kept its position in the limb. At the third shot however, it flew and was joined by its companion. The bullets had glanced aside in the intervening branches and it had not been touched. Both turkeys had flown by me in plain sight, not a hundred yards off.

The third one I had not heard fly and I waited two

blessed hours hoping it would attempt to rejoin its companions who were on the opposite side of the field from it. At the end of that time I heard him drop down from his perch in a most inaccessible piece of swamp, and I gave up turkey hunting for that day as a bad piece of business.

The next time I saw my guide he told me he had shot a nice hen turkey the day before. "I was shootin' robins," he said, "when she flew down off the roost right in front of me, and I killed her one barrel. She was only twenty steps off." This man shot upward of thirty turkeys last year, and is an expert caller. Dr. Capehart has a fine turkey tail tacked up in his home. It came from one of a pair killed by Mr. Todd, an amateur, who called the turkeys to him and then killed one with each barrel. Their aggregate weight was 43 pounds.

Avoca is a great place for gray squirrels. While waiting for the turkeys to roost one night with Turner, my guide, at the edge of a swamp, I saw ten or a dozen within range at one time. They were running over the ground making a great racket, or up and down their den trees, making equally as much noise. They seemed to know we were after turkeys. As we paddled home across the creek later in the night Turner said: "Do you remember that little island where we stopped? It ain't more than two acres, but I killed fifty-fo' squirrels on it once." Later he added: "That year squirrels were the thickest I ever knew them. I killed them faster than my family could eat them, and I had to salt them down. One time I had a po'k bar'l full."

Salmon Creek is said to be a fine (large-mouth) black bass water in season. Two catches are reported that together weighed 84 lbs. They were taken on live bait. There are also wall-eyed pike and abundant perch in the creek, and one has fresh fish to eat at any season of the year. Another product of the creek is beavers. Mrs. Capehart has a magnificent cape made from the skins of three, and a skull or two with curving yellow teeth like those of immense rats are lying round the house in evidence.

The Doctor once exhibited these at one of the State or county fairs, and an intelligent reporter who wrote it up got beavers confused with seals. His article long made Avoca the Mecca of ladies whose husbands were sportsmen, and no doubt some are still petitioning their baser halves to go shooting and get them a "sealskin."

Back again in the rush of the city, there still tingles in my ear the note of a little Adirondack sparrow that I heard in a Southern swamp. The mockingbird sings there also in January, and the hermit thrush; but sweetest of all was that bell clear whistle of an old-time friend of the North Woods.

J. B. BURNHAM.

AN AVAILABLE ROUTE TO COOKE.

BILLINGS, Montana, Dec. 27.—*Editor Forest and Stream:* A railroad to Cooke City has for several years past been anxiously looked for by the miners of that camp, as the millions of wealth now in sight will have to lie idle on the dumps and exposed to view in the mines, until a railroad is built to furnish cheaper transportation than there now exists, before the mines can be successfully worked.

One of the greatest obstacles now in the way seems to be to determine a feasible route. It has been asserted at different times by parties who claim to know that there is only one route by which a railroad can reach Cooke City, namely that via Cinnabar, thence up the Yellowstone River and through the National Park; but our law makers at Washington have wisely seen fit to keep the bars up against any project tending to injure or deface any part of our National Pleasure Ground, for which the people of Montana—with the exception of a few who perhaps may be personally interested in having a railroad go through the Park—feel very thankful.

It is not necessary to infringe in any way on the National Park to reach Cooke City with a railroad. A far better route is found by following the Clark's Fork of the Yellowstone from its mouth to its source, as it heads in the heart of the Cooke City mining camp. A few years ago I ran a transit line from the mouth of Clark's Fork River to Cooke City, being one of an engineering party sent out to make a preliminary survey for a railroad to that point. We found a good practicable route, and one that would not be at all expensive to build, excepting for nine miles in what is known as the box cañon of the Clark's Fork, which would be somewhat expensive, but in my opinion not any more so, if as much, as it would be to build the same distance up the cañon of the Yellowstone River, in the National Park.

The Clark's Fork route offers a great advantage over any other contemplated, right to Cooke City. In the matter of a snow-fall, the Clark's Fork River from its source to where it leaves the mountains, runs in a southerly direction, consequently is on the south slope of the mountains. It is a fact well known to all who are acquainted with the location of Cooke City and the winters of Montana, that the snow-fall is far greater on the north and west slopes of the mountains than on the southern slopes; so much so, that a railroad could not be successfully operated more than four months in a year on the north and west slopes of the mountains, while on the southern slopes, until you get within ten miles of Cooke City, the snow-fall is but little greater if any than in the valleys.

The Clark's Fork route presents other advantages that would be considered by a railroad company. Such are the extensive marble quarries that have been discovered near the line of this route, only awaiting the advent of a railroad to become valuable, and last but not least, the celebrated Bear Creek coal mines are within about six miles of this route. These mines have been visited by numerous coal experts from all parts of the United States, and they have been unanimous in pronouncing them the largest deposit as well as the best quality of coal known to exist in the Northwest; equal in quality to the Rock Springs coal of Wyoming.

To conclude, I hope that our law-makers at Washington will continue to keep the bars up in the future as they have in the past, and not permit our National Pleasure Ground to be used by a railroad or any other syndicate, that would in any way deface one of nature's greatest marvels in the known world, and the only place left that affords protection for game.

GEORGE T. LAMPOR, U. S. Deputy Surveyor,

## THE .22 SHORT.

COLUMBUS, Neb., Dec. 23.—*Editor Forest and Stream:* I have been reading the controversy in *FOREST AND STREAM* over the .23cal. rifle and see that in to-day's paper there is another letter from "Diamond Walt" of this State, in which he insists that he killed a prairie dog at 303yds.

Now I will give you my experience with the .22 short. I shot a dog seven times in the head at a distance of not more than 10ft. and did not kill him. Afterward I shot at a mark on the side of a barn at a distance of 60ft., and more than half of the bullets did not bury themselves in the board. With the .22 long, however, I have killed antelope at perhaps 100yds.

This, as you know, was several years ago. Is it possible that the penetrating power of the .22 short has improved so much of late years?

[The writer of this note has been intimately known to us for over twenty years, and is perhaps the best rifle shot at game that we have ever known. He crossed the Missouri River in 1856 and from that time until game was exterminated from the plains and the Indian wars came to an end, he was constantly engaged in Indian fighting and in hunting.]

HORNELLVILLE, N. Y.—*Editor Forest and Stream:* I thought I had heard the last of "Diamond Walt" and his wonderful .22 short rim-fire cartridge. Some men die hard, so I must tackle him again. I watch the rifle scores very carefully, and it is not often I see eight bullseyes in ten shots at 200yds. There is not much shooting done at 300yds., but only a short time ago two crack teams shot a match, ten shots at each range, 200 and 300yds.; at 300yds. only two men on each team got two bullseyes. It is reasonable to suppose that they used the best rifles that could be bought, as the match was for \$1,000. So I rise to remark that the man who shoots alone is a great shot. You can find him at every cross road. I have met him all over America. I have seen him fire at a stone or a stump half a mile away. The dust would fly and then he would tell about what a wonderful gun he had.

"D. W." might shoot a .22 short rim-fire cartridge 325yds., but all the same, a light wind would drift the ball 6ft. It makes no difference to me who supports "D. W." I still maintain that it is an impossibility for the .22 short to do the work "D. W." says it will. The man don't live and the man never will live, who can do the shooting "D. W." says he can do with that cartridge. Men nowadays do not hide their lights under a bushel or in Nebraska. "D. W." can make a million in a year if he can shoot just half as good as he says he can. There is not a village or city east of St. Paul where he cannot get a hat to shoot at for all the money he can raise; and then he can give exhibitions, for no one ever saw such shooting east of Nebraska.

A bet is a poor argument, but "D. W." talks about dollars, so I will talk business. Messrs. Margeson & Owen, manufacturers of carousels or merry-go-rounds, are well-known as business men all over the United States. They will bet \$1,000 to \$500 that "D. W." can't hit an 8in. bullseye eight out of ten shots at 303yds., and \$1,000 to \$800 that he can't do it at 200yds. Our gun club will form a syndicate and bet \$5,000 on same basis.

I have been in South Dakota and know all about prairie dogs. "D. W." might have killed one at 303yds. by firing into the town, but he did not fire at the particular dog he hit. I have shot them with a .45-90, but they most always dropped into their holes. I have one stuffed and "D. W." can't hit it if he fires at it all day (and I will place it on the ground at 300yds.), unless he uses a telescope. As I said before, a bet is a poor argument, but some men must be hit in the pocket if you want to touch their hearts.

I did not shoot alone when I won my medals and badges, but in fair open competition. I did not try to see how big a lie I could tell, but did try to see how steady I could hold. "D. W." cannot teach me anything about a rifle, I've handled one for forty years. I've traveled nearly all over the world. I've killed everything that can be killed in America, from a chipmunk to a silver tip on land, and pickerel with a .22 short and whale with a bomb lance in the water—from mule to men, white, black, red and greasers. I was a sharpshooter on the Potomac, a scout on the plains, a ranger in Texas; and when I went from Galveston to Santa Fe and Pike's Peak in 1857 I assure you that there was plenty to shoot and plenty of chances for being shot, but I am not dead yet, and think I can teach "D. W." something about guns and how to shoot one. Rifle shooters have spent millions of dollars to get the best gun for off-hand work at 200yds. and 80% of the guns used are not less than .38-55.

Again I say, the man who shoots alone is a great shot, but if "D. W." can do half as good as he claims he can, then he should come East and do the trick. Makers of .22cal. rifles will give him more a month than he can make in Nebraska in a year, and riflemen in the East want to see such a shooter. If "Diamond Walt" comes here I will bet him \$25 even up that he can't put eight shots out of ten in an 8in. bullseye with a .22 short at 303ft. off-hand.

J. OTIS FELLOWS.

SALEM, Neb.—*Editor Forest and Stream:* In your issue of Dec. 23, "Diamond Walt" appears to be anxious to prove the wonderful power and accuracy of the .22 short and proposes to do it "next fall." Now he need not wait till next fall nor go so far as New York State, for if he will come down into this corner of his own State, I will endeavor to accommodate him with a shooting match. I can shoot a little bit myself and if "Diamond Walt" can do what he thinks he can with the .22 short he can win all of my money and then my gun.

I don't believe that there is a man (or woman either) in America or anywhere else who can "put eight out of ten shots in an 8in. bullseye at 303yds. with a .22 short off-hand," and if "Diamond Walt" thinks that he can do it and will come down here and try it, I think that I can raise enough money for a "starter," and when he is through trying it I will lend him enough money to get back to Exeter on.

I have owned and used some .22 rifles myself and found them very good for killing English sparrows, but when it comes to killing game I prefer something a little larger. I have shot squirrels with a .22 and knocked them out of the tree, but when I went to pick them up they were not here, but had crawled off in the weeds to die. When I

hit them in the head I usually got them, but when hit "a little too far back" they got away.

A prairie chicken will sometimes fly a mile with a .22 bullet hole through it.

I shot a hog a few weeks ago with a .22 short out of a Winchester single shot, and it did not even squeal or shake its head; but when I shot it again it went down and I found the two bullet holes less than an inch apart in its forehead.

I should like to see "Diamond Walt" try his .22 short on a blacktail deer. If he wasn't nearer than 303yds., he would go a long time hungry for venison I'm thinking.

J. F. LAYSON.

## ADIRONDACK NOTES.

NORTHWOOD, N. Y., Jan. 1.—Many deer were killed up the West Canada Creek this fall—thirty-five on one runway, a guide told me. As usual deer were killed in numbers appalling to a sportsman in and about Moose River. Moose River deer are said to be as plentiful as ever, but it cannot be true. Men will tell of seeing ten, twelve or even twenty deer at one time on Canochagola Stillwater in times past, while now two or three deer seen at once there is an unusual incident.

About Northwood this fall the deer were more numerous than in the five years just gone. Some say because the big woods are overflowing with them, some say that they were driven out by dogs, some that the lumbermen frightened them from their usual haunts. That they were here is evident, and the woodsmen act accordingly with their dogs and rifles. A deer dead in the present is more to them than the narrow possibilities of ten dead in the future.

It was much the same with trout last summer. They were more numerous than in the five years past. Were they driven down stream by logs and high water? or did they bite better than usual? or were they actually increased by fewer fingerlings being kept in the past? At any rate the trout rose readily to the fly or took bits of shiners and earth worms with avidity to the delight of the woodsman, his sons and his summer boarders.

But while deer and bear and trout seem to be increasing the partridges are nearly gone. All summer long they were in every patch of woods, some woods second growth, even among the briars, but they have disappeared. Perhaps foxes and chick hunters got them? Maybe they went to the beech ridges to feast on the nuts.

Bears were numerous during the summer and fall. Few were killed, and they were trapped for the bounty and hides. I know of only four being caught within five miles of Northwood, which, considering the numbers that roamed around the clearings, was small. It is well there were no more killed by traps or otherwise. Our southern Adirondack bears are harmless till cornered, then what animal will not fight? They may in some places knock down calves and sheep, and run away with pigs, but here they eat beech nuts and berries and black cherries, perhaps a little carrion now and again, and such other lawful food that they may find in the woods or in the edges of the clearings.

It is a credit to kill a bear or deer by still-hunting, and it speaks well of a man's nerves and marksmanship if he kills a deer on the jump before the dogs, but to some trapping bears is revolting, and shooting swimming deer is detestable—a hammer, a boat and a guide to paddle would serve as well—while the bounty on dead bears is a shame and inducing to pot-hunting. There are times and places in the Adirondacks where dogs are necessary for killing deer, but the runways usually, if not always, cross woods, roads or inwood clearings where a sportsman could kill his deer man fashion.

Shameful waste is sometimes seen in the Adirondacks. A man sat, a few years ago, and shot four deer as they were crossing. The poor things crept to the bushes and there died and rotted. Partridge and rabbits go to the dogs and bait traps in the fall when crows and bluejays could as easily be procured, but it is more honorable to kill a rabbit or partridge than a simple crow or hawk, even if it is only to bait a trap.

There is a growing sentiment among the woodsmen which makes the killing of male game more honorable than the killing of the female. Now that only two deer can be killed in a season, bucks alone are sought and very few does are killed. The slayer of a male bear is praised while the killing of a cock partridge is mentioned; I have even heard a woodsman say that he would not shoot a female partridge if he could help it. But if males alone were killed too much would die even then. It is a sad thing for mankind that he cannot eat his cake and have it still. Yet unless he ceases to be human he will eat and kill till all is gone, then he will mourn his greed as a child a dismembered toy.

Woodsmen wonder at the examples they are asked to follow. "Because sportsmen kill not for food or clothes! Kill only in the fall! Shoot partridges only when they fly!" Yet even as the sportsmen ask they tell of a score of partridges or fifty ducks killed during a single day. I know of no woodsman here who has killed five partridges in a day.

RAYMOND S. SPEARS.

## How do you Cook your Quail?

MR. HOUGH in his recent essay on Emerson and other things tells with considerable enthusiasm how to clean a dozen quail in six minutes. His racy description reminds one of the stories of the great stock killing yards which Chicago modestly allows hold the world's record for dispatch in converting the raw article into beef, mutton and pork.

No doubt the skinning and otherwise preparing a dozen quail in six minutes is a world's record also, but to one who has been accustomed to regard quail as a luxury it seems a sinful waste of good material. What does it profit a man to dress twelve quail in six minutes if after he gets them dressed they are not fit to eat? Mr. Hough may not be an epicure and it may suit him just as well to have his quail boiled with corned beef and cabbage, but I'd like to know what other way he would suggest to cook a quail that was skinned?

A quail, as every one knows, is naturally one of the driest of birds, and it is always a question with cooks how best to preserve its juices. To take off the skin is to take away the greatest part of the juices, and such a quail broiled or roasted would be little better eating than cottonwood chips. In North Carolina they cook a quail in the middle of a big potatoe. This little receipt is worth a column on skinning quail.

J. B. B.

## ANOTHER "ARABIAN SPIKE BUCK."

HUNTER, N. D.—*Editor Forest and Stream:* In a late issue of *FOREST AND STREAM* I noticed an article contributed by "W. H. J." in which was a partial description of an "Arabian spike buck." This reminds me of a buck I killed in the fall of 1887. This was also in the Upper Peninsula of Michigan, at the head of the Whitefish River. I killed two nice bucks that morning in less than an hour, and both were "five prongs" and of about the same weight, but very different in build. One appeared to be more than usually chunky, with very heavy neck and horns; but this may have been partly due to the company he was in, as the other buck was by far the most rangy animal I ever saw of the deer kind. His neck, and for that matter his entire body, was very noticeably slender, and on his head was a wonderfully symmetrical pair of horns of toy size. I have no record to refer to, but they were of only about one-half the ordinary thickness, while the other pair mentioned were probably of more than average size. We had the horns together in camp for several weeks, and the contrast made them quite a curiosity.

Another fact I noticed was that the tracks made by the slim buck were about double the size of those left by his more portly conqueror.

This Liliputian set of horns were intended for a friend in Minneapolis, and I delivered them prepaid and properly tagged to an express agent at Prentice, Wis., but being in great haste I neglected to take a receipt. It is needless to add that my friend received no horns, and they are probably in use to-day as an ornament in some express car or local office, while the quarter I paid the agent is no doubt in circulation somewhere and doing all the good it can.

But what I started to write about was the peculiar coloring of my ornamental buck. His back and upper sides were of the usual color; the belly and groundwork of legs were pure white, the legs being thickly covered with blotches of a reddish brown. I don't know the meaning of those hard words in the item sent by "W. H. J.," but I do not think my buck had anything so serious as that affecting his mouth, and the eyes, if I remember rightly, were of normal color. The slender proportions of this animal and his delicate horns, together with the spotted (this must be where the Arabian comes in) legs made him an object of much curiosity to the few who saw him. I wonder if I did kill an "Arabian spike buck" and never knew it? *Quien sabe?*

C. D. F.

## Maine and Massachusetts.

THE open season on big game in Maine has closed. The last week of the season was a remarkable one—remarkable for deep snows and snows covered with crust. In some sections of the State the crust was strong enough to support a person, and in these sections the deer have suffered, though the story will never be told. Several Maine deer were seen in the Boston market the other day, almost the first seen from that State this year. If crusting has been badly followed of late, more deer will be likely to find their way into this market. Boston deer hunters have all been at home for nearly a couple of weeks, or since the coming of the deep snows in Maine. Geo. H. Cutting, of Andover, Me., guided a party on a deer hunt in the vicinity of C Pond the week before Christmas. They got no deer. The snow was over two feet deep and covered with a crust that would not bear the hunters, and they could not move over it, either with snowshoes or without, without making such a crashing that it was impossible to approach any deer.

SPECIAL.

## Old Style Flint Locks.

*Editor Forest and Stream:*

In "Kelpie's" reminiscence of the Fair in your edition of the 6th inst. he speaks of the remarkable collection of arms and armor shown in German village. Did "Kelpie" or any other sportsman who chanced on this collection notice the locks on some of the old pistols? Flint locks they could hardly be called, as the flints were in the pans, the steels in the locks. Another peculiarity was that the lock was reversed and the throw or fall was toward butt of pistol. This style of construction may have been common in some makes of old arms, but I had never chanced on it before, and it struck me as being very peculiar. The date of this arm I do not remember, but the workmanship was very fine. "Kelpie" is right in saying that many of the specimens were unique, and the collection certainly did not receive the attention it deserved.

[The backward striking lock was a common form in early arms.]

## Seventeen Thousand Dozen.

It is estimated by conservative men that during the last three days of mild weather seventeen thousand dozen quail have been spoilt and thrown away, in the State of Indiana alone. We do not believe that this will cover the number. When we think of the fact that every little country store, at cross roads and in hamlets where there are not half-a-dozen houses, handles quail and rabbits, it will be seen that the above figure is not large enough. These little stores hold the quail till they get "enough to ship," and when they know that they are "souring" and will not be received by the city merchants, they are too timid (fearing to be charged with the freight) to even try to send them. When the Almighty, in His wisdom, puts in some law-makers at Indianapolis whose brains lie in their heads and not in their bellies, we will have a law against the sale of quail, just as they have in Illinois.—*Evansville (Ind.) Tribune, Dec. 24, 1893.*

## In the Guard House.

WORD was received in the city the past week that Henry and Frank Rockinger are confined in the guard house at Camp Yellowstone. The offense for which they were imprisoned was the killing of game in the Park, they having been caught by a detachment of soldiers in the act of removing the carcass of an elk that had been killed not more than four or five miles from Mammoth Hot Springs. It is stated that the men made no attempt to deny their guilt, but simply plead the necessity of providing their families with meat in extenuation of the offense. As the killing of elk is prohibited in Montana as well as Yellowstone National Park, there is no excuse for this flagrant violation of law, and the Messrs. Rockinger will receive little sympathy from the public for the punishment meted out to them if the facts are as related.—*Livingston Enterprise.*

## Sea and River Fishing.

### ANGLING NOTES.

#### "Five-Cent Fish and Four-Dollar Rod."

A FARMER writing to the *Americus Times* gives a number of reasons for the hard times and the scarcity of money. His text seems to be that we buy more than we produce. Here are two of the reasons which follow the text:

"We send a 15-cent boy out with a \$20 gun and a \$4 dog to kill birds. We land a 5-cent fish with a \$4 fishing rod."

A \$4 fishing rod is supposed in this instance to illustrate opulent extravagance, whereas, in truth, a \$4 split-bamboo fishing rod, for there are such things, is the proper tool for a 15-cent boy to use; when he goes fishing, and perhaps as a natural sequence he lands a 5-cent fish. Whether he does or not this is as it should be. A good fishing rod, like a good anything else, requires good material to start with, and time and skilled labor to fashion it; and when it is finished it represents several times \$4 in material and labor alone, to say nothing of the legitimate profit of the manufacturer. A first-class bamboo rod with the care that a skillful angler gives his tackle will do good service for many years, and this, coupled with the fact that such a rod always affords the user a sense of delight and a feeling of security under trying circumstances, makes it cheap at the price commonly asked for it, while a "cheap and nasty" rod is dear at any price.

When a man splits up his hands in holy horror at the cost of the best split-bamboo rods, best of materials, best of labor and best of skill in putting the rod together, and dilates with smiling face over the excellence of a little red wagon, it is safe to put him down as short on rods and long on red wagons.

There is another view of the matter. How much has the \$4 rod to do with making the boy a 15-cent boy? The odds would probably be 100 to 1 on, without being a false price, that if the boy should be furnished with a good, serviceable rod and other tackle in accord with the rod, would make him into a \$1,000 boy, and he would then land some \$4 fish.

The funny man of the daily press frequently takes a whack at the fisherman with his fine tackle in comparison with the barefooted boy with alder gad and pin-hook. Frank Stockton has heard the story, for one of his characters is made to say: "That old story about the little boy with the pin-hook who ketches all the fish, while the gentleman with the modern improvements who stood alongside of him, kep' throwin' out his beautiful flies and never got nothin' is a pure lie."

#### The Fly-Fishers' Club.

At the annual dinner (the tenth) of the Fly-Fishers' Club, London, with Mr. W. Q. Orchardson, R. A., in the chair, and Mr. Wm. Senior, angling editor of the *Field*, and Mr. R. B. Marston, editor of the *Fishing Gazette*, in the vice chairs, the club gathered together the famous fishermen, angling authors and writers of Great Britain and Ireland; as it has done ever since it was organized, to hear excellent speeches and fine music after the members and guests had discussed the good dinner provided. America is generally represented at these dinners, and last month Mr. J. G. A. Creighton, of Ottawa, was the representative. This reminds me of what I read in an alleged sporting paper lately. The writer said that having tired of the fishing in America he decided to leave it for a time and go over the border into Canada and try the fishing there.

The Fly-Fishers' Club has in the United States the following honorary members: Mr. Henry P. Wells, Mr. Fred Mather, Mr. Gonzalo Poe, Dr. J. A. Henshall, and the writer of these notes; but not one of them has ever been the American representative at the annual dinner of the club, which fact is doubtless cause for regret, by each of the gentlemen so honored.

At the recent dinner Mr. Marston, replying to the toast "The Fly-Fishers' Club," spoke of the threatened destruction of the lovely rural scenery of England by advertisements, which were to be seen in the fields and even on the banks of favorite rivers. The members of the club, living as they did in all parts of the country, would, he felt sure, do all they could to prevent this desecration of the landscape. They all knew that ever since Walton's time milkmaids and anglers had always been on the best of terms. Well, he would just give them an instance of the extent to which the modern system of advertising had permeated to the remotest districts. He was fishing in Devonshire, and on his way to the river one fine morning he met a pretty milkmaid. Of course he made a bow and said, "Where are you going to, my pretty maid?" fully expecting to get the well-known reply. Judge of his astonishment when the fair maiden, with a curtsy, said: "Good morning. Have you used Perkins's soap?"

#### An Angler's Den.

In the Christmas number of the *Fishing Gazette*, London, Mr. Francis M. Walbran has an interesting article about "A Few of My Angling Friends," and in it takes occasion to describe the "den" of Mr. Frederic M. Halford, the great apostle of dry-fly fishing, the author of "Dry-Fly Fishing in Theory and Practice," "Floating Flies and How to Dress Them," etc., and who has written much about angling over the pen name of "Detached Badger." This is an extract from the article:

"And how about the great 'Detached Badger'? All right, my friends, I have not forgotten him. On Sunday last I spent a most enjoyable afternoon in his company, sitting opposite to him in his model angling den. I use the word 'model' advisedly, for never have I seen a more perfect angler's sanctum. Under the window is a table with sockets to hold fly vice, with drawers on all sides for fly-dressing, with one of the new electric lamps devised for that purpose, and described by my host in the *Field*. To the right are more cabinets and drawers, containing the archives of the new club water owned by Mr. Halford; to the left are sinks, shelves, tables, etc., devoted to microscopic work. Facing the window is an ample library of angling works, flanked on each side by cupboards devoted to rods, nets, reels, lines, etc. On the wall, to the right facing the window, are the original plates for Mr. Halford's standard work, 'Dry-Fly Fishing in Theory and Practice.' Facing these is a picture which has a strange

fascination for me; it represents the familiar old Sheep Bridge at Houghton, drawn by Mr. A. W. Cooper, the well known artist. An angler stands on the bridge in the act of casting; underneath is written, 'The Sheep Bridge, Houghton, on the Test. In memoriam, Oct. 16, 1886. Francis Francis' last throw.' Long do I linger in my contemplation of this picture, and for once I disobeyed the commandment, 'Thou shalt not covet.'"

Sinks and shelves devoted to microscopic work are not, commonly, adjuncts to anglers' dens in this country, but Lee's reference helps one to understand why the Halford patterns of floating flies and May flies are so true to nature as to deceive the very elect of the trout. Mr. Walbran, who is an artistic fly dresser, makes a specialty of the Halford flies, and specimens of his May and floating or dry flies are before me as I write. They are not conventional flies, quite the contrary; for at first glance they seem to be the real thing, as, in fact, a visitor took them to be when first discovered on my desk, and they are the result of "microscopic work" on the natural insect to obtain the pattern which Mr. Walbran has followed so closely.

The Halford floating flies have already been adopted in this country and are made by some of our fly dressers, but as yet our fly tyers have not deemed it necessary to closely counterfeit the various specimens of May flies which is so skillfully done on the other side, but that will be a subject for another note. The practice of dry-fly fishing is growing in this country in the open country streams. When I first tried it I did so only after I had failed to get trout that I saw rising, and which utterly refused my wet fly, or rather a dozen different patterns of wet flies, and I was astounded at my success. One of the editors of the New York daily newspapers wrote me that he had killed trout on Long Island with the dry fly when all the wet flies in his book had failed.

A couple of years ago a Vermont angler came converted to the dry fly and there was an item about it in one of our papers. Mr. Halford read it and in writing me soon after said: "It is certainly a source of gratification to find one's little efforts appreciated by anglers in the United States, the more so as my work was more specially devised for the use of our chalk stream fishermen here. However, it goes to prove that the habits of our *Salmonidae* do not differ greatly in different climates, and that the popularity of the sport is tending to work the same improvement in the education of your trout as it has already over here."

Certainly, if anything made by the hand of man—or woman—will deceive the wisest trout that swims, it is one of Mr. Walbran's up-winged floating flies, or one of his cleverly counterfeited May flies—when the "May fly is up."

#### German Brown and English Brown Trout.

A fishing paper quotes from an exchange that a lake in Maine has been stocked with "Von Behr, German brown trout, and Loch Leven or English brown trout." The common trout of Europe, *S. fario*, are called "brown trout" in Great Britain, when they are not called "yellow trout," and in Germany they are called *Bachforelle*, or just plain brook trout, and not brown trout at all. The fish are found in all the trout waters of Continental Europe, as well as in the waters of England, Scotland and Wales, and to call them French brown, Irish brown, German brown or English brown trout would be like calling our own native brook trout (*fontinalis*) New Jersey speckled trout or Connecticut speckled trout because they happened to be found in the waters of the States named. "Von Behr" is the name given to the European trout in this country by the U. S. Fish Commission because the first eggs of the species were sent here by the late Dr. Von Behr, president of the German Fishery Association.

Loch Leven trout are not even the fish that are called brown trout in England, so it is absurd to call them English brown trout. While the antecedents of the Loch Leven trout are in doubt, they have a specific name of their own, *L. levenensis*, and are found almost solely in Loch Leven in Scotland.

A. N. CHENEY.

#### "FISHERWOMEN."

##### Editor Forest and Stream:

Why should it be considered *outré* for ladies to fish? I cannot understand! I wanted to go trout fishing with my husband; I had caught my large black bass, turning the scale at over 4 lbs., and had earned my right to enter the anglers' brotherhood, and wanted to initiate a new split-bamboo rod, the gift of a friend of my husband, so was determined to do some trout fishing even though I had to go alone.

I found the creek out of which so many toothsome trout had been brought to our camp table. I had to fish with worms because all the flies were in my husband's fly-book. I had been fishing long enough to know "where the trout hide" and dropped the baited hook in a clear space beside the old log and let the bait sink.

Away went hook and line across the hole, and I gave a gentle strike, but in the excitement of the moment I had not calculated the momentum of the movement, nor the laws of specific gravity, nor the fact that I had forgotten to change my shoes. Suffice to say, my high heels slipped up and in less time than it takes to tell it I was diving for trout to find where they hid.

Somehow I climbed the log, and, strange as it may seem, I had clung to my rod all the time I was in the water. Of course I got wet, but I took out a splendid trout and hurried off to camp. I presented a delicious trout on the table for supper when we sat down to the evening meal.

We had a hearty laugh over the mishaps of the day, but it was the beginning of trout fishing for me. Since that time I have joined my husband in many a fishing trip, and I am enjoying life as I never expected to. Such a plunge as I got over this trout would have been my death warrant only a year or two previous. My physician knew some of the delights of trout fishing, and advised my husband to take me along and see if life in the open air would not be beneficial to me.

I am longing for the end of the official life of my husband so that I can once more go camping. Now I spend six or eight weeks every season with him behind the ponies on the broad prairies of Minnesota during the chicken and wild duck shooting, and like to handle a little 16-gauge Lefevre as well as I do my split-bamboo rod.

I have for many years contended that the cause of so much unhappiness in our American homes comes from

the fact that we womenkind are too much absorbed in the cares of the family life; we do not enter into what our protectors enjoy, and the little trouble these hunting and fishing trips cause annoy us; our apathy alienates little by little, until indifference comes in and the home circle becomes a dreary blank.

I love to be thought something of, and love to join my husband in either fishing or shooting trips, and I am very far from being Amazonian in either tastes or stature; my big son can let me walk under his outstretched arm.

There is so much to enjoy in the voices of the evenings, and the brooks' murmurings, that I never tire of them.

LUCY J. TOMLIN.

#### MAINE FISH AND GAME ASSOCIATION.

THE first annual meeting of the Maine Sportsmen's Fish and Game Association was held in Bangor on the 2d inst. The Fish and Game Commissioners and many other prominent sportsmen of the State were present, besides a considerable number of guides, wardens and other persons interested in the preservation of our fish and game.

The opening address was delivered by the president of the Association, E. M. Hersey, of Bangor. After alluding briefly to the objects of the Association, Mr. Hersey gave an account of the work done on the west branch of the Penobscot by the patrol of the Association, Mr. B. L. Fowles, who has been stationed during the past season at Pesnadamcook Lake. Through Mr. Fowles's efforts, it is said, dogging has been practically abandoned and summer killing lessened. The relations of sportsmen to lumbermen, including the matter of camp-fires, were touched upon, and the necessity of protecting cow moose urged upon the attention of the Association.

Col. E. C. Farrington, secretary of the Association then made his report. After giving some further details of the work done during the past season, Col. Farrington suggested that the game sections of the State should be divided into districts, each district to have its patrol. The patrol should receive a fixed salary, and should be on duty the year round. In this way the laws would be better enforced and abuses reformed. Col. Farrington also suggested that the "special laws" should be replaced by general ones, and that some provision should be made for the transportation of fish and game by the citizens of the State during open time. After attending to routine business, the Association passed the following resolution:

Whereas, The greater number of special laws relating to the protection of fish in the inland waters of the State prove ineffective in their operation, becoming such a hindrance to the proper enforcement of salutary legislation, that the governor, Hon. Henry B. Cleaves, in a special message to the Legislature under the date of Feb. 13, 1893, called its attention to the advisability of providing by general law for the regulation of such matters; therefore,

Resolved, That it is the duty of this Association to take such action as will lead to more general and effective legislation, regarding both special and general laws as is consistent with the best interest of the State and to aid in securing such beneficial results. The president of the Association is hereby empowered to increase the committee on legislation from three to seven, on which shall be the president of this Association.

Hon. Wm. T. Haines, of Waterville, then delivered an address on the propagation and protection of fish. After treating this subject from an historical standpoint, Mr. Haines urged the necessity of more hatcheries and fishways, and suggested that if mill owners would be too heavily burdened by the construction of fishways, the State should in such case undertake the work at the public expense.

Fish and Game Commissioner T. H. Wentworth then spoke on "The Protection of Large Game; What is Being Done?" Mr. Wentworth believes that moose and caribou are on the increase, and thinks it possible that the existing close time of six years may do something for deer in the southern counties. He says that the principal enemies of the large game are the summer hunters and the hide hunters, the former being the worst and most destructive. He suggested that the difficulties of securing a conviction for dogging are such that it would be better simply to forbid killing in the water.

Hon. C. E. Och, of Caribou, then spoke of the resources of Aroostock county as a fish and game region, and called attention to the necessity of taking some means for restocking the Aroostock River with salmon.

Hon. J. F. Sprague, of Monson, next discussed the question Residents vs. Non-Residents. He concluded that the State derived more benefit from non-residents than it would by having game killed for the market.

Hon. Henry O. Stanley, Fish and Game Commissioner, then addressed the association on "Propagation of Fish, Necessity and Methods." After lamenting the falling off in the supply of game fish in the more accessible regions, Mr. Stanley then proceeded to demonstrate the superiority of re-stocking by artificial propagation rather than by trusting to close time and natural methods. He also favored rearing fingerlings where practicable instead of turning out the fry. Mr. Stanley also said a timely word on the matter of fish food, urging every one who was interested in the fishing in any particular pond or lake to stock his water with smelt, and describing how this could be very easily done.

Hon. A. M. Spear, of Gardiner, then spoke on the question, "Should the Game Preserves of the State be Controlled by Associations or Private Persons or Parties?" Mr. Spear's argument was learned and his conclusions were that neither the Megantic Fish and Game Association nor any other person or persons could control the right to fish and hunt in any particular area.

Mr. Manley Hardy, of Brewer, then spoke on the "Illegal Transportation of Game." He was of the opinion that much game was illegally sent out of the State. Mr. Hardy also delivered many plain, hard, common sense ideas on game protection in general.

Hon. L. T. Carleton, of Winthrop, then spoke on "Special Fish and Game Laws," arguing against private and special legislation.

Short addresses were also made by E. G. Gay, of Lewiston, on the "Propagation of Game Birds in Maine;" J. H. Kimball, of Bath, on "Shore Fisheries;" H. N. Fairbanks, of Bangor; A. J. Darling, of Enfield, and Jock Darling, of Lowell.

F. S. BUNKER.

#### The Ice and the Trout.

CHARLESTOWN, N. H.—The bitter weather which has set in on us for December, 20<sup>th</sup> on the 13th and 14th, threatens destruction to what few trout were left in this region, as the brooks were very low, and I fear for the result.

SAMUEL WEBBER.

## MAINE AND MASSACHUSETTS.

THE pickerel season is on in Massachusetts, and Christmas Day, Dec. 25, was really the opening day with a good many men who love fishing through the ice. Mr. Claude H. Tarbox, of the Boston grain trade at the Chamber of Commerce and with A. P. Aldrich & Son, put in Christmas Day on his favorite pond, Crane Pond, partly in Byfield and partly in Georgetown. Mr. C. O. Bail-y was with him. They were determined to reach the pond early, and having some distance to make, they were up by 4 o'clock in the morning, which is really pretty early for this season of the year. Their only desire was to reach the pond before anybody else. They had every reason to believe that others would be out on that day. With bait can, ice chisel and traps in hand, they made all speed to the pond, and were there before daylight. They lost a good deal of courage when before they were within a quarter of a mile of the pond they heard the cutting, crunching sound of an ice chisel. Getting to the pond they found another party there. They had been at work with a lantern, and had already nearly 50 holes cut and traps out. The early fishermen evidently knew the ground to perfection, for their traps were set completely around the pond, in the form of an ellipse, and just the right distance from the shore. The pond is a small one, and for a moment Claude and his friend were a little discouraged, but they concluded that their only hope was to set their traps in a row directly up and down the pond, through the middle, lengthwise, and within the ellipse of the other company's traps. They set to work, and soon Claude had two traps in, with the hooks baited, and was cutting a hole for the third one, when the first flag was down. Running to that trap he soon had a fine pickerel. It was just daylight, and the other company had not yet taken a fish. The first hook was quickly baited again, and by this time the second flag was down and a pickerel was secured. In this way the sport continued at intervals, scarcely giving Claude and his friend time to get the whole of 25 of his traps out till the early morning was over. At the close of the day they had taken 25 handsome fish, from 1 lb. to 2 lbs., and exactly the same number as the other party had taken with their whole 50 traps. Mr. Tarbox's idea now is that through the middle of the pond is often the best, though previous to Christmas Day he had always supposed that the best grounds in that pond was a certain distance from the shore, and about where the other fellows traps were out.

The upper pond in Wassfield yielded some fine strings of pickerel on Christmas Day, and it was well fished. This pond has been closed altogether by law for a number of years till the close season was off on Oct. 1, 1893. The effect of the close time has evidently been good. The number of pickerel is good that the fishermen are getting, and the size is much larger than before the close time. The ponds in Reading were also, many of them, fished on Christmas Day. At Hurd's Pond, in Wayland, some good strings of pickerel were secured.

But the Christmas pickerel fishing of Mr. E. C. Paul did not prove as pleasant as it might have been. Mr. Paul is also of the Boston flour and grain trade, at the Chamber of Commerce. His home is in Taunton, however. There are some ponds down there that he delights to fish. He was out on Christmas Day on one of these ponds. The day was unusually warm, it will be remembered, and the snow nearly all departed, and the ponds as far south as Taunton begun to break up. Mr. Paul and his man had got well to work with traps and lines when they found that the pond they were on was breaking up. They started to run for the nearest shore. The ice was cracking and breaking behind them, and actually cracked and broke under their feet as they ran. They got ashore without severe mishap, however, but a good deal exhausted and somewhat frightened. The fright made Mr. Paul's man actually sick, and he began to wretch and vomit; so sick that he could scarcely stand. An old countryman had seen them running for the shore and had come down to see if he could be of any assistance. He consoled the sick man and congratulated him on his escape, remarking that the pond was a dangerous one. "I got in there once myself!" he remarked. "I was in all over and the ice broke every time I tried to climb out on to it. I was more scared than you be," he said to the sick man, "and did not vomit either!" Mr. Paul had to laugh here and the sick man felt better. "I got out, though," the countryman continued. "It was a blusterin' cold day an' I see that every time I put my mittens out on the ice they nearly froze there. I had on big yarn mittens. Then I thought how to save myself; just to wait till the mittens froze solid on to the ice. I did it and that gave me a bolt on the ice, so that I pulled myself out, high and dry."

"You're a liar!" shouted the sick man, who was now well from the effects of the hearty laugh the three men enjoyed.

Mr. Edward J. Walker, who died at Plymouth last week, was an ardent lover of the rod and reel. He loved to fish the ponds and streams in the country about him, and not infrequently paid big prices for the privilege of fishing in private, stocked waters. He never seemed to care for the fish, generally giving his catch away.

Mr. B. D. Wyatt, of Boston, has leased property in Hancock county, Me., covering Tunk and a number of other ponds. He has been stocking these waters with some 14,000 young fish this season, including German brown trout, Loch Leven trout, English brown trout and landlocked salmon. A club has been organized through Mr. Wyatt's exertions, and camps and hatcheries are being built. Some seventy-five members are already on the books of the club.

## Protecting the Headwaters.

Editor Forest and Stream:

I was very much interested in the remarks of Commissioner Titcomb, of Vermont, read at the meeting of the Fish and Game League at Burlington, a short time ago, as given in your paper.

His plan for the protection and increase in the supply of trout by shutting off all fishing in small streams or headwaters of large streams (usually consisting of little rills, the outpour of some spring), struck me as being more feasible than the present six-inch law and the difficulties of its enforcement. There are few times when a basket is searched, although we often have a peep at the top layer; but trout, you know, like apples or potatoes, always come with the big ones on top. While if any one is found fishing on a posted brook that would settle it, no more evi-

dence being required. I have seen some very flagrant cases of the violation of the six-inch law in New York, Massachusetts and Vermont; and although I reported one, I did not hear any more of it. My business being that of a commercial traveler, I cannot take the time belonging to my employers to appear as a witness in such cases, or perhaps some one would have suffered; whereas, had there been a law forbidding fishing in a brook, the chances would be that they would have a number of witnesses. As to allowing the taking of trout of any size in all other waters, as proposed by Mr. Titcomb, I think there would be nearly as many fingerlings returned to the water then as now, for those of us who return the little fellows now would be apt to do so anyhow, while those who keep the poor little fellows because they fry up so crisp and brown so that you can eat them in your fingers, could not keep any more than they could catch; and they could not get as many down stream as up near the headwaters.

I hope to see this discussed, and tried in Vermont at least, whose mountain streams are so well adapted to it.

H. C. KIRK.

## "Coahoma" as Seen in a Vision.

Editor Forest and Stream:

I have not contributed anything to your columns for a good while, having nothing of sufficient interest to communicate. I am, however, minded to relate a dream, which my little twelve-year-old daughter related to me when I visited my home Christmas. It is a very simple affair, but appeared to me quite funny. It should be borne in mind that I am a civil engineer, that my business keeps me from home most of the time, and that my present employment is on and along the Mississippi River, some 150 miles from my home.

My little daughter Fannie said, "I dreamt that mama was going to a reception at Mrs. Blank's, and she saw father coming down the street, and he looked very forlorn and troubled about something, and his clothes were all torn and dirty. And mama said, 'What in the world is the matter?' And father said, 'I have ruined all the fishing in the river.' And then they came home and father wouldn't come in the house, so we carried him a chair out in the street, and he sat out there with his face buried in his hands. He said the fish had laid a great many nice eggs, and he allowed the negroes to go and get the eggs, and the fish wouldn't lay any more till next year, and so the fishing was destroyed, and he felt so bad about it; and after a while he got up and went away to his work up the river."

COAHOMA.

Dec. 29, 1893.

## Black Bass of the Patapsco.

ALBERTON, Md., Dec. 27.—I have been an interested reader of your many articles upon fishing, particularly those relating to the spawning season of the bass. Our law designates the month of May as the close season for this fish as its spawning period. In the last ten days of October, 1892, I took in one afternoon four small-mouth bass from 1½ lbs. to 2½ lbs., which, when opened, revealed in all well opened spawn; and to this day I regret that catch.

The Patapsco River is a small, rocky stream, rarely exceeding 50 yds. in width, with sluggish pools and swift rapids alternating, the water mostly of wading depth, and would be an ideal stream for bass if it were not for the numerous dams across it, there being seven of these structures between Alberton and Relay, a distance of only eleven miles. A few years ago fair sport could be had in these waters, but since the breaking of the Alberton dam on July 3, 1892, very few fish have been caught. Young bass were placed in the mill race at this place on Dec. 23, 1885, by Mr. S. F. Cobb, manager of the Alberton Cotton Mills, and this gentleman informed me that none other than these were put into these waters during the twenty-three years he has resided here. We hope to see this river restocked with this noble fish.

G.

## Osprey Rod and Gun Club.

ALBERTON, Md., Dec. 27.—Editor Forest and Stream: The Osprey Rod and Gun Club was organized last night at the residence of Dr. Wm. B. Gambrill, near this place. The object is to develop a knowledge of, and to practice legitimate sport with, rod and gun, and for social intercourse. It is the purpose of the members to spend an outing in tent or shanty for a week or ten days of each year, in pursuit of health and pleasure, and not to make a murderous record. It will be a part of their work to encourage respect for, and obedience to, the game and fish laws of the State, and, wherever they may be able, to exert an influence, and to call the attention of proper authorities to all willful violations that may come to their notice. They will also use their influence in having the waters of this State properly stocked with game fish. Dr. Wm. B. Gambrill, a practicing physician of this place, was elected President; Mr. Elmer M. Harn, principal of the Ellicott City High School, Secretary, and Mr. W. C. Hagan, telegraph operator at Hollifields, B. & O. R.R., Treasurer.

## The Hendryx Reel Catalogue.

THE illustrated catalogue for 1894 of the A. B. Hendryx Co., of New Haven, Conn., manufacturers of fishing reels, has just been received. It is a handsome volume of 86 pages, with a black and gold cover, and on each page are found illustrations of reels or parts of reels, which can hardly be looked at by the angler without a desire to own most of them. The Hendryx Co. claims for its reels in an especial degree, the desirable qualities of lightness, durability, wearing qualities and low prices. They manufacture reels of all sorts and descriptions and call especial attention to their patent adjustable globe bearing, which improvement, they say, is the most important addition to fishing reels ever made, as no ordinary accident will unfit for use a reel which has those bearings. We can well imagine that there will be a very large demand for this catalogue.

One of the interesting exhibits at the World's Fair was the fisheries. Here was to be seen a species of nearly every fish to be found in the waters of the United States and "adjoining territory," and all the different kinds of tackle with which to catch the wary fish. The FOREST AND STREAM had a cozy corner in the building where the thousands of its readers failed not to call and receive a warm greeting from some one of its representatives who was ready to give all the information possible.—*Ashtabula, O., Sentinel.*

## Fishculture and Fish Protection.

## THE COAST FISHERY CONFERENCE.

Proceedings of Conference Held to Consider the Subject of the Exhaustion of Coast Line Food Fishes.

OFFICIAL REPORT BY SECRETARY E. P. DOYLE.

(Continued from Page 12.)

MR. A. WALLING, JR. (Keyport) said that he had been appointed to represent the National Association of Purse, Pound and Trap Fishermen recently organized, and he represented more particularly on this occasion the pound-net fishermen engaged on the Atlantic coast of New Jersey and the south shore of Raritan Bay, and those for whom he appeared were fearful that this conference might through mistake, or ignorance of facts, make some recommendation that would be prejudicial to that interest, and he had prepared a paper that would clearly demonstrate the propositions of the gentlemen for whom he appeared.

Mr. Walling then read his paper, as follows:

The first pound net that was set on the New Jersey coast was placed there about twenty-five years ago. There has been a gradual increase of the number until during this year from a point about twelve miles north of Barnegat to Sandy Hook there are twenty-four pound nets. It is a fact susceptible of the clearest proof that each pound each year has on an average taken the same quantity of fish, or, rather, that there has been a slight increase in the annual take of each pound. That is to say, in twenty-five years there has been an increase of twenty-four times the quantity of fish taken, twenty-four times more fish have been taken in that territory this last year than were taken twenty-four or twenty-five years ago. In 1892 there were taken in those twenty-four pounds about 7,000,000 lbs. of fish, and for 1893 the statistics show about 10,000,000 lbs. of fish taken. This proves that the quantity of fish coming annually to our shores shows no diminution. It is the experience of the men engaged in this business that there is no diminution of the quantity of fish coming to our shores. Fishes are irregular in their habits; one kind will come this year, and the next year they will be gone, for some years, and then they will come again. It seems to be that man's devices, as Capt. Church has said, figure but little in this matter, the ocean supply of fish is as unlimited and inexhaustible as saving grace. The pound nets along the coast furnish a large percentage of the market supply. Without pound nets the market could not be supplied; it would be an absolute impossibility for any other device in common use to furnish a supply of food fish necessary for the markets of this country. The remainder is furnished by the seines, hook and line, and other means of capture. It is a matter of common knowledge that many of these fish cannot be taken except by some character of nets. The shad will not bite. Very few of the large weakfish that are found upon the Jersey coast will bite. They must be taken in the pound net because that is the form of net that can be most effectively used upon the coast. The result has been an increased distribution of this valuable article of sea food. The markets are now supplied with food that twenty years ago was not known, as to some kinds. There is not a market within a thousand miles of the coast that does not have its fish branch, simply because man's devices have provided fish for them from an inexhaustible supply, coupled with improved transportation facilities and improved methods of taking fish. Prescott, in his "History of the Aztecs," states that by a system of carriers fresh fish from the Gulf of Mexico were placed on the table of Montezuma for his morning meal; that luxury was restricted to the royal table and the common people got none. But in this country every man is a Montezuma in his fish supply and in his ability to get food fish at a reasonable price. Why? Because man's devices have increased the supply and made it possible to distribute fish all over the land. It is within the knowledge of most of those here that the price of food fish has steadily diminished from year to year. In support of my assertion I have here a statement signed by all but two of the wholesale fish dealers in Philadelphia which says that the supply of food fish, such as weakfish, sea bass, Spanish mackerel and bluefish, has greatly increased during the past ten years, in view of the fact that the population of this country has increased about 16 per cent. in that time.

PETITION FROM FISH DEALERS OF PENNSYLVANIA.

We, the undersigned fish dealers of Philadelphia, do by these presents, as set forth, affirm that the supply of food fish such as weakfish, sea bass and Spanish mackerel, butterfish and bluefish has greatly increased during the past ten years. In view of the fact that the population of this country has increased about 16 per cent. during the last decade, the increase of food fish has been such that the supply has been greater than the demand, thus causing the average price to be less during the past five years than in former years, which fact can only be attributed to the increase of the supply by the natural causes of propagation, as well as the increase and improvement in the devices for catching fish. It is a well known fact that weakfish abounds in our waters to a very much greater extent every year, and is an evidence that the propagation must be on the increase instead of a decrease, and its prices which naturally follow the production of any commodity, whether it be large or small, is an evidence (during the period as stated) that what we say is a well known fact. The average price for weakfish in their season and during the period alluded to has not averaged over two and one-half cents per pound, which enables thousands of our population to avail themselves of a commodity at prices within the reach of all classes.

A. W. Rowe & Co.	E. F. Hopkins.
B. F. Sparks & Co.	M. H. McCormick & Co.
Wm. T. Benner.	John Dickinson & Co.
Gluckman.	J. A. Dee & Co.
John McCormick.	A. S. Helms.
M. E. Hinckman & Co.	A. M. Wilson & Co.
C. C. Walrer & Co.	Hall, Stiles & Co.

The supply has been greater than the demand, thus causing the average price to be less during the last five years than in former years, which fact can only be credited to an increased natural supply, as well as to the increased devices for catching fish. Weakfish abound in our waters more and more every year, and reduction follows reduction in prices. It is a well known fact that the average price of weakfish in their season during the period alluded to has not been over 2½ cents a pound, enabling thousands of our population to avail themselves of fish at prices within the reach of all.

In conclusion, I wish simply to say that if the object of this meeting is to recommend legislation, I trust that you will bear in mind the interests of the wage-working millions, and that you will not recommend legislation that has for its object the advancement of the interests of a much less numerous body of men. I offer the following resolution:

First.—That the use of pound nets in fishing has continuously increased the take of food fish, and this too, without any perceptible diminution in the average quantity of fish annually coming to our shores.

Second.—That as a result of pound net fishing there has been a steady annual increase in the supply and distribution of food fish, and a wholesome and necessary article of food has been furnished to the people at reduced prices.

Third.—That the interests of the wage-working millions, who are thus supplied with food fish at reduced prices, are far more important, and upon the theory of the greatest good to the greatest number, should receive more attention from the law-making powers than the interests of the limited hundreds who clamor against the pound nets for the reason that their use interferes with the indulgence by this class of people of their taste for sport, or upon some other ground of no greater merit.

MR. ROOSEVELT—You say that the supply of fish on the Jersey coast has not diminished by reason of the pound fishing. Are you acquainted with the supply of fish in Barnegat Bay?

MR. WALLING—I cannot say that I am familiar with the supply of fish in Barnegat Bay. I represent the pound-net interest on the Atlantic coast, and it is capable of the clearest proof that there is no diminution in the supply. As to Barnegat Bay, it was claimed that the use of seines destroyed their hook and line fishing; they went to the Legislature and got a law passed prohibiting the use of seines in that bay, and it is a fact that this last season, when those seines were prohibited they could catch no more weakfish than before.

MR. JOHN GITHENS (Asbury Park) said: Mr. Chairman and Gentlemen: I stand before you a pound net fisherman and a merchant. It will be my wish to start right, and to make a faithful and impartial statement. I can say that all the bluefish taken in our pounds in a season's catch will not amount to 5,000lbs. This can be substantiated by the bills where we have sold our fish. As to weakfish, I defy any man to show me where ocean weakfish have been caught largely with hook and line. Five hundred or a thousand boats will not catch 100lbs. of weakfish a day. I have lived on the Atlantic coast since I was eight years old, and not 100lbs. of bluefish will the pounds average in a day. Asbury Park, with its population of 40,000 people, requires from 10,000 to 15,000lbs. of fish per day for its supply, in addition to that which is required for interior cities. As to weakfish, in Barnegat Bay they are small fish, as a rule; while the kind that I catch in my nets are a different fish and do not go into the bay, but come up the coast. Now is there a single pound net below Barnegat Inlet, except one at Cape May? With regard to the destruction of small bluefish, we will frankly and honestly admit that it is true to a certain extent; but not nearly to the extent that is reported, that there are millions and millions of them destroyed. It is the thimble-eye mackerel. But there is a smaller percentage of fish lost from getting into the pounds than in any other method of fishing. In all the history of our pound fishing (and that happened this season), there has been only one instance of our getting 20,000lbs.

In answer to Mr. Roosevelt, Mr. Githens said that the pound nets are usually complete for fishing about June 1, or a little sooner, and that they do get spawning fish; but he thought that the loss could not be great because each spawning fish has about a million eggs.

MR. ROOSEVELT said that spawning weakfish had nearly two million eggs, and that the pound nets catch the fish before they have a chance to spawn.

To this Mr. Githens made inquiry how is it that weakfish are more plenty than ever before, after twenty-four years of pound fishing?

MR. ROOSEVELT said that was something he wanted to find out—how it is that the more nets there are the more fish there are to be caught.

MR. GITHENS said that the average cost of the fish sent to the markets of Philadelphia, New York, Detroit, Chicago and Buffalo this year was not more than one and one-half cents a pound.

A desultory conversation then began, interrupting Mr. Githens' further remarks, and upon the suggestion that no progress could be made in that way a recess was taken until 2 o'clock.

#### Afternoon Session.

Meeting called to order by the chairman, William H. Bowman, at 2:30 o'clock P. M.

WILLIAM THOMPSON, of Pennsylvania, said: I want to suggest that in order to expedite business the secretary call the roll of States, beginning with Maine.

The chairman suggested that he put it in the form of a motion.

MR. THOMPSON then moved that the secretary proceed to call the roll of States, beginning with Maine, and that all papers, and all persons who desired to speak from Maine, be heard in their order, and that the States then be called as far as represented.

The motion was carried.

A. M. SPANGLER, of Pennsylvania, then spoke as follows: I shall probably be met, as I was by one of our menhaden friends who figured in the convention at Chicago, with the remark that I do not know what I am going to talk about. However, living in a fresh-water country, I may not be supposed to have a great amount of knowledge in regard to coast fishes, but I guess if I were to give you an account by years, I can count more years' familiarity with the fishes of the coast of New Jersey than any man in this convention, for I am a pretty old fellow. I am celebrating my seventy-sixth birthday to-day. (Applause.)

I have been a fisherman along this coast almost ever since I knew what it was to catch a fish, and I will give you the results of some of my observations. Forty years ago I could go along the Jersey coast from any point from Sandy Hook to Cape May, and around into Delaware Bay, and throw my line into the water and catch a fish of some kind. There has during that time been a great decrease. Fifty years ago the bluefish made their appearance on the coast in very large numbers; in fact, in such tremendous numbers that you might go where you would on the coast or go a mile from the shore and you would be sure to meet those fishes in schools in pursuit of the menhaden, as you know they do, until they have earned the title of being the butchers of the sea. Just in proportion as the menhaden fishing interests increased the plentifulness of bluefish on the coast has decreased. I remember the time when I could fix the arrival of the bluefish in Barnegat Bay with almost an absolute certainty from the 6th to the 10th of June. I had instructed my friends along the coast to telegraph me whenever the fish made their appearance, and was ready to go at the first notice. Now I don't know when the fish make their appearance. I have taken a great many bluefish in our central bays.

The assertion was made here this morning that such a thing as taking a weakfish at sea was an unknown thing. I wish I had as many dollars as I have taken weakfish at say eight or ten miles off shore, drifting much of the time, or trolling or taking by anchoring. You will find that it is not only the bluefish that have decreased, but also the weakfish. I went out one day last summer with seven others and we did not get as many fish in waters we used to take in hundreds of fish in a day, as a good healthy man could eat here for his supper, and that was the story that was told along the entire coast. It has been contended here quite successfully, as the paper read by Mr. Huntington will show, that the statements made by the menhaden advocates in regard to the taking of food fish were altogether unreliable. I will say this to you that they certainly were not sustained by their sworn evidence that was given in the investigation from which the matter was read here this morning. You may take weakfish, bluefish, striped bass and sea bass and blackfish and all other food fishes of the coast, and you will find that there has been a gradual decrease in them, just as there has been in our American waters generally. The idea that the supply is inexhaustible is simply a piece of nonsense. There is nothing that is inexhaustible, and we have demonstrated that. We have done it in the buffalo, we have done it in our forests. In a thousand ways we have shown that there is probably no such thing as inexhaustibility. These food fishes are not so liable to change. They don't fluctuate as the herring and the mackerel and the menhaden are said to do. I recollect distinctly when you could not go anywhere a mile from shore without encountering millions. I have seen menhaden so plentiful that the boat was actually impeded in its progress by the mass of fish; yet I have it

from Mr. Church, over his own signature in black and white, that he has had to send his boat hundreds of miles and not get a fish. That does not look anything like inexhaustibility. About ideas in regard to the salmon fish on the Pacific coast. I was out there last year and I wanted to familiarize myself with some of the facts connected with them, and the result was I found the British Columbian Government had extended the close time of fishing a month, because of the scarcity of the salmon. They once believed out there that the salmon could not be exhausted. What is the result? To-day the Columbian River is practically no longer a salmon river. The fish are exhausted and in British Columbia, as I said to you, they had to extend the open season in order to prevent the fishermen from starving.

Arrangements are being made for the purpose of protecting the same kind of fish on the Alaska coast. They also were supposed to be inexhaustible. There is no greater fallacy than such a statement as that. I hope that this congress will bear the fact in mind. I could tell you a great many things in regard to the depletion of fish along the coast. We have been told here that fish are more plentiful, that they are more cheap than they have ever been. It is only the process that is leading to exhaustion. It was stated here by one of the gentlemen that where there was one pound net twenty-four years ago, they now have twenty-five or twenty-six and they catch twenty-five or twenty-six times as many fish. That does not show that the supply has increased, simply because they catch more fish now than they used to, when they only had one net while now they have twenty-five.

About the price of fish. It is claimed they are cheaper. I say they are not cheaper. There may have been times when there have been gluts in the market. When those bad-smelling boats come in here loaded with fish, which the markets cannot take, as they are already overstocked, no doubt there is a glut. Who wants them? These boats are not fitted with any appliances for preserving fish, and these hauls of food fish are made in midsummer, and are dumped in the hold with other fish. Of course by the time they reach the markets they are in a pretty bad condition, and have to be sold at any price. This of course operates to reduce the average price of food fish in our markets.

What becomes of their argument in the face of the testimony that was produced here to-day? I don't say that the gentleman misstated facts, but I do say that they don't seem to have shown what appears to be the ground bottom facts, just as my friend Mr. Church stated in Chicago in regard to the bottom fish. I don't know how many of you are familiar with net fishing. I never was a commercial fisherman, but I have had a good deal to do with drawing nets. Mr. Church made this statement, that they did not take food fish to any extent for the simple reason that food fishes are principally bottom fish and escape along the edge of the nets. Anybody that knows anything about the nature of fish knows that the bottom of the sea where these nets are drawn is as smooth as this floor, and if a bottom fish sees a lead line coming toward him, it is not possible that he is going to run toward it, but rather the other way, and is caught with the rest of the fish when the net is pursed. Anybody that knows anything about net fishing must know that this is a fact. These menhaden, or commercial fishermen as you call them, have come here in full force, and it has seemed to me to be a strange thing that you called a convention for the purpose of considering a matter of this kind and at the same time invite more people here who are opposed to any reformation than those who are in favor of it. It strikes me very forcibly that if the friends of the fisheries interests of this country should know that if the fish-producing waters of the United States, the finest on the face of the earth, were in the same condition that they were fifty years ago before obstruction of the fish production had grown to its present proportions, they would produce fish enough to supply the entire wants of our enormously increasing population without any increase in their cost. I can take you to fresh water rivers, like the Delaware, where formerly fish were plentiful, but the same destructive policy was used there as along the coast, except that fish baskets were substituted for pound nets, and the fishing became greatly exhausted. When the fish baskets were removed fishing began to increase again and is now almost as good as it ever was.

Col. Marshall McDonald then read the following paper:

#### Relations of the Community to the Fisheries.

BY COMMISSIONER MARSHALL M'DONALD.

THE interest of the general community, or the great body of consumers, relates to the quantity, quality and cost of the supply drawn from the waters. A wise public policy should not only permit, but should encourage the largest production of which the waters are capable, but at the same time should insist upon the observance of such conditions and restraints as are necessary to maintain supply.

To the State Commissions and to the Federal Commission of Fisheries are duly committed, each in its own sphere, the custody and conservation of the resources of the water.

The means to be employed are:

1. The artificial propagation of fishes and the distribution of the young to new or depleted waters.
2. The establishment and enforcement of such regulations as to the times, methods and apparatus of the fisheries as careful inquiry into the conditions of the fisheries, and the influence of these conditions upon supply shows to be necessary.

In discharge of the delicate and responsible duties with which we are charged under the law, it will be necessary to occupy a middle ground between the extreme views which prevail, and which demand on the one hand absolute freedom to fish without restraint or question, and on the other insist upon unreasonable and oppressive restraints, which would strangle the market fisheries and so restrict supply as to enhance the cost of living to the great body of the people.

#### Artificial Propagation.

I am disposed to think that in this country we have relied too exclusively upon artificial propagation as a sole and adequate means for the maintenance of our fisheries.

The artificial impregnation and hatching of fish ova and the planting of fry have been conducted on a stupendous scale. We have been disposed to measure results by quantity rather than by quality, to estimate our triumphs by volume rather than by potentiality. We have paid too little attention to the necessary conditions to be fulfilled in order to give the largest returns for a given expenditure of effort and money.

The argument that underlies and justifies fish-cultural methods, and which has built up and liberally sustained our State and National Commissions is this: The percentage of survival under artificial methods is so largely increased that by hatching but a small proportion of the total egg supply in any given field we may equal or surpass the results from natural reproduction in the same area, even when nature's efforts are not contravened, restricted or rendered abortive by the adverse conditions under which the fisheries are prosecuted.

Our methods in this respect are the methods of the farmer. From an acre of ground he harvests twenty or thirty, or, under the best conditions, forty bushels of wheat. He sets aside one bushel of seed, and the rest he may safely exchange for the necessities, the comforts or the conveniences of life.

This one bushel, sown under proper conditions of tilth and fertility (either natural or supplied), is a sufficient guarantee of the future harvest.

It is the same in our fish-cultural operations. By our methods we give to a small percentage of fish ova the poten-

tiality of the entire reproduction under unrestrained natural conditions.

In the same measure, therefore, as we enlarge the means for artificial propagation, may we ease or release our restraints upon the commercial fisheries and permit a larger catch without apprehending a deterioration of our fishery resources.

We must not, however, be unmindful of the fact that the prosecution of the fisheries, without reasonable and necessary restraints, is sure in the end to make adequate reproduction by artificial methods impracticable by obstructing or shutting off the sources of the egg supply. Protection, therefore, and reasonable regulations as to the times and methods of the fisheries, are just as essential for their maintenance as is the largest measure of artificial propagation.

The two are intimately and essentially related and interdependent; each implies the other; both must concur and have equal consideration in devising a rational and fruitful administration of our fishery interests.

We should, I think, keep always in view that the object of public fishculture is to assure the utmost realization of the resources of our waters, and to permit the largest production that can be accomplished without deterioration or impoverishment.

We should insist upon whatever measures of protection or regulation that may be found necessary to accomplish this end.

On the other hand, we should be careful not to embarrass or harass the enterprises of our hardy and adventurous fishermen by restraints that are not clearly necessary to accomplish the end in view.

In pursuing this wise and conservative course, we must expect to encounter the opposition and denunciation of men of extreme views on either side; men who base their conclusions upon misapprehensions derived from limited and local observations; who have mistaken coincidences for causes, sequences for consequences, and who are dogmatic, dictatorial and arrogant in the assertion of their own opinions, and intolerant and denunciatory of opposite opinions in proportion to their own ignorance.

#### The Necessity of Protection.

I think that every one who has given careful, intelligent and disinterested study to the conditions of the fisheries will be forced to the conclusion that there is not one of the important commercial fisheries which may not be pushed to such extremes as to make it necessary to adopt proper regulations and restraints in order to maintain supply. There is no diversity of opinion in reference to this so far as it relates to the resident species of our rivers (such as the basses, the trout, the pike-perch, the pickerel, etc.), or those anadromous species such as the salmon and the shad, which though attaining their growth in salt water are compelled by the necessities of their nature to enter our rivers for the purpose of reproduction.

When, however, we seek to apply the same conclusions to the coast fisheries, strenuous and intemperate opposition arises on the part of those who are engaged in the prosecution of these fisheries. They insist that the proportion of fish taken by man is so insignificant in comparison with the vast numbers destroyed by adverse natural agencies that therefore the amount withdrawn by him from the aggregate supply of the ocean can have no effect in determining the deterioration. In support of this they quote Prof. Huxley, who is said to have declared that the destructive agencies exercised by man are so small compared with the destructive agencies of nature that man's efforts constitutes no important factor in determining the decrease in the abundance of any species.

Now it is undoubtedly true that the number of fish of any species taken by man is absolutely insignificant compared with the vastly greater destruction wrought by the agencies of nature. The inference therefrom, namely, that the agency of man is therefore no factor in determining the decrease of species is not sustained by the facts. Man exercises his destructive influence upon that small remnant of the total production which has survived the natural casualties, upon that small portion which is left to secure the maintenance of the species. Any invasion by man in however small a degree necessarily disturbs the balance of nature and introduces deteriorating influences which must determine decreasing production unless we interpose, and by artificial reproduction and by regulating the conditions of the fisheries we restore this balance. I can make this plainer by an illustration drawn from agriculture. Of the total production of the cereals of the world one-tenth is required for seed; the other nine-tenths may be and are consumed either for food or in the various arts. If the one-tenth reserved for seed is kept intact we have the means of continual reproduction of the world's supply. Should, however, by reason of famine or diminished crops the world's supply fall short of the demand for food and it became necessary to trench upon the one-tenth reserved for seed, it would result, of course, in a diminished acreage and a decreased production which would continue as long as these influences lasted.

Now, in the case of our market fisheries, man is operating upon that portion which is reserved for seed, and the reproduction of which is necessary in order to keep up the supply. When by our operations we withdraw any proportion of this remnant from production, it is necessary for us in order to keep up the balance to have recourse to such regulations and restraints as will permit the least interference with natural reproduction and at the same time by the vastly improved methods of artificial reproduction provide compensation for any deficiencies in natural supply.

Careful attention should be given to the fact that nearly all of our important market species, such as the scup, the sea bass, the squeteague, and the Spanish mackerel, in large, if not in entire measure, either spawn immediately upon our coast line or in the different bays and estuaries which indent it. The active operations of the fishermen are conducted upon their spawning grounds, or their apparatus is so located as to intercept the approach of the species to their spawning grounds. The effect of these methods, unless properly and intelligently restrained and regulated, must be to diminish the supply and to impoverish the fisheries. When, however, we attempt to deal with any particular fishery, we are confronted with inadequate information in regard to the habits, distribution, and conditions of distribution of the species which is the object of our solicitude. I may illustrate this by reference to the menhaden fishery.

The menhaden, as you know, is not a food fish. It is, however, a most abundant species upon our coast line. Its range extending from Florida to Maine. The menhaden is itself doubtless a source of food, probably a main source of food to many of the commercial species which frequent our coast. On the other hand, it is the object of one of the largest fishing industries prosecuted on the coast, an industry which furnishes occupation and living to many men, which has an invested capital of probably a million and a half dollars. The annual product of the fisheries reaches about the same amount per annum. The oil obtained is applied to various uses in the arts. The scrap, composed almost entirely of ammonia and phosphates, is largely employed in the manufacture of ammoniated superphosphates, and thus indirectly, if not directly, this species contributes vastly toward the food supply in furnishing essential elements of fertilization to the farmer.

The menhaden fishermen have opposed any restraints upon the prosecution of this industry. They have insisted that nothing was known in regard to the habits of the menhaden; that it spawned offshore; that it was not amenable to fish-cultural methods, and that nothing that man could do therefore could influence their abundance. Meanwhile we were in ignorance of the natural history of the menhaden,

and therefore not in a position to combat the statements made by them. Two years ago, the Lapham Bill having furnished the motive of the inquiry, careful investigations were instituted for the purpose of arriving at such knowledge of the life history of the menhaden as would permit us to suggest intelligent regulations respecting the fishery. Very much to my surprise I must confess it was shown by these investigations that the menhaden spawned in the brackish estuaries and creeks along the entire coast line from Virginia to Massachusetts. While we have not obtained direct evidence as to this, since we have not yet succeeded in impregnating and hatching the eggs, yet the circumstantial evidence is conclusive and indicates beyond question that what I have stated in regard to their spawning habits is true. It is evident, therefore, that if the fisheries are pursued in such a manner as to cut off the fish from access to their spawning grounds either by the use of purse seines and pound nets along the coast, and of weirs and gill nets in the creeks and estuaries, it is certain to result in a diminution of supply which will affect alike the menhaden fisheries themselves and the abundance and distribution of those economic species along the coast which feed in large part upon the menhaden. What the specific regulations should be I am not prepared to say.

Commissioner McDonald submitted the subjoined statistics: Spanish Mackerel.

Not artificially propagated, spawns in Chesapeake Bay and to north. The aggregate catch of this fish in 1880, 1887, 1888, 1889, 1890 and 1891 was as follows:

1880.....	1,887,423lbs.
1887.....	663,604lbs.
1888.....	748,267lbs.
1889.....	1,404,566lbs.
1890.....	1,535,749lbs.
1891.....	1,691,987lbs.

The maintenance of the catch has been due to a much larger production in the Gulf States, while in the States of the Atlantic coast a serious decline has been experienced. The variations of the output in the Gulf region are as follows:

1880.....	20,000lbs.
1887.....	325,841lbs.
1888.....	350,769lbs.
1889.....	615,310lbs.
1890.....	700,459lbs.
1891.....	731,890lbs.

The most conspicuous decrease in the catch of this fish has occurred in Virginia. This State had a larger yield of Spanish mackerel in 1880 than all other States combined, and it is still the leading State. The decline here can evidently be traced to the capture of the fish in large quantities at the mouth of Chesapeake Bay before they have been able to reach their spawning grounds. In 1887 and 1888 the production dropped to a very low mark, but it has shown signs of increase in recent years. The catch in 1880, 1887, 1888, 1889 and 1891 was as follows:

1880.....	1,609,668lbs.
1887.....	108,000lbs.
1888.....	239,952lbs.
1890.....	648,793lbs.
1891.....	739,910lbs.

In New Jersey, the changes since 1880 have also been marked at times, the catch declining from 200,000lbs. in the year named to 53,781lbs. in 1891. The average catch per pound net on the New Jersey coast in 1880, 1887, 1891 and 1892 was as follows:

	No. of pound nets.	Average catch per net.
1880.....	11	13,636lbs.
1887.....	7	2,500lbs.
1891.....	12	2,815lbs.
1892.....	23	3,115lbs.

#### Shad.

Bred artificially in large numbers. Introduced on west coast:

Regions.	1880.	1892.
New England States.....	2,117,392	\$88,730
Middle Atlantic States.....	12,024,579	\$26,982
South Atlantic States.....	3,932,563	\$80,078
Pacific States.....	.....	655,750
Total.....	18,074,534	995,790

#### Scup.

Regions.	1880.	1891.
New England States.....	8,643,358	8,571,765
Middle Atlantic States.....	1,550,000	400,858
Total.....	10,193,358	8,972,623

#### Sea Bass.

Regions.	1880.	1891.
New England States.....	629,400	\$1,557,935
Middle Atlantic States.....	1,486,200	2,101,418
South Atlantic States.....	527,000	\$79,684
Total.....	2,642,600	4,539,037

#### Sea Mullet.

Regions.	1880.	1890.
Middle Atlantic States.....	110,700	\$250,740
South Atlantic States.....	4,369,000	5,573,623
Gulf States.....	2,407,250	15,185,117
Total.....	6,886,950	21,009,480

#### Squeteague.

Not bred artificially and spawns in bays and salt water or brackish waters. A comparison, by geographical regions, of the yield of this species in 1880 and at the present time discloses the taking of 15,463,560lbs. in the first-named year, and 19,173,447lbs. in 1892, as exhibited in the following table. Every section shows an increase, but this is most marked in the New England and Gulf States:

Regions.	1880.	1892.
New England States.....	532,060	\$829,430
Middle Atlantic States.....	12,604,500	13,503,907
South Atlantic States.....	1,827,000	1,885,677
Gulf States.....	\$500,000	2,959,433
Total.....	15,463,560	19,173,447

\* Estimated; no accurate figures available.  
† Figures for year 1889.

The individual States in which a noticeable increase in the production of squeteague has occurred are Massachusetts, New Jersey, Maryland, Virginia, and the Gulf States generally. States exhibiting a diminished output are New York and Delaware. Especially worthy of notice is the reduction of the catch in Delaware, where the yield was 2,618,500lbs. in 1880, and only 837,510lbs. in 1892. It may be stated, however, that up to 1890 the production was well maintained, and it would seem that an effort to increase the catch in 1889 and 1890 resulted in a large falling off during each year since.

#### Bluefish.

Not bred artificially, spawning habits or grounds not known, movements irregular and under influences not well understood.

The aggregate catch of this fish in 1891 was somewhat less than in 1880. The only region showing a diminished output

was New England. The increase in the other coast sections was about 3,500,000lbs. The figures for the separate regions were as follows:

Regions.	1880.	1891.
New England States.....	5,526,341	\$1,322,598
Middle Atlantic States.....	8,267,217	10,649,613
South Atlantic States.....	850,000	1,452,984
Gulf States.....	\$64,250	610,256
Total.....	14,707,708	14,035,451

\* Partly estimated.  
† Figures for 1889.

The decrease in New England is confined to Massachusetts. In 1880, the catch reported for this State was 4,273,841lbs.; in 1889 it was only 986,967lbs. The very large production in 1880 indicates the eastward movement of an unusually large body of fish in that year, although there was a conspicuous decline between 1887 and 1889; the catch in 1887 being 706,882lbs. and in 1888 689,904lbs.

In reply to a question:

COL. McDONALD—As a matter of fact, the salmon spawn far up the river.

MR. BROWN—As far as the investigation of the Fish Commission has gone, is there any analogy between the salmon and the menhaden or any resemblance?

COL. McDONALD—The resemblance is in this. There is a very marked resemblance in this respect; the salmon spawn in the headwaters if they are not prevented from going to the headwaters by the obstructions in the river, and by the intervention of nets, so that they cannot get there, fishing in time will cease. The menhaden spawn in the estuaries, and if you prevent them from going to their spawning grounds, and if you intercept the menhaden on its way to the spawning ground, you will have the same effect in one sense as in the other. Any fish that spawns along the coast line is subject to the same condition of depletion; I mean the fishes that run into our rivers, like the shad or the salmon.

MR. BROWN—When did you, in your investigation, find the menhaden heaviest with spawn?

COL. McDONALD—In the spring.

MR. BROWN—Since when?

COL. McDONALD—In the last two years.

MR. BROWN—Cannot you be a little more particular than that? I would like to know when you first discovered the menhaden were heaviest with spawn?

COL. McDONALD—The investigation disclosed the fact that menhaden were shore spawners.

MR. BROWN—Did you not say several years ago that menhaden were off-shore spawners?

COL. McDONALD—I have said so.

MR. BROWN—Whether it is in the spring or in December there is no fishing going on when the menhaden is heaviest with spawn?

COL. McDONALD—It is a question of temperature entirely where fish spawn, at least that is my judgment, where fish are under the instinct of reproduction and are moving for the purpose of reproduction. You find that the scup strikes on our shores when a certain temperature of water is found. The shad comes into our rivers only when the river gets warmer than the sea, so you may state as a general fact that the movement of our coast fishes, having reference to spawning, I don't mean after movements which are determined by a pursuit of food, but the spawning movement is influenced by temperature.

MR. BROWN—Then in your judgment a temporary absence from certain localities on our coast is due almost entirely to temperature?

[TO BE CONTINUED.]

#### Fishculture and Food Fish.

In his annual message Gov. Flower, of New York, has this to say about fishculture:

The Legislature of 1893 passed bills providing for two new fish hatcheries, one in Sullivan county and the other in Steuben. I refused to give my assent to these measures unless the establishment of the hatcheries was made conditional upon the decision of the Commissioners of Fisheries that the places named were properly located for the propagation of fish. This condition was inserted in the measures, and the Commissioners have decided that certain kinds of fish, chiefly trout, could be successfully propagated in the waters of these localities, and have accordingly made agreements for the building of the hatcheries. It would be unwise, however, in my opinion, for the State to establish any more hatcheries. We have enough of these already. Trout is particularly a game fish, and public money should rather be used for the propagation of food fish, such as pike, perch and whitefish, from the bountiful supply of which greater benefit will accrue to the people of the State. As I said in my last annual message, merely to conserve sportsmen's interests would not justify large appropriations for fish culture from the public treasury. The measure of opportunity is much wider than is prescribed by any such narrow aid. There are 1,500 square miles of water within the area of our State capable of producing an unlimited supply of fish food, thus cheapening in large degree the cost of living to the people, creating additional employment and adding to the State's wealth. Every stream might be made to yield largely to the food supply of the farms through which it runs, and every lake might give means of livelihood to more men and furnish cheap, palatable food to more families. Liberal stocking of fry hatched and distributed in the waters of the State, assisted by proper regulations for catches, would be an important industry in that vicinity, profitable alike to the fishermen and to the public.

In the direction of applying this policy it is worthy of note that of the 80,000,000 young fish raised in the State hatcheries during the last year, the larger proportion was of what might be strictly called food fishes. The total stocking of fry hatched and distributed in the waters of the State was fifty per cent. in excess of the hatching and distribution at any previous year. Eighteen million whitefish were planted in Lake Ontario. This lake was formerly famous for its whitefish, but constant fishing had so depleted it that until the present year the catch on the American side was comparatively insignificant. As a result, however, of the persistent stocking of the lake by the Commissioners of Fisheries during the last five years, the fishermen report a large increase in the catch during the season recently closed. The Commissioners should be permitted this year to make a still larger plant, and to continue the work until the lake is thoroughly stocked.

#### REGISTRATION OF NETS.

I would suggest the passing of an act providing for the registration of nets and their use throughout the State under proper supervision. The mesh of these nets should be large enough to permit the escape of small fish not yet old enough to breed, and the net should not be used at all during the spawning season. Their use should not be permitted in trout streams nor in lakes where there are none but game fishes. In this way food fish could be taken where desirable and yet the game fishes be protected. As the Commissioners are now stocking the waters of the State with many varieties of fish that can not readily be taken by hook and line, some provision should be made for their capture, while at the same time protecting game fishes. The law passed two years ago prohibiting the catching of bullheads and suckers by any other means than angling proved a great hardship, and as a result nearly every county in the State was last winter exempted from its provision. The system of registration and allowing the use of nets under the safeguards proposed, would, in my opinion, be satisfactory both to the anglers and to the farmer to whom the common varieties of fish prove an agreeable addition to his ordinary bill of fare. A small fee should be charged for registering, and for the permit to use, in order to pay the expense of this work, and the registration would give the Commissioners accurate knowledge of the location of every net in the State, together with the name of its owner, and would enable them in a great measure to prevent improper use and at the same time allow the needed facilities for the capture of food fishes. This system has worked very successfully in Canada.

#### The Missouri Commission.

CINCINNATI, O.—Governor McKinley has appointed Mr. M. W. Renick, of Middletown, Fish and Game Commissioner, vice John H. Lohr, of Hamilton, resigned. Renick is considered an authority on fish and game. WILLIE WICK.

#### Spirit Lake Poachers.

ALTHOUGH, in the expressive language of Fish Commissioner Griggs, fifty-seven Iowa applicants are now after his red locks, he still retains his office and many Republicans are working hard to have him continue. The report of Mr. Griggs is now in press and will soon be issued with an appendix containing notes on the habits of many of the fishes of Iowa.

The commissioner went on a little crusade against the illegal fishermen during Christmas week in company with a member of the Minnesota commission. J. S. Berry was found on the Minnesota side of Spirit Lake with a lot of fish in his possession, for which he was bound over to the June term of court with fines amounting to \$375. Then Mr. Griggs nipped a number of poachers on the Iowa side, and so the chase continued up one side and down the other, until the law breakers gave up in disgust. H.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Jan. 16 to 19.—Saratoga Poultry and Kennel Club, at Saratoga, N. Y. L. J. Clute, Ballston Lake, N. Y., Sec'y.  
Feb. 1.—Blue Ridge Futurity Stakes, at New Orleans, La. G. W. Sentell, Jr., Sec'y.  
Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y.  
March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.  
March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y.  
March 20 to 23.—St. Louis Kennel Club, at St. Louis, Mo.  
April 3 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.  
April 13 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orear, Sec'y.  
May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

#### FIELD TRIALS.

Jan. 15.—Pacific Coast Field Trial Club, at Salinas, Cal. J. M. Kilgariff, Sec'y, San Francisco, Cal.  
Feb. 1.—Blue Ridge Futurity Stakes, at New Albany, Miss.  
Feb. 5.—Southern Field Trial Club's Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 12.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### POINTS AND FLUSHES.

[By a Staff Correspondent.]

#### Resolutions.

In bidding the old year good-bye it is gratifying that it has been so exceptionally full of good fellowship and free from acrimony.

It is gratifying that so much progress has been made in matters appertaining to the dog.

It is gratifying to observe that the prevailing idea of the liberty of speech, in relation to sportsmanship, has not been, by a large, seriously abridged.

It is gratifying that the kennel press has had one kindergarten lesson of what true editorship should be, in the past year.

It is gratifying that nearly all the old worthy editors are still on deck.

It is to be deplored that some dogmen have fallen by the wayside, and others have left us.

It is gratifying to notice that public opinion in the past year has undergone a change in respect to considering freedom of speech freedom to abuse.

It is a good time to make resolutions.

When your friend borrows a dog to go shooting, do not lend him the worthless dog of the kennel. If he says that dog is no good do not wring your hands and exclaim that he has ruined your best dog.

Do not sell a worthless dog for a first-class price, on the ground that you do not know anything about him, but that you sent him to a first-class trainer.

Do not think that your dog can get a \$100 education for \$10.

Do not expect to get a dog intellectually and physically beautiful for \$5. It costs more than that to raise a puppy.

If your dog does not win at a bench show, abuse the judge. That is honored usage. A lot of people then will think you are an offensive person, while a few will think you are misused. The former will tell their thoughts to the world, the latter will tell their thoughts to you. Both will estimate you at your true worth.

Above all, ardently love man's best friend, the dog, at so many dollars per dog. The love of the dog for his own sake is not proper progress. Progress in canine matters is sometimes obstructed by love of the dog. That is, a higher price is asked than progress will warrant, sometimes.

Resolve never to make the same mistake twice. Endeavor to keep the canine world up to the high degree of good fellowship, courtesy and progress of the past year.

Endeavor to believe less than we hear of each other in some respects and more in some other, otherwise the kennel world is dubious.

Never forget that the color of a dog, or whether his coat is long or short, is of far more value than any man's character, therefore let the man's character suffer if, in your wisdom, you consider it necessary.

If, in your writings, you are kind and courteous as becomes gentlemen, one time is excusable, but please see that it does not occur twice. It is an example that others may imitate, therefore it is not to be encouraged. Seriously, 1894 will be a bad year for the writer who is not gentlemanly.

In 1894 do not write a story about Fido to advertise your kennel.

In 1894, do not write 400 columns of challenges, at \$5 per challenge. The public might, after a while, consider that it is not instructive literature.

In 1894, if you become a sportsman after reaching manhood, try to behave as if you were a born sportsman. The sportsman of yesterday is noisy and nervous. The sportsman, "to the manner born," is civil and deferential to the judges. He is courteous too, to others. It may be hard, but try.

In 1894, try to make a field trial dog as much like a plug-shooting dog as possible. The latter is used chiefly for killing birds over; the former is used chiefly to sell. In proof of this look up the records, and observe how many field trial winners of late years have been sold.

Nevertheless, some field trial dogs are good field dogs—nevertheless, not many.

The American eagle is not a game bird. Any foreign sportsman, who goes gunning for the national screamer, is likely to return home empty handed. Foreign papers please copy.

In 1894, when you get a stud fee, please not to make a mistake to breed your customer's bitch to the younger and abler dog.

In 1894, resolve that each of the four days of a dog show will not be over twenty-four hours a day in duration.

In 1894, resolve that each day of a field trial will see you a wiser and better man.

Look upon the past year as twelve months which are gone.  
In 1894, do unto others as you would have others do unto you.

Field Trial Grounds and Game.

I quote the following paragraph from a letter received recently from Mr. J. M. Freeman, Bicknell, Ind.:

"Mr. J. Mayfield has gone to Pontotoc, Miss., for the winter."

"The amount of shooters the field trials have developed here is astonishing. Not only have the local shooters increased, but so many, who have been here at the trials, come again to shoot, and others, who have read of them, come, it is only a question of a short time till there will not be birds enough here to hold trials."

There is a problem confronting field trial clubs, with a seriousness never before existing, in respect to the preservation of game on field trial grounds. Several clubs did not hold trials last year, for the sole reason that there were not birds enough on their grounds to afford the necessary opportunities to test the dogs' performances. A simple lease of the grounds has often brought no more returns than the privilege of going on the grounds without trespassing. Often the birds are shot by local shooters before the trials are held, with a strong probability that the land owners were perfectly aware of the injustice.

Clubs should be careful to exact something more in their leases than the mere privilege of holding a field trial on the ground leased. Nor should indiscriminate shooting be permitted on the club's grounds after the trials. That privilege should be confined strictly to club members, and even to them there should be a limit to the number of birds killed each day and the number of days. The conditions are changing fast as the years pass, but the forces of destruction on the one hand far exceed the forces of protection or reproduction on the other. Between the hard winters, the hawks, foxes, skunks, cur dogs, etc., the wet seasons, the nets, traps and shooters, the stock of quail is rapidly diminishing, while the gunners multiply beyond computation. It would be a source of rejoicing were they multiplying as sportsmen, but a large ratio look upon the gun as an instrument for producing meat.

A gentleman calls my attention to the matter of publishing the names of applicants for membership by the Pointer Club, whether the applicants were accepted or rejected, as was done recently. It does seem as if it is unnecessarily frank on the part of the club to publish the names of rejected applicants. Those who contemplated joining might think seriously before applying for membership, if being rejected their names are to be published.

B. WATERS.

The Russian Wolfhound.

Editor Forest and Stream:

Last July Lieut. Henry T. Allen, of St. Petersburg, Russia, whom I believe knows more about the Russian wolfhound, so called, than any one outside of Russia, wrote a very instructive article for the *Fanciers' Journal* about this breed of dogs; an article which all who are interested in the dog would find instructive reading. I would especially commend it to those who feel competent to judge the dog at our bench shows, for the conclusions arrived at by several judges during the past year were far from the type which is stated very clearly in that article, were far from the type as established by the English Barzoi or Russian Wolfhound Club, and were far from what I had been taught was the true type of this dog while spending a winter in Russia two years ago. That the decisions of many of the judges should be a "little off" is not surprising as this dog is new to America, and there have been very few opportunities to study the breed as it should be studied. The difficulty has been in confounding this type with the greyhound type, and if continued we shall have neither the true Russian dog or be able to compete with dogs bred in England. The whole subject is so well discussed by Lieut. Allen and was so well written up in the English *Stock-Keeper* two years ago, that it is a very easy matter to get started right. The spring circuit is now near at hand and we are apt to be in the same position a year from now as we are now unless those to be invited to judge this year will take the trouble "to book up a little." The National Greyhound Club, of this country, could do no better than to adopt the standard now adopted in Russia and England. Such action would give an incentive to all breeders of these dogs and there would be no such discouragements as now exist when one finds he has been getting his dogs into condition only to learn that this and that judge has another type in mind. My understanding of bench shows is to encourage breeding, and until a type is fixed the breeders of this dog can never expect to improve the breed. To the Greyhound Club I would also make this suggestion, that the dog be known as the "Russian greyhound." I noticed that Lieut. Allen in his article gave them this name. While the name in Russia is "Barzoi," the translation of the word is "a fast running dog" and may as properly be called Russian greyhound as Russian wolfhound. The word wolfhound does the dog injustice. We must bear in mind that very few people yet know the dog and from the name one gets the impression that he is savage and treacherous. Many a letter has my kennel man answered in reply to this inquiry. At the bench shows it is noticeable how cautious people are in going near them when they are told that they are wolfhounds. As a matter of fact they are very affectionate, are never surly and can be trusted anywhere. As a companion for a walk or for carriage they cannot be excelled, and for a house dog they stand without a rival. For three years I have been breeding these dogs and have sold puppies in all parts of the country, and never but once have I had a complaint about their disposition or a criticism as to their value as a house dog or a companion. That the dog is extremely popular in this country goes without saying and is daily growing more popular as he becomes better known. Indeed my prediction is, that within a few years he will be the most popular breed we have. Why won't the breeders and owners of this dog start the ball rolling by giving to the public their views. Where is Mr. Wade who has done so much for other breeders? Where is Mr. Roger Williams who has made a study of this breed of dogs and is now breeding himself? Where are Mr. Huntington and Mr. Hacke, who also have kennels of this breed of dogs?

CHAS. STEDMAN HANKS.

BOSTON, MASS., JAN. 1.

A Deer Drive in Virginia.

Editor Forest and Stream:

We had a deer drive the day after Christmas with the Hon. E. A. Watson's pack of hounds. There were eight of us stationed in a circle on top of the mountain in front of the hotel, and when the hounds started the deer (a large buck and doe), they made right for the center of our line and passed within shooting distance of Slocom Howland (Yale '95 S.), who succeeded in killing the buck, which proved to be a fine one with ten prongs. It weighed 136 lbs. after being disemboweled. To-morrow we expect to have another drive in the same place.

CLARENCE HOWLAND.

NIMROD HALL, Va., Dec. 23, 1893.

Mr. Fred Church has imported, through Mr. Whelan, a bull-terrier dog that is said to be a "scorcher," to beat Carney and Monarch.

The Canadian Kennel Club and the A. K. C.

Editor Forest and Stream:

As to the Canadian and the American Kennel Clubs joining, I would say that I am a Canadian. I have many friends in the United States that I thoroughly trust and admire, but when it comes to such organizations as kennel clubs, I am Canadian, and as far as my vote goes will never consent that all Canada in doggy matters shall sink itself to the level of one of the many make-believe clubs in the United States. There is the Keystone Kennel Club, of Philadelphia: does it not consist of James Watson alone, as far as doggy men go? And are there not plenty of others like it?

We have our own club, now a most respectable one, with a wise and prudent, well-known "doggist" at its head. Canadian dogmen comprise:

W. H. Auld, Strathroy; C. H. Akerley, Tonawanda, N. Y.; J. Ayre, Toronto; Dr. T. Armstrong, Toronto; W. H. Apted, Toronto; John Atkin, Montreal.

Geo. Bell, Toronto; John Briggs, London; H. Beddington, Hamilton; T. D. Burns, London; W. H. Beattie, Wilton Grove; J. O. Bennett, Toronto; F. C. Bolts, Igersoll; R. W. Boyle, Toronto; W. Barclay, Georgetown; P. Brown, Toronto; W. Brodie, Scotland; H. C. Bates, Kingston; Geo. Bowman, London; W. Barber, Toronto; Frank Burton, Montreal; J. W. Brown, Toronto.

J. L. Campbell, Toronto; F. E. Curtis, Simcoe; C. H. Corbett, Kingston; E. A. Cleghorn, London; Thos. Carson, Kingston; Ray J. M. Crombie, Montreal; F. H. Cunningham, Ottawa; Hiram Card, Elora; C. R. Christie, W. G. Cumming, Montreal; R. A. Cunningham, W. S. Chambers, J. B. Carmichael, Victoria, B. C.

T. G. Davey, London; John Davidson, Monroe, Mich.; H. B. Donovan, Toronto; J. Douglas, Toronto; W. H. Drummond, M.P., Montreal; George Douglas, Woodstock; A. Dorland, Wellington; Ben Davis, Toronto.

A. E. Elmer, Kingston; H. A. Elkers, Montreal; E. B. Elliott, Maywood, Ill.

H. Falconer, Shelburne; L. Farewell, Toronto; M. M. Fenwick, Bowmanville; R. H. Fairthorne, Perche; H. A. Fraser, Westmeath; Fred Flynn, Hamilton; A. J. Ferguson, Montreal.

S. F. Glass, London; Richard Gibson, Delaware; J. C. Guillott, Windsor; A. Geddes, Ottawa; H. Gorman, Sarnia; G. M. Gibbs, Parkhill; A. F. Grant, Ottawa; Dr. H. S. Griffin, Hamilton; H. Marshall Graydon, London; A. J. Groves, Toronto; Bruff Garrett, Toronto; T. Gilbert, Brantford; G. M. Gibbs, Sarnia.

Geo. C. Hare, Hamilton; F. Hobart, Toronto; Samuel Holmes, Chatham; W. Hutchins, Montreal; Philip Hart, Belleville; Robert Hall,

IRISH SETTER FIELD TRIALS, 1893.

Romayne, Currer Belle IV. and John Cassidy.

Peterborough; Fred Hatch, Whitby; Oscar Hendry, Simcoe; J. W. Humpedge, London; Geo. R. Hooper, Montreal; John Hood, Hamilton.

Inspector Jas. Johnston, Toronto; H. L. Jeffery, Stratford; Geo. Jay, Victoria, B. C.

R. E. Kent, Kingston; J. F. Kirk, Toronto; P. J. Keating, Toronto;

Dr. J. Kime, Chatham; J. Kennedy, Hamilton.

A. G. H. Luxton, Mount Forest; A. Laidlaw, Galt; Jas. Lindsay,

Montreal; London Hunt Club, London; J. M. Lottridge, Hamilton.

J. G. Mitchener, Toronto; Dr. A. E. Mallock, Hamilton; Dr. G. L. Milne,

Victoria, B. C.; J. C. Morgan, Toronto; Andrew Murdoch, Hamilton;

W. R. Mumford, Toronto; Geo. L. Maxham, Quebec City; A. E. Mussen,

Montreal; Thos. L. Moore, Montreal; Alfred Magnusen, Victoria,

B. C.; Robt. McEwen, Byron; J. K. McDonald, Toronto; Thos. McGaw,

Toronto; C. A. McHaffie, Cornwall; Jas. G. McDonald, Montreal,

N. B.; Wm. McDonald, Hamilton; A. A. McDonald, Toronto; J. H. Mc-

Nally, Montreal; Alec McKinnon, Toronto; R. S. McDonald, Fort

Saskatchewan, N. W. T.

J. C. Nichol, Montreal; J. S. Niven, London; Mrs. C. M. Nelles,

Brantford; J. W. Magee, V. S., Delaware; J. A. Noble, Narval; R.

Northcote, Toronto.

G. S. Oldrieve, Kingston; Daniel O'Shea, London.

W. B. Palmer, Hamilton; G. W. Prescott, Toronto; J. A. Pitt, Mon-

treil; Dr. W. J. Prendergast, Montreal; P. J. Packard, Victoria, B. C.

F. W. Shaw, Forest; A. Sprackin, Woodstock; C. A. Stone,

Toronto; W. S. Smith, London; P. J. Smythe, Toronto; C. H. Smith,

St. Stephen, N. B.; A. D. Stewart, Hamilton; C. Seale, Hamilton;

John Smilie, Toronto; F. N. Stanton, Toronto; Geo. B. Sweetman,

Toronto; Shirley Stewart, Toronto; H. Stableford, Watford; John

Saunders, Harristown; John Smith, Toronto; Jas. H. Smith, Montreal;

H. S. Sepselson, London.

Alan Treblecock, Toronto; S. H. Thompson, Toronto; H. P. Thomas,

Belleville; W. H. Thorne, St. Johns, N. B.; W. H. Thomas, Montreal;

H. P. Thompson, Toronto; Jarvis Thompson, Jr., Woodstock; R. W.

uck, Shelburne; W. Torcher, Hamilton.

W. T. Virtue, Montreal.

E. J. Walsh, Woodbridge; J. S. Williams, Toronto; F. S. Wetherall,

Compton; Robt. Wanless, Sarnia; Hess Wilkins, Leamington; R. T.

Williamson, Guelph; Hugh M. Williams, Carleton Place; W. B. Wells,

Chatham.

And is it proposed that all these representative men shall

be balanced by Mr. Watson's club and others like it. Not with

my vote.

Toronto, Ont., Jan. 6.

Editor Forest and Stream:

In reply to your letter of the 29th inst, I may state that I have heard as yet nothing from any of the members since the publication of the A. K. C. meetings. But I know what the feeling was a short time since. The universal feeling was that the A. K. C. treated us in a very unjust manner, and "no surrender" of any of our privileges would be acceptable. Nor do I think that the C. K. C. will give up any of its power to legislate for Canadian dogs or owners. The C. K. C. is anxious that no injustice should be done to any one, and I think, will be prepared to negotiate another compact on different lines, and as Mr. Vredenburg puts it, the old compact was too much of a "jug handle" kind, the next one, if it is negotiated, will be part of the "jug" as well as the "handle" for the C. K. C. I think this is only just as the A. K. C. treated the C. K. C., as if it was of no account, and allowed personal interest to juggle the compact out of existence without giving the C. K. C. any notice that such a motion was to be brought up, and if I mistake not, in a most illegal way. These were the sentiments of the members last September.

Since then I have been using my influence among them to get something definite into shape which may be mutually agreeable and of use to owners and exhibitors, and I have formulated a plan which I am going to bring up at the next executive meeting on Jan. 26, which I hope will be carried out, at least in part.

I am sure all the members of the C. K. C. are pleased to have Mr. Watson and Major Taylor on the new compact committee, as they are both well known to most of us in Canada.

J. S. NIVEN,

President Canadian Kennel Club.

LONDON, Ont., Dec. 30, 1893.

Editor Forest and Stream:

I think that a strong effort should be made to re-unite the A. K. C. and the C. K. C. We on this side of the line, I am sure, wish to be one with you and work in harmony with you in every possible way, and it is too bad that a separation should have occurred as the result of the malicious blundering of a single individual. We have a good president this year, and a faithful, careful and popular man, and I am sure he will bend all his energies in the direction of a renewal of peace and good feeling between the two clubs.

A. D. STEWART.

HAMILTON, Ont., Jan. 4.

Editor Forest and Stream:

In regard to the Canadian Kennel Club coming in with the A. K. C. I would be perfectly willing if the registrations were less. One dollar for each registration is too high. I don't think the C. K. C. will agree to the A. K. C. proposal that I read in your *FOREST AND STREAM*. My own opinion is that we would be better if we were all under one club.

GEO. DOUGLAS.

WOODSTOCK, Ont., Jan. 5.

DOG CHAT.

Pomona Kennels Burned Down.

The owner of the Pomona Kennels, Mr. Charles E. Idell, of Germantown, Pa., sustained a severe loss on Wednesday, Jan. 3. He tells us that his entire kennel of dogs, with the exception of the silver terrier Jacko (2d at Wissahickon and Mt. Holly shows last year) were destroyed by fire. The kennel building was 24x12ft., 8ft. high in front and 6ft. high at the back. The building was separated into seven compartments. Among the dogs destroyed were the 5/16lb. King Charles spaniel bitch Minnie, winner of 2d, at Wissahickon and Mt. Holly shows; black cocker bitch Tottie, by Ober ex Belva; a promising young red bitch Nina, by Cherry Punch ex Lady Gay; the imported Yorkshire stud dog Nipsey, a very pretty silver terrier bitch called Ruby, a terrier bitch Lady; five promising Yorkshire puppies; the Yorkshire bitch Wilson; a Yorkshire terrier dog called Marco, and an old family dog, a brown toy spaniel named Sue. Mr. Idell estimates his loss at \$1,500 on which there was no insurance. The fire was discovered by some neighbors at 1 A. M. on Wednesday, and although a bucket brigade was quickly formed the flames spread so quickly, the building being of wood and covered with tar paper, that it was impossible to save any of the stock. Mr. Idell is not disheartened, however, and will commence building another kennel at once and purchase a new stock of cockers, toy spaniels and Yorkshires. He has already purchased three King Charles spaniel puppies. A collie bitch Maud, due to whelp last Saturday to Seminole Kennels' Curzon, was fortunately away from home at the time.

Russian Wolfhounds.

Mr. C. S. Hanks, owner of the Seacroft Kennels of Russian wolfhounds, makes a suggestion in another column regarding the, to some extent, misnomer, at least as far as this country is concerned, under which the Russian wolfhound is said to labor. The breed is too handsome to be allowed to suffer from any mistaken idea that may arise in the public mind owing to the name of "wolfhound." Mr. Hanks's suggestion, therefore, that the National Greyhound Club adopt the name "Russian greyhound" for this breed does seem to merit consideration, but before action is taken we should like the breeders of this handsome animal to express their views so that the pros and cons can be carefully weighed and adjusted. In this connection it might be well to revert to the old generic name of Barzoi. Mr. Hanks tells us that after his return from the South in the spring he will commence building new kennels and move his present one to higher ground which he has purchased. The Seacroft Kennels have also issued a handsome little card giving the breeding of their well-known fox-terrier Damson, own sister to Dominica.

The C. K. C. and the A. K. C.

In another column will be found several letters from prominent Canadian dog breeders in regard to the proposal advanced by Mr. Vredenburg at the recent A. K. C. meeting. We had no idea of and we do not think Mr. Vredenburg realized the strength of the Canadian fancy at the present moment. That the C. K. C. if it joins the A. K. C. should be only represented by one delegate does not seem fair. They should have three or at least two delegates to represent them. The more one considers the question the more impracticable appears Mr. Vredenburg's proposition. Unless provision was made by the C. K. C. covering the expenses of their delegates we are afraid that their representation would simply resolve itself into the method adopted by most of the Western clubs—a representation by men selected from the ranks of New York fanciers. As the matter stands at present the Canadian dogmen are asked to convey their registrations to the A. K. C., and pay \$10 for the privilege of paying a delegate's expenses to the A. K. C. meetings.

Mr. James B. Blossom, in sending us a Kennel Note of his Irish setter bitch Duchess whelping eleven pups by Dr. Jarvis's recently imported Signal, remarks that this litter deserves mention from the fact that it is the first of this dog's get in this country, and that if there be anything in mating field broken dogs, and there is a good deal, the result should be good. Signal won on the other side. First Irish setter Puppy Stake, fourth Irish setter All-Age Stake, second St. Leger Stake (all setters), first Irish Setter Club's Cup and Puppy Stake in 1891; second Irish setter All-Age Stake, Irish Setter Club's cup in All-Age Stake, third (divided) Grand All-Age Stake and Irish Setter Club's cup for best setter in Grand All-Age Stake in 1892. Mr. Blossom further remarks that he intends to breed all his Irish bitches to dogs of proved field trial abilities, and thinks that a similar plan, if followed and persisted in by all Irish setter breeders, cannot fail to greatly aid in placing the coming Irish setter upon an equality with pointers and English setters in the field, and that quickly.

Death of Prof. Batchelder.

Some time since we published a rumor to the effect that Prof. Batchelder was dead, and asked for confirmation of the report. We now hear that it is only too true. He died from suffocation by gas in Boston. Prof. Batchelder's troupe of performing dogs was a good one, and no doubt many of those who followed the shows will regret, as we do, to hear of his untimely death.

## W. K. C. Judges.

The remaining judges for the Westminster Kennel Club show are announced as follows: Bulldogs, E. A. Woodward, Chicago, Ill.; bull-terriers, C. Albert Stevens, New York City. Smooth fox-terriers, T. S. Bellin, Albany, N. Y. English foxhounds, A. Belmont Purdy, Garden City, L. I. Mr. Woodward is the secretary of the Bulldog Club and has owned King Lud, Harper, and still owns some very good ones. Bull-terrier men will be pleased no doubt to see Mr. Stevens in the ring; he exhibited prominently several years ago and Mr. Bellin is well known in his fancy. No better choice probably could have been made than Mr. Purdy for foxhounds; he has always taken a great interest in fox-hunting, has been an M. F. H., in fact we believe was the organizer of the first hunt club on Long Island. Writing hurriedly we are afraid we did Dr. Crier a little injustice last week. We know that Dr. Crier is one of our very oldest fanciers, but we have so generally associated him with pugs in late years that we forgot that he had judged poodles at Brooklyn and Chicago and was one of the earliest to import Skyterriers. The premium list will not be ready for a week or so. Mr. Mortimer tells us that while the money prizes will not be quite as large, the classification will be increased. Entries will close Feb. 5.

Spratts Co. have secured a loft in Chicago, where they have stored benching for about 800 dogs, and this will be used for the Western shows. They have long considered such a move, owing to the exorbitant freight charges to which they were subjected in bringing their material from New York and also the uncertainty of getting it to the shows in time. Dogmen who have come in contact with Mr. C. Coleridge Vickery, the genial assistant manager of the company, will regret to learn that he severs his connection with the firm in March. Mr. Vickery has had an offer from the other side, but prefers remaining here for the present.

We hear that the Chicago Kennel Club show was over \$1,000 behind. This will surprise most of those who were there, as the attendance, though not as good as formerly, was fairly good, and the show was open five days. We understand that prize money was not all paid.

The premium list of the Mascot Club's show will be out Jan. 20. It is expected to be the best yet offered in the West. We should like to see the club give another good show, and after the year's rest they should attack the problem with renewed vigor. The club room is No. 953 Monadnock Building, Chicago.

There is little prospect of a show in Pittsburgh this year, owing to the Duquesne Club's inability to secure a suitable building. The club tried to secure the Horne Building on Penn avenue, but failed. Rather than not have a show at all why not use the old rink, where so many good shows have been held heretofore?

## A Mastiff for the Mikado.

Mr. Chas. E. Bunn writes that the scarcity of sales at Chicago show did not affect his kennel, for he sold more dogs there than at any show he ever attended. He disposed of three at good prices. These included Eole, the winner of second in the open bitch class, which went to Mr. F. E. Waller, of Chicago, and a bitch pup to Mr. F. W. Sandborn, of Oak Park. The third was sold to Mr. S. Schida. Mr. Schida is a Japanese gentleman; in fact, he is the Royal Commissioner to the Mid-Winter Fair at San Francisco, and he intends to take the pup to Japan with him as a present for his royal master. Mr. Bunn is also waiting for a few details to complete a sale of a pair to go to the City of Mexico. He adds, "So you see, at present I have no reason to complain, and am doing my share to make America hold her own in dogs."

## Heavy Mastiffs.

The mastiff bitch Boss's Princess, owned by Mr. J. L. Winchell, must be a giantess in her way. The other day she was weighed by the weigh master of the town and tipped the beam at 205 lbs., and as she has a litter of pups in not good shape and could be estimated to weigh, according to her owner, 30 lbs. more. She measures 80 in. from tip of nose to tip of tail, stands full 32 in., girth 44 in. (tight). Mr. Winchell sends us an interesting letter which, however, must lie over until next week. Boss's Princess has been shown but once and then at Brooklyn, when she won second and also took the special for best mover.

We are sorry to hear of the death of Mr. Geo. Douglas's Woodland Queen. She is renowned as a matron of cockers, counting such celebrated winners as champion Black Duke, champion Black Duchess, champion King Pharo's Sister, Silver King and Compton Bandit among her progeny. Mr. Douglas thinks she is the last of the old Tippoo strain, Woodstock Dinah dying last spring. This well known cocker man ran up to Detroit last week to have a look at Pickpania, who is coming so rapidly to the front, and thinks him a much improved dog over his Toronto form. He congratulates himself that he owns a younger brother by Black Duke out of Woodland Jade, that "will make them all skate." By the way, the veteran Joe Spracklin has something up his sleeve and has been heard to remark lately that all the spaniel men will have to take off their hats to him at New York next month. Mr. Spracklin forgets there are some ladies in the fancy, too.

The *Fanciers' Journal* property will be sold at auction on the 16th. If not disposed of in a whole, the plant and good will, etc., will be sold separately. The paper will not be published again under the present management.

In our report of the International field trials we referred to the scarcity of birds and its cause, and hinted that the club grounds would probably be restocked. Mr. Wells, the secretary of the club and a game commissioner of Ontario, now proposes that a purse be raised among the lovers of the dog and gun in Chatham, and with the fund import quail from Virginia, where they can be bought for \$5 a dozen. The subscribers to the fund will then be asked to unite in renting a preserve of 1,000 acres, with privileges exclusively secured, in which the birds will be turned loose to breed and multiply. The proposition is cordially indorsed, and the scheme will doubtless be at once put into effect.

## N. E. K. C. Meeting and Dinner.

The monthly meeting and annual dinner of the New England Kennel Club took place on Thursday evening last at the Revere House, Boston. Among those present were Samuel Hammond, Jr., in the chair, John P. Barnard, Dr. J. Frank Perry, James Greese, Sid L. Brackett, Arthur B. Sharpe, Herbert Merriam, Harry W. Smith, Andrew B. Cobb, J. W. Newman, F. A. Curtis, Jean Grosvenor and Secretary D. E. Loveland. The daily press was represented by Walter Barnes, of the *Journal*; George S. Mandell, of the *Transcript*; George Ryan, of the *Globe*; W. A. Power, of the *Traveler*; J. M. Kelley, of the *Post*, and W. B. Atherton. We regret to hear that owing to illness Mr. Ed Brooks and Mr. George Fletcher were unable to attend. The business meeting did not take up much time and the party soon marched to the dinner table, when, after behaving like good and true dogmen, the evening was given up to speeches, reminiscences of dogdom, etc. Dr. J. Frank Perry and Mr. Herbert Merriam, who has just returned from a shooting

trip in the South, were the principal speakers. Other speakers followed, and one and all congratulated themselves and others that they were alive, and dogmen at that. Secretary Loveland promised several improvements at the coming show and assured every one that the same democratic spirit would prevail as made their show last year so popular.

There seems to be lots of bargains in our business columns this week. Avert & Thayer Kennels offer for sale field trial winners and shooting dogs, deer hunting hounds, etc.; S. H. Soewell, field pointers; C. T. Brownell, Gordon setter puppies; Kennebec Valley Kennels, pointers; E. W. Fiske, cocker spaniels; Toon & Thomas, prize-winning dogs; Terra Cotta Kennels, Russian wolfhound pups; T. G. Davey, broken pointers and setters; J. J. Scanlan, several well-bred Irish setters; F. F. Dole, noted bulldogs; J. Hope, pointers and Irish setters; Standard Kennels, beagle pups; Samuel Jagger, the noted St. Bernard Councillor Joe, litter brother to the celebrated Lady Mignon; Goshen Stock Farm, beagles, foxhounds, etc.; J. B. Cook, trained foxhound; J. Fox, Lewellyn setter pups; National Beagle Kennels, beagles; P. Bauer, coon dogs, etc.; J. H. Miller, trained foxhounds. In the stud: P. Dorsey's celebrated beagles.

Mr. George Raper, the well known judge, was married Dec. 27 to Mrs. Mordue, of Normanby, Yorkshire. Friends of Mr. Raper on this side the water will, we are sure, join us in wishing Mr. Raper and his bride every prosperity and happiness.

It is rumored that a new dog paper is shortly to come out. It is not stated where it will go in.

Contrary to general report the Swiss Mountain Kennels' St. Bernard bitch Sunray did not whelp at the Chicago show. In fact she was taken home and did not whelp until the middle of the week afterward, and then one dead pup. She was too fat when bred and was kept in that condition afterward. This kennel will show a strong team at Saratoga next week.

It is reported that Mr. Sidney Smith intends coming over for the New York show.

Mr. A. W. Smith, of Buffalo, N. Y., has sold out his interest in the kennel to his late partner, Mr. W. S. Patterson, of Mayville, N. Y. This includes the good black and tan bitch Louie. Mr. Patterson also gets three of Louie's pups by Broomfield Sultan. Mr. Smith still retains his love for the breed, and when business permits will own another good one or two.

Mr. Loveland, secretary of the N. E. K. C., tells us that it is the intention of the club to give increased classification and prize money at their show in April next. "We do not want it all, and when the exhibitors show a desire to help, as they did last year, we cannot do less than return the compliment by offering more liberal inducements in return."

We see in our business columns that Mr. F. F. Dole is willing to part with two or three good dogs, among these are the bulldogs Argonauta, 1st puppy and novice class N. Y. show 1893, and the noted dog Rustic Swell. The prices seem reasonable, too.

The picture of Irish setter field trial winners which we publish this week is from a photograph taken before the trials at Thomasville, N. C., by one of our best amateur "fiends," Mr. F. R. Hitchcock, and which Dr. Davis kindly allowed us to use.

## Mayor Stewart Now.

We do not meddle much with politics, but when we see a good fancier voted by his fellow citizens into a good thing one cannot help feeling more than a passing interest. Mr. A. D. Stewart, of Hamilton, Ont., has been elected Mayor of that city. He had two opponents and he beat the second man by 1,665 votes, and the third man was buried out of sight; more than this, he beat the two combined by 200 votes. He has already held high office in Hamilton, having been Chief of Police and an Alderman, but this election puts him at the top of the tree.

Mr. Stewart has long been identified with the bulldog and fox-terrier fancies, and has always had the best interests of Canadian dogdom at heart, therefore we are sure his many friends will join us in congratulations. Mr. Stewart is also president of the Canadian Fox-Terrier Club, and is also secretary and Chief Warden of the Game and Fish Commission of Ontario.

A serious accident happened to Mr. F. H. F. Mercer the other day. While driving over a bridge his horse bolted and threw him violently to the ground. His head struck the pavement and he was rendered unconscious. Mr. Mercer was carried to his rooms where he now lies dangerously ill.

The meeting of the Pacific Kennel Club that was to have been held Jan. 2, was expected to be a lively one, as some of the members are not pleased with the decision that exonerated Mr. Huber. It is stated, however, that the officers of the club have the confidence of the majority of the members, and the decision will be upheld.

## Pacific Coast Field Trials.

The Pacific Coast field trials, while they will not be overburdened with entries, are creating considerable interest among field sportsmen on the Pacific coast. There are said to be about ten entries in the Derby, but the All-Age Stake is expected to do much better, and show the spectators some good field work. The trials take place Jan. 15, and as Salinas is but 118 miles from San Francisco, an opportunity is offered sportsmen to see good dogs at work, and this may result in great benefit to both the field and bench interests of the Coast.

The question of responsibility on the part of show committees for specials donated by outside parties is cropping up in the *Scottish Fancier*, and we see that Mr. W. Brodie, who was recently a resident in Toronto and who owns the noted terrier Irish Ambassador, is mainly the cause of it. It seems that two years ago he gave a special at the Dumfries show for the best Irish terrier pup sired by one of his dogs. This has not yet been given to the winner's owner, and hence the trouble. This raises a rather interesting question as to whether a show committee is responsible for such specials. We do not know the "law" in such a case, but it seems logical that if a committee advertise certain specials as an inducement to exhibitors to enter at their show they should also assume such responsibility as would insure the winner of such special receiving his just due. The show committee here stands in a position like that of an indorser of a note; they are responsible to the winner of the prize, and must for their part look to the giver. It would be quite impracticable to adopt any other system. Exhibitors cannot investigate the responsibility of every man who offers specials. But it very clearly is the business of the committee, before they hold out the promise of a special, to inform themselves of the true character of the special, the responsibility of the man who offers it, and to make suitable provision to insure its payment. In a word, the nearer we come to usual business common sense ways in our dog showing, the less friction and the more satisfaction will there be in it.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

## BRED.

Prepared Blanks sent free on application.

Katie Noble—Breeze Gladstone. F. G. Taylor's (Philadelphia, Pa.) English setter bitch Katie Noble (Count Noble—Queen Meg) to his champion Breeze Gladstone (Gladstone—Sue), Sept. 18.  
Queen of Hearts—Breeze Gladstone. W. H. Wallace's (Philadelphia, Pa.) English setter bitch Queen of Hearts (Sportsman—Sweetheart) to F. G. Taylor's champion Breeze Gladstone (Gladstone—Sue), Sept. 24.

Peggy Breeze Gladstone. E. D. Jones's (Yorkshire, N. Y.) English setter bitch Peggy (Cluch—Fraud II.) to F. G. Taylor's Breeze Gladstone (Gladstone—Sue), Oct. 14.

Belle Bucklelaw—Breeze Gladstone. C. K. Westbrook's (Philadelphia, Pa.) English setter bitch Belle Bucklelaw (Bucklelaw—Vic Fly) to F. G. Taylor's champion Breeze Gladstone (Gladstone—Sue), Oct. 16.  
Lady Roderigo—Breeze Gladstone. W. C. Goodman's (Paris, Ky.) English setter bitch Lady Roderigo (Roderigo—Royal Fly) to F. G. Taylor's champion Breeze Gladstone (Gladstone—Sue), Oct. 26.

Bleaze—Breeze Gladstone. W. S. Bell's (Pittsburgh, Pa.) English setter bitch Bleaze (Count Noble—Tessie) to F. G. Taylor's champion Breeze Gladstone (Gladstone—Sue), Nov. 9.

Nanon—Breeze Gladstone. S. M. Mitchell's (Philadelphia, Pa.) English setter bitch Nanon (Ben Him—Mary) to F. G. Taylor's champion Breeze Gladstone (Gladstone—Sue), Dec. 5.

Nellie G.—Ben Hur of Riverview. H. R. Sack's (Lymanville, R. I.) English setter bitch Nellie G. (Breeze Gladstone—Lady Snowflake) to F. G. Taylor's Ben Hur of Riverview (Ben Him—Zoe W.), Dec. 8.

Spec Lomond—Milton. Grand View Kennels' (Danbury, Conn.) rough St. Bernard bitch Spec Lomond (Hesper II.—Quinta Lomond) to McCarl & Cattaneo's Milton (Tartar—Lady Gair), Nov. 29.

Lady Alma—Sir Douglas. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Alma (Eberhart's Cashier—Mabel E.) to their Sir Douglas II.—Lady Verne, Dec. 4.

## WHELPS.

Prepared Blanks sent free on application.

Edgewood Fly. T. A. Holcombe's (Salt Lake City, Utah) bull-terrier bitch Edgewood Fly (Duke—Alice), Nov. 22, seven (four dogs), by his Little Prince (Bendigo—Kid).

Fly M. Geo. Meister's (Jackson, Mich.) Gordon setter bitch Fly M. (Buck—Gyp), Dec. 8, nine (six dogs), by his Louis S. (Beaumont—Fly M.).

Roche Tacit. A. C. Bradbury's (Englewood, N. J.) wire-haired fox-terrier bitch Roche Tacit, Dec. 24, seven (three dogs), by J. W. Taylor's Roche Talma.

Chicago Fawn. J. B. Wickers' (Pittsburgh, Pa.) pointer bitch Chicago Fawn (champion Fritz—Virginia), Nov. 9, nine (four dogs), by T. Johnson's Manitoba Shot (Cotton—Psyche).

## SALES.

Prepared Blanks sent free on application.

Orphan Girl. Silver fawn pug bitch, whelped July 8, 1893, by Happy Toby out of La Belle Senora, by Eberhart Pug Kennels, Cincinnati, O., to John Ward, same place.

Young Cashier. Silver fawn pug dog, whelped July 7, 1893, by Eberhart's Cashier out of Cashier's Daughter, by Eberhart Pug Kennels, Cincinnati, O., to Miss Laura Francisco, Decatur, Ia.

Cloudf. Black curly poodle dog, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. Dr. Robt. Salter, same place.

Nellie. Fawn pug bitch, by Eberhart Pug Kennels, Cincinnati, O., to E. F. Cunney, same place.

Monk of Burness—Belle Mur whelps. Orange belton English setter bitch, by A. L. Fookes, Columbus, O., to Dr. P. J. Gavin, South Boston, Mass.; also a black, white and tan bitch to J. G. Pickering, Clarks-ville, Va.; black, white and tan dog to R. B. Hurt, Wheeling, W. Va.; orange belton bitch to A. Muth, Natchez, Miss.; orange and white belton bitch to W. Houser, Dansville, Pa.

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. O'B. Lawrence, Mass.—See answer to F. B. D. for mixture.

M. W. Paterson, N. J.—If you will tell us which show you wish to exhibit at, we will tell you how to go about it.

Mrs. Birmingham, Ala.—Ollie B. is not registered in the published stud books. She may have been registered in 1893, and this you can ascertain by writing to the secretary of the A. K. C., 44 Broadway, New York.

B. H. S., North Attleboro, Mass.—Nesta (A.K.R. 1494), by Duncan out of Bess. Bess by Mec out of Wilson's Duce. Mec by Mr. Herkett's collie from Scotland out of Mr. Gerrard's bitch from Scotland. Duncan's pedigree cannot be traced. Write to Mr. Jas. Watson, Box 770, Philadelphia. He imported Nesta. The Chesapeake, Rake, is not registered.

Subscriber, New York.—I have an English setter pup seven months old; she is timid and is afraid of everything. What will be good for her timidity? Ans. Let her accompany you as much as possible in your walks. Always treat her kindly, but do not pet and caress her every time that she is apprehensive or frightened. Let her, by actual experience, learn that there is no danger impending. If you could take her out rabbit hunting with a beagle and let her chase and kill, or assist, it would do much to increase her courage. If the timidity is associated with a high degree of nervousness it may require a lot of time and patience to correct it.

J. M. P. Sistersville, W. Va.—Please inform me what are the markings of a Gordon setter. I always thought a Gordon was black, with tan markings on legs, breast, muzzle, and dots of tan over eyes; but a few people here have got black dogs that they claim were bred direct from Scottish Gordons. If they are the true Gordons my dog must be a cur, and an awful long pedigreed cur, too. Ans. You are substantially correct. The Gordon setter should be of a deep black, with tan markings dispersed as follows: On the forelegs below the knee, on the feather on forelegs, on the throat, on the cheeks and muzzle, inside the ears and over the eyes, on the belly, inside the thighs and on the vent.

F. B. D., Kegar Falls, Me.—I have a cocker spaniel bitch. She has sores come on her head, and the hair comes off. It seems to itch quite badly and on the inside of the ear it is red and sore. Ans. Treat for worms, and give the following all over the dog every other day:

Sulphur sublimed ..... 8 oz.  
Oil of tar ..... 5 oz.  
Cottonseed oil ..... 2 qts.

Mix. Also give dog this mixture:

Iodine sulph. .... 3 vi.  
Pot. bicarb. .... 3 i.  
Sod. bi carb. .... aa 3 i.  
Aq. ad. .... 3 vi

Mix. Give one tablespoonful twice a day.

X. Y. Z., Salt Lake City, Utah.—Dutch is by Old Victor out of champion Countess (E. K. C. S. B. 5,510) pedigree unknown (vide E. K. C. S. B.). Old Victor (E. 2,791) pedigree unknown. Victor came out of the Black country and died in June, 1872 (vide E. K. C. S. B.).

Marquis (E. K. C. S. B. 2,713) is by Tarquin (E. 2,776) out of Fuss, by Nelson out of Gaby Young Fawn.

Nelson (E. K. C. S. B. 2,754, Vol. I), by Harding's Old Nelson out of Flower, by Old Tim. The other Nelson (E. 2,759, Vol. I) is by Old Billy (E. 2,722, Vol. I) out of Julie—both noted prize winners and both whelped in 1872. Tarquin (E. 2,776), by Young Victor (E. 2,792) out of Fuss, by Hink's Gambler (2,787) out of Young Fuss.

There are Countess by Gambler (E. 2,747, Vol. I) out of Little Fuss. Principio by Bendigo (15,637) out of Dr. Remison's Kit, by champion Sting out of a bitch by Sankey. Bendigo by Pratt's Baron (13,078) out of Maggie May (10,829), by Old Prince out of Kit, by Dick.

Champion Jubilee by Richmond out of Spot I., by Shamrock out of Elsie. Shamrock, by Erin out of Flora. Richmond, by Young Modoc out of Lillie. Young Modoc, by Modoc out of Malloye.

There are also Countess by Gambler (E. 2,747, Vol. I) out of Violet, by Old Victor out of Fuss. Candidate, by Marquis out of Florence. Marquis, by Tarquin (E. 2,776) out of Hink's Fuss.

The information contained above will also give the particulars of Edgewood Fly and Little Prince's breeding, sufficiently so to register. Queen of Spain we cannot find. A number of these old bull-terriers had the same names, but we think we have traced those mentioned to their proper owners. If all is not plain write again. See notice at the head of this column.

## The Gentler Sex Enjoy It, Too.

Editor Forest and Stream:

Papa takes the FOREST and STREAM from the news company in Baltimore, and we all are very much disappointed when it is a day over time on our table. We enjoy the good stories of the outings of people, and contrast them with our own experience. Mrs. R. J. H. BALTIMORE, Md., Jan. 5.

# Hunting and Coursing.

## FIXTURES.

Jan. 15.—Brunswick Fur Club's winter meet. Bradford S. Turpin Sec'y.

## COURSING IN CALIFORNIA.

THE San Francisco Coursing Club had their second meeting in the Newark Park on Sunday last, Dec. 24, and it was a decided success. Twenty-four of the crack dogs of this section of the State entered for the meeting, and it is, I think, no exaggeration to say that they were the pick of all the kennels, and when the draw was made not one of the crowd that attended would undertake to pick out a winner, that is, for single courses, except at even money. Skyrocket and Little Banshee were the only ones of the "cracks" that did not show up for the meeting. The entry money was \$50 each and the stake was named the "Xmas Cup."

Considerable excitement was exhibited by the leasmen over the event, and had the weather kept fine there would certainly have been a large number of people in attendance; but for once the weather completely foiled the sportsmen, and when Sunday morning broke it was evident that the day was to be a bad one, and in all probability wet jackets were in store for all who went for outdoor sport.

The regular sportsmen, however, were not to be balked of their pleasure, and about one hundred of them appeared at the ferry prepared for anything—rain or shine.

On arriving at Newark, about 10 o'clock, it was found that the running ground was in fine order, though there were a few pools of water to be seen here and there over the surface, and heavy clouds were forming toward the southeast that indicated a downpour, which came along in due time, and shower after shower came down throughout the rest of the day that reminded one strongly of a tropical rainfall.

Mr. Dugan, the manager of the park, informed the committee that there were thirty-five of the finest hares in the running ground that had ever been seen there, and "depend upon it," said he, "you will see great coursing," and most assuredly he was correct, for stouter running game was never seen at Newark, and not till the third course was one of them killed—the two first hares especially being regular "road runners."

It was just ten minutes past 11 when the first pair of dogs were handed Mr. Wren, and as he and Judge Grace moved out the rain was coming down like "ramrods," as one of the bystanders expressed it, and when the last brace was handed to him it was exactly 3:30, thus finishing the twenty-four dog stake, after allowing for the luncheon time, in about three hours. Finer coursing has seldom been seen on this field, and notwithstanding the heavy and incessant showers, the crowd seemed to revel in the sport and appeared not to know that there was anything but sunshine. But of course it must be remembered that there were none there but the genuine lovers of the game, and to them, as a rule, good weather or bad weather seems alike—if the coursing is only good.

All the dogs acquitted themselves wonderfully well, but of course the pride of place must be given to the winner, as he met in his run down the card the very pick of the dogs, and he disposed of each one of them in the most workmanlike manner, showing a vast improvement over his Thanksgiving Day running, clearly proving his owner's assertion when the coursing commenced that he was a 50 per cent. better dog than on Thanksgiving Day. On that occasion he was beaten after a fine trial by Jack Dempsey, but this time Jack was well beaten by his sister, White Cloud, who fell after a strong effort in the next round before Shortstop, thus completely reversing in each of these cases the running of the three dogs. From this it would appear that dogs are as liable to change as horses. The other dogs that particularly distinguished themselves were Queen Bess, Vida Shaw and the Australian dog Waratah, who showed an extraordinary dash of speed, indeed, surpassing any of the dogs of the meeting, and actually losing his course with Queen Bess, paradoxical as it may seem, through his great dash of foot. The following are the details of the courses:

### First Round.

**DOTTY DIMPLE—CHIEF OF THE VALLEY.**—Dotty Dimple and Dowling's Chief of the Valley met a boomer, and the way it scampered before the hounds was a caution. The course was a very long one, each of the dogs doing a great deal of work, though in the commencement Dotty had the best of it, but not by a great deal, and when the hare made good his escape Mr. Grace must have stopped to think which of the two had the balance to its credit. Dotty got the verdict.

**QUEEN BESS—GLENFARRON.**—Queen Bess and Glenfarron were then sent after a flyer. The old veteran Glenfarron made play at once and shot out, the black bitch raced up sharply and both ran for a hundred yards close up to the game. The bitch then shot out and brought the hare round, and nearly all the rest of a long trial was hers and the hare escaped.

**WHIP—NATIVE SON.**—Whip and Native Son were sent after a regular flyer, and it was a long run to the game before either dog got near enough to turn it. Whip, however, got there by a length, but the white dog could give no help. Whip eventually killed and won.

**WARATAH—PRIDE OF THE PARK.**—Waratah and Pride of the Park were next called out. This little beauty was made a hot favorite, as all remembered her work with Long John the week previous. Just as both dogs were put in slips, however, Pride broke away and got on to a hare, which gave her a heavy course before she killed. After half an hour she was again put in slips, but Waratah proved altogether too much for her and beat her, though she made a very game effort at the finish of the course.

**MARVELOUS—OLYMPIC.**—Marvelous (late Home Rule) ran a great course with Olympic. The course took place during the heaviest of one of the showers, but it could be seen that Marvelous had the best of it after the first two or three turns. He killed and won.

**MARY ANN—RUSTIC MAID.**—Mary Ann and Rustic Maid had a fair course, but as the work got hot it was seen that the Maid was throwing up her head and allowing her opponent to do as she pleased, showing that the Maid had learnt a little too much. Mary Ann, of course, won after a most exhausting trial.

**WHITE RUSTIC—JENNY G.**—These two also had a great course, and to the astonishment of the talent Rustic beat Jenny, always a reliable and a clever bitch after a fine trial. This was the first appearance of Jenny for many months. She was a hot favorite, too, and, indeed, the first of the dogs on which odds was given. The hare escaped.

**VIDA SHAW—LONGFELLOW.**—Vida Shaw and Longfellow were next in order, the latter being the favorite, but upset the talent in an unmistakable manner and won a decided victory. The hare was a regular stinger, too, and the course was a heavy one for both dogs.

**WHITE CLOUD—JACK DEMPSEY.**—These dogs are brother and sister, and from the decided manner in which Jack defeated her in the Thanksgiving meeting he went out a 2 to 1 favorite. But never were tables so completely turned, and again the knowing ones fell, as the bitch gave Jack an unmerciful thrashing at all points of a long course. She led him to a hare by a length and beat him well at 11 points.

**SHORT STOP—RED PRINCE.**—These were slipped to a rattling hare, but Short Stop got first turn by three lengths, and won a long course, doing all the work.

**MAGPIE—QUEEN OF THE VALLEY.**—Magpie had really the great course of the day with Queen of the Valley. The work done in this trial was most severe for both dogs, but Magpie eventually got the flag by a clever kill. The course caused great excitement, so clever was the work. Magpie was a little faster, but the Queen was the closest worker and the stamina of the hare was wonderful.

**LONG JOHN—COUNTRY BOY.**—They went out as equal favorites, but John made a show of the Boy and won easily. Why Country Boy was ever supposed to have a show with Long John it is difficult to conjecture, except that he is said to be very fast after the patent hare.

### First Ties.

**QUEEN BESS—DOTTY DIMPLE.**—Queen Bess and Dotty Dimple had a great run to the hare, running as if in slips for fully three hundred yards and then Dotty reached out a length ahead and secured the turn. Both dogs then did some clever work but the hare broke away, and in a long reach to the escape Queen Bess had all the best of it, and when puss escaped the Queen had a decided advantage and got the flag.

**WARATAH—WHIP.**—Just as this pair of dogs were being placed in slips the owner of Whip held him loosely and right in front of him a hare jumped up. Of course he shot away and had quite a course to himself. He was allowed half an hour's rest, but he had no show with Waratah, who won, a sharp course.

**MARVELOUS—MARY ANN.**—Had a great course after a flying hare, which managed to escape from them. Marvelous won after some clever work.

**VIDA SHAW—RUSTIC MAID.**—Were slipped to a great hare that gave both dogs an extraordinary lot of hard work both in running and in turning, but it eventually fell to the fangs of Vida Shaw. In this course Vida hurt one of her forefeet and came back to the kennels very lame.

**SHORT STOP—WHITE CLOUD.**—This course was a surprise, as it was thought the white bitch would, after her defeat of Jack Dempsey, be at least a match for the San Jose crack, but she never made a point in a comparatively short course.

**LONG JOHN—MAGPIE.**—This was another short course.

A KENNEL AUTHORITY PICKING A BONE.

the hare being more of a dodger than a runner. John got the flag.

### Second Ties.

**QUEEN BESS—WARATAH.**—Slipped to a hare from the upper escape. The dog shot out, and when he got alongside the hare he was fully six lengths ahead of Queen, but running wide of the game. The hare doubled back and Queen coming in its way she ran in, wrenched and killed, getting of course the flag, but only by pure accident.

**VIDA SHAW—MARVELOUS.**—Vida Shaw was sent out to meet Marvelous on three legs, but by her wonderful pluck she absolutely beat this fast and clever dog after a fine course, Marvelous getting the lead up by two lengths. The hare was both a flyer and a worker, and it was here that Vida shone. She eventually got the kill, which secured her the course.

**SHORT STOP—LONG JOHN.**—Short Stop bowled Long John over in a canter.

### Third Ties.

**QUEEN BESS—VIDA SHAW.**—This was a great course, though the Queen had always the best of it. Yet Vida, notwithstanding her injury, fought well, and was never far away from her opponent through all the points of a great trial.

**SHORTSTOP—TOM HAYES.**—This was a bye for Shortstop. Tom didn't give the crack and winner of the stake a point. He beat him in the run-up, and in another dash picked up the hare, and thus beat the great Shortstop pointless. Of course Tom Hayes was fresh and this was Shortstop's fourth course within three hours' time.

### Final.

**SHORTSTOP—QUEEN BESS.**—Queen Bess and Shortstop, after the latter had his half hour's grace, were then called up and sent after a great hare. The course was a fine one, but Shortstop managed to get first turn, and then some clever work was put up by both dogs, Shortstop all through having a little the best of it, and when the hare fell he was a decided winner.

Mr. Grace and Mr. Wren gave thorough satisfaction all round, as usual.

### SUMMARY.

T. J. Cronin's w & f b Dotty Dimple	beat	J. Dowling's br d Chief of the Valley.
T. Cooney's b & w b Queen Bess	beat	M. Tiernan's r d Glenfarron.
J. Cranston's bl & w d Whip	beat	J. Shannon's w d Native Son.
R. E. de B. Lopez's b & w d Waratah	beat	J. J. Edmond's br b Pride of Park.
J. Cranston's br d Marvelous (late Home Rule)	beat	M. Tiernan's br d Olympic.
M. Tiernan's f b Mary Ann	beat	Dowling & McCormacks w & bl b Rustic Maid.
Dowling & McCormicks w d White Rustic	beat	T. J. Cronin's w & bl b Jennie G.
J. J. Edmond's w b Vida Shaw	beat	J. H. Perigo's bl & whtd Longfellow.
S. A. Cummings's w & br b White Cloud	beat	T. J. Cronin's wht d Jack Dempsey.

P. Curtis's br d Shortstop	beat	A. Merrill's f d Red Prince.
P. Ryan's blk & wht d Magpie	beat	J. Dowling's br b Queen of the Valley.
M. Tiernan's br d Long John	beat	S. E. Portel's blk d Country Boy.

### First Ties.

Queen Bess beat Dotty Dimple. Vida Shaw beat White Rustic. Waratah beat Whip. Shortstop beat White Cloud. Marvelous beat Mary Ann. Long John beat Magpie.

### Second Ties.

Queen Bess beat Waratah. Shortstop beat Long John. Vida Shaw beat Marvelous.

### Third Ties.

Queen Bess beat Vida Shaw. Shortstop a bye.

### Final.

P. Curtis's bridle and white dog Shortstop (Midnight—Peasant Girl) beat T. Cooney's black bitch Queen Bess (Laurelwood—Black Bess) and won the stake, \$40; Queen Bess took \$25, Vida Shaw \$15, Marvelous and Long John \$10 each.

The Merced interstate meeting will commence on Washington's Birthday. The number of entries will undoubtedly be large, and the first money will be either \$400 or \$500. The San Francisco Club will also hold a large meeting in their park the week after the Merced meeting, so that all who may come from a distance will have another big stake to play for without having to lose much time.

The sport is growing fast all over this coast, and greyhounds that have any pretensions to good breeding cannot now be had here for less than \$75 or \$100, while two years ago the same could be had easily for \$25 or \$30.

### GAZEHOUND.

### Beagle Hunting in England.

If only the American hares could be induced to run in the open as their English cousins are wou't to do, how much more interesting it would be to follow the merry little hounds in this country. This sort of thing is denied our beagle men, however, and as a usual thing we must be content to rush through briars and swamp at the imminent risk of limb and cuticle, with a multiplicity of checks giving us our only views of the hounds, and if it was not for the music there would be precious little to encourage one to undergo the fatigue. Just to show the happier conditions under which our cousins across the water take their sport we will give an account of a run with the Worcester Park beagles which we find in the last English Field.

This good little pack has been showing the most remarkable sport this season, scarcely having had an indifferent day. On Wednesday, the 6th, they met at Harefield House, Chesham, and punctually at 11:15 a move was made to North Chesham, as the covert on the Epsom side were going to be shot on Friday. The drawing for a quarter of an hour, a hollow some way off was heard, and our master set off at a rare pace. No sooner were hounds laid on than it was apparent that scent was all that could be desired. Our hare took a most extraordinary line, straight into Sutton, and, after running down one of the streets, in at one gentleman's front gate and out at another one; hounds suddenly checked. A wag was here heard to ask whether our worthy master would not like to make a cast down the High street, as it appeared the only spot where hounds had not run. Mr. Simpson, however, noticed a hound sniffing about at the wooden paling in front of a small house, and the good lady, at that moment coming out, invited him to draw her diminutive back garden. Every one felt inclined to laugh, as it had been cleared of everything except a group of three cabbages. Mr. Simpson, however, went in and there was puss, who was up and off like a shot, managing to just squeeze out between the wall of the house and the fence—a space apparently not big enough to let a cat through. Hounds were quickly taken round, and, after running right round the churchyard, went out into the country through the football field, till finally we lost her on Mr. Lee's field. Time, one hour.

Our master here handed over the horn to our energetic whip, Mr. Longman, and after drawing one or two fields blank, we crossed the road and drew toward the kennels. Hounds seemed every now and then to have a bit of a line, and sure enough when within about half a mile of their kennels up got Sarah, and a grand run ensued. They raced over the grass like foxhounds, every member of the pack giving tongue, over the Epsom road below the Queen Victoria Inn, on to Mr. Hale's land, then right-handed up through Mr. Fiddymet's into Non-such Park, where they checked, with only Mr. Longman and two others with them. A dash of about ten minutes followed. Willing and Wasteful hit it off again, and up got puss who had been squatting and crossed the heavy plow land of Mr. Martin's, across the line, through Harefield House garden, and away like wind, the field being about as completely spread-eagled as it has ever been my lot to see. It was now evident that her point was the very covert which had been purposely avoided; however, it was utterly impossible to stop hounds and the only thing was to blunder on as best we could, for there was no more "run" left in us. Fortune favored us, however, for just as we got into the same field as the covert bordered, we saw our hare just in front, clear dead beat, and the way Livery and Tragedy drew out from the pack and rolled her over within 100yds. of the point was a treat which only the few blown mortals who were there could properly appreciate. This was a three-mile point from where she was found, five miles as hounds run, all over grass, with the exception of one plowed field, and with only one check. Time 45m. and every hound there.

A three-mile run over grass is something for our Kreuders, Reeds, Chapmans and Jamiesons to dream about, but, alas, we fear with no possibility of realization. Even our friend Phœbus would feel disposed under such circumstances not to push the height of his beagles over the 15in. line. In the account of another day's work with the Cheshire beagles we find the hounds called off after a run of an hour and a half in the open, and this after killing the first hare at the end of a fifty-three-minute "gallop."

An interesting account is also given in the same paper of a run with the Surbiton beagles, in which a noted beagle, Rosemary, came to an untimely but glorious end. After a good run, the hare being hard pressed, "puss" turned toward a railway cutting, the walls of which were of chalk rock with a sheer fall of 43ft., and to the consternation of those below, Rosemary, with the hare in her jaws, was seen to disappear headlong down to the metals below, followed instantly by seven other hounds. Poor Rosemary and the hare were found lying dead together, and most of the others lay where they fell, stunned by the fall, while, to make matters worse, those few of the hounds able to move narrowly escaped being cut to pieces by a passing train. After the wounded hounds were taken back to the kennels, the remainder of the pack, seven couple, found two more hares, one of which afforded a run of one hour and a quarter before she was pulled down. "Poor Rosemary was left to her last long sleep near the spot where she fell, in the midst of the scene of many of her former triumphs."

### American Foxhounds.

THE anxiety displayed by the different clubs, which have the welfare of the American foxhound at heart, to adopt or formulate some standard whereby these hounds shall be judged in the future, is very commendable. At the same time, we are afraid that this zealous feeling may lead to some confusion. Already we have two associations or clubs in the field whose intention it is to form a standard at an early date, and another club is to be formed at the coming Saratoga show with this end in view. The arrangement of a standard is too important a matter to be considered hurriedly or in the interest of any one strain; it should be a welding of all interests, so that the result should conduce to the common weal. The National Fox Hunters' Association, an association composed of the most prominent fox hunters in the country, and who are also members of the other clubs, is the only body of sportsmen on which this duty should devolve. There would be no objection to the fox hunters at the Saratoga show and those of the Brunswick Fur Club carrying out their intention, with this reservation, that before finally adopting such standard as they may propose, they would forward the same to the committee on standard, selected by the

be extended in other ways as well. I have found that if you bring a certain amount of trade to one man he will usually give lower rates, but at present we have the spectacle of a well-known New York dealer in canoe jewelry putting his prices as has been remarked—"50 cents worth of name and 50 cents worth of goods for \$1 spent." Other dealers in canoe goods take their cue from him. My idea might cut down some of this.

## YACHT NEWS NOTES.

old maps and logs stowed away, would it not be a good plan for him to produce them once in a while in FOREST AND STREAM or somewhere else for the benefit of his fellow members?

JOHN T. HOLDEN, A. C. A. 1292.

### THE LOG OF THE FRANKIE.

The '92 Cruise of the Shenandoah C. C.

BY THE COMMODORE.

(Concluded from Page 17).

As we sat by the spring, welling out from a deep crevice in the moss-grown rocks in the cool ravine, enjoying a quiet smoke and rest, Lacy was much amused by our description of how we had landed here last year with the intention of camping for the night and how old man Foster had worked us away by pointing out the superior camping facilities afforded by McIntire's—a mile below—and the danger we ran from camping on the public road (as he dignified the grass-grown wheel tracks, which, so far as we could see, only led from his tumble-down house to his tumble-down stable), quite evidently taking us for a couple of suspicious characters, whom it was well to be rid of as soon as possible and whom it would be unsafe to have on the premises over night.

Lacy was also interested to learn that on our memorable '88 cruise George and I made the run from here to Riverton between lunch and supper (arriving there after dark). We had good water then—rather too good, in fact—while on the present stage of water it would be a long day's run from here to Riverton.

About half-past 11 or 12 o'clock we reached the stove factory just above McCoy's Falls, where water had decided to lie by for lunch and a noonday siesta. This, like yesterday's lunch place at Milford, proved to be a very uncomfortable spot. The weather was intensely hot and close, the shade was thin and poor, as the trees were little better than bushes, and it was stilling close and hot under them. The water was poor and a quarter of a mile away.

After lunch, of course, of entering ourselves, we changed our quarters to the opposite side of the river, which, as it was a sand bank densely overgrown with willows, was scarcely an improvement upon our first landing place. The shade was better and more abundant, but the undergrowth was so dense that there was no breeze and it was stiflingly hot; and altogether our situation was an uncomfortable one. There was a small stagnant pond, a few yards inland, evidently left behind by some recent overflow. There were fish in it, for when George threw small toads in it they were instantly snapped up. A trial with his fishing tackle produced no results, however.

At 4 o'clock we re-embarked and resumed the cruise, and a quarter of a mile below George discovered that he had left his fishing rod behind, so he went sweating back after it, while Lacy and I paddled on leisurely to the head of the falls, where we laid by, up under the bank in the shade to wait for him.

After getting his rod and paddling half way down to us, he was observed to turn back and again return to our siesta-ground. On rejoining us it developed that he had also left his camp stool behind and a second return was necessary. The subject was beyond swearing and the second return was made in a gloomy silence. George is a careless boy around camp, and would go off and leave his head behind if it wasn't tied on.

There is a post office at the stove factory, and while we were there we mailed letters, including one from the boys to their Berryville friends stating that owing to low water and intense heat, we would not be able to reach Castleman's Ferry by Thursday, and therefore had decided not to start on Thursday. At McCoy's Falls the river widens out to a most imposing breadth, but is correspondingly shallow and of course full of reefs, and we had difficulty in finding water enough to get through, even with our small light draft canoes; and hang-ups, even in the boat channel were most annoyingly frequent.

There is one place in this falls where we have always missed the channel, and owing to the scant water, we missed it more than on any other year. The channel goes in at the head of the falls, close up to the left bank, and continues down a quarter of a mile, when it takes advantage of a smooth still reach between two lines of reefs, to cross over to near the right bank. We have always missed the exact place where it crosses, and gone too far down before crossing, to our great annoyance; for, once out of the channel, it is peculiarly difficult to get through this wide shallow, and, as a rule, we have been unable to locate it positively, however, in time for next cruise, after, as usual, missing it to-day.

At the upper part of the falls there are three chains of grass grown rocky islets extending clean across the river, forming, with the connecting reefs of great limestone reefs, over which the water falls in cascades of frothy white foam, and, as a rule, a barrier impassable to any kind of boat except through the boat channel.

The channel passes through the first and second of these chains, close to the left bank, as before stated, while, on approaching the third and densest chain, it runs out almost across the river and then goes down through the islands in a long, narrow, straight canal, down which the water ripples and rushes with the speed of a millrace. To-day is the third time we have missed this channel, and, as a result, below, having missed the upper end of it every time heretofore, but I'll warrant we'll run down it next cruise.

After securing the channel the remaining three miles of the falls gave us but little trouble. At the ford near the foot of the falls we passed one of the gondolas or flat boats similar to the ones formerly used in navigating the river in the ante-railroad days, loaded with barrels from the heading a few miles above, and moored to a log above the bank. While at the factory we learned that their entire product was boated down the river through the falls to this ford, and thence hauled to the railroad, a few miles away.

As we slid smoothly along past it on the rippling current, we at once saw how it is that these big boats can navigate such a shallow river, for it floated like a leaf on top of the water and did not draw much, if anything, over two inches less than half what our light canoes drew. We still wonder, however, how they get them over some of the reefs and falls we shoot, without their hanging up amidships; or how they swing them across some of the sharp turns in the channel, for the boats are 70 ft. long and 10 ft. wide—as big as a ferryboat.

We had an exciting shoot over the old dam and down the short, steep rapid below it, the foot of the falls, and by P. M. we reached our chosen camping-ground at the mouth of a small creek, where we camped in '88. There is a good spring in the bank of the creek some 50 yds. up from the river, and we all walked up to it over the roundabout path along the bank above the creek—for the driest route up the creek bed is very muddy—and enjoyed to the utmost a refreshing drink of water as well as a lemon decoration before making camp. We pitched the camp on the bar but a foot or so above the water, much as we did in '88, and the spot made a very comfortable camping-place, and we had a good supper and pleasant evening in camp before turning in for the night.

Wednesday, Aug. 10, 1892.—We were out at 4:30 this morning and hurried through with our camp work and were aloft again by 7:30, so as to get off as early as possible and avoid the heat of the day for this, the homestretch of the cruise. The 10 miles from here to Riverton is a troublesome stretch, as the river is so broad, shallow and full of reefs that it is difficult to find water enough in places at the present stage. However, profiting by the cruises of '88 and '91, we knew pretty well now where to find the best water, and so had but little trouble.

The event of the day—indeed, of the entire cruise—was the running of the shoot in the Blakemore Dam, opposite Front Royal, a shoot we have always heretofore declined. This shoot is a massive log structure built out from the face of the dam—which is some 7 or 8 ft. high—and sloping down to the level of the river below at an angle of about 60 degrees. Pretty much all the water in the river rushes and roars down this huge trough with tremendous power and violence, and pitches off the lower water in a perpetual spray about a yard high, while, even in the shoot itself, owing to inequalities in the floor, the water rolls and pitches in huge waves, making a horribly rough passage.

It looked safe, however, with good management, so with tightly closed hatches and aprons drawn up to our chins we engaged it, one at a time, George first, Lacy next and the Commodore last. The plunge was a most exciting one, and the canoes were completely buried in the water at the perpendicular drop at the bottom of the shroud, the water rolled in a solid sheet, a foot deep clear over our decks, from stem to stern, and the sharp crests of the waves struck us in the face. We a-l-shipped a little water here, not to exceed a half gallon all told. It was a most exciting episode, and worth the whole trip. I now feel satisfied for I have never yet portaged this dam, but if they had had a shot at avoiding the shoot, and we have always heretofore considered it too horribly rough to run.

The remaining four miles of the cruise were made without incident. We got a glimpse of the old, old story in the shape of a spruce looking young man and his equally spruce looking best girl evidently from the summer hotel at Front Royal spooning in a beautiful shady nook on the river bank; they were probably fishing, but if they had had a shot from a rifle it is not likely that it would have received much attention. At exactly noon we ended the cruise by landing among the miscellaneous collection of sail boats, skiffs, and gondolas, moved under the steep high bank just above the big dam at Riverton; and, after making the canoes fast, we climbed the rickety flight of steps leading up to the road above, along which we walked to the flowing spot where we were refreshed and cooled with beer and lemonade. After we returned to the canoes (taking with us a bucket of water) and paddled across to the left bank and had our lunch and then lazily unpacked the canoes, drew them ashore and put up the camp on our old camp ground, a beautiful piece of turf on the tree-

lined river bank by the roadside, and made ourselves comfortable for the rest of the day, as we cannot comfortably get things packed and shipped for home until to-morrow.

After putting the camp in order, I walked across to the post office to get my letters from home. On the way over I passed a fine large house, evidently full of summer people, for the ample veranda was crowded with young people, among whom I noted considerable of the fair sex. My not too presentable canoeing costume—short trousers, long stockings, etc.—muddy and travel-stained from the long and arduous cruise—seemed to attract some attention and afford some amusement to the company, as well as to offer a little opportunity for brilliant remarks at my expense, as I inferred from some of the observations dropped as I passed along. One very witty young man wondered audibly what I would take for the "pants," while his fair companion wondered whether I would be willing to throw in the helmet in case a trade was consummated. As I really did not care to dispose of either, I turned a conveniently deaf ear to their remarks and hurried on past, and on returning I took occasion to slip down a convenient back way, fearing that if I again made myself visible somebody's intellect might receive a strain.

On my return to camp, George and I took advantage of the several hours of afternoon still left us to go fishing. George went down below the railroad bridge with his fly tackle below the mouth of the north fork, which comes in about a quarter of a mile below our camp while I fished from the dam with bait. This place is fished to death, and at least twenty men and boys were fishing around in different parts of the river; but I caught three nice bass, while George returned at supper time with a string of some seven or eight fine ones.

We had an elegant light supper and had a party of lady visitors in camp while I was getting ready for the morning's outing, doing the heavy sitting around, and entertaining the visitors with preposterous and untrustworthy accounts of their adventures and hairbreadth escapes during the cruise, while I did the rest. One pretty, bright-eyed young miss asked who did the cooking and Lacy replied that the Commodore officiated in that capacity in addition to his other duties, and incidentally expatiated upon the Commodore's skill as a culinary artist, upon which point Lacy may fairly be considered an authority. "Oh, how nice!" she exclaimed, as Lacy concluded his panegyric. "And you two gentlemen just take him along with you for that purpose!" She was much abashed when the boys broke into a loud guffaw, which gave her to understand that the Commodore was permitted also to associate with them on terms of entire equality.

Thursday, Aug. 11, 1892.—We got a leisurely start this morning, as there was no hurry; so leisurely, in fact, that when our fair visitors of last night came down again at 9 o'clock to see the camp by daylight and to see us pack they found me just beginning to get breakfast and Lacy in the midst of a shave. In due time we were packed—our fair friends waiting their process—and we were off with exclamations of wonder that much plunder could be stowed into so small a space—and the boats were clattered across to the Virginia Midland R. R. station and shipped for home via B. & O. freight, and at 12:30 we embarked in a chair car on the N. W. road and were soon speeding back up the river for home. We took a late dinner at Wright's Hotel at Sheridan and had the usual tedious wait at Basic City, and at 6:30 we reached Stanton, and the cruise of '92 was over. Next year we will start from Mt. Crawford on North River instead of cruising through Middle River, and will push right straight along for the lower river without dallying along as we did on this cruise.

This dallying on a cruise is really the pleasantest part of the trip; there is no hurry, and it is better to take things easy, even at the expense of shortening the objective point of the cruise, as we did this last time, by stopping at Riverton instead of Harper's Ferry; but we find that from two to three weeks is as long as we care to stay out, and next year we will push along rapidly over the more familiar upper river and dally along after we get further down, which will be better; for the further down we get the better the fishing becomes, and we can thus spend more time in becoming better acquainted with the lower river. Next year we intend to inscribe on our banners our legend, after the classic motto of the famous Pike's Peaker of '49, "Harper's Ferry or bust," and we have no idea of busting.

### CANOE NEWS NOTES.

Appropos of the kauri, or cowree, pine, recently mentioned by a correspondent; Mr. F. A. Perrot, of Port Townsend, Wash., has sent us a small piece of the wood. The grain is somewhat similar in appearance to beech wood, so much used here for planes and other tools. Mr. Perrot says: "I have worked many thousand feet, and it is one of the best, if not the best wood I have ever used; light, durable, free from knots and finishes well. Kauri pine is worth \$2 to \$25 per thousand in New Zealand. In regard to the Spanish cedar, which is sold in Sydney, where it is brought from Queensland, for \$22 per thousand."

A correspondent asks for information concerning the St. Francis River, Lakes Memphremagog, Willoughby and Chrysal, and the Passumpsic River, on which he proposes to cruise in a canoe.

TRAVERSE CITY, Mich., Jan. 1.—Mr. J. A. Montague, V. E. Montague and the writer must take credit for opening the canoe season so far as Traverse Bay is concerned, having enjoyed a two hours' sail in the canoe into this New Year's Day. For some years it has been our custom to take a sail on Thanksgiving, Christmas and New Year's Day, something the outside world, who judge northern Michigan winters by what they read, would hardly think possible. Great interest will be taken in canoeing here during the present year, several canoes being under construction, from which great speed is expected.—S. E. P.

The annual meeting of the Red Dragon C. C. was held on Jan. 5 at the Colonnade Hotel. The following gentlemen were elected to fill the offices for the ensuing year: Com. H. E. McCormick; Vice-Com. H. B. Fleishman; Treasurer, A. S. Penner; Quartermaster, W. J. Smith; Correspondent, F. O. Gross; Fleet Surgeon, W. C. Fetridge, M.D.; House Committee, W. J. Scott (chairman), H. D. Bachman, F. W. Noyes, H. Blummer, M. D. Witt.

At the election of the Hoboken C. C., Jan. 3, the following officers were elected: Com., Rich Biege; Vice-Com., G. V. Strahan; Treas., L. C. Kretzmer; Sec'y, P. C. Gotschalk; Capt., Theo. Forst.

### Rifle Range and Gallery.

#### Jerseymen at the Targets.

THERE was a good-sized crowd of riflemen and their friends in the Greenville Schutzen Park on New Year's afternoon. The weather was warm and springlike and the light fine. The Zettler Bros., with a party of New York and Brooklyn friends, were present and participated in a little informal practice. Five members of the Greenville Club shot off a 50-shot handicap match for refreshments and a nominal stake. M. Dorrier was out with his new Ballard match rifle, his first appearance with it on the range. Michael gave a little exhibition of what he can do by putting up two scores of 234; he then let up a little to allow the other fellows to keep anywhere near him. The weather was warm and pleasant, but as the day advanced the light became a little too hazy for fine shooting. This, however, made no perceptible difference in the zeal of the shooters in their efforts to reach the center of the bull. Chavant, who by the way has been improving in form of late, expressed himself as being satisfied to forego

his usual handicap and start scratch. Hansen was late in getting out to the park and was handicapped with the uncertain light in the last half of match. Under more favorable circumstances his score would be many points better. Collins brought out a new Ballard .38-50 for trial. His score shows quite an improvement over those of the past few weeks. A few more practice shoots and his handicap will come down several points. Colin Boag, with the aid of his handicap, reached the highest total of the day.

During the afternoon the portly form of that leader of experts, Barney Walker, walked into the shooting house. His entrance was the signal for an enthusiastic impromptu reception to this popular exponent of target-shooting. After a cordial hand clasp with all present, Barney was interrogated as to the whereabouts of his gun. His answer was that he dropped it in just for a social visit. All out of practice, had hardly fired a shot since the Chicago International tournament last summer, but the growing reputation of the Greenville Club, and the good repute of Jerseymen in general, had induced him to cross the Hudson and venture a trip to Greenville on the icy line. Mr. Barney Walker, in a shooting house among riflemen is very much like a drop of water on a hot stove cover, and on this occasion he was in his usual lively mood. It did not take him long to brew a little rivalry between two of the shooters present—Messrs. Hansen and Plaisted. Barney picked out Hansen as, in his judgment, the better man of the two, and proceeded to arrange an impromptu match, ten shots per man, risking a small bet on his judgment. Hansen expressed himself in sport and made his care free, as he expressed it. As a general thing the shoemaker is quite successful in picking a winner, but in this case he was a little off, as the appended scores will show. When the two contestants commenced their race the day had so far advanced that the shades of night were crowding the daylight to that extent that the light was poor and the location of the bullseye somewhat uncertain. After each man had fired two shots Walker expressed himself as feeling quite sure of his expenses. The third round, however, gave him a slight chill, and as the race progressed he ordered a little tonic to ward off the inevitable. Scores:

Plaisted.....	17	14	24	23	31	25	21	24	22	20	—210
Hansen.....	16	17	19	22	22	25	19	23	24	18	—204
The result was somewhat of a surprise to Walther, and yet did not change his faith in the correctness of his judgment, and to convince those present that he had not made an error he offered to back Hansen, in a 50 shot match for a moderate fraction of his shoe factory. His offer was accepted, and the match will be shot off on Saturday, Jan. 20, between 1 and 4 P. M.:											
Hansen, scratch.....	19	16	32	17	25	24	30	23	19	17	—204

Rifleman vs. Bowlers.

A novel match took place last week in Jersey City between a rifle club team and a bowling club team. The contest was made up under the novel rules of the match on the alley and on the gallery, the total scores of the two to count. The match was between teams of the Greenville Rifle Club and the Catholic Club. The first contest was on Wednesday night on the Catholic Club alleys. The rifleman went into the bowling contest with a confident faith in their ability to center the alley and down the pins, but when tried to send the balls down center of alley they found that the balls rolled upon an eccentric that seemed to carry many of them into the gutter, much to the disgust of the perspiring shooters. The result was that the Catholic team won the bowling match by a margin of 418 points (pins).

The return match was shot off on the gallery ranges of the Greenville Club on Saturday night. The members and friends of the Catholic team were promptly on hand and filled with a zeal to try and hold their bowling margin or at least enough of it to leave them a surplus to their credit on the grand total. The bowlers, however, found it somewhat difficult to make their bullets and the targets connect, one member making a clean score of goose eggs. The result was that the Greenville team won the rifle match with a margin of 1,123 points or a net margin on the two matches of 705 points.

The result of this novel match is that the Catholic Club now express its intention to build a set of ranges in its fine club house on Jersey avenue and educate a team of rifleman. Should the club carry out its intentions in this matter, the Catholic Club will be a formidable force in its bowling members, some good material out of which to make good rifleman. After the close of the match the Greenville Club entertained the visitors in a liberal manner and sent them home filled with that respect toward the Greenville Club which is born of good fellowship. Scores:

Denver's New Year's Shoot.

DENVER, Col., Jan. 3.—*Editor Forest and Stream:* The third annual prize shoot, which was the opening of the 1894 rifle competitions under the auspices of the Denver Rifle Club, was a complete success. Marksmen were present from different parts of the State, and from 9 on the day the range was packed with shooters. Nothing was lacking on the part of the management, and the firing continued smoothly as fast as the shooters could load and fire. Including preparatory shots, the score sheet shows that over 1,100 shots in all were fired. The prize list contained over seventy valuable prizes. The match was open to everybody. No marksman could win but one prize, and that was determined by his score, the highest score being first choice of one prize on the entire prize list, and the subsequent shooters in rotation according to their scores. Three shots, off-hand, distance 300yds., American standard, any gun sight or trigger pull:

New York Rifle Club.

The New York Rifle Club held its regular weekly competition for prizes and medals at Zettler's gallery, 12 St. Mark's place, on Jan. 6. There were nine members present, who made the following scores, the two best to count on each day:

R J Young.....237 245 G E Gensch.....235 237 E B Barker.....221 226  
M Herrington.....236 240 H Duane.....230 235 Jas Duane.....208 225  
ER Chadbourne236 238 A H Isbell.....239 230 F C Hamilton.....206 212  
E. R. Chadbourne, Sec'y.

Miller Rifle Club.

At the weekly gallery shoot of the Miller Club last week sixteen members participated. Captain E. Fisher led his members with the good score of 241. The scores: Captain Fisher 241, Kruse 238, Schlicht 238, J. Meyer 236, Brandt 233, Dewey 230, F. Meyer 228, Vanderhayden 224, Leil 223, Meyns 223, Miller 220, F. Solt 225, Murphy 220, Scott 225, Stadler 222.

RIFLE NOTES.

President B. Walther is reported to have received a letter this week from M. Dorrier, of New Jersey, authorizing Walther to make a match for him with F. C. Ross for a 100 shot gallery match to be shot on the Cypress Hill range, three weeks from signing articles. Stakes from one to two hundred dollars a side. This ought to bring about a match for the Cypress Hill range is Ross's favorite ground.

There is an effort being made to establish a league among the rifle clubs in Hudson Co., N. J. We trust that the Jersey reformers will succeed in forming a league that will add a little life to many of the clubs, who at the present time are in what Mr. Dana would describe as innocuous desuetude. This leads us to inquire as to what our Newark gallery shooters are doing these long winter nights. It is many moons since we have heard anything from the many clubs who used to make this city the centre in gallery shooting during the winter months.

The Busse-Plaisted match, one hundred shots each, will be shot off on Washington Park range on Friday of this week. It is expected that many of our prominent experts will be on hand to witness the contest.

L. P. Hansen, of the Excelsior Club of Jersey city, is matched to shoot Plaisted, a 50 shot race on Saturday, January, 20th, on the Greenville Schuetzen Park range.

President B. Walther, of the Zettler Rifle Club, was a visitor at the new club house of the Greenville Rifle Club on Saturday night. He was highly pleased with the arrangement of the house and its ranges, and he prophesied a successful future for this young and energetic club.

We learn that Win. Hayes has returned home from his visit to the South very much improved in health.

Brother Hough's statement in last week's issue that the Windy City gun gallery shooters who were game enough to put up their lure to the extent of from \$50 to \$500 in a 100-shot gallery match has created a little interest among our local shooters. They have suggested to our rifle scribe, Plaisted, that if the ambitious Chicago shooters were to give out something in the way of a challenge that was bona fide all wool and a yard wide, the New Yorkers would try a piece of it. What do you say, Chicago? Business in New York with the rifleman at the present time is very dull and they are inclined to accept most anything that will break the monotony of their present surroundings.

Zettler Rifle Club.

The first monthly meeting of the Zettler Club for the year 1894 was held at headquarters on Jan. 2. There was a light attendance, for which the holidays were no doubt responsible. The shooting of the members after the close of the meeting was of that quality usual to these experts. H. Holges got the champion medal on the excellent score of 247 on his first entry, and he also divided honors for the best 10 shot score with R. Busse, 247 each. Scores:

Champion medal: H. Holges 247, R. Busse 245, F. C. Ross 244, B. Walther 245, G. Nowak 240, B. Zettler 239, L. Flach 238, F. Schmitt 236, H. D. Muller 235, M. B. Engel 235, C. G. Zettler 237.

Best 10 shot scores: R. Busse 247, H. Holges 247, F. C. Ross 246, B. Walther 245, P. F. Schmitt 245, G. Nowak 246, M. B. Engel 245, B. Zettler 244, C. G. Zettler 243, L. Flach 243, G. Zimmerman 243, H. D. Muller 241.

Winchester 1894 Reloader.

The Winchester Arms Co. send us a description of their 1894 model reloading tool, designed to make more easy the reloading and resizing of large sporting ammunition. By a strong lever, a motion (not more than .03 of an inch) is imparted to the slide. The cartridge is contained in the die A, as shown in the cut. The die screws in to the frame. The shell, with its charge and bullet, is put together by hand and put into the die A. The die is screwed into the frame as far as it will go readily. A motion of the lever toward the die will force the cartridge into the die through a short distance. The backward motion of the lever loosens the cartridge in the die and withdraws it partially. The die can then be screwed up through a part of one turn. The repeated motion of the lever and continued screwing up of the die bring the cartridge its full length into the die, inserts the bullet to the right

distance, crimps the cartridge around the bullet, and reduces the shell to its original size, so that it will go freely into the gun.

With this tool it will be found to easily reload the largest cartridges, compressing the powder, putting the bullet to place, and reducing the shell on the outside to its original form. By the reverse motion, that is, by lifting the handle of the lever away from the die, the slide is lifted and the cartridge, by means of the extractor, is drawn a slight distance out of the die. When the handle is returned to the die, the latter can be unscrewed a corresponding distance. Another motion of the lever draws the cartridge still further out of the die, and with a few motions it becomes so loosened in the die that the latter may be easily unscrewed. As soon as the cartridge is loosened in the die, the extractor loses its grip, and the die and cartridge are taken from the frame together. This tool, new in principle, permits, with the use of little force, the most exact reloading, including the resizing of the shell. A measure, giving the exact quantity of powder, set of bullet molds, charge cup and primer extractor accompany the tool. The tool weighs two pounds. It will be made to load the following sizes of ammunition: .32-40, .33-55, .35-56, .40-55, .40-62, .45-70-405, .45-70-500, .45-90, .50-110 Express.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

Jan. 16-18.—Grand live and artificial bird shoot, \$1,000 guaranteed, by the Hamilton Gun Club, J. E. Cray, Sec'y.  
Jan. 23.—Open shoot at 25 live birds, \$35 entry, on Erb's grounds, Newark, N. J. Entries close Jan. 22.  
Feb. 22.—White Plains (N. Y.) Gun Club tournament.  
Feb. —Reading Shooting Association tournament; two days targets, one day live birds, at Three-Mile House, Shillington, Pa.  
April 4-6.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Dexter Park, Long Island.  
April 24-27.—Central City Gun Club's tournament, Central City, Neb.  
May 1-6.—Arkansas State Sportsmen's Association's tournament, at Fort Smith, Arkansas.  
May 17-18.—West Newburg (N. Y.) Gun and Rifle Association's spring tournament.  
May 22-25.—Knoxville (Tenn.) Gun Club's thirteenth annual tournament; first days, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.  
June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.  
June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.  
June 19-21.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.  
June (third week).—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.  
Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wagonhook Park, Altoona.  
Oct. 4-5.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament.

DRIVERS AND TWISTERS.

The fourth annual tournament of the Hamilton (Ont.) Gun Club, to be held on Tuesday, Wednesday and Thursday of next week, bids fair to be as successful as their former affairs. The big event will be the opening shoot at 20 live birds, \$10 entry, for which \$700 is guaranteed. First money is \$300, second money \$100, third money \$75, and so on down to the fourteenth, which is \$15. Entries for this event will be taken on Monday evening at the Brunswick Hotel, Hamilton. Entries made after 12 M. on Monday will be charged 10 per cent. extra. The high guns will take the money. Hamilton Gun Club rules will govern. The rise will be 30yds. and the boundary 100yds. On the same day there will be a 15-target event, \$1.50, with \$30 guaranteed; a 20-target shoot, \$2 entry, and a 20-target sweep, \$2 entry, with \$10 guaranteed. Wednesday's programme comprises 15 targets, \$1.50 entry; 10 targets, \$1.50 entry, \$25 guaranteed; 20 targets, \$2 entry, \$50 guaranteed; 20 targets, \$2 entry, Thursday, live bird miss and out, \$5 entry; \$10 guaranteed with surplus, 20 entries to fill; 15 targets, \$1.50 entry, \$30 guaranteed; 20 targets, \$2.50 entry; 15 targets, \$1.50 entry, \$25 guaranteed; 10 live birds, \$5 entry.

Sportsmen throughout the East are clamoring for a chance to witness a match between E. D. Fulford and J. A. R. Elliott, who have never met one another before the traps in this section. The furthest east trap match during the series of five matches was William'sport. Fulford is a member of the Newark Gun Club, and his clubmates are anxious to see such a contest as above take place on the club grounds at Erb's. Elliott is also hanging for an opportunity to pull even with his old opponent, who during the series referred to won four matches to Elliott's one. Elliott desires to shoot in the East, where business will detain him for several months. He stands ready to arrange one or more matches at 100 live birds per man for \$250 or more a match, each match, and the sooner they are arranged the better will he be pleased. When Fulford was in this section a few weeks ago Elliott approached him on the subject, when Fulford said he would not be able to go into a contest until February. Fulford also preferred to shoot in Chicago, but to this Elliott declined to agree to a trip West, saying that he considered the East good enough to shoot in as long as both men were at hand, and that he saw no sensible reason for making a thousand-mile journey in order to shoot. Whether they will come together or not remains to be seen, but we are inclined to the belief that the public will have an opportunity of gauging their respective skill before many weeks have elapsed.

The fourth shoot for the medals of the Riverside Gun Club, was held at Red Bus, N. J., Jan. 5. The contest was at 25 bluecock targets, from 5 traps, unknown angles. Oscar Hesse was high with 23, using Walsrode powder as a matter of course. E. M. Cooper broke 22, Albert Ivins 20, E. Throckmorton 19, T. Davis 18, L. S. Campbell 18, John Cooper 17, J. S. Hoey 17. In a 5-man team shoot at 10 targets, rapid-fire, the scores were: Team 1: E. M. Cooper 9, W. M. Little 8, E. Throckmorton 9, Oscar Hesse 6, H. C. White 3; total 44. Team 2: Albert Ivins 9, John Cooper 4, J. S. Hoey 6, T. Davis 4, E. Garsney 4; total 33. Team 3: Oscar Hesse 8, E. M. Cooper 7, Ivins, Hoey and Throckmorton, 5 each; Campbell 4. At 5 singles: Throckmorton, John Cooper and Ivins, 4 each; E. M. Cooper 3, Hoey and Hesse, 2 each.

The Maplewood (N. J.) Gun Club enjoyed its annual dinner at Smalley's South Orange Hotel on Friday evening, Dec. 30, there being a goodly number of members present. Speeches and singing followed and afterward came the election of officers for 1894, this resulting as follows: President, J. Warren Smith; Treasurer, T. B. Smith; Recording Secretary, Walter G. Laidlaw; Corresponding Secretary, O. L. Yeomans; Manager, D. W. Van Idersine; Field Captain, William Drake; Governors, Samuel B. Tillou, J. Siggius, W. C. Smith, William Drake, Albert Barry, D. W. Fisher, D. W. Van Idersine, O. L. Yeomans and Walter G. Laidlaw. The club is in fine condition financially, as well as numerically, and a lively season is contemplated.

A private live bird shoot was held at Belleville, N. J., on Tuesday, Jan. 3, there being four even teams of 5 birds each and on at 6 birds. The results: Team No. 1, five birds, Hill 5, Campbell 4, Keller 4, Parker 4, Weston 3, Stayer 1, McNulty 0, Stanier 0. No. 2, same, Hill 5, Parker 5, Weston 5, Keller 4, McNulty 3, Stayer 1, Campbell 1, Stanier 1. No. 3, six birds, Hill 6, Parker 6, Campbell 5, Leighton 5, Keller 4, Weston 4, Ortholf 4, McNulty 3, Stayer 1, Stanier 1. No. 4, five birds, Leighton 5, Hill 4, Parker 3, McNulty 2, Keller 2, Weston 2, Ortholf 1, Stayer 0, Stanier 0. No. 5, five birds, Campbell 5, Hill 4, Leighton 4, Parker 4, Weston 4, Ortholf 3, McNulty 1, Stayer 1, Keller 1, Stanier 0.

The New Year shoot of the newly organized Orange Rod and Gun Club, held on their grounds on Watching Mountain, West Orange, N. J., was a pleasant and successful affair. There were sixteen members present and they shot at 5 live birds each. C. H. Jacobus and George Fisher killed 5 each; C. C. Young and Hamilton Meller 4 each, Joseph Young and Solomon Wood 3 each, George Wood, William Manwood, Samuel Booth, William Heberis, Frank Storans, Rudolph Wagner and G. M. C. Mantock 2 each, and Thomas H. Lippe 1. After the shoot the members repaired to Duun's Hotel, where a banquet was served and a pleasant evening enjoyed.

We are pleased to say that Rollo Heikes, the genial blonde who is so expert at smashing targets, is entirely recovered in health, but Chicago is no longer to contain him as a resident. He is now located in his old home, Dayton, O., and will go into the shell-loading business on his own account. Rollo was completely run down, and by the advice of his physician he spent some time in the South recuperating. While a believer in climatology he has arrived at the conclusion that the man who goes to Chicago for a change of climate usually gets a surfeit.

The Union Metallic Cartridge Company publish a pretty panel embellished with a picture of a Gordon setter and litter of puppies, all of whom are seriously contemplating the amount of damage they have wrought by partially emptying a box of Smokeless shells. In the background is shown a kennel, game bag and gun, and underneath is a calendar for 1894. Taken altogether it is a pretty conceit and a neat ornament for office or club room.

Under date of Dec. 21 notices were sent out for a 50-bird sweep, \$50 entry, to be shot at Erb's on Jan. 18. All the recipients of said notices impress upon their minds the fact that the shell-loading business has been cleared off and that in its stead there have been arranged a 25-bird sweep, \$25 entry, to be shot at Erb's, Newark, N. J., on Tuesday, Jan. 23, beginning at 10 o'clock A. M. Entries will be taken up to Jan. 22 by C. H. Townsend, Box 2332, New York.

Washington's Birthday at Dexter Park this year will, as usual, be devoted to targets and birds. This is the one day in the year that the patrons of Dexter Park turn out to give "Billy" a little benefit, and as a consequence the day has been calendarized by the shooters as "Trapper Mills's day." The shoot will open at 9:30 A. M. with target sweeps and continue until 1 P. M., after which birds will be in order.

There will be a fat year for the frequenters of tournaments. Already two have been announced, each with \$1,000 added money; and Washington and Cincinnati are likely to fall in line with similar affairs. Then Charlotte, N. C., is considering the feasibility of giving a three-days' shoot immediately preceding the Knoxville shoot, and they will probably add from \$500 to \$1,000.

The new catalogue of the Chamberlin Cartridge and Target Company of Cleveland, Ohio, is ready for distribution and will be sent to any address on receipt of a stamp to cover postage. Every shooter should have this catalogue, as it contains many half-tone cuts of great interest. The company has also ready the programme for tournament, Jan. 10-21 at which they add \$1,000 in cash.

A letter from Arthur S. Mattingly, secretary of the Capital City Gun Club of Washington, D. C., informs us that his club is now the only organization of the kind in the city and that its membership comprises every good shot in the city. They are now considering the feasibility of holding a tournament in June and adding \$1,000 to the purses.

Leander S. Campbell of Little Silver and James Van Brackle of Long Branch had a fill, trap and handle match at Perth Amboy. The conditions were 25 birds per man, 21yds. r.e., 50yds. boundary, gun below elbow until bird was on the wing. On the twenty-first round Campbell was shot out, having killed only 11 birds to Van Brackle's 16.

A number of well-known sportsmen will go to Norfolk, Va., next Thursday to witness the 100-bird match between "Dutchy" Smith of Plainfield and Neaf Apgar of Evona, for a stake of \$250 a side. The party will start from New York on Wednesday afternoon and return on Friday.

Jersey shooters were disappointed at the falling through of the contemplated live bird match between Dr. P. J. Zeglio, of Warrenville, and T. W. Morley, of Paterson. These men are very evenly matched as regards skill, and a contest between them would be an interesting event for their many friends and clubmates.

The Atlantic City (N. J.) Rod and Gun Club has decided to hold its tournament on June 12, 13 and 14, instead of during the third week in June, in order not to conflict with the Chamberlin Cartridge Company's tournament.

The Nebraska State Sportsmen's Association will hold its eighteenth annual tournament at Columbus, Neb., on May 15, 16 and 17, and will add \$1,000 to the purses. The shoot will be under the auspices of the Columbus Gun Club.

And now we understand that John L. Brewer is anxious to have another "go" at J. A. R. Elliott, and as the latter is more than anxious a meeting, or even a series of them, are likely to result.

T. C. Wright and T. W. Morley, both of Paterson, will shoot a match at Willard's Park on Tuesday, Jan. 16, each man to shoot at 50 live pigeons for \$50 a side.

The Oneida County Sportsmen's Association will soon publish an advance prospectus of the New York State shoot to be held in Utica in June.

Notice is given elsewhere that the Chamberlin Cartridge Target company has discontinued their Eastern office. A list of agencies is given. Secretaries of clubs are requested not to fail to promptly send us the results of their annual elections, change of shooting days, etc.

## New Year's Day at Dexter.

LOUIS MILLER'S New Year's cards inviting his friends and patrons to attend his New Year's shoot on Monday last, was the means of bringing together an agreeable and enthusiastic group of shotgun devotees.

The day was fine, the air tempered to that degree that makes one's overcoat a burden. The events of the day were divided into 12 events; 9 at targets and 3 at birds.

The first event at 10 targets had 8 entries. Fred Thompson of the Vernon Gun Club, broke 9 for first money. Messrs. Wood and Floyd tied with 8 each for second.

Second event, 10 birds, 7 entries. W. H. Thompson first with 10; F. A. Thompson second, 9.

Third event, 10 targets, 7 entries. W. H. Thompson, Ferris and Heyer second with 8 each.

Fourth event, 10 targets, 7 entries. Heyer first with 9, Wood second with 8.

Fifth event, 10 targets, 9 entries. Osterhout first with 9, Ferris second with 8, W. H. Thompson, F. A. Thompson and Soper third with 7 each.

Sixth event, 10 targets, 8 entries. Ferris first with 10, Woods second with 9, Heyer and Osterhout third with 8 each.

Seventh event, 10 targets, 8 entries. Woods, Heyer, Schortemeier and F. A. Thompson first with 8 each. Osterhout, Ferris and W. H. Thompson second with 5 each.

Eighth event, 10 targets, 8 entries. Woods first with 9, Schortemeier and Thompson second with 8.

Ninth event, 10 targets, 9 entries: Thompson first, with 10, Schortemeier second, with 8, Bowen third, with 7.

Tenth event brought a change in the monotony of targets to live birds. This event brought together 12 contestants, 5 birds each. Schortemeier, Bowen and Thompson tied with clean scores.

The eleventh event, 7 birds, 16 entries, was an interesting sweep. The birds were good and strong, and in most instances when the traps were opened the birds made good flight for the next county. Fessenden, Schortemeier and C. H. Meyer dropped all of their birds inside the boundary and got clean scores to their credit. Osterhout slipped up on his last bird and finished with 6 kills to his credit. Wood and Kellenstroth also killed 6 each. Otten, Schumacher, Johns, Bowen and Simpson 5 each, Meyer, F. A. Thompson, Dr. Little and Keim 4 each; C. Meyer, while last, with 3, got about as much of the pot as the others, for he had no division to make.

The twelfth event was a mix and out affair with 6 entries. Otten and Bowen dropped out on the second round. Schortemeier on the fourth and Dr. Little on the fifth. Smith and Thompson then divided. Scores:

No. 1, 10 singles: W. H. Thompson.....001111110-7 F. A. Thompson.....011111111-9 Wood.....011111110-8 Ferris.....101111100-7 Brown.....000101000-2 Osterhout.....101111110-7 Floyd.....101011111-8 Heyer.....100110111-7

## The South Side's Annual.

This year for the thirteenth consecutive time the members and friends of the enterprising South Side Gun Club, of Newark, N. J., assembled on the club grounds to enjoy the New Year's "annual" shoot, which has become a State fixture. The day was all that could be desired, with its bright sunshine and balmy air. The attendance was good, as in former years, there being a number of out of town shooters present. Among the visitors were Harry and Ed Landis and Mr. "Henry" of Philadelphia; John W. Hoffman, of German Valley; Fred Van Dyke, of Danville, N. C.; Miller of Springfield, Dr. Crane, of Rahway; J. W. Smith, of Orange; Creveling and Strader, of Jersey City; Van Idersine, of Orange; O. L. Yeomans, of Maplewood; J. B. McCullum, of Irvington; Hibbard, of Elizabeth; Walters, of Arlington; N. G. Money, of Oakland; Craft, of Irvington; "Dutchy" Smith and "Tee Kay" Keller, of Plainfield, Sickley of South Orange.

An abundant and tasteful lunch was provided by Day, the well-known Newark caterer. Firing was kept going in the shooting house, and in every way possible the comfort of the shooters was attended to. Messrs. Hobart, Terrill and Breintall were the managing committee. It was nearly 11 o'clock before the sport began and between that time and 4:30 P. M. over 3,600 bluecock targets were thrown.

The result of the day's sport is appended:

No. 1, 10 singles: Hoffman 7, Hobart 7, Geoffroy 8, Van Dyke 8, Landis 9, Miller 7, Terrill 6, Henry 6, David 8.

No. 2, 10 singles, entry \$1: Hoffman 7, Hobart 8, Miller 9, Landis 10, Geoffroy 9, Van Dyke 9, Dr. Clark 6, Henry 4, David 7.

No. 3, 15 singles, entry \$1.50: Hoffman 13, Van Dyke 13, Geoffroy 13, Miller 11, Hobart 13, Henry 11, Landis 12, David 11, J. W. Smith 13, 9, Hadden 9, Hobart 7, Henry 7, Dr. Clark 6, Henry 8, Hoffman 10, J. W. Smith 9, Landis 10, David 8.

No. 5, 15 singles, entry \$1.50: Geoffroy.....1100101111111-12 Hedden.....0110111011111-12 Hobart.....1011101111111-13 Hoffman.....0101111111111-13 Thomas.....1011011011111-11 Landis.....1101100110111-12 Breintall.....1111101111111-14 Henry.....0101111111111-12 Van Dyke.....0011110111111-14 J. W. Smith.....1010111011010-10 Miller.....0011110111111-12 David.....1111101101010-12

No. 6, 10 singles, entry \$1: Breintall 6, Hibbard 6, Whitmark 8, Creveling 5, Strader 8, Van Idersine 8, Miller 7, Geoffroy 8, Van Dyke 10, Thomas 8, Hobart 6, Hedden 6, Landis 10, J. W. Smith 8, Henry 6, Hoffman 9, David 6.

No. 7, 15 singles, entry \$1.50: Landis.....1101111111111-14 Thomas.....0101011111100-10 David.....1101011001111-12 Whitehead.....1111101100111-32 Breintall.....1110111101111-13 Hoffman.....1111111111111-35 Hobart.....1110110111111-12 Miller.....1011111111111-33 Geoffroy.....0111011101101-10 J. W. Smith.....1111101111101-13 Van Dyke.....1011101101111-12 Henry.....1011110111111-33

No. 8, 10 singles, entry \$1: David 9, Landis 9, Geoffroy 9, Hobart 9, Strader 9, Miller 9, Van Dyke 9, J. W. Smith 9, Henry 9, Hoffman 9, David 9.

Creveling 7, Strader 7, Hedden 7, Hibbard 8, Van Dyke 8, Van Idersine 4, Walters 6, Breintall 6, N. E. Money 8, Miller 7, W. Smith 8, Thomas 7, Hoffman 8, Henry 9, Craft 6.

No. 9, 10 singles, entry \$1: Landis 6, David 4, Hobart 5, Thomas 4, Henry 4, J. W. Smith 6, Hedden 6, Geoffroy 7, Breintall 7, Van Dyke 6, Van Idersine 6, Whiteback 6, Walters 7, Miller 7, Hoffman 6, Money 8.

No. 10, 20 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 11, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 12, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 13, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 14, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 15, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 16, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 17, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 18, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 19, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 20, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 21, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 22, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 23, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 24, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 25, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 26, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 27, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 28, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 29, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 30, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 31, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 32, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 42, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 43, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 44, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 45, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 46, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 47, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 48, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 49, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 50, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 51, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 52, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 53, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 54, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 55, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 56, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 57, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 58, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

No. 59, 10 singles, entry \$1: Landis 10, David 10, Hobart 10, Thomas 10, Henry 10, J. W. Smith 10, Hedden 10, Geoffroy 10, Breintall 10, Van Dyke 10, Van Idersine 10, Whiteback 10, Walters 10, Miller 10, Hoffman 10, Money 10.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass" By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish; practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NISSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 234 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition, By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksman; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfoot presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 190 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suave and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$7. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERGER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/2. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages; numerous illustrations, and fifty plates in envelope. Price, \$3.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.50.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 20, 1894.

VOL. XLIII.—No. 3.  
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## SPECIMEN COPIES.

Any reader of the "Forest and Stream" may on request and without expense have a specimen number of the paper sent to a shooting or fishing friend.

## PORTRAITS IN INK.

V.—ONE WHOM WE ALL KNOW.

If all sportsmen were like our harmless friend, game might live a quiet life and die of old age, while its human enemies were getting ready for a campaign against it.

Even though it makes you impatient, you cannot help being amused by the fuss of his constant preparation, nor fail to be warmed by his steady enthusiasm that burns on and on like a slow-match, which never fires the mine of action.

What careful selection of guns, what labor of tinkering and cleaning them, what cautious purchasing of a new one and endless testing of its qualities, what thoughtful study of ammunition and close measurement of charges, what nice adjustment of all appurtenances go on while the season draws near, endures and is gone.

Then at once with unabated zeal he begins planning for the next, and refurnishing his equipments, targeting his guns, wearing them out with innocuous use. So his year passes in a round of pleasant anticipation and free of vain regret.

Once in its course, perhaps, he is betrayed into going shooting while yet unready. Your report of the abundance of squirrels, his favorite game, in your neighborhood, gets the prompt response of a promise to come in a day or two for a raid on them. During the week or a fortnight that await its fulfillment the woods are overrun by a horde of gunners, and every squirrel is killed or made alive to its own safety.

At last, late in the afternoon of the last day, your friend arrives with a wagonload of guns and equipments, whereof nine-tenths are quite unnecessary. When he has made a studious selection from his embarrassment of riches, you go forth with him in the propitious last hour of sunlight.

You are so fortunate as to accomplish stealthy approach to a squirrel that, unconscious of danger, sits rasping a nut on a hickory branch, and as a courteous host should, you signal your guest to take the easy shot.

Slowly unlimbering his gun from under his arm, while he calculates the distance, he cautiously raises the weapon to its deadly aim. You hold your breath in expectancy breathless; but if you held it till he fired, you would have no further use for it.

A busy spider runs out to the steadfast muzzle and cables it to the ground with a silver thread. The squirrel turns his nut, half eaten, to begin on the other side, and suddenly becomes aware of enemies. Down drops the nut with raspings of shuck and shell, and up goes the squirrels behind the sheltering trunk, then out upon the further branches, and so goes plunging and scampering through upper byways in swift retreat to the heart of the woods.

Without lowering his gun, the dilatory marksman turns an almost triumphant face toward you, as who should say, "If he had not moved his fate was sealed."

He never risks a shot at running or flying game. You would as soon think of an oyster snatching its prey as of him shooting on the wing. If his game will not wait, it may go unscathed.

When the delayed opportunity arrives, he is as little exalted by success as cast down by failure, and calmly accepts good fortune with quiet thankfulness.

Whether he bears home a light or heavy bag, he seems never to be weighted with the burden of disappointment nor to be troubled with jealousy, while you can but envy his constant pleasure of anticipation, his sure enjoyment of participation.

Happy old man, long may he potter in endless preparation, long continue his meandering in the woods, a rarely harmful foe to all their denizens.

## SNAP SHOTS

THAT is an interesting reminiscence of war times which Dr. Ellzey sends us in reply to a Maryland correspondent's inquiry concerning the effects of prolonged close periods on quail and other game. Dr. Ellzey's testimony shows that in Virginia a close season extending over several years brought a great increase of partridge (quail) and other birds. On the other hand, some of the sportsmen of central New York are of opinion that these good results are not certain to follow such prolonged periods in that latitude, and at the meeting of the New York Association last week they asked that the five years' prohibition of quail shooting in certain counties should be removed. With the migratory instincts of imported birds and the peril of extermination by severe winters, they argued, the gunner might wait patiently year after year only in the end to find the game fields barren as before. Opposed to this again was the testimony of Mr. A. E. Babcock, of Monroe county, in the same State, who reported that some of the quail put out by Mr. Kimball, of Rochester, two or three years ago, were still flourishing, and should be given further protection.

Our Maryland correspondent, it will be remembered, testified that killing off a percentage of the old birds and scattering the coveys had actually promoted the breeding of the birds in a locality observed by him. This is supplemented by a report of Mr. W. C. Witherbee, of Port Henry, in the northern part of New York, who has been successful in introducing quail from West Virginia. The report was read before the Genesee Valley Association in Rochester last week and is given in our report of that meeting in another column. We would be glad to receive further testimony and opinion on this subject. The importation of quail from one locality into another is assuming proportions which entitle it to such discussion; and in many districts the native supply has fallen so low that interested persons would gladly forego shooting for a period of years if they were fully assured of the good results to follow.

At the Megantic Club banquet in Boston the other evening Dr. Heber Bishop gave some interesting figures of the development of the Megantic idea. The club has a membership of 270, which is widely scattered in this country and Canada; controls in its preserve 250 square miles of territory, over the waterways of which it travels by means of its 100 boats and steam launches, and by 75 miles of trails on land; and having disbursed \$50,000 in improvements, it has a comfortable surplus of \$15,000. The members killed fifty-one deer in 1893, and a number of caribou. The trout and salmon caught were numbered by the thousand; while vast numbers of ova have been produced in the club hatcheries, and yearling trout have been put into twenty-eight lakes. A novel diversissement of the evening was the introduction of a dead caribou from the Maine preserves, which was carried around the hall by Dr. Marshall and Mr. Wendal Stevens. Like all the Megantic reunions, this was an occasion of true woodland camp good will and enjoyment, long brightly to be remembered by members and guests.

The Sunday fishing law of this State has been receiving some attention since the recent Court of Appeals decision brought it to notice. A resolution asking for the repeal of the law was discussed in the Genesee Valley Association at Rochester the other day; but adoption of the resolution was deprecated on the ground that the public might misinterpret the motives of the step and the attitude of the society toward the observance of the Sabbath. This disposition of the matter was the wise one. The debate of a Sunday fishing law soon lapses from the comparative calm and serenity of fish protection talk into the heated and possibly rancorous discussion of religion, and ends in nothing more profitable than the firmer intrenchment of each party to the dispute in his own position. As for the Sunday fishing law in this State, it has been and is practically a dead letter except when made use of as a spite measure. It will continue to be a dead letter, or if enforced will be repealed. In either event, game protective societies need not make hazard of their influence by taking action on it.

Fish Commissioner Hackney, of this State, raised a laugh in the meeting of the State Association last week when he said in effect that at the time of his appointment to the Fish Commission he had known nothing about fish and he did not now. Mr. Hackney is something of a

humorist and apparently does not fail to recognize that his being on the Fish Commission is a huge joke, although just where the joke comes in for the people of the State, even Mr. Hackney might confess himself unable to determine.

The second annual winter meeting of the New York State Association for the Protection of Fish and Game, in Syracuse last week, demonstrated anew the wisdom of those persons who were instrumental in 1892 in providing for the fullest exercise of the two-fold activity of the organization—a summer meeting for its shooting tournament and a winter meeting for its deliberative convention. This is an old story, but one which is well worthy of renewed attention, for in solving the problem with which they were confronted the organizers of the Association on the new basis led the way in which similar associations in other States may profitably follow. Under the present arrangement both summer tournament and winter convention have been entirely successful and satisfactory; each interest has had recognition, neither one has interfered with the other. Never before in its history has the Association been more prosperous nor more powerful than now.

The proceedings at Syracuse were characterized by earnestness, unanimity and an unselfish spirit. The findings of the deliberations may or may not in every case have been the wisest, but of one thing there is no question, the advocates of the several measures adopted urged them because of a deep conviction that in so doing they were contending for the common good.

A happy selection of officers has been made for the new year. Gen. Bruce is one of the old guard; his devotion to the Association has never wavered; it was his persistent and unwearied effort which eventually brought about the reorganization, and under his guidance healthy growth and greater achievement may be anticipated. Mr. Bannister, the vice-president, has been one of the most active promoters of fish and game interests in central New York, and will bring influence and strength to the State organization. Of John B. Sage, the old and new secretary-treasurer, it may be said that his occupancy was coeval with the creation of that office, has been coexistent with it, and promises to be coterminous with it.

The presentation of a gold watch by the Association and the district protectors to Major J. Warren Pond was a fitting recognition of the Chief Protector's public services. Major Pond is a quiet, sensible, unassuming, experienced, well informed, faithful, fearless and efficient officer. As Mr. C. H. Mowry well put it, he does not do his duty alone for what there is in it, but is actuated by higher motives. He deserves the good opinion, the support and the backing of every citizen, and of every association of citizens which desires to see the game and fish protective laws enforced. The force of district protectors are as a body likewise efficient, honest and undeterred by threats in the performance of their duty. They are a very creditable branch of the public service. Their presence by invitation in the convention was an earnest of the feeling entertained for them by the sportsmen of the State.

The first annual meeting of the National Game, Bird and Fish Protective Association was held in Chicago last week, and is reported at some length in our staff correspondence from that city. We invite a reading of the report, for the proceedings illustrate in a striking manner what we have already said respecting the scheme of a national association.

The "same old grind" has begun at Albany. Our special correspondent at that point has sent in his first report of game and fish bills in the Legislature of 1894. A long catalogue, we may be certain, will follow. They will be reported promptly in our game columns.

The annual dinner of the Massachusetts Fish and Game Protective Association was held in Boston, last Tuesday evening; just as these pages were going to press. Our report of the pleasant reunion is of necessity deferred until next week.

Michigan has a new tri-county protective association organized at Detroit last week. An expected report has not come to hand in season for this issue.

## The Sportsman Tourist.

### SOME CHRISTMAS SPORTS.

SOME Christmas sports that we witnessed recently in the colored quarter of a large Southern city were sufficiently novel and picturesque to call for a chronicler.

For two weeks before the holiday the following notice had hung in the post office, being posted on a large dry goods box in which reposed peaceably a fox and a coon: "On next Christmas Day in the morning, a big race will take place out by Jerry Simpson's old field. The race will be between this coon and Pomp Cammell, butcher, ten miles for \$100 a side." The "old field" had been prepared for the occasion by marking out therein a circular race course some 5yds. wide, and inclosing it with a high fence of palings, the latter too near together to permit the coon to slip through. Rude board seats were placed within the circle. Ten cents gate money was charged, and there was a booking office, liberally patronized, where one could bet his money on the favorite contestant. As the hour arrived the area within the inner palings was densely packed with black humanity.

Abraham Lincoln acted as herald, or master of ceremonies. He wore a cocked hat with a high feather, a field officer's coat bespangled with gold, blue tights on his lower limbs, and twirled a marshal's baton.

"Is yo gemmen ready foh de race?" he began. "Has yo made yoh bet?"

No objection being made he called for the contestants. Pomp Cammell, a tall, long-legged negro, clad in tights that left his arms and legs bare, entered the ring and was introduced to the audience; the box containing the coon was then placed beside him. "You Pomp Cammell an' yo gemmen know de terms of dis race, ten miles, two laps ter de mile, fer a purse of \$100, whoebber cross de line fust on de twentieth lap, whedder man or coon, to take de puss, an' de coon to go scot free. Is de umpires ready? Is Pomp Cammell an' de coon ready? Den go!"

He waved his gay silk handkerchief and the contestants were off amid the cheers, shouts and laughter of near a thousand spectators. The raccoon, stimulated by the hope of regaining its liberty, ran at its utmost speed, though awkwardly, with the negro at its heels, the latter making no attempt to pass it, his object being rather to tire it out and so win the race through failure of his competitor to come to time.

Round and round the ring flew coon and man, followed by the plaudits and exhortations of the spectators, until at the tenth round the poor little animal, with an almost human cry of distress, threw itself in a heap against the palings and lay there panting, while Pomp continued on and easily won the purse.

After the cheering and congratulations had subsided the leaders conferred together and again the herald made proclamation:

"Pomp Cammell hab won and de coon hab lost. Pomp Cammell now offers ter run agin a fox, de champion sprinter ob Polk county, on de same terms as de previous race, an' do challenge any one ob yo gemmen to run wid him."

At once there rose a cry of "Bob Ash! Bob Ash!" and a tall, loose-jointed negro was pushed to the front. "Led-dies and gemmen," proclaimed the herald, "I meks you acquainted with Mistah Robert Ash, de champi'n runner of Manatee county, who will run agin Pomp Cammell an' de fox. Am yo ready, gemmen? Am de fox ready?" Being answered in the affirmative, he again waved his handkerchief, and men and fox sprang into the narrow course, the fox taking the lead in his break for freedom, his brush elevated, his long, sharp nose pointing straight down the course, and his feet flying like castanets in a Spanish gipsy's hands.

The men were not far behind, and again the matter resolved itself into a question of endurance. It was observed that after the first round the fox slipped along with the ease and lightness of a zephyr, seemingly intent on keeping out of the way of his human competitors; the latter as they lumbered along—in contrast with the fox—were saluted with a torrent of cheers, exhortations, groans, invectives, hand clapping and hisses, according as the fortune of the day seemed to favor or desert them. It soon became evident, however, that the fox was a foe of very different caliber from his predecessor. By the time the fifteenth lap had been reached he was loping along as gaily as ever, wondering no doubt when that long lane would end, but fresh as at the start; while his pursuers were becoming winded and in danger of total collapse. Indeed, on the eighteenth lap the Manatee county champion stumbled, fell and refused to rise again. His antagonist held on and completed the twentieth lap; but slowly and with pain, while the fox leaped gaily over the line several yards in advance of the surviving champion. A wicker-work barrier was then thrown across the course before him, which turned him into a corral, where he was captured and returned to his box.

After the applause had subsided and pots of money had changed hands, the box was taken into an open field, and while the crowd stood at a respectful distance the master of ceremonies thus addressed its occupant:

"Br'er Fox, you am game! You am an athlete! Br'er Coon was a baby, but you am a man. In open field you hab run down de champions ob Po'ke county and Manatee. You hab earned de freedom ob de woods, an' you am gwyne ter hab it. Tek it, Br'er Fox, an' llope!"

He kicked open the box amid the breathless stillness of the audience. Reynard appeared, looked about for a moment as if to get his bearings, and then swept lightly across the field, over the rail fence and into the forest, followed into its recesses by the cheers and good wishes of his natural enemies.

In the afternoon there was a shooting match, advertised for 3 P. M., thus allowing ample time for the eating of the Christmas turkey. It had its inception in the desire of old Jupiter Yulee to dispose of a patriarchal gobbler belonging to him which had been offered for raffle to three church fairs and declined by each.

The match was held in an open field just outside the quarters. The terms were a dime a shot, all firearms except rifles to be entered.

The ill-fated bird was tied to a stake sunk in the ground so that only its head and neck appeared, and whoever succeeded in killing it took the bird.

I do not know that this differed much from other shoot-

ing matches further north, except in the nomenclature of the contestants and the quality of their firearms.

Abraham Lincoln appeared with a battered old army musket. Ulysses S. Grant with an old ancient flint lock, altered to a percussion cap exploder. George Washington with a particularly dilapidated and disreputable looking English fowling piece. Ben Franklin with ditto. Tecumseh Sherman with a Springfield rifle, altered into a musket. Phil Sheridan with a discarded breechloader, which refused to work in the natural way and had to be loaded from the muzzle. It was a very motley collection of firearms indeed, and the visitor made a point of slipping behind a colored brother whenever any one fired, but strange to say no accident occurred except that Julius Caesar and Winfield Scott were twice nearly bucked over by the recoil of their guns. On the twelfth round a chance shot from Wendell Phillips's big ducking gun struck the unfortunate bird in the neck and it succumbed.

AUGUSTUS ST. CYR.

### PADDLING DOWN THE PATUCA.—II.

#### A Story of Travel in Honduras.

(Continued from Page 8.)

A HAPPY village looks down on the meeting of the waters of the Pau and the Uampu. Pathless tropic forests are on every side. In their shades the shy ocelot and the jaguar prowls after the pheasant and the pavoreal, and pounce on careless monkey or on vicious peccary. The tapir browses at night on tender foliage, and dozes in his bath through the midday hours. The mountain lion lurks in the craggy hills, and the black tiger sneaks beside the trail of the traveler, and attacks biggest of prey or fiercest of foes. No Sumo nor Paya dare leave the firelight there after dark. Too many demons and dangers haunt those gloomy shadows.

While bright day lights those woods the Indians hunt and fish, collect rubber and gather sarsaparilla. Meanwhile the women kind cook and beat blankets out of the bark of the tuno tree, or they laboriously weed the plantations, and bring from them canoe loads of bananas and of yuca. Or they peel from the tuno trees great sheets of bark, which they anchor with stones on the gravelly bed of the river. And when the bark has rotted in part they lay it in folds on the bottom of an upturned canoe and pound it with corrugated beaters of hard and heavy wood; they rub and rinse the bark in the clear river, and beat it again until nothing is left of it but a broad sheet of fibers intricately interwoven by nature's loom.

White-haired patriarchs sat in the sunshine and idly watched the women at their work. Nude babies swung asleep in the shade of the thatched roofs, or crawled about among dogs and pigs and poultry on the smooth earth. Older children ran about in happy play, or gaily swam and splashed in the placid river. Two boys slyly crept up behind a buxom dame knee deep in the river, bent and busy with her washing. Together they dashed showers over and drenched her, then turned to fly. They were too late. She ran and swam and dived more expertly than they, and quickly had them by the heels. Great was the splashing and laughing before she let them slip from her, and pretended to pursue again.

Sweet cassava boiled in an earthen pot over the fire in the middle of the hut. When cooked enough part would be eaten as potatoes are; part would be rolled in corn husks and roasted in the oven. The rest would be washed and added to the fermenting yuca in the immense olla of red pottery in the corner, that a cooling, nourishing drink might be ready for any who might come.

Over the smoking fire hung little sheaves of seed rice, by slender cords tied to the slim poles on which rested the steep thatch. Each cord passed through the center of and supported a bowl made of the half of a big calabash shell. When ant or mouse or other creeping thing may descend to reach the store of food below the slippery surface of that bowl it is treated to a surprise.

On floors of crickery resting on round joists overhead were piles of maize in the husk. Skins of deer and of peccary, of monkey and of jaguar, lay on the corn. Under the wide eaves hung a section of hollow branch of tree, its ends stopped with clay. Stingless bees as big as house flies crawled through a knot hole in its side to store honey rich in flavor. Beside a rafters was stuck the only bow I ever saw in Mosquitia. Near it was a cheap shotgun and new paddles in reserve.

At each rounded end of the house were beds resting on crickery of split-bamboo, supported by stout forked sticks planted in the ground. The beds themselves were thick piles of tuno blankets and for covering the sleepers used sheets of cotton that were once white, perhaps. Great wealth enabled the chief and his favorite wife to sleep under most rare and gorgeous bed-spreads of chintz, whereon were wonderful pictures of horses and bareback riders coursing around rings in raiment of bright colors.

Half a dozen hammocks were stretched across the house, and swung gently in the breeze what time they were not occupied by some man or child, or thrown over a joist to put them out of the way of the housewife. Women may use hammocks there; no doubt they do when no men are near, but I have seen no Indian woman in a hammock when there was a man in the house.

Mealtime came to that village soon after sunrise. It lasted through the day and after darkness fell. Always there were pots boiling, plantains or green bananas sputtering in the hot ashes, or meat sizzling over the coals. Whenever a pot-bellied youngster tired of play, he or she plucked a ripe banana from the bunch swinging near, or stuck a plantain up to roast, or gnawed the meat from a bone. After that the growing hope of Sumo humanity slept the sleep of the care-free and full-fed, until ready for another round of jollity, feasting and sleeping. Surely these neglected beings should have the benefit of missionary teaching. They do not know that they are in an unhappy state of sin. They should be taught that they are, in their ignorance, in worse case than are the drunken, blaspheming, murderous products of our blessed civilization.

One morning my baggage was stowed in a long, low pipanti hewn from a tuberose trunk. The gifts had been distributed and the patriarch of the tribe had shaken my hand in lingering farewell. A good-looking young woman took her place in the stern of the canoe, her broad-shouldered spouse pushed the craft off and I gave to the assembled crowd my last greeting. We paddled away and an old woman on the bank addressed a parting word or more to us. The girl in the pipanti replied as we

entered the current of the Uampu. The old woman shouted another sentence. Our pilot responded. Again the old woman's voice came to us and our girl chanted an answer. Once more the message came from the village that was hidden then by a bend in the river. Now the chant was taken up by our deep-chested paddler in the bow, who sent his voice melodiously back over the water. So it went, chant and response, back and forth, until we could no longer hear a voice from Pau.

Except for a stop to gather a few pineapples and to cut a bunch or two of bananas, we made no pause before high 12. Rapids there were, but the two Sumos easily steered the canoe so skillfully that scarcely a gallon of water came over its sides, that were little if any more than four inches out of water when in the still reaches.

Before us a hill rose a thousand feet into the blue air, its crest crowned by cliffs of white. It seemed not more than a mile or two away.

"El Rio Patuca," said the Sumo in the bow, pointing to the hill.

"Will we breakfast there?" I asked.

My crew grinned and shook their heads. They did not tell me that the whole day would be past before we would reach the big river that washed the foot of that hill; isolated outpost thrown far into plain from the host of mountain peaks in the south. All the hills we had seen since leaving Pau were on the right bank. All were independent knobs of basalt, of porphyry or of volcanic ash, hardened by ages. As we paddled on they became separated widely from each other. Each was clothed from foot to crown by tropic growths, and on the crest of each the soldierly palm royal lifted its plumes high against the blue beyond, and above the heads of its more lowly neighbors.

At noon the girl beached the pipanti on a sandbar. Her husband scaled a fish killed on a rapid an hour before. The wife made a bowl of uabal, stewing a slice or two of sugar pineapple with the bananas. I wrote a page in my note book, and fell asleep on the clean sand while watching snowy clouds floating athwart the sunny sky, far beyond the delicate fernlike foliage of the guanacaste above me.

'Twas a pity to awake from such sleep, merely to eat of the fish and plantains, the yuca and the pineapples, and the frigitolas or little black beans, than which none are better. But the coffee was black and of excellent flavor, and the Sumos enjoyed it immensely. Usually they must content themselves with no better drink than chocolate made of seeds gathered from trees growing wild in the forest hereabout, roasted and ground by a pestle in an earthen pot, and briskly stirred into foam by a carven stick that bristles with little pegs.

After coffee, cigarettes for the two Sumos, siesta for me, until that girl again aroused me with a softly-spoken, "Adelante, señor; adelante."

I took my place in the canoe and closed my eyes to finish my nap, but that girl seemed determined to torment me without reason. She flipped a drop or two of water into my face, and whispered, "Tilba, señor; tilba wass."

This was Waikna tongue, but was shorter than the Spanish, and she knew that I could not understand her native idiom.

The tapir stood stupidly surveying us. He was not thirty feet distant, and stood as still as a stone. It would have been a shame to have missed him. A cockney sportsman could have hit him with a club. So I scored a clean miss. The tapir went away. The girl dropped her paddle across her knees and stared at the rifle and then at me. There were no knot holes in the canoe, so I had no place to crawl into. I tried to stare that girl out of countenance, but gave it up. I tried to look as though I wasn't ashamed, and gave that up, too. Then I tried to blush through the dark tan and to sweat in my hot embarrassment, and succeeded completely. I wanted to kick those two Indians because they said never a word in comment. They couldn't say anything, because their dictionary has not provided words for feelings of disgust. The very most they could have said would have been, "He missed that tilba!"

But luckily for me the idioms of English are rich in expressions that beautifully fitted that fleeing tilba and the maker of the gun, and the man who couldn't hit the broadside of a hill with it.

I was not on speaking terms with those Sumos before sundown was near. Then I happened to see a pavoreal settle on a high branch before either of the couple with me saw it. I know this sounds pretty fishy, but it's true. Possibly the fact that the turkey was astern of us and the Indians were facing forward, had something to do with it.

"It's a big chance against me, but I'll take it, even if it bankrupts my reputation as a shot," said I to myself, and stood up. The girl spoke one word and both sat as still as the trees in the forest. The big bird fell with a prodigious splash into the river, its breast torn open. I felt better. I might expect to be well fed that evening, and a long shot that brought down a bird surely was more creditable than one that would knock over at close range a tapir as big as a yearling bullock.

We rounded a wide bend in the river the next day. Before us swept a broad stream, golden in the glare of sunshine. It was the Guayape, which is said to have got its name from the guayapin or skirt worn by women who dwell in the region through which it flows. Guayape is also the name of a people whom Humboldt saw in South America. This may show that those people took their name from the skirt; or that the garment got its name from them; or that both got their name from the river; or that— Scientists will kindly choose sides and fight it out among themselves.

Beyond the river rose the hills which we had seen the day before. Half-a-dozen brown-thatched watas stood at the edge of the terrace between the river and the hills. Broad, dark leaves of the plantain waved at us promise of abundant food. A little patch of lighter green told that here might be a supply of cider from the sugar cane. An orange tree jeweled with golden balls told of refreshing juices to be had, and two marafones bore rich burden of crimson and cream-colored, acid fruit, which obligingly turns its seed out into the world, thus keeping its flesh free of hard obstacles to tender teeth—an example recommended to the peach and other northern fruits.

This was a Waikna town, therefore my Sumos wished to leave me there. Pipantis and paddlers were there in plenty. The way back to Pau was long and full of wearisome rapids. Besides, the Waiknas were bad, very bad. Did not they come up the river in swarms and carry away

## Natural History.

### AS TO BEARS.

THERE has been a good deal written of bears of late, and I will add something to the literature upon that question, with the editor of FOREST AND STREAM'S permission. Are there three varieties of the bear family in the South? I think there are, and will tell you why, because I have seen them.

First is the great black bear of Louisiana and Mississippi. I saw one killed three weeks ago in the big Atchafalaya Swamp of Louisiana. It weighed 672 lbs. on a pair of cotton scales. The big bear is perfectly black. It has a white horseshoe-shaped mark on the breast. It is a fighter from 'way-back, and will decimate a pack of bear dogs in short notice if not killed soon.

Then there is a long, thin bear almost as slender as a panther. It is an incomparable runner, and will tire out the best pack that ever took a trail, if allowed to. It is only found in the Yazoo, Miss., country. In color it is like a dark-red calf. It weighs about 250 lbs.

The third kind is the common brown-red bear that ranges mostly in hilly or mountainous country. Its habitat is from the White Mountains of New England to the Alleghenies, and the great Southern mountain ranges of Tennessee, North Carolina, Georgia, and the hilly regions of the further South.

Now, are these three kinds of bear, only natural variations, caused by locality and climate, or are they veritable different varieties of the ursine family? Our closet naturalists have not noted them. I should like to hear from some one who has knowledge whether I am right or wrong in the theory that they are really of different families of the bear kind. Closet naturalists have much yet to learn. Every Southern man who has hunted much knows that in the great Southern swamps there is a great owl, bigger than the *B. virginianus*, standing almost 2 ft. high, with monstrous power. I have seen one of these great owls dash into a flock of mallards at an evening, and carry off one as easily as it would carry a quail. Its markings are not like those of the great horned owl of our natural histories, yet naturalists seem not to have noticed it. So of these varieties—or new kinds—of bear. Tell us something about them. W. H. R.

WASHINGTON, D. C., Jan. 13.

### The Wilson Ornithological Chapter of the A. A.

THE December election of officers resulted as follows: President, Willard N. Clute, Binghamton, N. Y. Vice-Pres., Reuben M. Strong, Oberlin, O. Secretary, William B. Caulk, Terre Haute, Ind. Treasurer, Lynds Jones, Oberlin, O. The Chapter is in a very flourishing condition, with seventy-three active, four honorary, and thirty-one associate members. The past year has been devoted to a special study of the warblers, and the forthcoming report promises to make a very interesting paper. Any information regarding the Chapter will be cheerfully furnished by the secretary.

## Game Bag and Gun.

### ARE LONG CLOSE SEASONS DESIRABLE?

A LATE issue of FOREST AND STREAM contained a call for experience as to the value of long close seasons. Those of us who lived before, and again after, the great war in the counties of Piedmont, Virginia, contiguous to Washington, remember as the effect of the close season established by military occupation of that country during four years, a prodigious increase of game. It was not at any time during those four years a safe thing for anybody suspected of being a Yankee to be found abroad in the field with a gun. Johnnie Reb on the other hand durst not bring out from its hiding place his old gun, for per-adventure a raiding party might catch him out, and carry him a prisoner to Washington, in which case he would never see the old gun any more. No close season, it may be believed, was ever so carefully observed. Accordingly in the autumn of 1865, we found great abundance of partridges, ruffed grouse, woodcock, and other game. The old camp grounds, on which the boys tented no more, were literally alive with partridges. The fame of this thing went abroad, and an extraordinary concourse of market-shooters from Washington, Baltimore, Wilmington and Philadelphia, descended upon us. Virginia was at that time District No. 1, Gen. Canby in command. I wrote to Gen. Canby protesting against the butchery of all our game in District No. 1 by hired pot-shooters from city restaurants. My friends laughed at me for a fool, to be writing to Canby, but he issued an order embodying some of my suggestions. As soon as we got a Legislature I drafted a game law and sent it to the delegate from my county. He introduced it, and it passed the House by a unanimous, or nearly unanimous, vote, but the Senate threw it out *nem. con.* The next session practically the same bill passed both branches by large majorities and became a law. This law caused the market-shooters to decamp. The previous year a party of men hired to shoot for a Philadelphia restaurant shipped during two months a thousand partridges a week from the vicinity of Rapidan station. For some years subsequent to this we had grand shooting in that part of Virginia. I myself frequently bagged in those days forty or fifty birds in a part of a day.

Guided by the experience narrated above, I should say a long close season would again be followed by a great increase of game, provided we had favorable seasons for wintering, and hatching and rearing broods. On the other hand, if we had four years close season and the winter preceding the open season should be such as last winter we should be back again where we started. During forty-five years' experience as a shooter I have never seen as few birds as the present season, and it is the first season in that time I have not fired a gun. I have two coveys on my farm which have not been shot at and I hope they may get safe through the winter; if so, and they have favorable seasons for hatching and rearing, the supply in this immediate vicinity will be fairly established. My judgment is in favor of an open season each year from Oct. 20 to Dec. 20, the shooting restricted to three days a week, as we have it here now in the case

of ducks. This would prevent visiting shooters on vacation following the birds every day from daylight to dark. It would also prevent the ruin of all our dogs by not being shot over for several years. In any case land owners can post against shooting when birds need further protection. Shooting three days a week would also discourage making a business of shooting for market. Other shooters and land owners would not tolerate shooting by any one on close days, and the law would be well enforced. The Berghites ought to favor this law, for it would prevent what often amounts to atrocious cruelty in shooting over used-up dogs every day. It seems to me that three open days a week would be desirable from many points of view, and I am not able to see any valid objections to the plan. I believe a very important feature in game protection would be to encourage land owners to intervene by posting when birds are usually scarce. In similar cases by common consent sportsmen ought to forego their shooting for the time in whole or in part. My best wishes always for FOREST AND STREAM and a Happy New Year to all its readers.

CUMBERSTONE, Md.

M. G. ELZEY, M.D.

### THE POWDER TESTS.

Editor Forest and Stream:

Your readers are certainly indebted to Mr. Armin Tenner for his letters on ballistics and his report of experiments conducted at Chicago and Carney's Point, N. J. His articles are instructive to those who have not made the theory of shotgun ballistics a study and interesting to all of us.

The fact only that Mr. Tenner has not left it to his readers and the public to judge and form their own conclusions, but has himself sat in judgment of the various powders used according to his own individual, possibly prejudiced, ideas, by comparing and summarizing the alleged results into total figures of merits, induces me to draw the attention of your readers to a few irregularities and the impropriety—yes, impossibility—of making anything like fair comparisons of the general practical merits of the powders used from the results chronicled.

On the other hand, much information may be gained as regards the comparative adaptability and effectiveness of various shells and primers. The results obtained by Mr. Tenner closely agree with the many continuous experiments made by me during the last few years, the results of some of which were published in your paper.

Although knowing that Mr. Tenner has been interested in Germany in Walsrode powder and is to-day on very friendly terms with Messrs. Wolf & Co., the manufacturers of Walsrode powder, I am far from impugning any wrong motives on his part. I believe that Mr. Tenner's intentions are perfectly honorable, but at the same time he was prejudiced in favor of Walsrode powder. My criticism will, therefore, be entirely friendly, and I think that Mr. Tenner must agree with me in the justness of my objections and criticism.

The first thing which is bound to attract the attention of all versed in ballistics is the apparent lack of uniformity in Mr. Tenner's results, both as regards "bursting strain," or as it is generally called, "initial pressure," as well as velocities.

Mr. Tenner says in his introductory article that an "increase of bursting strain up to 1,000 lbs. may still be considered natural and permissible, and an increase of velocity of 50 ft. may be regarded as of no importance." I certainly differ with Mr. Tenner. Should I receive such variations under normal conditions with evenly and properly loaded Schultze, E. C. or black powder ammunition, I should be tempted to suspect some disorder or imperfect arrangements of the instruments or their manipulation.

But these trials show allegedly much greater variations with even standard black powders than what Mr. Tenner calls permissible, which powders we all know cannot be excelled for evenness in results. This, together with other very contradictory results, will always leave a well founded doubt as to the proper working or manipulation of the instruments employed.

Black powders in general are less liable to be affected by differences in primers, wads, pressures, etc., than nitro powders. Yet we are told that 3½ drs. of FFF (I believe FFF G was meant) DuPont's in a series of only five shots gave a variation of 2,044 lbs. in bursting pressure and 89 ft. in velocity. Again, 8½ drs. Dead Shot FF (presumably FFG), one of the most even and reliable of black powders made in the world, gave a variation of 136 ft. velocity, nearly 300 per cent. more than Mr. Tenner calls permissible.

These figures prove beyond peradventure that something was wrong, for such variations with these standard and reliable black powders cannot be accounted for by any possible or at least excusable difference in loading.

On the contrary, the difference obtained in five series of five shots each with Schultze powder, namely, 40, 30, 30, 20 and 23, as per table A, seem excusable. At the same time, however, some of the variations in bursting strain are entirely out of place.

I am not acquainted with Mr. Tenner's spring device for measuring initial pressures. There is hardly a week, however, where I do not use the lead crusher gauge, such as is in use by the London Field, Schultze, E. C. and other concerns looked upon as authorities, and I have never been able to make this gauge lie or record anything like similar variations in pressures with perfectly prepared ammunition of standard powders. I, however, retain the character of each kind of ammunition, and if I test two kinds of cartridges giving pressures varying 50 per cent., my instrument so correctly records them, whether I alternate both kinds with each shot or use up one kind before trying the others.

I am also led to believe that it is not advisable to simultaneously try velocity and pressure with one shot. Velocities must certainly be disturbed thereby. The barrel on the force gauge used by Mr. Tenner for measuring velocities is, moreover, a cylinder bore, and in these days of chokebores and high grade ammunition, a cylinder barrel is out of place.

It will not give nearly as even results as a choked gun. Balling of shot is much more frequent in a cylinder than in a choked gun, and as often very open patterns are made with a cylinder bore, the results apparently obtained may be misleading according to the adjustment and kind of target plate in connection with the chronograph, and Mr. Tenner did not use the most approved. Moreover, the barrel on Mr. Tenner's force gauges not being a regu-

lar gun, may be better adapted to one than another kind of powder.

The phenomenon of even velocities and greatly varying bursting strain with one kind of ammunition, and a reversal, is noticed throughout Mr. Tenner's trials. I am well aware that bursting pressures and velocities are not dependent upon each other, and that even a gun barrel may be burst at the breech by a detonating explosive without giving sufficient accumulative energy to send the shot out of the muzzle. At the same time none of our standard powders, evenly loaded, will vary in bursting pressures thousands of pounds and retain even velocities, although these same velocities may be obtained with an accompanying higher or lower initial pressure under different conditions of loading.

I do not wish to convey the idea that Mr. Tenner is not able to properly handle his instruments. He had, however, to rely for a great deal of the work done upon other and some not experienced parties. Moreover, I believe that the putting up of chronograph, etc., was too provisional to be anything like as perfect as those in use at the E. C. or Schultze powder works. The latter have their shooting range some 150 or more feet from the recording rooms with its instruments. The chronograph is resting on solid rock and concrete foundations reaching several feet deep in the ground to prevent any and all possibility of outside interfering influences.

I have among my records a series of trials made at the Schultze works, at which I assisted, consisting of some 300 shots with different kinds of shells, and about a dozen different kinds and combinations of wadding. All charges were 42 grains of Schultze and 1½ oz. of English 6 shot, and various amounts of crimp, etc., were tried also. The greatest variation in velocity recorded for any one style of loading was less than 30 ft., and the greatest range of all velocities was covered by 52 ft. The initial pressures recorded were also normally even.

So much of the *modus operandi* of the instruments; and now a few words as to the comparative manner of preparing the ammunition used. Even if we suppose that the figures quoted were correct, it is an apparent injustice to make comparisons therewith under the circumstances.

Equitable comparisons as far as the practical and real value of the powders are concerned including Walsrode are impossible for the following reasons:

The Walsrode cartridges used were furnished by its agents specially for these trials. Each charge of powder of course was weighed to a fraction of a grain. The waddings used over Walsrode were not the same trade wads used over the other powders, but they were of a selected kind most suitable for it. The shells used also were only of kinds found most suitable. In other words, Walsrode ammunition was tested under best possible conditions, to which I do not object.

On the other hand, however, Schultze, E. C. and I suppose other powders, did not fare so well. To this I object if comparisons are to be made.

Being under the impression that these trials should be made exhaustive and practical to get at the real merits and reliability of the various powders in the market, V. L. & D. refused to furnish Schultze powder and requested Mr. Tenner to procure his Schultze powder in Chicago, San Francisco or wherever he pleased, thinking that different lots of all powders would be so procured in different parts of the country.

Some of the powder loads for cartridges to be tested were weighed, but many were not, and simply measured, and it is the easiest thing in the world to vary a 3-dram measure from 1 to 5 grains in weight. No pretense was and is made that these cartridges were skillfully loaded and to best advantage. Ordinary trade wads were used exclusively, but Mr. Tenner does not give us particulars in a single instance of what wadding was used, and everybody knows that proper and suitable wadding is an all important factor for best results with nitro powders. I proved this to Mr. Tenner by firing loads up to 54 grains of Schultze, retaining the same excellent and even results.

To base a comparative table of merit upon the results of such one-sided test seems unfair to say the least.

What kind of a showing would Walsrode powder make under exactly reversed conditions? This powder is so violent and so sensitive to the difference of a few grains in weight, different kinds of wads, shells and primers, that the agents dare not sell it in bulk, but only in shells, and then put up only in "winter" and "summer loads."

Before this powder as such can be made a marketable article, we shall have to change our guns, shells, primers, and educate everybody away from equal loads by measure, as those of black powders.

If Walsrode had been loaded by dip measure in the same variety of shells as Schultze with similar wadding and by the same parties, some cartridges would have fired, others half-fired and still others not fired at all in spite of the fact that the primer exploded. So little of this powder in quantity is safe only to use, that if the loader had by mistake put in two loads into one shell, which is easily possible and not detected, there would have been a bursted gun and probably a broken head in the bargain.

As for Schultze and E. C. ammunition loaded to best advantage, I will say that there would not have been variations of thousands of pound pressure and hundreds of feet in velocity. World's records and scores of hundreds of straight kills and the manufacturers' reputation and financial successes would have guaranteed its effectiveness and evenness in results.

We will go a step further, and for argument's sake overlook the various irregularities and unequal features of these tests and see how Mr. Tenner arrives at his total points of merit of the different powders. Here again he has certainly laid himself open to criticism.

Entirely too much weight is laid upon theory, and some absolute practical advantages are wholly lost sight of.

At best it could be claimed that the total figures of merits applied to the alleged actions of the particular kind of loaded cartridges and not to the powders used, as such, for instance: Schultze and E. C. do not receive a single point of merit for always being absolutely of just one-half of the accepted specific gravity of black powders, so that they can be handled and loaded like black powders by anybody. On the contrary, Walsrode receives no demerit for the want of it, although its agents would want of it not to have this demerit and its ever present dangers. Again the sample hardened grain Schultze powder receives no credit for showing throughout the highest velocity with all varieties of shells and primers, while Walsrode can be and was only used in special or specially prepared shells

and cannot be used in others. Certainly these are merits and demerits of powders for practical as well as commercial use.

Walsrode has one undeniably theoretical advantage that it is not as much affected by extreme damp and heat as the other powders, but Mr. Tenner lays too much importance upon this point. Schultze or E. C. cartridges are generally not stored on wet cellar floors or in red hot baking ovens. Thousands of shooters the world over can testify to the fact that loaded Schultze and E. C. cartridges can be safely kept one year or five, and there is not a day in the year where cartridges some years old are not used with as much satisfaction as black powder cartridges of similar age. This is, as is well known, not the case with all other nitro powders.

Another feature of Mr. Tenner's table of merits is that he allows 30 points for "least bursting strain in proportion to velocity." Under this head, one special powder is credited with 29 out of the possible 30 points of merit, which according to his own standard of desirable killing force has never once with the regularly loaded trial ammunition of 3drs. reached a velocity of penetration which is sufficient and meritorious.

This is all wrong. Of what good is a comparatively low bursting strain when the accompanying velocity is not sufficient for practical work? None whatsoever. It only makes matters worse.

On the contrary, instead of figuring a very low bursting strain as a merit, I should penalize it as a distinct demerit and as lacking a desirable element of force which of necessity must be present in all high grade and practically most excellent ammunition. Bursting strain up to an easily permissible degree influences time from the instant the cap is detonated to the time the charge of shot is well under way, and it helps to reduce total time from the pressing of the trigger to the shot reaching its object. I would as little think of using cartridges with a decidedly low bursting pressure for my own use at game or at the traps, as I would think of using a powder with a dangerous bursting pressure.

A fine grain of black powder will generally give a somewhat higher velocity as well as considerably higher bursting strain than a coarse grain of same kind.

The disregard of the difference in total time consumed induced Mr. Tenner to say that a quartering bird, flying at the rate of forty miles an hour, 40yds. from the gun, need be led only two or three inches more with a charge of coarse grain than with one of fine grain black powder, or practically not at all. Every observing practical shooter knows differently, and Mr. Tenner as easily as anybody else can figure out the difference by feet and inches.

Again, with the same propriety and for the same reasons that in years past the high grades of black powders, such as the Curtis & Harvey, Orange Lightning, etc., giving greatest velocities, were preferred by all who wanted the best to the cheap grades of black powders, although the latter gave correspondingly lower bursting pressures, do we want now a nitro powder giving high velocity and great killing force, although the bursting pressures are higher than those of cheap powders.

I am far from advocating excessively high initial pressure as desirable. What I wish to say is that cartridges giving low initial pressures, coupled with low velocities, are damnable worthless for practical use, and that I look upon a certain amount of the energy, which Mr. Tenner calls bursting strain, as absolutely desirable as long as a half-way decent gun is being used. For this reason it is a farce to figure the actual merits of powders as Mr. Tenner has in the above instance.

For highest actual velocity only 20 out of the total 200 points are allowed, although velocity is what we all want most, as long as it is coupled with sufficiently close pattern and safety. A conflict of Mr. Tenner's theories and actual practical value to the sportsman.

To go into details would carry me too far, although the basis of awarding other points of merits are as open to criticism as the aforementioned ones.

However, the study of ballistics is inexhaustible, and there is lots of room for honest differences of opinion. I, for one, hope that Mr. Tenner will make his American testing institution a practical and to himself a financial success, and I shall be ready at any time to give Mr. Tenner such assistance as is in my power.

Should, contrary to my judgment and that of other parties in positions to judge, a powder like the Walsrode be found desirable from a commercial point of view, then both the Schultze as well as the E. C. Co. would put a similar powder upon the market within a few months' time, which both, I have reason to believe, would prove decided improvements on the original of these condensed strength Walsrode powders. I think, however, that there will be no occasion for it.

The question whether a powder of decreased bulk and increased strength, as compared to best of black powders, is desirable has been answered in the negative by the failures of several such powders, and the signal practical and financial success of the two powders, which have been made to compete with black powder bulk for bulk and measure for measure, and one half in specific gravity, namely, Schultze and E. C. powders.

I know that it is much easier and also less expensive to make a nitro powder of condensed strength, but possible changes are not aimed in that direction as far as E. C. and Schultze powders are concerned.

One of the greatest prides and boasts of the Schultze Co. is that for nearly ten years they have not changed their powder, and that no matter where Schultze powder is for sale the world over, it is of alike standard strength and kind, owing to the fact that such immense quantities are mixed and kept in magazine and mixing houses for from one year and over, under constant observation. Special "family powder," strong, weak, extra good or poor batches, are never issued as such.

The wonderful success of the American E. C. powder, with its hard grain and consequently easy manner of loading, has induced the Schultze Co. contemplating to improve their powder in this respect. Since a year they have been filling their magazines with a powder which is in all appearances the same as their regular powder, but the grain is as hard and indestructible as black powder. The same standard of strength and quickness, specific gravity and bulk will be retained, but the loading will be greatly simplified, as various pressures on wads will not make any greater practical difference in loading than with black powder. This hard grain powder will be issued some time this coming fall, and I know will meet with general favor,

In conclusion, and referring to Mr. Tenner's tests, I will say that although the proverb goes that figures don't lie, it is necessary to know how they were arrived at, and even then without practical tests it will be difficult to arrive at their real practical and commercial value.

JUSTUS VON LEMBERKE.

### THE NATIONAL ASSOCIATION.

[From a Staff Correspondent.]

THE first annual meeting of the National Game Bird and Fish Protective Association was held in the Sherman House, Chicago, Jan. 10. The president, Mr. M. R. Bortree, presided. There was a fair attendance of members present, the majority residents of Chicago. Following is the list: Messrs. E. K. Adams, M. R. Bortree, F. S. Baird, C. Essman, Thos. P. Hicks, W. N. Low, W. B. Leffingwell, J. Roberts, C. Sparre, Jr., Geo. W. Strell, H. B. Tefft, R. S. Mott, N. S. Birkland, A. M. Birkland and Dr. C. W. Lichtenberg, all of Chicago, and Mr. J. P. Barnum, Prairie du Chien, Wis., Mr. A. L. Lakey, Kalamazoo, Mich., and Mr. T. E. Pond, Milwaukee, Wis.

Mr. Bortree briefly reviewed the work of organization in previous meetings.

On motion, several applications for membership from individuals and clubs were accepted.

It was voted that the president and secretary be authorized to pass on the nominations of honorary members.

Mr. Lakey caused a long and fruitless discussion by presenting the following as a resolution:

Whereas, The gun is an article used mainly for man's pleasure and seldom for his pecuniary profit; and

Whereas, Many objections are made by some of our Legislatures to the expense of enacting and enforcing proper laws for game and fish protection; and

Whereas, Some good men are opposed to appropriating State or public money for such purpose; therefore,

Resolved, By this Association in annual session, that we believe it would be no injustice to the sportsmen, or the men that keep and use the gun, to ask our several State Legislatures to enact and enforce suitable laws for the levying and collecting of a license tax on each and every gun in its domain, and to punish by fine and imprisonment or both any person carrying or using any gun of any kind whatever, for the purpose of shooting or trying to kill any song game bird or water fowl, or wild animal of any kind or description whatever, without having paid such license or tax; and further,

Resolved, That such license or tax should not be less than \$2.50 or more than \$5 per arm; and further, that such license or tax should go to the support of and to enforce just and proper laws for game and fish protection.

Mr. Low seconded the resolution as a matter of courtesy, and then proceeded to show its unsoundness. After quite full discussion the sentiment was that the idea was good, but that it wouldn't do now, but might do some time later. It was tabled.

Mr. Baird then offered the following preamble and resolutions:

Whereas, Large quantities of game are continually being shipped to this and other markets, contrary to the laws of the various States where it is killed, and therefore be it

Resolved, That the president of this Association be and he is hereby directed to cause written notice to be served on the express and other transportation companies, notifying them that unless they cease receiving and shipping game from States having non-export laws they will be prosecuted to the full extent of the law by the joint efforts of the State Association and national associations, and in the event of their failing to obey the laws of the several States, prosecution be at once brought against them.

After the resolution was seconded, Mr. Low was promptly on his feet and informed the assemblage that as president of the Illinois State Sportsmen's Association he was competent to do the work of protection in Illinois. The whole gist of his remarks was that the Association was "usurping the functions" of the State Association. It was admitted that there was illegal game in the Chicago market from non-export States, and therefore it was plain that the Illinois State Association was not entirely efficient in enforcing the game laws. But dignity and function were an issue.

Mr. Mott made the point that the lowliest citizen in the State had a right to take action in enforcing the law. It was not a right confined exclusively to any individual or association; but he did object to the resolution because he considered that, not having any money in the treasury, the Association could not prosecute. It would be making threats it could not fulfill.

Mr. Bortree showed the good which could be accomplished by diligent personal efforts. He and Mr. Pond had called on several express companies, all of which promised not to transport any more game illegally.

Mr. Baird then said if the Association could not fight it had better quit at once. But he knew they could fight without money. He had assisted in prosecuting twenty-one cases in Chicago without money and twenty of them were convicted.

Mr. Leffingwell was in sympathy with the resolution, but thought nothing could be done without money. In the country, neighbor would not inform against neighbor, and an informer was looked upon as odious. Stacks of grain and hay were burned sometimes and mischief done in retaliation.

Mr. Barnum cited several instances where illegal shooting and cold storage was suppressed by a firm notice of intention to prosecute. The threat alone was sufficient. Much time was consumed in this discussion, The resolution was adopted.

Treasurer Hicks reported seventy-five members at \$1 each, and three clubs at \$5 each. After deducting expenses, there was a balance on hand of \$7.95. The report was accepted.

The secretary, on the motion of Mr. Mott, was instructed to cast a ballot for the same list of officers for the ensuing year: President, M. R. Bortree, Chicago; First Vice-President, A. L. Lakey, Kalamazoo, Mich.; Second Vice-President, Joseph H. Hunter, Washington, D. C.; Secretary, F. E. Pond, Milwaukee, Wis.; Treasurer, T. B. Hicks, Chicago; Attorney, F. S. Baird, Chicago.

All dues paid in are considered applicable to 1894. Mr. Low objected.

It was carried that any application for membership properly vouched for by any member be accepted by the Association and the applicant be considered a member.

Mr. Strell presented a preamble and resolution as follows:

Whereas, Game and fish wardens are the legalized protectors of game and fish in their respective States; and

Whereas, With their hearty support and co-operation with this Association, protection of game and fish would be made easier,

Resolved, That this society obtain the addresses of every game and fish warden throughout the United States, keep the same on file, and pledge each and every one to the moral and financial support of this Association, and, further,

Resolved, That this Association will notify all game wardens of ille-

gal shipments from their section whenever possible, and ask for the prosecution of offenders.

Mr. Low seconded the resolutions.

The president, secretary and treasurer were appointed to select a design for a club badge, have the badges made and charge a suitable price for them to members, the price not to exceed \$2. It was not compulsory on members to buy them. The committee on badges is to report at the next annual meeting, to be held in Chicago.

The purposes are specifically set forth in Article I. of the Association's constitution, as follows:

"This Association is formed for the purpose of securing co-operative work among State sportsmen's association, game wardens and individuals in protecting game and fish during the close season; to obtain harmonious legislation by and between the several States, territories and districts in their game laws; to discourage the reckless killing of any and all kinds of game for pleasure or for pecuniary profit, prevent the unnecessary destruction of forests and the killing of insectivorous and song birds, encourage a general adoption of the game warden system, extend the number of State and National parks by proper legislation, foster the introduction and protection of new species of game; ascertain, defend and protect the rights of sportsmen, and promote the affiliation of all worthy members of the fraternity throughout the United States."

A most deplorable state of game destruction was described in a letter, under date of Jan. 5, from Mr. J. N. Wass, president South Dakota Sportsmen's Association, B. resford, S. D. He wrote: "The Dakotas should be the grandest grouse and wildfowl State in the Union, but is fast being depleted from two causes. First, shooters from all over the Union come here to help us slaughter our game birds, and most of them are not disappointed. Second, and by far the most destructive cause is the winter trapping along the Missouri River. Observation and experience have proved to me that our pinnated grouse are to a certain extent migratory, and last fall they began their southward journey in October, and it lasted to some time in November. They go south to the Missouri River where they winter in the wooded bluffs and valleys, and are now congregated by thousands along the river from Yankton, S. D., all down through Iowa, and it is by trapping and shipping that their numbers are lessened more than by shooting. I do not know how far up the river the birds use. Vermillion and Elk Point are two places where the people all seem linked together in gam' traffic. It has been stated that in the winter of 1888-89, at Elk Point, S. D., there were paid out for chickens alone \$39,000, and I have looked up the matter sufficiently to believe the statement not overdrawn. It is impossible for an individual to get a conviction there, for it has been tried, and the officials have helped the parties under arrest to escape from the court room while having a preliminary trial, and they are now at large. It will take concerted action to accomplish any good there. I think that there is no place in the whole United States where more good to the sportsmen at large could be accomplished than by having game wardens sufficient to properly patrol the Missouri River for both Iowa and South Dakota; for birds wintering along that stream spread themselves all over South Dakota, if not Iowa, in the spring to nest and rear their young. Enough birds passed here last fall, going south, to stock a good portion of the State well next spring.

"I believe if it was looked into it would be found that a good share of the chickens received at Chicago came from the Missouri River country. Protection here would affect a large scope of country."

There were many more letters which the secretary had with him, but owing to the dilatoriness of the meeting, there was not time to read them during its continuance.

B. WATERS.

909 SECURITY BUILDING, Chicago.

### Restocking Rhode Island.

PROVIDENCE, R. I., Jan. 8.—All the true sportsmen of the State of Rhode Island are glad to see the way the State Protective Association is taking hold of the restocking plan.

This year has been reported as certainly the poorest of any known for fairly good bags. Last year's hard winter practically exterminated the hardy little Bob White, while that staunch and sturdy old monarch of our Rhode Island timber, the ruffed grouse, is very scarce. The boys have fixed the law now so that nothing can lawfully be killed after Jan. 1, but of course it is practically impossible to keep the law enforced. The association is doing good work, but the same old cry "Lack of ready cash" is heard when active work is needed. There are a good many free, open-hearted sportsmen here who are willing to put their hands in their pockets, but it is hard work sometimes to draw them out full when they think that they alone are supporting the association. But to the credit of those who do help along the association and its good work much can be said, for the laws are much better respected than some few years ago, and all we want now is to make good the big hole in the game supply.

Mr. Thos. Aldrich has been south looking up quail, and as a result a good many hundred birds are now being let loose throughout the State. Mr. Aldrich brought home some 300 quail a week ago Saturday, and despite the adverse circumstances they were in excellent condition. The larger part of the quail were subscribed for by members of the association, and upon arrival were delivered to the parties, who liberated them wherever they may choose. Several parties who had not subscribed to the general fund have now made application for birds, and the result will be the State will soon be pretty well restocked. The birds are supplied by the association at cost, and as fast as disposed of more are ordered. They are being distributed mostly through the Blackstone Valley, Scituate and Kingston.

Messrs. Carpenter and Bender, of the Farm and Field Club, took some eight dozen birds out to the farm yesterday and reported in first class condition. Next Thanksgiving possibly the boys will have broiled quail. The Farm and Field Club are getting ready for a big fox hunt soon. Foxes are thick near the "farm" and parties in that section have secured several this season. Today.

### A Virginia Shooting Ground.

WAVERLY, Va.—There is plenty of game here, such as wild duck, wild turkey and many deer. Squirrels I have never found so plenty as they are along the streams, rivers and swamps.

F. UG

## NEW YORK ASSOCIATION.

THE New York State Association for the Protection of Fish and Game held its annual convention in Syracuse, Jan. 11. The delegates met in the capacious assembly room of the Yates, which had been put at their disposal by the renewed courtesy of Proprietors Averill & Gregory. The following clubs were represented:

Canandaigua Rod and Gun Club—W. H. Fox, W. H. Knapp.

Honeoye Falls Anglers' Association—Aaron Mather. Sundown Fishing Club, Poughkeepsie—J. S. Van Cleef. Oundaga Gun Club, Onondaga Castle—C. J. Smith, Isaac Waterman, John Loft, Martin Hill.

Pierrepont Gun Club, Utica—W. Pierrepont White, E. J. Millsaugh, Henry P. Crouse, Isaac H. Maynard, Hugh White.

Black River Association for the Protection of Fish and Game, Utica—Geo. W. Chassell, W. E. Wolcott.

Caledonia Fishing Club, Caledonia—Jas. Annin, Jr.

Niagara Co. Anglers' Ass'n, Lockport—G. W. Weaver.

Anglers' Association, St. Lawrence River—R. P. Grant, G. H. Strough, G. M. Skinner, Clayton; W. H. Thompson, A. C. Cornwell, Alexandria Bay.

Genesee Valley Fish and Bird Propagating and Protective Association, Rochester—F. J. Amsden.

Rochester Rod and Gun Club—Thos. H. Maguire.

Anglers' Association of Onondaga County, Syracuse—J. N. Babcock, George B. Wood, M. J. French, John Buss, Amos Padgham.

Steuben County Fish and Game Protective Association—Z. L. Parker.

Auburn Gun Club, Auburn—C. W. Brister, C. G. Curtis, L. E. Fiero, Geo. Nellis.

Onondaga County Sportsmen's Club, Syracuse—C. H. Mowry, C. G. Courtney, H. McMurchy, A. C. Ginty, H. Ayling.

Erieville Fish and Game Protective Association, Erieville—J. V. Perkins, F. I. Whitnall.

Central New York Game and Fish Protective Association, Seneca Falls—Chas. Bannister, Dr. A. H. Fowler, Fred J. Davis, J. D. Aldon, Dr. F. G. Seaman, J. George Stacey, A. M. Schermerhorn.

Honest Fisherman's Association, Seneca Falls—F. G. Seaman, Dr. Gould.

The president, Charles B. Reynolds, of FOREST AND STREAM, was in the chair and the secretary was John B. Sage, of Buffalo. There were present also Gen. D. H. Bruce, of Syracuse, president of the Onondaga Anglers' Association and Vice-President of the State Association, and Chief Game and Fish Protector Pond, with the entire force of the district protectors.

On motion of Mr. Frank J. Amsden, of Rochester, who advised the meeting that a Michigan association of similar aims was at that hour forming in Detroit, this message of good will was dispatched:

Herschel Whittaker, Fish Commissioner, Detroit:

The New York State Association for the Protection of Fish and Game send greeting to the new State Association of Michigan.

JOHN B. SAGE, Sec'y.

Later in the day a response was received, reading:

DETROIT, Mich., Jan. 11.—John B. Sage: The Tri-County Club thank you for greetings and wish your society long life and activity.

HERSCHEL WHITTAKER.

On suggestion of Mr. Amsden the following message was sent to Governor Flower, not as an indorsement of all his acts and recommendations with respect to fish and game legislation, but as expressing the satisfaction of the delegates that New York has an executive who is honestly interested in the subject. The text ran:

Governor Russell P. Flower, Albany, N. Y.:

The New York State Association for the Protection of Fish and Game wish to express their gratification that we now have a Governor who shows an interest in the objects we are laboring for.

JOHN B. SAGE, Secretary.

It had been hoped that the members of the Fish Commission would attend the meeting, but the only one present was Commissioner Hackney, who, being called upon to speak, made a hit by saying, "I am not much of a speech-maker, but I am something like Gen. Grant, I smoke." He said humorously that when elected a member of the Commission he knew nothing about fish, and had kept up the record. "The Commissioners," he added, "will gladly work in concert with the Association as to legislation and law enforcement." Forest Commissioner Wm. R. Reed, of Potsdam, addressed the meeting, speaking in high terms of the forestry force. On motion of George H. Strough, of Clayton, it was declared to be the sense of the meeting that the foresters should be given authority to protect game and fish.

Messrs. John N. Babcock of Syracuse, W. S. Gavitt of Lyons and Dr. Gould of Seneca Falls denounced the fyke nets in Seneca River as destructive in an inordinate degree and seriously menacing the existence of the food fishes of that river and all the waters of which it is the feeder.

Mr. Gavitt read a letter from Senator Saxton declaring a change of front on this question. The feeling of the convention found expression in the report of the legislative committee recommending that the clause allowing nets in the Seneca River should be eliminated.

Mr. Aaron Mather called attention to the questionable action of the Livingston county supervisors who had prescribed a tax of \$10 on non-resident fishermen. Secretary Thompson of the St. Lawrence River Association, Mr. C. H. Mowry of Syracuse, and others declared that it was impossible to get good legislation from many of the boards of county supervisors because they were in the control of the netters and fish pirates.

Mr. W. E. Wolcott of Utica read an interesting report on the deer of the Adirondacks, in which he said: "One year ago reports received from the Adirondack region were to the effect that deer were increasing in numbers at an encouraging rate. This year the reports are not quite as favorable. Beyond a question the deer are on the decrease in some portions of the woods, while in a few localities it is believed they are still on the increase. Some think the apparent gain in numbers at certain points is due to the fact that the deer have been driven there from other sections, and this seems quite a plausible explanation. If the deer are increasing in spite of the adverse conditions that exist it is certainly remarkable. A guide at Big Moose Lake saw the carcasses of ten deer last spring decaying in the woods between Big Moose and Raquette lakes. He thought that the animals had starved to death. The snow was six feet deep in that locality for forty consecutive days and the mercury below zero. Carcasses were also found in other parts of the woods and many are inclined to think that the trouble

was caused by dogs getting into the deer yards in the winter and stampeding the deer. Some reports have been circulated to the effect that feed for deer is becoming scarce in the Adirondacks, but this idea is utterly absurd. A Utican who has frequented the woods for many years saw less than a dozen deer last summer on a trip to Twitchell and Big Moose lakes, when he had been accustomed to see fifty. It is said by parties who claim to know, that a very large number of deer was killed last winter for use in lumber camps in the southern part of the woods. Deer are reported as increasing in numbers at Cranberry Lake, St. Lawrence county; North River, Warren county; Raquette Lake, Hamilton county; Fulton Chain, Herkimer county. A falling off is reported at Harrisville, Lewis county; Morehouseville, Hamilton county; North and South lakes, Herkimer county, and Sacandaga Valley, Saratoga county.

"At the Bisby Lakes, Wilmut, Beaver River, Leroy Lake, Blue Mountain Lake, Moose River, Piseco Lake, Schroon Lake and other localities they are about holding their own; and at Honnedaga Lake they are increasing. Advice received from various parts of the Adirondacks indicate that the number of deer killed last year was much smaller than the year previous."

Protector Pond was asked his opinion respecting the operation of the present deer law; and expressed a conviction that its provisions were wise and efficient. The seasons he would not change, nor would he forbid any one of the three modes now legalized—floating, hounding and still-hunting. The followers of each several mode, said Maj. Pond, are a check on those who hunt in other ways. The hounder will see to it that the floater does not get out before his time; and the still-hunter will not abide the hounds in the woods after their season has run out. Deer, according to his observation, are on the increase; they have doubled within the last ten years; and if no more shall be killed annually than the estimate for 1893, of 700 deer, the yearly increase will not be taken, and the number will be growing constantly. In certain localities the food supply was insufficient last winter.

Numerous desired amendments of the fish and game laws were submitted and were referred to the Committee on Legislation. The report of the committee, which was of necessity incomplete, left some of the propositions to be considered at a subsequent time, and their action on them will be reported in a later issue of the FOREST AND STREAM.

## Report of Committee on Legislation.

To the New York State Association for the Protection of Fish and Game:

Your legislative committee would respectfully report: That a large number of amendments to the game law have been submitted to your committee by various organizations and individuals for their consideration, several of which are general in their application and are important, and many of which are local in their character. That your committee are of the opinion that it is not advisable for this Association to suggest many or any radical amendments to the existing game law; that the few amendments we suggest are such as experience has demonstrated will improve the law and will tend to gain for it the support of the inhabitants of the localities affected. That in our judgment it is important that the law should meet the support and approval of the mass of the people in order to make it effective. We believe that the better class of citizens throughout the State begin to realize that adequate protection for fish and game is necessary and that such protection is in the interest of the common people. That in our judgment it was not advisable to recommend special legislation for particular localities, but that the general law should so far as possible be made uniform in its provisions throughout the State. We deem this very important, because when the law is uniform the people everywhere will learn to know and respect its provisions. Your committee would report that in the limited time at their disposal it has been impossible to consider and act upon all the amendments and it would suggest that as to such amendments on which your committee has taken no action, it be given power to sit after the adjournment of your body and consider them, and submit such amendments as may be deemed advisable to the Fish Commission and to the Legislature.

We would recommend the following amendments:

Sec. 44. After the word "Ulster" insert the words "or Sullivan," and after the word "time" strike out the balance of the section. [This adds Sullivan to the counties in which deer may not be hunted. Sec. 44 now forbids hunting them in any manner in Sullivan prior to 1897.]

Sec. 70. Amend by striking out the words "sunset and daylight" and inserting in place thereof the words "one hour after sunset and one hour before sunrise." [The time during which wildfowl may not be pursued.]

Sec. 73. Amend by striking out the five-year provision as to certain counties named therein. [Removes five-years (from 1893) close season on quail in Genesee, Wyoming, Orleans, Livingston, Monroe, Cayuga, Seneca, Wayne, Tompkins, Tioga, Onondaga, Ontario, Steuben and Cortland counties.]

Sec. 74. Strike out the words "fifteenth day of August" and insert the words "September first." [The opening date on woodcock and grouse.]

Sec. 75. Amend by striking out the words "fifteenth day of August" and "first day of February" and insert in place thereof the words "the first day of September" and "the first day of January." After the words "or sale thereof" strike out the word "between" and insert in place thereof the word "after," and after the word "January" strike out the words "and the first day of February" and also the last four lines of the section commencing with the word "unless." [This will entirely confine the sale of woodcock and grouse to the proposed open season, Sept. 1-Jan. 1.]

Sec. 110. Amend by inserting after the words "Oswego bass" the words "in any of the fresh waters of the State; nor pike, pickerel or wall-eyed pike in the American waters of the St. Lawrence River" [Provides a close season in St. Lawrence River waters for pike, pickerel, wall-eyed pike, from Jan. 1 to May 30.]

Sec. 132. Strike out all of the section in parentheses. [Removes waters of Lake Ontario in Jefferson county from present exemption from net law.]

Sec. 138. Strike out all of the section after the word "Troy;" also strike out the words "Hank Falls" and insert in place thereof the word "Eddyville." [This removes the exception by which nets are allowed in the Seneca River. Also forbids nets in Rondout Creek below Eddyville.]

Sec. 140. Amend so as to prohibit the fishing with fyke net or nets of any kind in the waters of Essex county, or in the Seneca River in Cayuga, Wayne and Seneca counties.

Sec. 142. Strike out the words "and in the Susquehanna in the town of Oswego, Tioga county, and from the first day of September to the fifteenth day of October in the Tioughnioga and Otsego rivers in the county of Cortland." [Prohibits eel-weirs in waters named.]

Sec. 374. Amend this section so as to limit the powers of the boards of supervisors to restricting the open season for fishing and hunting and providing penalties only for the violation of such provision, and that all local acts of boards of supervisors heretofore passed, so far as they are inconsistent with this act, be declared void. [To correct the doubtful constitutional character of certain supervisors' laws.]

We would respectfully recommend that the Legislature be urged not to pass any amendments to the game law permitting the spring shooting of wildfowl, or the use of

nets of any kind for catching fish in any of the waters of this State where it is now prohibited.

We would recommend that the wardens of the Forestry Commission be granted the powers of game protectors.

WALTER S. MACGREGOR (Syracuse),  
J. S. VAN CLEEF (Poughkeepsie),  
W. S. GAVITT (Lyons),  
G. M. SKINNER (Clayton).

## Nets in Inland Waters.

The suggestion contained in Gov. Flower's message, that nets be licensed in certain inland waters, was discussed, and it was the uniform expression of opinion that such a system would prove injurious to the fish food supply; and this conviction found expression in a resolution offered by Mr. John N. Babcock, of Syracuse:

Resolved, That the several associations or clubs having a membership in the New York State Association for the Protection of Fish and Game, be and hereby are requested to use every honorable effort with the members of the Legislature from their respective districts to prevent the passage of any and every amendment to the game laws permitting the use of nets in any of the inland waters of the State, including the River St. Lawrence and Lake Ontario within the present limits.

## Report of Committee on Forests.

Gentlemen of the Association:

At the last annual convention of the State Association the committee on forestry, consisting of Gen. D. H. Bruce and myself, submitted a report setting forth at some length the danger that threatened the Adirondack wilderness, and outlining the steps which up to that time had been taken in the interests of the Adirondack State Park. The subject of forest protection should be and doubtless is one in which every member of this Association takes a deep interest, and in our constitution it is specified as one of the objects for which the organization exists. Therefore a few remarks, intended to supplement the report of a year ago, may be appropriate at this time. The dangers that threaten the forest are multiplying with a rapidity that is appalling and disheartening to the many who have loved the great Northern Wilderness for the freedom it brought them, and they look with feelings of inexpressible sadness upon the changes wrought in their favorite haunts. During the past year the lumberman has invaded new sections with his ax and saw; trout streams have been dammed to obtain sufficient water to float logs, saw mills, which have greedily consumed all available timber near them, have been moved on to fresh scenes, where other mountains and valleys are being denuded; and the wood acid works have continued to devour the hard wood with unabated zest. The wilderness which had previously been girdled by railroads and transversed by one line, has been further mutilated by spurs running in from various quarters. Modern locomotives, palace cars and freight trains thunder through the dim recesses of the forest, where the larger game lately found a safe retreat; the path of the pedestrian is crossed by fallen logs and the landscape marred by unsightly stumps and piles of brush.

The report of the hunter's gun is drowned out by the terrific explosion of dynamite blasts in stone quarries, iron mines and railroad cuts. The angler, while wading a stream in quest of brook trout, is compelled to go ashore and remain there because the gates in some dam further up stream have been raised to let out water sufficient to float logs down to the saw mill. Below the mill he finds his favorite pools filled with sawdust and other refuse and notes with sadness that the spawning beds of the speckled beauties have been broken up. When one is peacefully dreaming in his boat on a placid lake, watching for a deer to come down to the water, it is exceedingly unpleasant and disenchanted to be aroused by the shriek of a locomotive or the clatter of a wagon on a newly made road near by.

The tourist can scarcely follow a blazed line or trail in any direction without having his progress barred by a wire fence too high to climb, or an equally discouraging barrier in the form of a notice printed in large black letters on white cloth; "This is a private preserve; no trespassing allowed," or words to that effect. The result is exceedingly depressing and altogether foreign to the ideas that lovers of the woods have hitherto held. Freedom is gone, and with it one of the greatest charms of wilderness life. Personally I can find no fault with the clubs, for I have been hospitably entertained by several of them, and have standing invitations to become the guest of others, but I take it that to even the club men themselves, or many of them, there are some things lacking under the new regime that they enjoyed under the old. And one of these things is the unrestrained freedom which has vanished before the march of civilization.

Doubtless, for the present at least, the clubs and their preserves must be considered in the light of established facts. They have come to stay unless aggressive measures are taken by the State to acquire title to the land by right of eminent domain. Some who have invested capital in the Adirondacks have no doubt done so with a view of making money through the rise in real estate, which has had a very marked upward tendency for several years past. Probably such persons would be glad to dispose of their holdings if paid a fair advance on the purchase price, and it would seem to be wisdom on the part of the State to buy up all available property at the earliest possible moment.

The legislation thus far secured in the direction of forest protection seems utterly inadequate. Much was hoped from the act in relation to the Adirondack Park, which became a law last spring, but the exchanging of lands does not appear to be enlarging the park very materially.

The Adirondack Park contains about 2,750,000 acres. The State owns within the park about 550,000 acres, and outside of the park lines but within the Adirondack preserve about 140,000 acres. Of these outlying tracts about 10,000 acres have been sold during the past year for \$35,000. This money, according to Chapter 332, Laws of 1893, was paid to the State Treasurer, and is held by him as a special fund for the purchase of land within the Adirondack Park. The Commissioners have been unable to buy any land with this money, as it has to be reappropriated by the Legislature before the Commissioners can use it.

At a meeting of the Commissioners held Dec. 7, 1893, applications were received for spruce timber over 12 in. in diameter 8 ft. from the ground, and they sold the spruce timber on about 17,000 acres. This money, when received, will be placed by the State Treasurer in the special fund to buy land. The sale of timber was all on land within the Adirondack Park.

A writer in criticizing the present forestry system, says:

"Vast game preserves worth millions are to pay no taxes, while the State is made the gamekeeper of these same preserves, and the property of the rest of the State is taxed to pay the expense."

The Forest Commission in its last annual report after alluding to the exchanging of lands through the medium of sales and purchases says: "But if the State ever acquires enough territory within the Adirondack and Catskill regions to protect the important interests dependent on the preservation of the forests located there, it will have to inaugurate some more liberal and comprehensive plan. After making ample allowance for any increase in acreage arising from exchanges, three-fourths of the Adirondack forest will still remain in private hands and beyond the control of the State. About 500,000 acres are owned by private clubs; but as these clubs, with few exceptions, have granted large timber rights to prominent lumber firms, the outlook for the private preserves is but little better than that of the forest at large."

The commissioners again recommend as in previous annual reports, the appropriation of money for the purchase of forest lands in the Adirondack and Catskill regions, and strenuously urge that the amount be commensurate with the importance of the interests involved. There seems to be no longer any question as to the necessity of preserving the forests around the headwaters of the Hudson and other large streams having their source in the Adirondacks, and public sentiment in favor of an Adirondack State Park has become so strong that our Senators and Assemblymen cannot afford to disregard it. The times appear to be ripe for prompt, energetic and liberal legislation along this line, and it is hoped that every member of the associations here represented will constitute himself a committee of one to urge our legislators to push the good work onward.

The members of the Forest Commission are deserving of commendation for the efforts they have put forth in behalf of the Adirondack Park. The one thing lacking to secure what is desired is the funds to enable them to purchase lands. If the Commissioners had the money at their disposal there is no doubt the State would soon have a park to be proud of. W. E. WOLCOTT, Chairman.

The following resolutions, which accompanied the report, were unanimously adopted:

*Resolved*, That the New York State Association for the Protection of Fish and Game, in convention assembled, does hereby express its conviction that the State should take, by right of eminent domain, lands within the limits of the Adirondack Park, as rapidly as funds therefor can be provided. That the State Legislature is hereby earnestly requested at its present session to take steps to provide for liberal appropriation for the purchase of such lands or for lending the State to obtain funds for such purpose. That it is the sense of this convention that no timber should be cut and sold from the Adirondack Park, and that the exemption of club lands in that region from taxation is unwise.

#### A Testimonial to Chief Pond.

A pleasant incident of the meeting was the outcome of a suggestion which came originally we believe from Mr. Henry Loftie. During the afternoon session (Mr. C. H. Bannister having lured Chief Protector Pond down into the subterranean vaults of the Yates), Mr. C. H. Mowry addressed the convention in a neat speech testifying to the good work done by Mr. Pond, as an officer who was doing his duty not for what there was in it, but because sincerely interested in that work; and then Mr. Mowry proposed that a fund be contributed then and there to provide a gold watch, to be given as a token of the Association's regard. It was no sooner said than done. The district protectors were invited to join, and in a few moments the required amount was in Mr. Mowry's hands, including a dollar which some one had collected down stairs from Maj. Pond himself under pretense that a watch was to be given to Sec'y Sage. Messrs. Bannister and Mowry repaired to the jewelry store of Messrs. Baker & Lathrop, and purchased a handsome watch. The formal presentation was made in his usual happy vein by Gen. Bruce, who spoke not only for the Association, but for all good citizens of the State, when he assured Maj. Pond of the esteem in which he is held for his record, and exhorted him to renewed watchfulness. Responding, Maj. Pond said that his own success and that of his staff had been in large measure due to the support of the Association, and of local societies, particularly the Anglers' Association of Syracuse. It is quite the correct thing now, when one meets Maj. Pond, to ask him what time it is.

#### Officers for 1894.

Messrs. Amsden, Gavitt and Skinner as a committee on nominations suggested as President, Gen. D. H. Bruce of Syracuse; for Vice-President, C. H. Bannister of Auburn; for Secretary-Treasurer, John B. Sage of Buffalo; and in presenting these names the committee spoke in high terms of the deep interest Gen. Bruce had shown in the Association and the part he had taken in putting the organization on its present basis; he was the father of the Association, and the hour had come for recognizing his claim to the honors of the office. The ticket was elected by acclamation, and in its choice of officers for 1894 the Association has given assurance of a year of usefulness and accomplishment.

The committee on legislation was retained, with the substitution of Mr. Strough in Mr. Skinner's place the chairman is Walter MacGregor, Esq., of Syracuse, and to him should be sent all suggestions respecting desired amendments.

#### New York Association for the Protection of Game.

NEW YORK, Jan. 9.—On invitation of the Hon. Robert B. Roosevelt, the forty-ninth annual meeting of the New York Association for the Protection of Game was held at the Gerlach on the evening of Jan. 8.

After discussing the usual excellent dinner, during which the president congratulated the club on the progress made and the great improvement in public opinion regarding the game protection, the association adjourned to the meeting room, where the usual routine of business was transacted, and the following officers elected for the year 1894: President, Hon. Robt. B. Roosevelt; Vice-President, Col. Alfred Wagstaff; Counsel and Treasurer, Thos. N. Cuthbert; Secretary, Wakeman Holberton; Executive Committee—E. G. Blackford, chairman; C. F. Imbrie, Wm. Carpenter, and the officers of the Association.

Mr. Edson Bradley and Col. E. A. McAlpin were unanimously elected members of the Association. Mr. Austin Corbin gave an interesting account of his success in stocking his New Hampshire preserve with elk, deer, moose, wild boars, buffalo, etc. W. HOLBERTON, Sec'y.

#### GENESEE VALLEY ASSOCIATION.

THE annual meeting of the Genesee Valley Fish and Bird Protective and Propagating Association was held last week in the Rochester Chamber of Commerce. The attendance of members was so large that it is evident great interest is being taken in the work of the Association. The Association is not an old one, having been organized only about a year ago. Herbert Wadsworth, of Avon, the president of the Association, occupied the chair. Secretary F. J. Amsden read this very encouraging report of the executive committee:

The executive committee has met seven times during the year with full attendance at each meeting. Three hundred and forty-five members have been elected and 147 have paid their dues for 1893, \$1 each.

A digest of the game laws, both for fish and birds, was printed on paper and cloth and posted throughout the counties. This the committee think is the most effective method of using the funds. It helps to remove the excuse often made for violation, that is, ignorance of the laws, and we would recommend to our successors the continuance of the practice.

The committee has had presented to them a proposition from Mr. Wadsworth, offering to set apart a strip of land in Livingston and Monroe counties, bordering on the Genesee river, amounting to one hundred acres or thereabouts for the use of this Association, for the purpose of forestry, game and fish. The executive committee gave it careful consideration at several meetings, but on account of the financial disturbances nothing was done. We hope our successors will take up its consideration at an early day, for it certainly is a very generous offer.

Last spring the Conesus Lake Association had a severe struggle with the violators, in which the association was successful. To aid them in their efforts we made them a contribution of \$25.

Your association has been instrumental in the appointment of several special game protectors, and in each case they have proved good men and done excellent work.

The deputy game protector, George M. Schwartz, though he has an extended field, has been very active and efficient. During the year he has captured 214 nets, valued at \$3,297, made thirty-one arrests and secured for the State \$202 worth of game. In Onondaga Bay, which has his special attention, is now practically free of netters, and fishing is greatly improved, and now that the sewerage of the city has been diverted, it will in the future be again a great resort for our citizens in recreation and fishing.

The ponds west of Charlotte have been guarded by Special Officer Marshall. He has captured thirty-four nets, worth \$550, and made six hundred arrests and collected \$173 in fines. The upper river and Black Creek are in the hands of Special Officer Brooks and his work begins to show by improved fishing. This is a water that should be kept free from all illegal fishing. Its nearness to the city affords angling for many of our citizens who cannot spare much time. It is a resort for the mechanic's evenings and holidays, and must be to them a source of pleasure. The park commissioners express an interest and join with us in its protection.

Honeyoyad Hemlock Lake has had the oversight of Special Officer Lyman, who has done well. He has the assistance and encouragement of the Hemlock Lake Association, which has a large membership, and who are determined to stop unlawful fishing. The lake is noted for its salmon, trout, black bass and perch. All it needs is protection to afford good fishing. The wall-eyed pike planted by the State Commissioners are beginning to be caught there.

Conesus Lake and Hemlock Lake, is another resort for many people from Rochester and elsewhere. It is a prolific water for pike, bass and perch. If netting can be stopped it will abound with them. The Conesus Lake Association is determined that there shall be no illegal fishing in it. Special Officer De LaVergne is the special protector of this water and is giving satisfaction.

Your committee feels very much encouraged with the work that has been done during the past year, and are confident that the good fishing the coming season will be the proof of it.

The State Fish Commission fully appreciates our Association and have and will continue to plant considerable numbers of young fish in the various waters. A plant of muskellunge was put in Conesus Lake last season and ought to prove a great addition to the water when they arrive at maturity.

What efforts have been chiefly directed to the protection of fish, we have not lost sight of the birds and close watch has been kept on the dealers to see that the laws were not infringed upon. We have also warned and watched the express companies to prevent the carrying of game from county to county, except in the possession of the person who shot them. This, we think, is one of the best provisions of the law and will help to prevent much of the market shooting that has done so much in the past to exterminate our birds.

Considerable work has been done in the subject of transplanting birds, and we have endeavored by correspondence to get the assistance of those who have tried it, and hope that something may soon be done in this line. One of our members, Mr. Wadsworth of Genesee, has been doing something in the line of pheasants. Your committee would suggest that this Association make another attempt, giving them out to some of our country members who can and will give them the proper attention.

The report was adopted. Mr. Amsden called the attention of the Association to the action taken by the Central New York Fish and Game Protective Association which at its meeting at Auburn a few days ago adopted a resolution favoring the repeal of the law passed in 1892 prohibiting the shooting of quail for a period of five years. The Central New York Association desired that the Genesee Valley Association take similar action and to bring the matter before the meeting Mr. Amsden offered a resolution declaring it to be the sense of the meeting that the prohibitive law should be repealed.

A. E. Babcock spoke against the repeal of the law. He reported having seen during the past season while out shooting a number of beavies of quail in this county. He was sure that if the law was repealed these quail would soon be shot away.

The quail question has not been satisfactorily settled in this county. Some years ago some quail were procured from the South and liberated in this county, but they did not do well and it was generally thought by sportsmen that the winter of this latitude was too severe for them. It was supposed that none of these quail had survived, but Mr. Babcock's report shows that some of them did. With the information furnished by Mr. Babcock before it, the Association decided that it would be unwise to ask for the repeal of the prohibitive law on quail, and Mr. Amsden withdrew his resolution and a resolution in favor of the continuance of the law upon the statute books was adopted.

The quail subject being up, Mr. Amsden read an interesting letter from W. C. Witherbee, of Port Henry, N. Y., in which he gives his experience in the transplanting of quail:

I tried the experiment here when we had extremely cold weather at times, as well as deep snows, with a great deal of doubt as to the outcome of the experiment. The results have exceeded my expectations. I bought some ten dozen West Virginia birds, from the mountainous parts, having them arrive here the last of March and fore part of April in two lots, and only know of six birds having died. I put them out immediately on their arrival near good cover, where I had first scattered some small grain, in lots of from four to six in one place, not trying especially to liberate cocks and hens equally divided. I kept track of them during the summer of '92 and they mated and hatched out good big beavies, and the county was full of them, although many of them that I first liberated crossed the lake and nested in Vermont. Along about October a great many began to travel, and I heard of beavies being seen miles away, mostly from the northwest. This traveling I find can to a great extent be stopped by killing off, as soon as the young are old enough to look after themselves somewhat, the old pair of each bevy, and especially the hen birds. During the fall of '92 I broke some pups on them and had very fine sport, in-

deed. I never tried to see how many I could get, but averaged say about a dozen a day for something over a month, that is, the most I killed in any one day was twenty-three and I tried never to kill over half a bevy, leaving the rest for seed. I had some buckwheat planted and left standing near some of the covers that I thought they would winter in, and aside from arranging with some of the farmers to feed them if they came around and looking after them a little in a few spots did nothing further. I knew of six beavies or parts, staying around near the region they were put out in that came through all O. K. Ten miles away one day late in February, when snow was deepest, I saw one bevy with twenty strong birds. They were living on a side bank covered with jumpers and cedars and feeding on seeds, etc., in a marsh on the lake front near, one bevy being under the floor of an old pavilion and one in a pine thicket. During the mating season this year I heard them all over the grounds where I had put them down, and also some in Vermont and heard of them for miles around, especially in Vermont. Last winter was considered hard on them everywhere, but these seemed to have stood it all right. Instead of looking them up and locating the beavies this season, I didn't look for any until a day or two before the opening of November. I found then only three beavies during the course of an hour or two's work with dogs, although one had some forty birds in and was probably two beavies joined preparatory to traveling, as I have not seen them since. I went out the opening day and once since only. I found three beavies, although the farmers told me that where there were lots during the summer they haven't seen any since October.

I did not pay the attention to the quail that I should have done. I had good sport one fall and they wintered well and this, the severest winter on birds known for sometime, and if I had killed the old of every bevy this fall there would be more here now, although there are enough now for seed in '94, if they winter. From the experience I had and from that of many friends I should advise you not getting birds until late, say the last of March, when you can turn them down immediately on their arrival. Where they are procured early and wintered in a barn or elsewhere they don't seem to do as well and they seem to die off rapidly whether because too many are kept in one place or not I don't know. If you try and winter them, keep them in several houses where they can get sunlight, having a fine meshed net around the sides, say a foot from the walls and one overhead—have a place fixed in one part with bushes so that they can run and hide; cover the floor with gravel, sand and a dusting place, lots of fresh water and feed, some green food as well as seeds, and don't try and keep over three dozen in one place.

If you will plant some buckwheat and grains near the covers and let it remain, it will afford good feed for them in winter, and you, of course, as a club, will have them looked after—more carefully than I did—and above all, have the old birds killed off before they travel if you want to keep the beavies around where they were raised. W. C. WITHERBEE.

An interesting report was read from Simon Marshall, the special game protector appointed by the Association in April of last year, in which he reported having during the past season captured and destroyed sixty-eight nets worth \$550. Mr. Marshall's territory included Braddock's Bay, Cranberry Pond, Long Pond, Buck Pond, Round Pond, all in the town of Greece. He made sixteen arrests and secured nine convictions. Mr. Marshall has four cases pending in the courts at the present time. The amount collected in fines from the parties convicted was \$173. Mr. Marshall reports that he finds it difficult to get assistance in his work, as the farmers are afraid of the illegal fishermen, who take pains to warn the farmers that if they tell the game protector, trouble will follow. He also reports that in a fish suit, fishermen and jurors have little regard for their oath. Mr. Marshall says that if he continues in the employ of the Association next season he will have a boat of his own which he can load into his wagon, and take to the water in pursuit of illegal fishermen as he discovers them while driving along the shores of the ponds, streams and bays. He reports having been greatly assisted in his work by State Game Protector Schwartz, who has aided him in making captures.

President Wadsworth spoke briefly in reference to the proposition which he made some months ago to the Forestry Association, and the fish and bird men of this locality. He said the conditions of the proposition were that a fish hatchery should be built by the fish and bird men at some suitable point along the river or its tributary streams. By this scheme Mr. Wadsworth hopes to bring to the attention of the farmers along the river the value of preserving the fish and game, and he believes that little can be accomplished unless the farmers heartily co-operate with the sportsmen.

The committee on nominations, composed of Messrs. Brown, Gillette, Roth, Vogel and Annis, reported the following list of officers and they were declared elected: President, Wm. S. Kimball; First Vice-President, Herbert Wadsworth; Second Vice-President, E. A. Babcock; Treasurer, H. D. McVean; Secretary, Frank J. Amsden. Executive Committee: H. S. Woodworth, J. B. G. Warner, Dr. H. S. Miller, Daniel C. Bascom, H. M. Stewart, Thos. W. Fraine and Dr. David Little.

Mr. Edmund Redmond offered this resolution, which gave rise to some earnest debate:

*Whereas*, A recent decision of the Court of Appeals confirmed the constitutionality of that clause in the Penal Code and game law which forbids shooting or fishing in this State on the first day of the week; and

*Whereas*, It is not the province of the Legislature to prescribe in what manner the people shall observe their days of rest; and *Whereas*, Angling or shooting for amusement, in season, is in no way injurious to the State, but a pastime that should be free; therefore

*Resolved*, That this Association regards the law in question as a vexatious interference with the rights of the people; an uncalled-for abridgment of their liberty; calculated to generate ill-will between men, and in no way good, but opposed to the spirit of the State constitution; and

*Resolved*, That we would be pleased to see the obnoxious law repealed and that the secretary be requested to send a copy of this preamble and resolution to the committees on game laws and Penal Code of the Senate and Assembly of this State.

The motion was eventually referred to the executive committee, on suggestion of Dr. E. V. Stoddard, who said: "If the morning papers report that we have adopted such a resolution, nine out of every ten men will at once exclaim: 'That is a nice Association, it votes in favor of Sabbath desecration.' These men will say this because they do not think and because they do not understand

us. What we should do is to drop this resolution and appoint a committee to go to work in a quiet way to secure the repeal of the law. If we adopt the resolution we are sure to be misunderstood and criticised."—*Rochester Democrat and Chronicle*.

#### How Do You Cook a Quail?

NEW YORK, Jan. 3.—*Editor Forest and Stream*: In your edition of Jan. 13 I notice that "J. B. B." asks some questions as to how to cook a quail, and as I think I know something on that subject (at any rate, my friends who have tried the quail all say that they have never yet tasted any to compare with those that are cooked in the manner I describe); perhaps it might be of some interest to "J. B. B." and to your readers to have the recipe laid before them.

As to skinning the quail: that is something ridiculous. It should be carefully dry-picked and drawn, the same as you would draw a chicken that is intended to be roasted. Under no consideration should the quail be split open.

As soon as the bird is carefully drawn and washed out inside, stuff it with a dressing consisting of bread crumbs, salt and pepper, a trifle of onion and a trifle of parsley chopped together, also a very small quantity of breakfast bacon chopped in with the dressing, and stuff the bird behind and before with this dressing. Then take some slices of breakfast bacon and slices of onion and lay them on the outside of the quail and fasten them thereto by winding some linen thread around about them until the whole surface of the bird is covered with alternate slices of breakfast bacon and raw onion. Then pepper and salt the outside slightly, and after placing a good big piece of good butter on the top of each bird, put them in a baking pan and into a hot oven.

As soon as the butter is melted (which will be in the course of two or three minutes) baste each and every quail with the melted butter, etc., and when the birds commence to turn slightly brown, thrust the tine of a fork into the breast of each bird and if no blood issues therefrom the birds are done. If the oven is good and hot it doesn't take but a very few minutes to prepare them in this manner. In fact, it is almost the same process as is followed in roasting a chicken.

Now, if care is taken that the birds are not overdone it will be found that they are perfectly juicy and tender, and that the flesh will leave the legs and breast of the bird easily, in fact, will almost drop therefrom.

I have never seen at any of the New York or other restaurants or in any hotel, quail broiled that were fit to eat. They were so dry and tough that it was almost impossible to detach the meat from the body of the bird or from the legs, and when it was detached it was so dry as to be next to tasteless.

If my sportsmen friends will follow the above directions carefully I think that they will one and all admit that never before have they known what a delicious bird and how juicy a quail is when properly cooked.

ROBERT C. LOWRY.

#### A New Michigan Club.

HOLLAND, Mich., Jan. 10.—A long needed gun club has at last been organized here. Its objects are the importation, propagation and protection of game and fish. The following officers were elected: President, M. G. Manting; Vice-President, H. Kiekintoeld; Secretary-Treasurer, A. G. Baumgartel.

We have a beautiful sheet of water here called Macatawa Bay, six miles long and from one to one and one-half broad, which was once teeming with fish, but by illegal netting and spearing its waters have become so depleted that one has to be an expert to make a fair catch of fish. The same can be said of the game; shooting out of season has been so much indulged in that our pointers and setters are nearly useless. Of course the deep snow last winter is the cause of the present scarcity of quail, but game of all kinds is on the decrease. Heretofore, and to a more or less extent at the present time, public sentiment has upheld the law-breakers, but happily a better sentiment for the protection of game and fish is being awakened. People who once said that it was impossible to deplete our waters by netting are now, when they can no longer make their accustomed catch of bass or pickerel, seeing that something must be done. It is the idea of the club just started to give the Mongolian pheasant a good trial, to stock a few suitable brooks with trout, and to protect, as far as possible, our game and fish from further destruction. We shall endeavor to encourage our warden by offering rewards for convictions and to assist in other ways when possible.

A. G. B.

#### Save the Does.

RED BANK, N. J., Jan. 10, 1894.—*Editor Forest and Stream*: As an old deer hunter and sportsman for the past thirty years, I must protest against the brutal and inhuman hounding to death of a doe in southern New Jersey, as related in your issue of Jan. 12. No Feejee Island cannibal would eat the meat of a doe two months in fawn and hounded down for two days, until she dropped from exhaustion. The pole that was cut to carry the "quarry" might better be used to pound common sense in the perpetrators of this brutal and unsportsmanlike outrage. Shame!

OSCAR HESSE.

#### Illinois Game.

MACOMB, Ill., Jan. 9.—Two weeks ago a flock of geese passed over this city going north. Is not this uncommon for this time of year? Are having fine weather for the game, no snow and no cold weather. There were lots of quail left at the close of open season and if pot-hunters leave them alone will have an abundance next season. Would like to help fill "Chicago and the West's" rabbit kettle, but there are probably less rabbits around here this year than ever before; in an all day hunt two of us failed to even see a rabbit.

EN AM.

#### A Load of Meat.

THE other day there drove into the vicinity of the markets in Boston a countryman with six saddles of deer, in the hides, on his sled and a saddle of moose. No one among the commission dealers there took pains to ask him his name or where the venison came from. It was plain enough to them that it came from Maine; the saddles were "cut long," after the Maine style, and were very fresh. He desired to sell his load and was offered five cents per pound for it, "right through," by one dealer. This price he would not accept, and it took him a

long time to sell out. It is suggested that he could not have got more than eight cents per pound, and, after paying freights and other expenses, there could have been but very little left. He appeared a good deal disappointed at the low figures offered. The deer were very thin and poor, and all does but one or two. They were plainly the results of late December crust-hunting, and even the marketmen told him that it was "a shame to kill them." It is not positive as to how he came by the venison, but it is suggested that he had drawn it all the way from some part of Maine with his team. It is greatly to be hoped that his trip cost him double what his venison came to, so that neither he nor any of his neighbors will ever care to try such a trip again.

SPECIAL.

#### Shooting Resort.

If you are seeking a place where you can find some pretty good quail shooting, and be cared for in true Southern style, where our doors are open to strangers and a hearty welcome from all is given, you can come to the Hotel Central, at Aulander, N. C., and find the clever and ever obliging S. W. Everett in charge. Manager, guide, servant, or anything to make it pleasant for his guests. Teams, guides and dogs furnished if desired. A nice country to get about in. Roads good, generally speaking. People kind and friendly to strangers. Located on the Norfolk & Carolina R. R. A direct line for Florida and other points South. Two trains run from Norfolk. Good water and a pleasant climate, and the hotel is located in a thriving village that welcomes capital.—*Adv.*

### Sea and River Fishing.

#### A KINGFISHER COROLLARY.

ACCORDING to a promise made the editor when we were gossiping about old friends and old times in the shadows of the FOREST AND STREAM pavilion at the World's Fair, I send a few notes as corollary to "Kingfisher's" account of our camp in Algoma at Lake Waquakobing in the summer of 1892.

[NOTE. "Big Basswood" does not suit me as a name for that lake, being utterly inappropriate from whatever point of view. The Indian appellation (meaning, I believe, "Clear Water") is far more descriptive, but I suppose people will stick to the "basswood" if there wasn't a linden in all Algoma.]

The camp of the Kingfishers was misty and dreary on the morning of Aug. 9, 1892, for at early dawn had "Old Hickory" packed his "pie box" and departed for "the banks of the Beautiful River."

The Kentucky contingent had, not long before, pulled out for their homes in a village hard by the rushing torrent of the mighty Elkhorn, and we thought it was odd that they should be willing to live so far off.

Things were lonesome, and didn't suit. Among other matters which urgently needed rectification was the cook. It was unanimously voted that he was, as it were, quite too fresh, perhaps more. Something had to be done. We sat around the sulky fire, made medicine (Indian fashion) and reviewed the situation. On one point all were practically agreed—we must elect a new management, vice the "dear departed." It was of no avail to bully the cook for he didn't know when he was well used, and we must have somebody as a scapegoat. It was necessary to the peace and dignity of the camp and it should be done. It was done.

The New Management rose to the importance of the situation, and in full official costume, with the awe-stricken cook, Kingfishers and Canadians keenly conscious of their minor importance, he gracefully, and in a few well chosen words, indicated his plan of action:

"We've got to have a better start mornings, and better regulations for meals. This plan of putting a hardtack in your pocket and going off to fish all day with no further stomachic preparation aint the thing, nohow you can fix it. I will at once proceed to formulate some rules for the better guidance of all and singular."

There was no nonsense about the N. M., and in a little over four minutes by the Colonel's \$350 repeater, the following notice reared itself against the tent-pole:

"Hours for meals. Breakfast 6 A. M. sharp. Lunch 12 M. Dinner 4:30 P. M."

Then the N. M. went fishing in the lake with the Abbey & Imbrie combination rod, and a box of barnyard hackles. The rest of us were sitting about the camp when he returned, reaching the landing just in time for luncheon.

"First of the season," were the words which, from the stentorian lungs of the N. M. came sounding up the hill, as he strode along the rocky path leading to the camp.

"What is it?"

"Go and see 'em."

Now, I have no doubt that the other fellows wanted as much as I to know what he had to show us, but they were proud and haughty, and preferred to pose as cynics, who didn't believe that he had caught anything, anyhow. So I went down alone to the boat, where I examined critically its lading. Then I in turn toiled up the hill, where I found the N. M. with some glassware in his hands, and evidently disposed to make himself as comfortable as the nature of the circumstances would permit.

Sorrowfully I gazed upon his classic features for a time, then slowly said: "Cannot you do better with \$75 worth of fishing tackle and nine miles length of lake than catch two suckers?"

I do not now recall his reply, but well remember that those were the only specimens of that noble fish captured during our stay; and the N. M. eventually became, I think, somewhat wearied with hearing about them. The "damnable iteration" was too much for him, and he fished for them no more.

A glorious good management was he, the suckers to the contrary notwithstanding, and the next day the following bill of fare was adjusted to the tent pole:

#### MENU, AUG. 10, 1892.

##### Soup.

Bouillon.	Scrambled Eggs.	Broiled Ham.
Browned Potatoes.		Bread and Butter.
English Plum Pudding.		Sherry Wine Sauce.
Coffee.		Milk.

For whatever reason, no suckers or other fish appeared on the menu.

I know not where the N. M. got the sherry wine, but remember that he proffered a glass thereof to one of our English acquaintances, who, however, made answer:

"Well, sir, no, sir; thank ye, sir; but if you 'ad a little drop of some think 'ard, I'd take it with pleasure."

As Kingfisher said in his account thereof, ours was a pleasant camp; but it would have been far more so had

we made it at a distance from any habitation, as is our usual custom. The lake is well worthy a visit—it is one of the most picturesque in scenery, and most remarkable in its attributes that I have ever visited. Its waters and its fish resemble so strongly those of Lake Superior that many believe in the existence of an underground communication between the two lakes.

The bass were biting rather better before than after Aug. 10, but there was no difficulty in catching all we needed. They were, however, taken further from shore and in deeper water than during the earlier part of our stay. I remember that I one day fished in Clear Lake, using the leg of a red squirrel for bait, and found it very satisfactory. I have taken trout with this bait in some of the lakes of Maine. It is very tough and lasts a good while.

In Clear Lake there are a good many wall-eyed pike (called by the natives "pickereel"), and weighing from 1lb. to 2lbs. each. These were a nuisance, and would play the mischief with a tender bait.

We often used flies, but as far as my observation went, they were not usually taken by the bass unless when below the surface; and this reminds me that on the Rangeleys I never knew a very large trout to take the fly when at the top of the water.

Kingfisher has told the facts about the fishing better than I could do it, though he might, had he been so disposed, have added a good many notable episodes which occurred during our stay.

One of the agreeable features of angling in Lake Waquakobing with any sort of bait is the total absence of every kind of small fry—nothing there to nip and tear your lure, as is mostly the case in other waters.

We did a little desultory fishing after "Hickory" left, but cared not to bring in many fish, and wasted none. I do not care for fishing unless the product can be utilized, and we might infinitely have increased our catch had we been so disposed.

The day before we broke camp, I went with a companion to explore a certain island. Much of the shore of the lake is precipitous, and in windy days it is well to be cautious how you steer, for in many places no landing can be made and a boat might easily be dashed to pieces on the crags through careless handling. But the scenery is very fine, and we skirted the iron-bound coast, casting here and there for trout, and admiring the dark cliffs, clothed here and there with red and yellow lichen and waving birches, the fern and the campanula.

I caught a good many bass while trying to take trout, but the latter seldom bit. Their time was earlier or later in the season. On this particular day, my companion, for some reason, wished to make a string of twenty bass. By the time that this was accomplished, I had caught twenty-seven. All were returned to the water as fast as taken.

I note these catches for a reason, and not because I have any desire to disparage the skill of my companion, who is an experienced angler. He fished with a fly and a living frog (on the same line), I with the dead frog only. He, as I remember, made several double catches. I do not think that it is necessary to use live bait.

I do not much care for fly-fishing below the surface and of late years use the fly but little, even for trout, as I find the strain on my eyes too great.

About these days there was a football game near camp, on a little clearing by the church, and likewise a picnic in the woods. The "Royal Templars of Temperance" of Day Mills, and "Iron Bridge" of Mississauga, had a match. Some of the Kingfishers offered a prize of \$5, which was won by the "R. T. of T."

From the stunning costumes which emanated from our tents on this occasion, it was suggested that this be in the future known and respected as "Biled Shirt Camp." On this occasion, Harry photographed a number of people, but the films proved worthless.

At last the time came when we must pack up, and one morning early we were pounding over the road to Dayton, feeling rather sleepy. One man roused himself sufficiently to ask, as we rattled over a bridge:

"What's that in those bushes by the creek?"

"Only a pair of cartwheels."

"So it is. I thought at first that it was one of 'old Ketchup's' tarpon reels."

On passing a rock about 60ft. long of jasper conglomerate, which is quite abundant in this region, we were reminded that "Old Snakeroot" had used up Mr. Dyer's sledge-hammer in his geological investigations, and it was remarked that had old Sam seen this specimen he would never have lost sight of it until he had it set up on his lawn at Frankfort.

I meant before this to say something complimentary of the toads, which during the last few evenings of our stay came about our camp-fire in search of the flies which were attracted by the firelight.

They became quite familiar, and we had much pleasure in watching their movements. They seemed to be quite successful in securing their game, though they sometimes hopped too near the blaze and came to grief.

Kingfisher, having taken no notes, erred in his statement that Mr. Dyer had no fishing-rod proper, for he is an accomplished fly-fisher of old, and possessed one of those heavy, old-fashioned, brass-mounted English fly-rods, with a reel, and a spike in the butt, which might in former days have served a Pawnee for a buffalo lance.

We have many pleasant memories of this camp. The lake afforded us as fine bass fishing as I have ever seen, but I will venture to prophesy that in five years its bass will have become comparatively scarce.

We were well treated by our Canadian friends, and in return tried to be as civil to them as possible, and I think succeeded in giving them a few points in casting for bass for I remember that one of them remarked one day after we had become pretty well acquainted that at first he couldn't see "how we got our lines hout."

KELPIE.

#### The Chicago Fly-Casting Club.

A REGULAR meeting of the Chicago Fly-Casting Club was held in the Grand Pacific Hotel on the evening of Jan. 11. There were thirteen members present, the president, Mr. G. W. Strel, in the chair. The resignations of Messrs. W. G. Baker, W. A. Brooks, A. J. Merritt, J. S. Rossiter and C. A. Sturges were accepted. The report of the secretary-treasurer showed a small balance on hand after all the debts of the club were paid, including the cost of the Walton House at Jackson Park. A balance of \$22.23 on the house was ordered paid. The club has enough cash on hand to place it out of debt. Mr. Morrell, of the executive committee, reported that the committee

had requested of the South Park Board that the Walton House be allowed to remain at South Park as long as possible. There was reason to expect that the request would be granted and the Walton House remain there permanently. Out of \$150 appropriated for the tournament, which was the sum expected to be expended on it, the committee returned \$63.44. Besides being out of debt the club was reported in good condition otherwise. Of subscriptions \$80 were reported still unpaid. Great progress in skill in casting was reported. From casts of 61ft. with the fly, at the beginning, there were now records covering from 96 to 106ft. In bait-casting there were records of as high as 170ft. The total amount of tournament entry fees was \$189, expenses, \$275.56. Mr. J. Edmund Strong was unanimously elected a member of the executive committee, vice Mr. Rossiter, who resigned. Twenty delinquent members were dropped from membership. This left 40 active members in good standing. It was carried that notice be given to members that at the next meeting an amendment to the constitution, permitting honorary membership, will be proposed. Mr. B. W. Goodsell was unanimously elected vice-president in place of Mr. Brooks, who resigned. The tournament committee's report was accepted and the committee was discharged. It was reported that there are widespread violations of the law against seining in Illinois. One member said he knew of 3,000 seines being sold in Illinois alone in the past year. On motion, an entertainment committee was appointed to arrange a club banquet in the near future.

B. WATERS.

## ANGLING NOTES.

### Scale of Hooks.

A friend called upon me to-day to ask about the numbering of hooks, as he wished to order some flies in season for the spring fishing to be tied on Pennell hooks. So far as I know all the fly tyers in this country use the "old" or "Redditch-scale" in numbering hooks; anyway, flies or hooks ordered by numbers from the "Redditch-scale" will be filled even if the hooks ordered are numbered by the "new scale."

I do not at this moment recall who it was that first advocated a new scale for numbering fish hooks, but think it was Mr. H. Cholmondeley-Pennell at the time his turn-down-eyed hooks came out. I know there was quite a controversy about it in the *Fishing Gazette*, the Redditch manufacturers contesting for the old style, and Mr. Pennell for the new, by which his "Pennell-Limerick" hooks were numbered as well as the "Pennell-Snecks." Since that time the "new scale" of numbering hooks has been adopted to a greater or less extent for hooks other than those that I have mentioned, and for the convenience of others who may desire light on this subject I give both the old and new scale of numbering. The upper figures are those of the old or Redditch-scale commonly used in this country, and the lower figures are those of hooks corresponding in size in the new scale:

Old Scale: 0-5-0-4-0-3-0-2-0-1 1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17  
New Scale: 19 18 17 16 15 14 13 12 11 10 9 8 7 6 5 4 3 2 1 0 00 000

The 5-0, the largest hook of the old scale, finds its counterpart in 19 of the new scale, 17 of the old scale finds its counterpart in 000 of the new scale. The hook numbered 000 in the new scale is the smallest made, and it is small enough, and too small for the generality of fishing in this country.

Some hook makers used to number by the old scale to 20, and I think 22, but this was done by omitting the old numbers after 13. I have compared some hooks that I possess and numbered by the makers 20, and find that they correspond to 000 of the new scale and 17 of the old scale, as I have given it above, so that it may be assumed that these hooks are the smallest made, except it may be for some special purpose. Certainly they are about as small as the ordinary man's fingers can fix to a leader with neatness and dispatch, particularly if the man has arrived at an age called the "four-eyed stage" or eyeglass stage.

### Walbran's "Anglers' Annual."

I have received from Mr. Walbran, Leeds, England, a copy of his "Anglers' Annual" for 1894, and although it is bound in paper, I think every one who possesses a copy will feel that it is of a character to deserve a more permanent binding and thereafter a place on the book shelves of the angling library.

There are excellent articles in the "Annual" written by Mr. Senior, Mr. Marston, Mr. Jardine, Mr. Tod, Mr. Murdoch, Mr. Murray, Mr. Bickerdike and Mr. Walbran, and there are four full-page illustrations of aneling scenes. The frontispiece is a beautiful half-tone of "Summer Trout Fishing," in which Mr. Senior and Mr. Walbran are shown on the Wharfe at Pool.

In "Winter Grayling Fishing" on the Yore the other extreme is portrayed. If Mr. Senior looks to be hot and thirsty beside the still water of the Wharfe, Mr. Walbran looks to be anything but hot as he wades the Yore, everything but the water being covered white with snow.

The next full-page picture shows Mr. Fraser Sandeman, author of "By Hook and by Crook" and designer of the Sandeman salmon flies (there is a full-page reproduction of the Sandeman salmon flies in the "Annual"), salmon fishing on the Eden, and then there is a very taking picture of pike fishing. Besides the literary and artistic features, the 800 pages of the "Annual" contain about 200 illustrations of fishing tackle, all of which is fully described in the text.

### Precocity of Salmon.

A few years ago when I was planting a lot of salmon fry (*salar*) I took one can of the little fish to a small feeder of the trout stream in which the plant was being made, that I might turn them into still, shallow water and watch them for a time before they were swept down stream. The little salmon had been all night on the cars traveling from the hatchery on Long Island, and at the end of the railway journey the cans containing them had been placed in a wagon and driven six miles to the stream. The fry had but just absorbed the umbilical sac, and had not, I think, been fed in the hatchery, and owing to the lack of ice and detention at a railway junction they had arrived at their destination in not the best of condition, and it was for this reason that I emptied one can where I did to examine the contents.

When the water in the little feeder had cleared and become still after the roar from pouring the water out of the can into the stream, I got down on my knees with my face close to the surface, and was peering into the water; the little salmon were huddled at the bottom of

the brook in groups, as the young of the salmon family will huddle behind or on the down stream side of stones, or in depressions in the sand to get out of the force of the current, when a big black ant, as I now recall it, fell from an overhanging bush on to the surface of the water, directly over the salmon fry. The ant struggled on the water and instantly several of the little fish left off trying to hide their heads behind the stones and in the sand, and "rose to the fly" with all the dash and vigor of a trout native to the brook. They circled about the struggling ant as if they would devour it, if it had not happened to be nearly as large as one of the fry, and gave every evidence of the game character that distinguishes the adult salmon when it rises to the artificial fly of the salmon fisherman.

I have narrated this incident on a number of occasions, but the frequency with which some of my hearers have raised their eyebrows, as one does to imply doubt, has caused me to look the story up; and this reminds me that there are people who do express doubt concerning a statement simply because they have no personal knowledge of it. For a number of years I tried to convince a number of skeptics that the small-mouth black bass did grow to 8lbs. in weight. I knew it because I had caught one, but I honestly think that a lot of men in New York city did not believe it until I sent a larger one to New York and telegraphed to FOREST AND STREAM where it could be seen. Since that time a small-mouth of 10lbs. has been caught in the same lake and no one questioned the weight or the species. But I have drifted away from the precocious salmon, and the fact is I have just found unexpected confirmation of my experience.

### Mr. Senior Catches Baby Salmon.

Please remember that all I claim is that salmon fry raised to an ant in the water, and then read the following, which is the experience of Mr. Wm. Senior ("Red Spinner"), angling editor of the *London Field*, told in Mr. Walbran's Annual previously referred to:

"I got a bit of salmon fishing anyhow out of the Exhibition. A friend told me that the wee samlets hatched out in Wilnot's breeding troughs in the Canadian Court would rise at a fly, and that he had caught one. I challenged him to the proof, and he rigged up for me a whippy top for rod, a length of string for line and a foot of drawn gut for cast. The fly was, I am bound to say, the smallest I had ever seen made. The hook was the tiniest, and the dressing of the artificial midges a most ingenious thing, reflecting, as the reporters say, the greatest credit upon the tyer, Mr. Kenneth Cornish. It was great fun to see the little salmon of little more than an inch long rising at the fly dabbled on the surface. They came with a boil just as a big fellow would do, and made at once for the nearest cover. I got one at last by fairly working the tiny midge under water, and out, dangling in the air, came a small fish amid the laughter and applause of the crowd. This salmon fishing, I should add, was done in the breeding trough. The youngster was of course put back."

It seems that friend Senior challenged proof when he first learned that salmon fry would rise to a fly, so I will forgive those who raised their eyebrows at my story.

### The Saranac Convention.

An item has been going the rounds of the newspapers stating that a convention had been called at Saranac Lake, in the Adirondacks, to appoint delegates to go to Albany and oppose proposed changes in the game laws said to be favored by Dr. W. Seward Webb in the interest of his private park in the Adirondacks. The tenor of the entire item was so contrary to my own knowledge of Dr. Webb's views in regard to the protection of fish and game in the Adirondacks, and of his conduct in relation to fishing and shooting on his preserve by others than himself that I did not believe there was cause for such a convention. Now, it seems, that prominent citizens of Saranac Lake, headed by Dr. Trudeau of the Sanitarium, have signed resolutions in which it is denied that such a convention is to be held, or that Dr. Webb proposes to ask for changes in the game law, or that there is any feeling against Dr. Webb. On the contrary, the people of Saranac are "very much incensed over the false report sent out from there by an irresponsible party who evidently has some pique against Dr. Webb and the railroad company." Dr. Webb has always been very willing to grant permits to hunt and fish over his preserve. I know the permits require the holder to observe the State game laws and to be cautious about fires, and those are about the only restrictions. Before the State amended the game laws in 1892 the permits limited the game to be killed to less than the State law allowed, but now the State has come to Dr. Webb's standard.

A. N. CHENEY.

### BOSTON AND MAINE.

The weather has not been favorable for the pickerel fishermen in the ponds in the vicinity of Boston. Several excursions have been planned, but blustering weather, with more snow and the mercury down below zero, have been sufficient to keep the fishermen at home. But the bait will keep, and it is likely to be used as soon as the weather is mild enough. On Monday some fishing was done on the ponds in Bayfield and Georgetown, but not a pickerel was taken, by one party at least, though they do not like to have their names mentioned. The Upper Pond in Wakefield is still a much-talked-of location for the pickerel fishermen, the pond where the close time for several years was terminated Oct. 1, 1893. Some good strings continue to be taken there, when the weather permits. On Monday and Tuesday last this pond was visited by fishing parties, though with very poor success. The pickerel fishermen all mention warm days as the only days favorable to their sport on the ponds in winter. They continue to discuss the relative merits of shiners or chub and tomcod as bait. It is generally agreed that the shiner is the best bait, but that he does not live long on the hook. The tomcod is a far tougher fish on the pickerel hook, and it is much more difficult for the pickerel to get him off the hook without getting hooked himself.

A pickerel story grows out of Antoine Bisette's last, told in "Danvis Folks" in the FOREST AND STREAM of last week. In Antoine's case there was a long string of trout all trying to get at the bait by swallowing each other. Our pickerel case was on one of the ponds near Andover, Mass., the other day. Our friend Charlie MacIntosh tells it. He was fishing with a boy on that pond. They had some thirty traps out. The day was windy and cold, and the fish did not bite well. They were about discouraged

with keeping the lines free in the holes, the ice making so fast that they had to be cleared every five or ten minutes. At last one of the flags was down, and both man and boy ran for the spot. The boy arrived first, hooked the fish and commenced to pull him. "He's only a little one," said the boy; but no sooner than said the line began to slide through his fingers, and he could not hold it. The man took hold and soon had the fish up to the ice, though not without considerable hard pulling. The fish came up through the ice part way, and the boy laughed. "I told you it was only a little one!" he cried. Sure enough there was a little pickerel scarcely more than six inches long—or the tail of him. But another big pair of jaws was coming up through the ice. It was a monster pickerel. He had seized the little pickerel evidently about the time the line began to slide through the boy's fingers. He had turned the small pickerel and had swallowed him head foremost, hook, minnow bait and all, and was firmly hooked. The small pickerel had the minnow bait in his mouth also partly swallowed. There were really three fish on the hook, the largest weighing nearly 3lbs. But the fish were not in a string, as in the case of Antoine's trout. That functionary will also do well to "remble him" when he tells another "true" story, that fish invariably swallow their prey head foremost.

SPECIAL.

## QUEER THINGS.

"His angle rod made of a sturdy oak;  
His line a cable which in storms ne'er broke;  
His hook he baited with a dragon's tail,  
And sat upon a rock and bobbed for whale."

—A Giant's Angling.

LAST summer while salmon fishing in Newfoundland I was informed by a very reliable gentleman that during the month of September, 1892, he hooked a 12lbs. salmon which took the fly with avidity, and after landing him discovered an unusual enlargement of the abdomen. On opening the stomach he found a large field mouse, almost intact, as if but recently swallowed.

Queer! Is it not—with the fact staring us in the face that salmon do not feed in fresh water.

While fishing the same river last spring one of our party hooked and lost a salmon by the breaking of his leader. Of course it was a monster, and the whole camp was turned into mourning for the loss. On the second day after this the same pool fell to the lot of another member, and at night he returned to camp with a salmon of 12lbs., which had hanging from its mouth the fly and portions of leader which were lost by the previous angler.

Queer! Is it not—

First—That the big fish always get away!

Second—That this fish did not start for the ocean with the hook in its mouth, as it is so often stated they do!

Another queer thing has occurred to me. Why do certain persons write so enthusiastically of the game qualities of the much talked about but over-rated ouananiche, and pour all sorts of maledictions on the head of Mr. Lowry, who happens to differ from them in regard to the fighting qualities and nomenclature of this fish?

Let me say in all timidity (for I know there are sportsmen from whose wrath I shall suffer) that I read Mr. Lowry's article for the first time while camping at the beautiful Fifth Falls of the Mississipi River, and had taken my first ouananiche only a day or two before. I felt there and then I could say "Amen" to it, and after catching many large fish during our stay of nearly a week and spending another week at Isle Malin—where only small ones were taken—I could indorse the article almost in its entirety.

If ouananiche fishing is to be compared with salmon, trout or black bass fly-fishing, I must have struck the wrong season and logy fish, and I can but feel that those who talk the loudest and throw their hats the highest, have not yet learned to successfully cast the fly and enjoy the ecstatic thrill which the salmon, trout and black bass impart.

This somewhat mysterious ouananiche has its place as a game fish, but please let it rank where it belongs, and its supporters "whoop er up" as much as they like—if there is no axe to grind; but add a postscript for the guidance of those who may believe their stories and wish to follow in their footsteps; this luxurious fishing is only for the wealthy, as the hotel company claim to control the waters of the lakes and rivers, and the fish that dwell therein; therefore, to cover cost of this franchise, they explain a charge of \$6 per day is exacted for the service of two canomen, with supplies for them and yourself.

Facts are sometimes queer things, aren't they?

"There are more things in heaven and earth and fishing, Horatio,  
Than are dreamt of in your philosophy."

Now, Mr. Editor, when we come to think of it, the world is full of queer things. How did it seem to you when you found the recent convention so fully in possession of the net fishermen? This meeting was called by philanthropic, whole-souled men for the purpose of devising ways and means to stop the depletion of the food fish along the Atlantic coast. Surely, "The wicked flee where no man pursueth," for these very innocent net fishermen appeared in numbers, braced up by attorneys and wonderful statistics; and through these, and their oily tongues proved satisfactorily (to themselves) that net fishing could not cause any diminution, but the supply had increased, and they were humanitarians toiling for the dear public.

Noble men! your children shall rise up and call you blessed (because of the ducats left them); but the other fellows' children—alas! alas! they may hurl fearful anathematics on the despoilers. "God bless the rich, the poor can beg."

I wonder, though, if I can be mistaken; and if after all you and I have seen with our eyes, and heard with our ears, these public beneficiaries. The net fishermen are right; and, in order to increase the future world's supply of food fish, we should enlarge and multiply these harmless nets.

Wouldn't it be queer?

QUEEREST.

### Game and Fish Bills at Albany.

[From a Special Correspondent.]

ASSEMBLYMAN THORNTON has introduced these amendments to the game law: Allowing the taking of sturgeon in the Hudson River with nets of meshes of not less than 7in., between June 1 and Sept. 1; reducing the size of meshes from 14in. to 15in.; making the close season for wildfowl from May 1 to Sept. 1.

Assemblyman Horton has an amendment making it lawful to fish for bullheads, eels, suckers, catfish, pickerel and pike with spear in the streams of Wayne county that empty into Lake Ontario.

## Fishculture and Fish Protection.

## THE COAST FISHERY CONFERENCE.

Proceedings of Conference Held to Consider  
the Subject of the Exhaustion of  
Coast Line Food Fishes.

OFFICIAL REPORT BY SECRETARY E. P. DOYLE.

(Continued from Page 34.)

LUTHER MADDOCKS, of Maine, then addressed the convention as follows:

I was sent here by a class of men on the coast of Maine who make their living by using the purse nets, drag nets and purse seines. I am a fisherman myself by birth and occupation, and while I do not do a great deal of fishing now, I am brought in contact every day of my life with the different classes of fishermen on the coast of Maine, as well as Massachusetts. We are brought here to-day under a call of the New York Fish Commission to discuss the question of the exhaustion of coast line food fishes, starting out with the broad assumption that there is a scarcity of food fish. Gentlemen, who says so? Ask the men down at Fulton Market. Ask the men at T Wharf. Ask the men at Dock Square in Philadelphia. They will tell you they have fish for sale at 25 per cent. less than what we sold them twenty-five years ago—hake at 75 cents a hundred, cod for 2 cents a pound, herring for 1/2 cent or 3/4 cent a pound. We are told here that there is a scarcity. In order to make fish cheap, you must adopt the best facilities for catching them. Can you get up any better scheme to lower the price of fish?

I am speaking from a fisherman's standpoint, gentlemen. If there is no scarcity existing, and the statistics do not show any scarcity, why are we here? There seems to be a misapprehension of the facts, and we, as fishermen, are willing to submit to the most thorough investigation. If you will produce a committee of disinterested men to investigate this matter, and find that there is a scarcity and that the cause is the purse seines and nets, we will listen, we will join hands with you and regulate it; but until that time we are not going to plead guilty, not by any means. Gentlemen, when we made our treaty with Canada a few years ago, or attempted to make one, it was said we no longer owned the bait supply, and people asked, What are you going to do about it? How are you going to get your bait for fishermen? It set us thinking on the coast of Maine and Massachusetts, and the result has been we have built up the best bait fishing in the world. The fishermen are getting a bait cheaper than ever before. Gentlemen, we will corroborate these statements. We are entirely independent of the British American Provinces so far as bait goes. Canada is a competitor in the fish market to-day. They are sending their herring to Philadelphia by the carload and stand on the wharves to-day in competition with the herring and the cod on the coast of Maine. They are getting them cheaper there and transport them. The duty to-day is 1/2 cent a pound on fresh fish.

Suppose you inquire into this law—what will be the result? The idea as given out here by the paper which was read by Mr. Huntington (I hope I may be pardoned for criticizing it in a friendly way), starts out on the assumption that there should be a law, and that law, as proposed, would result in the total annihilation of the business. Talking about the catch of menhaden within two miles of the shore and sustaining the business, it cannot be done! Talk about regulating your traps according to that idea is also ridiculous. It cannot be done! We would have to abandon the fish business if such a law was enacted. I would like some other easier way to make a living. It is hard work, exposure and all that sort of thing. It is not a soft snap at all, as the word goes. Our men supply a great deal of fish and they are a class of men who cannot come to court and defend themselves, and they want to be heard and I believe they should be heard.

SYLVANUS SMITH of Gloucester, Mass., then addressed the meeting as follows:

I come here in the interest of my people. We have about 400 sailing vessels which fish in the deep sea. Some years ago when the Canadians prohibited us from taking bait on our shore, we looked about to see what we should do for bait for our fishermen. This is not a question of menhaden, though we use them for bait. Our business is to get our living out of the sea. Whatever is done to take the pound fishing away, strikes a people who are dependent upon it for a living. We cannot exist as a fishing city without the pound. Last year there was some legislation prohibiting the pound fishing in Buzzards Bay. We did take some bait there.

Our business is fishing, and no business has a better record than that has in our city, and when you take away the pounds it is the first blow at our fisheries. Our people asked me to come here to see what you propose to do. This is a vital question to us, but whether weakfish come in along the Jersey shore or not is of no consequence as far as we are concerned.

When you enact a law that prohibits the pound fishing you strike a double blow. We cannot go on the Nova Scotia coast and take fish there without violating a law, or any other fish within three miles of land. We sometimes go there and take fish for baiting by paying a tax of \$1.50 per ton.

That law can be revoked at any time at their pleasure. As Mr. Maddocks says, along our shore they have built cold storage or freezers to keep fish bait for us. If you take away the pounds the cold storage is done for. We depend upon them for our bait.

There is another great question we have to look at in our past—the supply of seamen for our wars. Look at the record of Massachusetts in the past. What was their record in the navy? I see the whole thing is in the sportsmen's interest, and the hotel keepers signed a petition against these traps. Why? Because they want to fill up their hotels. I want to say that anything you do against these traps will be a double blow to the fishing industry.

ROBERT POTTER, of New Jersey, spoke as follows: I am president of the Pound Fishing Association of Long Branch. I have fished for fifty years. In '43, with a hook and line on the rocks at Long Branch, and in '61 I commenced fishing the pound. It has been said here to-day that they could go along the Jersey coast from Sandy Hook to Cape May, throw off a line and hook a fish most every time. When they did that I must have been asleep. I have followed fishing for a living for about 50 years. When I want to catch fish, I generally launch my boat, and go off shore on the rocks. If I took my boat and line and went along the shore, back and forward, to catch fish for a living, I would have fished my life out. A fellow is a fool to undertake to fish along a shore for a living. I have fished the pound in the Bay and since, for about 18 years I have fished the pound outside. I was one of the first men who ever set a pound out in the ocean and for the last 3 years I have caught more fish with a pound than I ever caught in my life. At first we could not make a living at all. We stuck to it, and when we first commenced we could not catch many, hardly enough to make a living, but we kept at it and the fish struck on. Fish are not always on that coast. When I first commenced with a pound you could not catch 50 lbs. in a day. A few years after that you could catch 1,000 lbs. of porgies in half a day, and from that to 6,000 lbs. with a hook and line. They were gone in a few years, were not on the coast at all. When I commenced in '43 I never saw weakfish. There

were none on our coast. There were some in the rivers, but not outside. I have fished from the ocean, six miles at sea and never caught a bluefish for a whole summer sometimes, nor a weakfish. For the last three to five years the weakfish have been coming on our coast thicker and thicker.

It has been said here to-day by several people of Asbury Park that there will not be any more pounds. It don't pay them to put in a pound south of Asbury Park. Then, again, they say that the pounds killed Barnegat Bay, so they set these pounds just as close to the inlet as they can set them and catch the fish in Barnegat Bay. North of Barnegat Bay the closest pound to Barnegat Inlet is about 12 miles and the closest pound south of Barnegat Inlet is about 60 miles.

If those two pounds, one 12 and the other 60 miles distant, shuts off the fish of Barnegat Bay, then I don't know what I am talking about.

Then, again, they said last summer there were no fish in Barnegat Bay, could not catch any fish. In the New York Herald it said that the sail boats that carried out excursions for fishing in Barnegat Bay year before last, could make from \$400 to \$800 for the summer. Last summer they could not make anything.

Last winter they passed a law in the New Jersey Legislature that there should not be any nets in Barnegat Bay. Year before that there were plenty of fish. Last year there were no seines or nets in Barnegat Bay and the anglers could not catch anything.

I remember on our South Shrewsbury River there were about a dozen families made a living fishing in the river, and for the last year there were no nets and there were no fish there. They don't catch any. You say the pound has caught them all. They say the bluefish don't come in to the shore. It is a known fact that the fishermen go outside and bait these bluefish and hold them there. They won't come into the shore as long as this bait is there. The bait also feeds the sea bass and you can see them solid in the water so full of bait they won't bite. When the boats are on the shore the sickles are there still and hold them there. That is the reason they don't come in to the shore. It has been said here again they can catch these large weakfish with a hook and line. I have rowed through them for miles, schools of weakfish, and never caught any. Squid they have for a bait for them. There will be schools of them but you cannot catch any large weakfish.

MR. POTTER, of New Jersey, gave the following information in answer to questions asked him by Mr. Roosevelt:

Q. How many pounds between Long Branch and Ocean Beach? A. There are nine, nine in seven miles.

Q. What is the average catch? A. I have a statement here which gives the number of fish caught in the pound in five years, from year to year, by C. A. Valentine. In 1889 he caught 698 boxes and 108 barrels (a box will average about 350 lbs. and a barrel about 200 lbs.); in 1890 he caught 709 boxes and 103 barrels; in 1891 he caught 735 boxes and 83 barrels; in 1892 he caught 980 boxes and 112 barrels; in 1893 865 boxes and 56 barrels. You remember there was a heavy storm in August which took out all the pounds, poles and everything almost, and it took two weeks to get them in again and that out of the fishing in 1893.

Asked by MR. HULETT, of Asbury Park:

Q. What I want to know is this: How much fish are destroyed during the week? A. How many fish destroyed?

Q. Yes, in this pound during the week? A. When we catch weakfish we don't catch anything else.

Q. How many weakfish are destroyed and other fish? A. They don't destroy weakfish. They destroy other fish.

Q. I beg to differ with you. I wanted to know what your idea was? A. They don't destroy any.

Q. Is it not so that there are tons of fish destroyed in those pound nets every week? A. No, there are not tons of fish caught every week. I have fished for two or three weeks and did not catch over 50 lbs. a day.

Q. Your pound net will hold 5,000 weakfish? I want to get the average a day and how much is destroyed out of that catch, the catch in the nets and the average destruction?

I. SPENCER LEAMING, of New Jersey, asked the following questions of Mr. Potter:

Q. In giving your statistics of Valentine & Co. are you acquainted with the gentlemen and their fisheries? A. Yes, sir; I am one of the partners.

Q. Then in giving your statistics in 1889 you say you caught some 300 or 400 boxes, but you don't say anything in regard to your pounds. Are your pounds any larger or more numerous? A. No larger.

Q. You have not increased them in quantity? A. No.

GEORGE M. VAIL, of Orient, L. I., read the following paper prepared by:

H. A. REEVES: We do not know what ultimate object or purpose the proposed congress may have. In so far as the formal call goes, there is nothing to afford a basis for even conjecture. It merely alleges that there is a "growing scarcity of edible fishes" along the coast and asks for a conference to see if the cause or causes and remedy or remedies cannot be discovered and applied.

To such an inquiry, honestly conducted by men of true scientific spirit and capacity, no objection would be raised. The trap-fishermen of eastern Long Island (and no doubt those from other sections would agree with them) will welcome any scientific investigation, if honest and complete, into the questions at issue between themselves and others, who, as they believe, through imperfect information or inadequate consideration, oppose the taking of food fishes by means of nets.

Outside of the call, as is well known, the leading idea of some promoters of this congress is to restrict or to stop altogether the use of nets for taking the edible fishes of the sea.

They allege that these fishes are "growing scarce along the coast line," and they maintain that this alleged scarcity is due to what they call the destructive effect of net fishing; they therefore demand that the use of nets be restrained or prohibited by legislation uniform on the part of all the seaboard States, or, if that cannot be obtained, by the Federal Congress.

With this as the publicly disclosed purpose of some, at least, among the movers of the congress, we may without hesitation or delay proceed to define the position held by the trap fishermen for whom we speak.

They must be understood in the outset as not objecting to a scientific inquiry into the facts relating to their business, and by such an inquiry, provided only that it be a full and fair one, they are willing to stand.

Obviously, before any general measure of restriction should be enacted, whether by the States or the Federal Legislature,

other fishermen have put down traps in close proximity to their own; and it also shows that the average prices at which the fish were sold in Fulton Market for the year 1893 were less than for the average of the twelve preceding years.

Inasmuch as Fulton Market is the great mart of the fish trade, and prices there may fairly be held to control, it is important to note this fact, that the average prices for the past year were not up to the level of former years.

With the constantly spreading demand for fish food, it is undeniable that the supply must have kept equal pace with the demand, or else prices would inevitably go up. That prices did not go up, but on the contrary averaged lower for 1893 than for a dozen years before, is proof positive that there is no such "growing scarcity of edible fishes along our coast line" as forms the only basis for the call of the present congress. Certain it is, that whatever be the case elsewhere, there is no such scarcity in the waters of eastern Long Island.

2. In all ages and in all parts of the world there have been seasons when fish in given waters have been comparatively scarce, and these eastern Long Island waters are no exception to this rule. But the record proves that, while the traps have steadily increased, there are in some seasons an abundance of fish even in the upper portions of the bays.

It follows logically and inexorably that the pounds and other traps on the shores of these bays have little or nothing to do with the movement of bodies of fish coming in from the open ocean. It would therefore be in fact, as well as in theory, a grossly wrong as well as a mischievous thing to meddle with the traps upon no better basis of ascertained fact than now obtains.

We therefore demand, on behalf of the trap fisheries of Long Island, that they be let alone until after there has been a fair, full, conscientious and conclusive inquiry into the facts, which must determine whether they ought, or ought not, to be interfered with.

It may be added that, as shown by the printed extract from *La Nature* herewith shown, although the movements of cod and herring have attracted attention for centuries, it is only within four years past that, by the Scottish Fishery Commission, the first really reliable and accurate data bearing on the movements of fish in the open sea have been obtained. This again proves the need of a careful and exhaustive scientific investigation before resorting to legislation.

Vail Bros. have also kept a record for the past ten years of the catch of weakfish made by them in their traps. It shows that for the first five years the number taken was 97,419, while for the last five years the number was 145,538.

Q. ROOSEVELT asked Mr. Vail:

Q. How many traps and nets did you use in '80 and '93? A. We used in '80 six traps and in '93 seven traps, with an addition in '89 of one trap, and the others are set in the same place exactly, and this trap I don't think has caught anything.

HENRY C. FORD, of Pennsylvania, here said that the order was to go by States.

THE CHAIRMAN—We will give Mr. Ford the floor.

Mr. FORD then addressed the meeting as follows: I have but a very few words to say. We have heard a good deal from the fishermen, but a very little from the Fish Commission, with the exception of Col. McDonald, and last night I happened to think of the causes of the depletion of our greatest rivers, and I have just jotted down a few ideas which I think will not take me over the stated time. It is hard to propose what to do. The fact struck me to have this conference appoint a committee composed of both fishermen and anglers, who might probably formulate some laws that would be of advantage to all.

#### The Experience of Pennsylvania.

ALTHOUGH Pennsylvania has no seaboard, yet the protection or devastation of those great estuaries the Delaware and Chesapeake bays, directly affects her two largest rivers, the Delaware and Susquehanna. Therefore her fishermen, both commercial and individual, have an interest in protesting against any method of fishing that interferes with the ingress or egress of anadromous fish.

The numerous pound nets along the Maryland shores of the upper Chesapeake and in the vicinity of the Susquehanna, the hundreds of fish weirs erected in the fourteen miles of its course through Maryland territory, have ruined one of the greatest shad producing rivers of the United States, and practically nullified the efforts of the State and U. S. Commissioners in stocking the 600 miles of the two branches of the Susquehanna in Pennsylvania and New York.

Here is an evil that calls loudly for the exercise of judicious inter-State legislation. As to the Delaware, an inter-State act with New Jersey has been greatly instrumental in making this river what it is to-day in shad production—probably the largest shad producing river in the United States; its production having increased from a valuation of \$81,000 in 1881, to over \$500,000 ten years later. By this act pound nets are forbidden, fish weirs have been thoroughly eradicated from the river and all net fishing ceases with the close of the shad season in early summer.

Pennsylvania has also forbidden the destructive pound net in the Lake Erie territory, but to little avail, as long as other bordering States permit it to the fullest extent.

The abolition of pound net fishing has again been of such advantage in the Delaware that it would not again be permitted in the waters of the State. What has been so good for the fishing interests of Pennsylvania would certainly be of equal benefit to the waters of New York, with its noble Hudson and the numerous bays that burst through the sands of Long Island; or for Connecticut, where the shad fisheries of its best river have been ruined by the iniquitous pound net, and especially to the Chesapeake, where it has been used to such an extent that but little is left of the old time great fisheries.

It seems that the best and only way to remedy the abuses that are so injuriously affecting the fishing interests of the country, is through vigorous and concerted action. If the organization of such action is merely left to the Fish Commissions and protective societies of the several States it will fail. These bodies naturally only take cognizance of the abuses that threaten their own communities or States.

The remedy for this would be the formation of a powerful organization, comprising members from all the seaboard States, whose committees could act unitedly and intelligently in their own State Legislatures, or where national interference is demanded, could make their influence felt in the halls of Congress. Our State fish protective associations have been productive of the greatest good in our interior State fishing interests. Why should not an "Atlantic Fish Protective Association," be equally Argus-eyed to discover and repress illegal and destructive methods of fishing on our seaboard.

H. C. Ford, President,

Pennsylvania Commission of Fisheries.

B. F. DE BUTTS, of Massachusetts, said:

I represent the Boston Fish Bureau. It consists of an association formed of merchants in the salt and fresh fish business. We have members in the city of New York. We have members in St. Louis, in Chicago, and in fact about all the larger cities of the United States. Our bureau is maintained for the purpose of procuring and compiling statistics in relation to the fisheries, not only of New England, but of the United States, anything that is of interest to the fish business, not only as fishermen but as merchants. We also furnish for the United States quite frequently, statistics and information relative to the subject in which Prof. McDonald I believe will bear me out, so that an examination of those facts should substantiate or be of value in this discussion.

We find that in our statistics from the year 1810 up to the

present time, speaking of mackerel, speaking of herring, that these years of fluctuation, these years of increase these years of an abundance and scarcity continued, just as much previous to the use of the purse seine, the pound net or the trap, as it does to-day. So that we claim that it is not the introduction of the improved implements of mankind that are employed in the fisheries that is producing any diminution in the fresh or salt fish supply. We are increasing the supply of food fish for the great masses of the United States. I will further say that, in this connection, following the histories of Norway, Sweden, Great Britain and all the fishing countries of the great world, we find these same years, these periods of scarcity, these periods of plenty existed. Take the herring fisheries of Norway. There was a period of thirty-two years when there was not a fish caught in the shape of a herring on the coast of Norway. Now here is something that humanity does not understand. We claim that it was some law of nature, but at the expiration of thirty-two years the herring returned to the coast of Norway more abundant than ever was known before. History tells us of a similar instance when there was a period of sixty-two years. We take the fisheries of Scotland, the same law applies there. We take the fisheries of Sweden, Denmark, the same law applies there, consequently we claim that it is not the implements used by mankind at the present day that creates this increase and decrease in the supply.

There is one fact I believe that has not been brought out by this conference. I am not only a catcher of mackerel, but I am a merchant in that business. In 1887 we made up our mind as merchants that our supply of mackerel was going to be short in this country. Incidentally I saw a notice that mackerel were selling in the London markets at 2 pence a hundred. I endeavored to ascertain, through all means possible, if those mackerel were the same as the species we were catching and selling here. It was impossible to obtain the information, notwithstanding we had hundreds of our people visiting that country every year. I did succeed finally in getting partial information, and I at once proceeded to the Irish coast, and from the west coast of Ireland was imported the first mackerel into the United States. We followed those fish through the season, we followed them to the English coast, to Norway and Sweden, and I ask you simply to look to-day and ascertain what our supply of food fish is from foreign countries. We have received of the catch of Ireland 40,000 barrels of mackerel. Previous to 1887 not a barrel was salted for import. The catch of Norway this year amounts to just a few barrels less than 10,000. The bulk of that has been imported into your own city, together with a few that have gone into Boston.

Now, gentlemen, legislate, make laws to protect your own fishermen of their resources for furnishing you a cheap supply of food fish, and what is the result? I, as a merchant, if I can import from any foreign country, will do so if I can get them cheaper. You are wiping out the great American industry that has been in existence since 1600, and for what? For the benefit of a foreign industry. These are facts that I wish you all to look at, and before you legislate and make laws that will interfere with this business, let us understand just what the fishermen want and just what they require. Gentlemen, I thank you.

I would like to say in addition to my few remarks that I will furnish you with statistics on the salt fisheries of this country since 1810. I will furnish you with advice since 1831. I will convince you by statistics that the price of mackerel to-day solely depends on the supply and the demand. In 1884 I dumped enough mackerel on the docks of New York from my own vessels to supply your community here for 30 days, as other gentlemen present engaged in the same fishing will say. They would not bring 1 cent apiece, when they usually sell for 7 cents or 9 cents, and yet this great and abundant supply of fish in 1884 was 10 or 20 years after your purse seine had been in use and your pound nets that have been destroying this vast amount of food fish. The same applies to 1831, before there was a pound or purse net or anything of that kind used.

These are facts borne out by statistics that we will be glad to furnish you.

E. A. BRACKETT, of Massachusetts, read the following paper on lobsters:

#### Protection and Preservation of Our Lobster Fisheries.

BY EDWARD A. BRACKETT.

The protection and preservation of the lobster fisheries has more or less occupied the attention of the Massachusetts Commission. That this important industry is gradually growing less every year is apparent to every one who is familiar with its history.

Lobsters do not belong to the great ocean fisheries; they are bay or estuary fish, with little or no migratory habits, simply moving in-shore during warm weather and retreating to deeper water in winter. From their limited range they can be easily depleted by over fishing, but mainly through the destruction of the egg bearing and immature lobsters, all of which can be controlled by wise legislation of a uniform character in the States interested.

I am glad, Mr. Chairman and Gentlemen, that this call for a conference of the several States, in the hope that it may lead to uniform laws wherever climatic conditions may permit, has come from the State of New York.

In the efforts of the Eastern States to protect this industry, we have been handicapped by the fact that the State of New York, as well as States further south, permit the sale of egg-bearing and short lobsters, prohibited by law in the New England States. The practical effect of this has been to tempt our fishermen to violate the laws made for their own protection.

I have no comments to make here on the universal adoption by the fishermen of that Christian precept: "taken no thought for the morrow." Whatever else may be charged against them, it cannot be said that they do not live up to this rule.

Your fishing smacks have swarmed in our waters, carrying on an illegal traffic, to that extent that Maine and Massachusetts have been obliged to patrol the coast with police boats, while on land, in blissful ignorance of interstate laws, we have interviewed thousands of these lobsters traveling southward by rail and given them a much needed rest in Boston Harbor. The State of New York, and especially the City, is the great dumping ground for lobsters illegally caught in other States. All of this arises from lack of uniform laws in the various States interested.

Admitting (what I think will not be denied by any one familiar with its history) that the lobster fishery is a waning industry, we come to the question: What can be done to arrest its downward tendency? For reasons which will be stated further on, I think we will have to give up the idea of accomplishing this by artificial hatching.

In 1889 we conducted a series of careful and exhaustive experiments in artificial hatching, and the following statements were made in the Massachusetts Report for 1891. Many of the facts then demonstrated were, at that time, new, and we are not aware that any of them have been called in question:

"In 1889, at a hearing before a legislative committee on fish and game, for the purpose of discussing the question of a close season on lobsters, the fishermen claimed that they spawned every month in the year. Our investigations have shown this to be correct, but not in the sense which the fishermen claimed for it. Such spawning is an exception to the general rule, for the bulk of the spawn is deposited in June, July and August.

"While engaged in hatching lobsters in April, 1889, some facts were discovered leading to the conclusion that lobster

eggs did not hatch in the winter. To verify this, egg-bearing lobsters were secured in the fall and kept in cars until spring. The temperature of the water was taken every day, and a few eggs were sent to Prof. Garman, at Cambridge, every two weeks, for microscopic examination. It was found that little or no progress was made in the development of the embryo until the water reached the temperature of 50° F., and no eggs were hatched until the water rose to 55°. These experiments have demonstrated the fact that, no matter at what time the eggs are deposited on the swimmerets, they require a certain degree of warmth to mature them. It is doubtful whether, if hatched below this temperature, they would find the animalculæ necessary for their food.

Our experiments in hatching lobsters showed that, with proper arrangements, it was easy to hatch them by millions, but such an arrangement would require a hatching house, with machinery for lifting the water so that there would be a constant flow over the eggs and that the young lobsters could be kept in confinement only a few days, after which they either destroyed each other or died from starvation. No efforts yet made to feed them have succeeded, and however successful one may be in hatching them, they should be let loose at once to take their chances in the open sea. Egg-bearing lobsters put in boxes, properly prepared and floated in sheltered places, demonstrated the fact that there were no unimpregnated eggs. All hatched at about the same time. Whether they are impregnated before or after the eggs are laid has not yet been positively determined.

These experiments were carefully and scientifically made with a large number of egg-bearing lobsters and several millions of eggs. It should be remembered that the female carries her eggs in a way that protects them from their enemies and that after they are hatched the shells remain attached to the swimmerets for several days, and that it is easy to detect the lobsters whose eggs have been recently removed by violence. An examination of hundreds of lobsters with egg shells attached taken from the traps show that whether in the open sea or in confinement the eggs all hatch.

If these investigations are to be relied on (and they must stand until further investigation proves that they are in error) it does not seem possible that any advantage is to be derived from artificial hatching, except in localities where the egg-bearing lobster is not protected by law. The advantage of artificial hatching of fish applies only where under certain conditions or circumstances, impregnation is defective or where the eggs are exposed to danger during incubation, and where the fry can be easily transported to stock other waters.

In our experiments we repeatedly removed the eggs from the swimmerets and hatched them in boxes on wire screens. We found that even with the most careful handling, this could not be done without a loss of from ten to twenty per cent., and this is verified by the experiments at Wood's Holl during the past season, under the direction of the U. S. Commissioners, where from 10,037,300 eggs \$315,000 were hatched, showing a loss of 1,219,300.

Satisfied that the conclusions drawn from our investigations were correct, we recommended a law protecting the egg-bearing lobsters, which was passed by the Legislature of Massachusetts, and has been fairly enforced, but it is too soon to realize any benefit from it, for it is generally understood that it requires from five to seven years for the newly hatched lobsters to reach the length of 10½ in., which is the legal length in our State.

There is no question that this, together with the ten and one-half inch law, has been beneficial, but the latter law does not go quite far enough, as lobsters do not generally spawn until they reach a length of eleven, or eleven and one half inches, and the consequence is that there has been an alarming decrease in egg-bearing lobsters during the last four years, as will be seen by the sworn returns of the Massachusetts fishermen:

1890.....	70,909 egg-bearing lobsters.
1891.....	49,773 " " "
1892.....	37,230 " " "
1893.....	32,741 " " "

These lobsters are returned at once to the water, alive.

The returns from the Wood's Holl Station give an average of over 14,000 eggs per lobster. On that ratio our returns for 1890 should give 992,727,000 eggs, and the decrease since 1890 would be 534,352,000.

Whatever good may have accrued from the passage of these laws, it must be admitted that the industry is still on the decline. Should the protection of the egg-bearing lobsters fail to restore these fisheries, then it may be necessary to fix the marketable length at eleven and one-half inches. Again, if this should not be sufficient, then for a time prohibit the catching of all female lobsters.

There can be no question that one of the most serious obstacles to the preservation of our fisheries is the destruction of the young fish, for if they were allowed to mature sufficiently to deposit their spawn, if only for one year, it would go a long way toward keeping up the supply. The importance of this cannot be overestimated, for it lies at the foundation of the preservation of all our fisheries and marks the line between failure and success, and unless we look to it carefully one of our most important food supplies will continue to be a waning industry.

In the bays, the lakes and the rivers the decline of the fisheries must be apparent to every careful observer. The theory that they can be maintained by artificial breeding against the wholesale destruction of both old and young fish, is wrong; for there will become a time (and in some instances it has already come) when the supply of mature fish, upon which we must depend for eggs, must fail.

Mr. Chairman and Gentlemen, we need not go far to look for the cause of the depletion of our fisheries. In addition to the enormous destruction everywhere necessary to sustain the lower forms of life that prey upon each other, man steps in with his engines of destruction, regardless of the laws of reproduction, and destroys the balance of nature. The tendency once downward, requires energetic and heroic efforts to arrest its further depletion. Already the great shad fisheries of the Connecticut, the Merrimack and other New England rivers are gone.

In the economy of living, in the interest of the people who have a right to demand a supply of wholesome food at reasonable price, it is our duty to do all we can to protect this important industry.

It may be said with much force that every business should be allowed to take care of itself, and that there should be no interference. That may be true so far as the manufacturers and consumers are concerned, but in the fisheries, as in the products of the soil, it requires careful consideration and intelligent action looking not only to our immediate wants, but also to those who will come after us. Let us hope that meetings of this kind may be frequent where the interests of the fishermen as well as of the people may be freely discussed.

[TO BE CONTINUED.]

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Jan. 16 to 19.—Saratoga Poultry and Kennel Club, at Saratoga, N. Y. L. W. Clute, Ballston Lake, N. Y., Sec'y.  
Jan. 23 to 25.—New Orleans Fanciers' Club, at New Orleans, La. G. W. Seutell, Jr., Sec'y.  
Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y.  
March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y.  
March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y.  
March 20 to 23.—St. Louis Kennel Club, at St. Louis, Mo.  
April 3 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orear, Sec'y.  
May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

#### FIELD TRIALS.

Feb. 1.—Blue Ridge Futurity Stakes, at New Albany, Miss.  
Feb. 5.—Southern Field Trial Club's Trials, at New Albany, Miss. T. M. Brunmy, Sec'y, Marietta, Ga.  
Feb. 12.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. T. Madison, Sec'y, Indianapolis, Ind.

### POINTS AND FLUSHES.

[By a Staff Correspondent.]

#### The Field Trial Dog.

AS AN example of what a useful, practical working dog should be, the field trial dog has for years past steadily grown in disfavor. In practical exhibitions wild, half-trained dogs, with handlers rushing and scrambling to save the work of the dogs or prevent willful errors, could not well produce other results. Strictly for commercial purposes a distinction was made by one who competed largely in field trials, between a field trial dog and a plug shooting dog, the latter name from its derivation carrying an odium with it. It was wrong.

A writer in *FOREST AND STREAM* of Dec. 16 gives an excellent letter on the field trial dog and the plug shooting dog, he writing over the *nom de plume* of "Nil." If writers holding such views would present them as intelligently as the writer referred to there is no doubt but what a better and more correct understanding would be reached.

As a matter of fact, there should be no difference between the best field trial dog and the best shooting dog. A winner at a field trial ought to be a most satisfactory performer in practical field work. There are no inherent principles in the competition nor in practical field work which create a true distinction between a field trial dog and a field dog.

In talking over this matter with some of the most skillful handlers at the trials in North Carolina in November last they frankly admitted that a field trial winner ought to be the best field dog. They concede it fully, but under certain loose methods of conducting field trials, the best dog, if well broken, may not win anything, and, indeed, may make a poor showing, as will be more fully understood by further reading.

#### This and That.

Both in theory and practice field trial handling, if confined to an exhibition of a thoroughly trained dog's best performance, is a simple art. The purpose of a field trial competition is to determine which are the best dogs in it, and if handling were practiced for the same purpose the competition would at once be simplified and relieved of many complications, annoyances and abuses, and thereby it and sportsmanship would be the gainers. From the handler's standpoint, however, winning the prizes is of more immediate interest and profit to him than seeking out the best dog in the stake. The winning of his own dog is therefore his chief interest. When handled within the proper limits of fair play there is no exception to be taken to that duty. As a handler is in a competition with the special mission for the time being of displaying his dog's capabilities, it is but natural that he should take advantage of every circumstance which by rule or usage is recognized as allowable and legitimate. The judges are to determine the rest. In short, the field trial is theoretically to determine the best dogs in the competition, while the handler is intent on winning the place and money with such dog as he has, be the same good, bad or worse.

#### Imperfect Training.

But there never has been any strict exaction, by clubs or judges, in respect to good training, and wild, half-broken dogs have often won. Here is where the bars were left down for endless complications, evils and errors to enter. This circumstance of field trial competition made the half-trained dog a feature of the trials, and developed a new one, namely, that of the handler assisting his dog to an unlimited extent, if no restrictions are placed upon him. Thus it is often the dog and handler combined which are doing the work which should be done by the dog alone. Such is decidedly wrong in principle and unfair, and the unfairness of it is glaringly conspicuous when an experienced handler is opposed to an amateur.

Field trials can never be satisfactory to the public nor accurate in results till clubs and judges make the most rigid exactions in respect to dogs being perfectly trained.

With the half broken dog, an infinity of endless maneuvers, scrambles and pretenses are introduced in handling, all foreign to the work but useful to win money. The amateur in his first experience against a half-broken dog in competition is bewildered. There are details to learn and meet which he never knew or considered. Knowledge and sharp decisiveness of action are apparent at every move of the expert handler, and by finesse and rushing, if he doesn't succeed in making his own dog win, he may make the well-broken dog, if such he be, make a bad showing.

The expert, too, in most instances has a physical superiority in so far as it concerns the competition, since from constant practice he can outwalk and outlast his friend the amateur.

#### Studying Outside Matters.

Then there are many other incidental matters, outside of the competition of their own dogs, which many professional handlers look closely after. They walk as close to the judges as the management will permit, when other handlers are competing, observing the haunts of the bevis, the best way to approach them to advantage in respect to cover and ground, thus after the first day or two such handlers know the whereabouts of every bevy on the grounds and the best way of approaching them. At the same time, they are closely observing all the weak and strong points of their competitors' dogs.

I have often, too, heard the fallings of competing dogs exposed in strident voice, under an ostensible show of jocularity, but really so that all within hearing might observe what he observed and bear it in mind in making their conclusions. Such is a most reprehensible act, unsportsmanlike and justly offensive to all right-thinking sportsmen, and particularly obnoxious to interested owners and handlers. Whether public remarks accomplish the purpose of the utterer or not, such remarks, which are intended to prejudice

or prejudice the competition, should not be tolerated by any management for a moment. It is the judges' prerogative to decide the competition, and crying the excellence of one's own wares and mercilessly exposing the failings of others' dogs, under a cloak of jocular good fellowship for the judges' and reporters' benefit, and, incidentally, for the benefit of prospective purchasers or spectators, is not the way to raise field trials in the esteem of gentlemen nor make a fair and honorable competition.

#### Some Fallacies.

But to return to the half broken or wild dog. It has been a favorite argument with field trial supporters that the half-broken or wild dog, a winner at a field trial, can be made just as steady and good in actual field work as any dog regularly used for that purpose. That is but partially true. It is just as it happens. If it is true, why have the same dogs been brought to the trials but half-broken in their aged form? Some dogs will work with great dash and vigor if not required to work to the gun. As self-hunters they show increasing industry. But if forced to work to the requirements of the gun they develop into irregular workers and loafers. They will work for their own pleasure or profit but their desire for work extends no further. With a handler who can "hustle," as scrambling and rushing to gain every advantage is called at field trials, the many failings of such a dog are supplemented or concealed by the expert "hustler," and the dog goes rattling down through the records as a wonderful performer, though not properly finished in training by his handler.

Then there is the dashy, flashy dog, rattle-headed, with little sense, but great at going across fields at high speed. It may be that he picks out the open, easy places to run in, and notwithstanding the apparent air of industry in his work he might not find a bevy in a day save by accident. But again the expert handler comes in as a competitive factor. He can furnish the brains for a rattle-headed dog. If the handler has located every bevy he can direct him accurately. He turns him at the end of his casts by a whistle, he directs him by a signal of the hand as to the next course, and he nurses and coaches him in locating and pointing birds. It is true that he may make a great deal of noise and intimidate or balk his opponent's dog if he is well broken, but then again, it seems a pity that so good a dog as the rattle-headed dog is not well broken—so a dog as the average amateur or sportsman. As a matter of fact, the rattle-headed dog has about all the training that he is capable of receiving. His mental grasp can assimilate no more.

More instances could be mentioned, but enough has been shown to point out the evils of rushing and the impossibility of reaching accurate decisions with half-broken dogs as recognized factors in a competition.

#### A Remedy.

But how can the evil be remedied? Easily. If a dog is not properly broken, particularly in the All-Age Stake, retire him after the first heat. No matter how excellent he may seem, if he is not broken, no accurate opinion can be formed of him from a competitive standpoint. Running him is an injustice to every well-broken dog in the stake, for no well-broken dog is ever in actual work subjected to such a storm of whistling and loud orders as is bestowed on the rattle-headed or half-broken dog. Moreover, there is no excuse for an expert handler bringing a half-broken dog into a competition. Some handlers habitually bring in a larger stock of excuses into a competition than they bring in the way of applied training, but it always seemed to me that a handler who got 100 per cent. for training ought to produce something better than 75 per cent. of excuses and 25 per cent. of training at the trial.

The thoroughly trained dog is handicapped at a field trial, less so than formerly, but still enough to be serious. Often he will turn to the opposing handler's whistle and often he is turned by such whistle with unfair purposes. The constant whistling and calling confuses him, and, sometimes, in trials, good, well-broken dogs have quit working entirely out of pure indecision, or inability to get out without at once being turned back again by the whistle. There has been more attention paid to better breaking in the last year or two, but there is a vast deal of room for more improvement.

#### That Resolution.

I read with much amusement in *FOREST AND STREAM* of Dec. 30, the mention of the resolution, drawn up at Lexington, N. C., in 1892, in a style which would have made Lord Chesterfield turn green. It seemed a bit timorous to put that pretty resolution in a dark pocket for a whole year. It is, too, too bad that it didn't seem to make much of a jolt when it was sprung. I want to see the resolution in print again, so that the present and future may take warning:

Whereas, Published reports of work done by bird dogs running in the public trials have so often been untrue as to various dogs, misleading to the public, damaging to the reputations of handlers and owners, therefore be it

Resolved, That we demand of the sportsmen's papers that such reports contain the truth, the whole truth, and nothing but the truth.

That is not a request, but a husky, bustling "demand," sir! My heart sinks when I think how the careless, or ignorant, or mendacious reporter has been slamming his lead pencil about in a manner "damaging to the reputations" of that chaste band of martyrs, the field trial handlers. I am disposed to think the resolution is a joke, but I would be pleased to see the names of those in print who signed that resolution, before saying more.

#### The Mascoutah Club's Show.

Jan. 10.—The premium list of the Mascoutah Kennel Club's show is now being prepared and will probably be ready for distribution next week. The prize list is said to be quite liberal, and every breed of dog has a class provided for it. Many of the prominent specialty clubs have placed their club medals for competition at this show. It is probable that the entries will close about the last of February. The management is working in earnest, and the indications are that the club will hold a most successful show. Entries will close on Feb. 24.

#### The Northwestern Field Trials.

At a meeting of the Northwestern Field Trials Club held recently it was decided to hold their annual field trials in Manitoba. Mr. Hunter, the vice-president of the club, informed the club that good grounds could be secured at Jamestown, Dak. Mr. Johnson announced to the club that he had decided to retire from field trials as a competitor, though he will still give them his support otherwise. He intends hereafter to take recreation in his vacation by practical field work with his dogs.

On the 15th inst., Mr. Johnson will be one of a party of forty, who go to St. Paul, Minn., to attend a curling bonspiel, and on returning they have another week at the big bonspiel at Winnipeg. It is described as being great sport, with the best of hearty good fellowship among the gentlemen who participate.

I think that the club did wisely in deciding to hold the trials in Manitoba. A greater number of the members live in Canada; it is really a Canadian club, it has good enough grounds and accommodations in its own country, and a gentleman too, whose skill and industry in arranging for and managing the trials are a matter of satisfactory proof. It is not a mere diversion to do the work of a field trial club. It is sometimes wise to leave well enough alone.

Mr. J. T. Mayfield, who has settled at Pontotoc, Miss., for the winter, writes me under date of Jan. 3 as follows: "I

have been here since Dec. 23, and I am well satisfied with my location for training. Quail are not what one would call abundant, but I found plenty. The farmers have posted against market-shooters. The day is not very far away when every farmer in this State will protect his birds. I read my *FOREST AND STREAM* every week with much pleasure."

Mr. P. T. Madison, the popular sportsman and secretary of the U. S. F. T. Club, in a letter under date of Jan. 7 in his earnest manner writes: "I desire to congratulate the *FOREST AND STREAM*. The paper last week was a corker."

Mr. Harry L. Goodman has returned to Chicago to live, after a residence of a year or more near Nashville, Tenn., where he was occupied as manager of the Cumberland Kennel Co. B. WATERS.

900 SECURITY BUILDING, Chicago.

#### Heavy Mastiffs.

##### Editor *Forest and Stream*:

There is no question but that several St. Bernard dogs and at least one bitch have weighed over 200 lbs., also that there has been one mastiff that has weighed that and more. Far oftener when you come to the dogs that are claimed to weigh so much there is generally this: If they were in condition they would weigh so much. It is something like the notice lately in a Boston daily paper that Mr. So and So lost his champion mastiff dog (a champion never before heard of) that stood 5 ft. 9 in. high and weighed 175 lbs.

My aim has always been to breed mastiffs of great size and correct type. To get great size, not fat, but bone and muscular activity and strength, combined with the perfect disposition the true mastiff is noted for. That I am succeeding I offer three such dogs as Beaufort's Black Prince, The Lady Hopspur and Boss's Princess, which I claim to be three of the largest living, the first two the best type and the best headed ones as well. And in Boss's Princess the largest and heaviest with perfect body, legs and feet, but with a slightly old type of head when compared with Black Prince. A bitch perfect in color with blackest markings, which she probably took from her dam, which was of the brindled Ilford Cromwell breed, which goes to prove, as Mr. Taunton asserts, that unless we breed to the bitches occasionally we are in danger of losing the clear distinct marking of the mastiff. Boss's Princess has been shown only once at Brooklyn, where she should have had the easiest sort of a walk over; there she won the special prize offered for the best moving mastiff in the show, and after five days confinement she weighed in thin flesh 183 lbs. To-day, with a litter of pups (not for sale) she weighed 205 lbs., not estimated, but weighed by the weighmaster of the town. I could easily estimate she would weigh 30 or 40 lbs. more if in condition. She is over 80 in. in length from nose to end of tail, she stands full 32 in. under stick measure and girths 44 in. (tight). On her sire's side the blood of champion Colonel Cromwell predominates. She always had the greatest liberty—the run of a thousand acres. A house dog constantly at play with the children, affectionate, intelligent, companionable and always to be trusted.

With such results accomplished as can be shown in Beaufort's Black Prince and in Boss's Princess, can we not hope for something better than we have yet seen? Greater size, more activity and strength, and at the same time with the true mastiff disposition. The American public are as ever ready to buy the best. Breeders never need be afraid of being over-topped with first-class mastiffs. We do not hear of them being sold at ruinous prices, given away to any offer, as often advertised; they are a different class of dog. Twenty-dollar gold pieces are not obliged to be sold at half their value. Aim to breed the best, study each mating, and if the results are not as good, or better, than either sire or dam, or you did not get what you expected, try something else. Another important point for a breeder is to know a correct one when he sees it; if he does not, how can he expect to breed correct ones?

J. L. WINCHELL.

FAIR HAVEN, Vt., Jan. 6.

#### Mercer vs. Mills Thrown Out of Court.

SOME time since *FOREST AND STREAM* published a letter from Dr. Wesley Mills in which he characterized as fraudulent F. H. F. Mercer's action in entering another man's dog in a bench show without that man's knowledge and consent and for the benefit of the said Mercer. Having a proper knowledge of the facts in this case we refrained from allowing these columns to become the medium for Mercer's friends to heap vituperation upon Dr. Mills for his action in the matter, especially as such vituperation contained no proof of the fallacy of Dr. Mills's assertion. For this we have been subjected from time to time to much adverse criticism of the "no let up" order. We were quite content to rest the case on the evidence; and that our position was correct is proved by the following dispatch to the *Montreal Gazette* of Jan. 10. As will be remembered, Mercer brought suit against Dr. Mills for libel damages, on account of this charge of fraud, and it was this case which came up last week. The *Gazette* says:

OTTAWA, Jan. 9.—The action brought by F. H. F. Mercer of this city, against Prof. T. Wesley Mills, of Montreal, claiming \$10,000 damages, was yesterday afternoon non-suited by Justice Armour. A jury had been empanelled and Mr. J. B. Aylesworth, of Toronto, for the plaintiff, addressed the court briefly. After reading extracts from the evidence given by Prof. Mills in Montreal, His Lordship declined to allow the case to go to the jury, and the view he took appeared to be a surprise to Mr. Mercer and his friends. The entering of the dog owned by a gentleman in Massachusetts by the plaintiff was an unwarrantable action, was a fraud, and being such, statements of fact concerning the affair could not be a libel and there were no grounds upon which to base an action.

From a gentleman who was present at the trial we learn that—"The Toronto lawyer had finished part of his opening address to the jury and was quoting Dr. Mills where he said it was a fraud, when the judge suddenly and emphatically exclaimed, addressing the plaintiff's attorney, 'I think it is a fraud—don't you?' He then non-suited Mercer on the spot, saying that he would not listen to such a case." Mr. Little was not present at the trial, as he was ill at the time. Before Dr. Mills left the court house he was served with another writ at the instance of Mercer claiming a similar amount on other statements in the alleged libelous article.

#### Columbus, O., Dog Show.

PREMIUM lists for the Columbus Fanciers' Club dog show, to be held Feb. 23 and March 1, 2 and 3, are now ready to mail. With a liberal premium list and the judges they have selected, the club expects a good entry. The judges' names, as sent to us by Mr. T. A. Sherwood, are: E. Bardeol Elliott for great Danes; Major J. M. Taylor, all setters and pointers, and A. E. Pitts for mastiffs and pugs. The balance, we believe, will come under Mr. G. Bell's judicial eye. The club will give two handlers' prizes, \$80 to the handler with the largest string of dogs and \$40 to the second. Another valuable special has been added to the list by the Cambridge Fox-Terrier Kennels, of Toronto, Can. It is a model of a fox-terrier in silver, on a handsome stand, and is a very fine piece of work, modeled after the style of those donated at Toronto last fall; and as it is to be awarded to the best fox-terrier, smooth or wire dog or bitch, it should bring some of the cracks into competition. All inquiries for premium lists, etc., should be addressed to Mr. Geo. F. Mooney, 276 North High street, Columbus, O.

### The Westminster Kennel Club Show.

THE wheels of time seem to be well oiled these days, and work with alarming swiftness and smoothness for some of us. There is nothing that brings this fact more directly home to the fancier's mind than the sight of another W. K. C. premium list. The W. K. C. show is the pivot around which all other kennel events revolve, and marks the commencement of the fancier's new year. As soon as Christmas week jollities become a memory the fancier turns his thoughts toward the show of the year, and when fancier meets fancier the first question is generally, "Have you heard who the judges are?" It is not necessary to ask of what or where. In connection with no other show is there that absorbing interest to know the full list of judges as with the W. K. C. show, and when they have acquired the information, probably in the case of no other show has it so little effect upon the entry. The judges announced and their fitness for their several positions discussed, the premium list looms up, and, while they know this important feature will be forthcoming in ample time for due preparation, there is always some anxiety to know whether their own particular breed has received that due attention which its importance—in their own minds—fully entitles it to. Take the poodle man, for instance. He doesn't care a snap whether the pointers or St. Bernards are divided by weight or coat, but feels sure that the club would not be doing its duty to kenneldom if it did not provide classes for coris, curls; trimmed, untrimmed, white, black, brown and the rest of it.

Well, every one will soon be able to judge for himself, for once more the premium list of the W. K. C. show for the current year lies before us. This one makes the eighteenth, and a glance through it will show that while the club has scarcely made the spread of last year, the increased classification in several breed makes the list a more impartial and all round good one.

Taking the breeds in their proper order we find that mastiffs are scarcely so well considered as last year. They have \$15 and \$10 provided in the challenge classes; \$20, \$10 and \$5 in open classes, and puppy and novice \$10 and \$5, with sexes together, this makes a falling off of \$35 from last year's list. St. Bernards are much better treated, the entries being of course much larger, \$20 and \$10 in challenge; \$20, \$15, \$10 and \$5 in open, and \$15, \$10 and \$5 in puppies being the order for roughs and the same for smooths, and the novice classes have \$15, \$10 and \$5. The other breeds that are provided with the same amount as mastiffs are great Danes, Newfoundlanders, Russian wolfhounds, deerhounds, greyhounds, foxhounds, field and cocker spaniels, poodles, bulldogs, bull-terriers, dachshunds, beagles, white English and black and tan terriers and the different rough-haired terriers, pugs, toy spaniels (one challenge class for King Charles) and Italian greyhounds. Newfoundlanders, foxhounds and white English terriers have no challenge classes, and only spaniels, poodles, bulldogs, bull-terriers, beagles, Irish and wire-haired fox-terriers, have puppy classes in their section. Pointers, setters, collies and smooth fox-terriers are treated the same as St. Bernards, with the exception of Gordons, and there in the puppy and novice classes the sexes compete together. Those breeds where open classes are not divided and \$15, \$10 and \$5 are provided are English retrievers, Chesapeake Bay dogs, Irish water and Clumber spaniels, smooth collies, bob-tail sheepdogs, basket hounds, toy terriers and miscellaneous. This year schipperkes, Welsh and Clydesdale terriers and harriers must take pot luck with the "freaks" of the fancy.

In the way of kennel prizes, the club offers \$20 for best four mastiffs, rough and smooth St. Bernards (each), pointers, all setters, rough collies, bulldogs and smooth fox-terriers. Those getting \$15 are bloodhounds, great Danes, wolfhounds, deerhounds, greyhounds, foxhounds, the different spaniels (each), poodles, bull-terriers, dachshunds, beagles, Irish terriers, Yorkshires, pugs and toy spaniels. Other breeds get a brace prize of \$10.

The different specialty clubs have about the same list as last year, but space forbids our giving them more than passing notice; it is unnecessary. We remark, however, that as usual the Mastiff, Collie, Bulldog and Fox-Terrier clubs lead in the value of their offerings. A new special is that offered by the W. K. C. of \$100 cash or plate for the best four pointers and English setters run at public field trials in the United States or Canada. Entries close Feb. 5 with James Mortimer, room 310, 44 Broadway, New York city, and the fee is as before, \$5.

There is little more to notice unless we draw attention to the new rule, XVI., in "Additional Rules," which says: "During the show dogs can be taken from their benches for exercise between the hours of 12 and 1 and 6 to 7 P. M. only. All large dogs must be exercised on chain. This rule will be strictly enforced." The latter part of this rule is an innovation that is commendable and will do away with the boisterous actions of some of the big dogs while in the exercising rings, that is at once terrifying to the smaller dogs and a source of danger at all times.

The judges we have already announced, and when we say that Mr. Mortimer will superintend, assisted as usual by John Reid, this is a guarantee that the management and arrangements will be as good as experience can make them. Spratts Co. of course will feed and bench, and Sanitas will purify the air. Messrs. Thos. H. Terry and H. B. Cromwell will shoulder the duties of the bench show committee.

### Scottish Terriers at New York.

Editor Forest and Stream:

The list of the judges for the W. K. C.'s big show is always looked for with great interest by intending exhibitors and by dog owners in general, but I regret to say this year's list is a great disappointment to breeders of Scottish, Skye and Dandie terriers. These breeds have made such rapid strides within the last few years as to deserve better treatment than they get, as a rule, at the hands of show committees. I am sorry to say the W. K. C. this year is no exception.

There is no doubt this year's show at New York would have brought out a larger class of Scottish terriers than have ever been shown before, had a judge competent to judge them been appointed. We always look for judges at New York of the specialist order, and of course, this year in many breeds we are getting it, but unfortunately the Scottish breed of terriers will have to put up with a specialist in pugs to award the prizes to their classes. Everyone knows Dr. Cryer to be a gentleman, most competent to judge his particular breed, of which he has bred so many good ones; and of course coming from Philadelphia, which I hear is the stronghold of Skyes, he may know this breed, but we very much doubt his ability to set us straight as to type, size and the many perplexing questions, such as flat-heads, coat, etc., that bother the breeder of the hard-haired Scottish terrier, and I am afraid the W. K. C. will find they have made a mistake this year and I fancy I am not alone in this opinion.

SCOTTISH TERRIER.

### Too Flustered to Shoot.

WE all know the man who found so many rabbits one day that he did not know which one to shoot at first. Mr. J. R. Beebe, of Montrose, Pa., had something of that experience when he had put a two-line ad. in FOREST AND STREAM the other day. He wrote of it: "I had so many calls for my dogs I did not know which to answer first."

The Detroit people are quietly arranging their plans for the next show to be given by the City of the Straits Kennel Club, March 7 to 10. The club expects to give \$2,500 in prizes.

## DOG CHAT.

Pade.

For fear that an erroneous idea may become general owing to the writings of those who have not seen the dog and who were not present when he ran at the trials, we may say that we believe it is the general opinion of those who saw Pade at Nannet, that the picture as published in *Turf, Field and Farm* is no more like him than chalk to cheese. The rough sketch we published in our report of the trials, conveys a better idea of the points on which the club based its decision. The photograph has been taken very cleverly, and one would suppose the dog to have a straight and proper beagle front, whereas it is well known the dog is crooked like a basset, but of course not so much so, and his body is larger than the photograph would lead one to suppose. The dog photographed shows a dog deeper and shorter than the dog that ran at Nannet, in fact there is little similarity, and if the decision of the Beagle Club had rested on the evidence of the photograph furnished, Mr. Dorsey would have had the prize probably. There was other and stronger evidence than that, the whole evidence showed an amount of obscurity and "shielding" behind it that should not exist in a straightforward entry such as the club desires to see run at their trials. A correspondent in another paper writes: "The idea of the present Beagle Club undertaking to instruct Pottinger Dorsey, the oldest hand at the breed we now have!" The idea is not that the club wishes to instruct Mr. Dorsey but rather that the club is surprised that Mr. Dorsey, an official judge of the club, had an idea that the club would accept a dog that he confessed was not a pure beagle and one that he would not breed to for bench show form. The National Beagle Club's field trials are for beagles, in the same light as other field trials are for pointers and setters and not for "droppers." Where the field trial committee erred was in allowing the dog to compete; he should have been thrown out when measured and examined by the judges before the trials. This unfortunate affair could not have happened had the club made a rule that all beagles entered for its trials shall be registered with the N. B. C. before filling, and this should be done before the next trials. Mr. Dorsey knew as well as we do the light in which a beagle that wins at the N. B. C. trials is regarded, and we ask Mr. Dorsey as "one of the oldest hands at the breed we have," if he would honestly wish that type of beagle to be perpetuated. A winner at the field trials is much sought after in the stud, and those breeders who would seek his services would unwittingly do an incalculable lot of harm to their kennel, by introducing such an unknown quantity, one that is not acceptable either through pedigree or form. Mr. Dorsey has advertised the dog at stud in our columns, but this makes no difference in our estimate of the dog.

### The Pet Dog Club.

A meeting of the above club was held at the residence of the secretary, Miss Bannister, Jan. 10, at 15 East Forty-fifth street. It was decided that the club hold its annual meeting as usual, at the W. K. C. show. Several changes in the by-laws were under consideration during the meeting, and final action will be taken at the annual meeting. The membership of the club has increased and its future promises to be bright.

### The Philadelphia Kennel Club.

The annual meeting of the P. K. C. was held at the Aldine Hotel, Philadelphia, Jan. 9, when the following officers were elected: President, J. H. Winslow; Vice-President, Dr. G. G. Davis; Secretary, Dr. George DeB. Darby; Treasurer, S. Murray Mitchell. Directors: J. J. Snellenburg, Dr. Glass, Dr. Littleton, Chas. Phelps, Jr., and G. Schreiber. We are pleased to find that the treasurer's report showed the organization to be financially in good condition. The club, headed by the popular fancier Mr. Winslow, has now a good list of officers, and we fancy that the new secretary, Dr. Darby, from what we know of him, will prove a good selection. A secretary should have no private ends to serve, but work heartily and earnestly for the good of his club by disseminating without favor to one paper or the other the doings of his club. By this means public interest is excited in the doings of the organization. If such a club hides its light under a bushel it cannot hope to secure as large a membership as one that is not afraid to let the public know what it is doing. The club decided to hold a dog show this year and considerable money has been guaranteed for that purpose.

The meeting was as usual a social one and the punch bowl was a prominent and absorbing feature on the long table in the library of the hotel. Besides those officers named, and the members and friends present, were F. G. Taylor, G. Hay, Sbarswood Brinton, C. T. Thompson, Phil J. Walsh, and Major J. M. Taylor. It was the first meeting since the field trials, and there was lots to talk about and as usual in such gatherings, President Winslow's happy thoughts and jollity were contagious. The show committee was reappointed after hearing their report and told to go on with the arrangements for the coming show, the dates for which will be April 10 to 13, the week following Boston. The latest members elected are, Phil J. Walsh Jr., G. A. Loder, C. M. Gilbert, Paul Kellar and F. H. Flear.

### Champion Dick Swiveler Goes West.

Mr. A. B. Truman, of San Francisco, Cal., seems determined to raise the standard of Irish setters on the Pacific coast, and to that end he has brought from the East many good dogs. His Mike T., that did recently, and his Lady Elcho T. have hitherto been the best at the California shows. Now that Mr. Truman has purchased Dick Swiveler from the Oak Grove Kennels he has secured a dog that can boast of having beaten such cranks as champion Tim, Mack N., Chief, Mac A., Barney, Kildare, Gerald, Desmond II. and others. Dick has a record of three first prizes at New York in three consecutive years. In his veins runs the blood of the best strains of Irish setters. Through his sire, the field trial winner and bench champion, Bruce, he is directly related to Elcho and Noreen, and his dam, Leigh Doane II., was the winner of a first prize at field trials. This combination of field trial and prize winning blood should prove extremely useful to the breed in California, for the dog is yet able to stamp his progeny with type and quality.

A meeting of the executive committee of the Canadian Kennel Club will be held at the Queen's Hotel, Toronto, Jan. 26, at 3 P. M. Among the important matters for consideration are: 1. To finally correct and pass by-laws, etc. 2. To consider their relations with the A. K. C. 3. Election of new members, any other business that may come up.

The Toronto Kennel Club evidently has a proper conception of the duties and responsibilities of a kennel club. So many kennel clubs are such merely in name, and when they meet a few times in the year they come together, at best, in very perfunctory manner. Not so the club in question; their meetings, like the Philadelphia K. C. and the N. E. K. C. are made occasions for a little social jollity and good fellowship. The Toronto K. C. goes a step further and calls upon its members for papers on their specialties. For instance, Mr. A. A. McDonald, late owner of the well known fox-terrier Blemon Trump and others, read a paper on the

"Smooth and Wire-Hair Fox-Terrier" at the meeting of the club held at headquarters last Thursday evening, and imparted to his fellow members much interesting information on these breeds. President Kirk, after proposing a note of thanks to Mr. McDonald for his able paper, announced that the club would hold its fourth annual spring club show in April. A smoking concert is also announced for next month.

Mr. C. Walter Lougest, of Boston, Mass., has increased his stock of Bedlington terriers by the purchase of Professor from Mr. Thomas Pearsall, of Huntington, L. I. Professor is by the noted Tick Tack out of the no less noted Christmas Carol. Mr. Lougest having already purchased the bitch Tibbie, winner of three firsts and one second, can now claim ownership of a good brace of these all too scarce terriers. By the way, we wonder that these game terriers are not more popular in America. For gameness, companionship and a rough and tumble quality ready for any sport that comes along, there are few terriers his equal. Perhaps it is that the hideous fashion in which some of these dogs have been shown here is accountable for their present "exclusiveness."

Although Mr. Winchell's letter in another column slightly savors of "much vaunting of one's own," we think in the interest of the mastiff breed it merits perusal. Mastiffs lately have to some extent been allowed to languish, and at some of our best shows during the past three years the entries have not been such as the importance of the breed and the money offered should command. St. Bernards have to some extent pushed them temporarily to one side, but all mastiff lovers should feel elated over the prospect of a revival, and that while several of our best breeders have not exhibited as generously as they might have done, they have not been idle at home, and have succeeded in breeding several dogs of more than average merit. In fact, such animals as the late C. O. D., Beaufort's Black Prince, Ingleside Minting, Emperors Maximilian and William, Leamington and others we could mention, could hold their own in any competition either here or on the other side. We make the latter assertion simply from comparing them with the mastiffs that have been imported, and whose records showed that they were among the very best in the land they came from.

In company with Mr. S. Jagger we paid a visit to the New York St. Bernard Kennels at Kingsbridge. Mr. Jagger, as the owner of Mignon, was much interested in Princess Florence, who is looking well and hearty and growing quite a coat. Mr. Hughes shipped on the s.s. Cufic last week the St. Bernard bitch Surprise, that was shown at Newark last month. She goes to Mr. Shillcock's kennels at Birmingham, he having repurchased her at \$200. Another bitch will probably be sent over for this kennel before the New York show.

At the meeting of the Pacific Kennel Club held recently the report of the Schell Huber decision was read and the club endorsed the action of the committee. The secretary was instructed to prefer charges against Mr. Schell before the American Kennel Club. The treasurer's report showed a balance of \$861.04. A meeting of the club is to be held Jan. 17 to elect a committee of five members to take charge of the coming show in May. The charges preferred against Mr. Huber by Dr. Regensburger will be heard very shortly.

The first entry received by the W. K. C. for their coming show was that of the St. Bernard Lord Walbeck (Young Bute—Miss Anna), owned by Mr. S. Miller, New York, and we hope it will be followed by a thousand more.

Mr. E. O. Damon, proprietor of the Meadow City Kennels, has about decided to bring out their pointer bitches from Mr. Heywood Lonsdale's Kennels, Shropshire, England. With these and Strideaway and Soul II., he expects to have a kennel that will uphold the pointer standard in the field. Mr. Damon paid \$1,000 for Strideaway, so it does not look like very hard times in pointer circles.

Mr. Samuel Cushman, secretary of the R. I. Poultry Association, in writing to the press, thanking it for the courtesies extended to the association and valuable aid rendered, says: "The bench show of dogs was the best held by this society. Another year this department will probably be in charge of dog fanciers, and run on the plan of the bench shows."

### The P. K. C. Show.

The committee appointed by the Philadelphia Kennel Club to take charge of the coming show consists of Messrs. F. G. Taylor, S. Murray Mitchell and Dr. Glass. They held their first meeting at the Aldine Hotel on Friday last. The show will be held April 10 to 13, as previously stated, at Tattersall's, where the Keystone club has held its two shows. Mr. J. A. Wenderoth, of the latter club, was present and an important agreement was entered into whereby all of the members of the Keystone Club with one exception will be nominated for membership in the P. K. C., and if elected they will withdraw from that club, which action will probably wind up that organization, which really had no excuse for existence except for the purpose of giving a show under A. K. C. rules. The Philadelphia Kennel Club will then apply for membership in the A. K. C. and its application will be passed upon at the annual meeting of the latter club next February. This is a far more satisfactory state of affairs, though at the same time exhibitors should feel thankful to the younger club for the good it has done in showing that a show can be successfully held in Philadelphia, which action has encouraged the older club to take heart of grace once more and resume their former position.

### Bulldogs.

Mr. Cyril F. W. Jackson, secretary of the British Bulldog Club, sends us a prospectus of the second Produce Stakes for bull bitches and their produce whelped on or before April 31, open to all breeders of bulldogs, whether members of the club or not. Nominations for bitches must be sent in at least one week before the bitch is due to whelp. The whole of the entrance fees received for this competition, less one-eighth part forfeited to the club to cover expenses, will be divided into prizes as follows: For dogs, first, one-fourth of total entry fees; second, one-eighth, and third, one-sixteenth, and the same for bitches. The competition will take place at such show held between April 1, 1895, and Aug. 31, 1895, as the committee of the club shall select. The fees are: To nominate a bitch, \$2.50; for each puppy alive at the date of the produce certificate, 75 cents; for each puppy finally entered in the stake, \$2.50. For further particulars, rules, etc., our bulldog men, if they wish to enter their stock, should apply to Mr. Cyril F. W. Jackson, Hinton Charterhouse, Bath, England. Last year the stake had sixteen bitches nominated with their produce of fifty puppies. If our breeders could only raise some pups something of the sort should take well here.

That white collie, like Banquo's ghost, will not down. Now we have a letter from Mr. Armstrong, manager of the Cragstone Kennels, which contain Sefion Hero, Roslyn Wilkes, etc., in which he says that breeding white collies has nearly driven him crazy, but that he has got them at last. "I have a nearly white pup or two in every litter I breed, and in some cases half a dozen of them; but in many cases there

were a couple of marks that knocked them out. Two days ago, one bitch whelped seven, all pure white bodies with sable heads. How is that for collies?" Except for the prettiness of the thing we don't exactly see the use of perpetuating the "albinos," and we judge that Mr. Armstrong is not yet quite color blind, from the fact that he adds a postscript to his letter, in which he says he is now going to try for some good black, white and tans. This is better, and is a tricolor we should like to see become more general on our show benches. Such a dog is the Hempstead Farm Kennels' Woodmansterne Trefoil, and as Mr. Jarrett, the owner of Chestnut Hill Kennels, in a late letter also told us he was trying for them, there is a good chance that before long the color will take its old place in popularity.

We hear that Mr. W. H. Child, owner of the Oakview Kennels, Glenside, Pa., so long and favorably connected with dogdom as a breeder of beagles and Irish setters, has sold all his dogs and will henceforth give his attention to poultry breeding. He already has fine flocks of Plymouth Rocks and Wyandottes. We are sorry to lose such a thorough fancier as Mr. Child, but as he has been in ill health for some time past perhaps the gentler occupation will prove more interesting.

According to a press dispatch, the entries for the Saratoga show number 327, which must be considered an excellent entry, especially as some very good dogs will be benched.

Mr. Huntington, owner of the Marlborough Kennels makes use this week of our business columns to invite those who wish to exhibit at the coming W. K. C. show to send their dogs to his kennels to be conditioned. A recent visit to these kennels showed us that the condition of the dogs under John Stokes's care is the first consideration, and cleanly and warm quarters the next. The kennels are within 45 minutes of New York and are set in 65 acres of meadow.

#### Boston Terrier Club.

The annual meeting of the Boston Terrier Club will be held at Young's Hotel, Wednesday evening, Jan. 24, at 7 P. M. Officers will be elected for the coming year and other important business transacted. The presence of members is earnestly desired. G. H. HUSE, Sec'y.

#### Death of Bull Bitch Grit.

Mr. John H. Matthews, the well-known bulldog exhibitor and breeder, conveys to us the news of his old bull bitch Grit's death. We cannot do better than quote his letter: "My old favorite bull bitch Grit came to an untimely death on the second day of this new year, and I feel her loss very keenly, as she was the first bulldog I ever owned, and the most successful breeder I ever had in my kennels. Some unfortunate misunderstanding with her old companion, Dolly Tester, resulted in a fight, and the night watchman in charge of my stable, where the dogs were quartered, discovered the trouble too late to rescue her from her danger. She was badly bitten and crushed, and her old age could not provide strength to withstand the struggle of death, and she died the following morning in the arms of my kennel man, who was then attempting to bandage her wounds. Grit was several times bred to my old champion Portwood Tiger-Badajos, Quiberon, Portwood Pinch and Cock Robin being the best of her get, Cock Robin winning at New York in 1891 the Bulldog Club's puppy bowl and first in the puppy class, with Portwood Pinch second. Grit in 1893 won the Bulldog Club's medal for the best brood bitch, being sustained by Quiberon and Badajos, Badajos being twice a winner of seconds at New York shows. Poor old Grit has contributed more to the pleasure and encouragement of my bulldog "hobby" than any of the many others, and in her good qualities of kindness, keen common sense, faithful affection and fortitude in times of trouble she surpassed any bulldog I ever met. So her bones will rest in peace under the lawn and beneath the vines at my home, which must be her home."

#### Greyhound Specials.

Mr. Horatio Nelson, President National Greyhound Club, offers the following cash prizes at the W. K. C. show: \$20 for best American bred greyhound (dog or bitch) which has won two courses in public, same to have been the property of the exhibitor at least six months prior to W. K. C. show. \$15 for best American bred wolfhound (dog or bitch) and \$15 for best American bred deerhound (dog or bitch.)

Mr. S. Jagger, who is at present on a visit to America, offers for sale in our business columns his rough-coated stud St. Bernard Councillor Joe, at what is now considered a reasonable figure. Councillor Joe is one of the wonderful litter that produced two of the best St. Bernards in England at present, Lord Douglas and Lady Mignon. Joe, as his press notices show, is a very showy dog with massive, well-marked head and heavy bone. He is winner of several prizes in England, and the only reason he is for sale is that Mr. Jagger's Lady Mignon is in whelp and his kennel room is wanted. One hundred pounds was offered for this dog six months ago, but he was not then for sale.

Mr. Elliott has sold Toronto Wonder to Mr. F. C. Anderson of Chicago.

#### To Grow Up with the Country.

*Editor Forest and Stream:*  
Wm. Wade of Hulton, Pa., has presented me with a magnificent-looking Russian wolfhound pup, by Argoss—Princess Irma. Mr. Wade is a gentleman who likes practical evidence and does not take any stock in old world fables until proof is given of their truth. And I propose giving this pup, "when matured," a thorough test, in competition with my greyhounds on jack rabbits, coyotes and gray wolves. And I hope we will come down to some positive knowledge of their wolf-killing qualities.

The pup seems to have a fair turn of speed and plenty of grit, which is required in a good wolf dog, and as far as I can judge at present seems strong and vigorous, so he ought to answer as an example of what the breed can do.

Some day, after I have thoroughly tested him, I will give the coursing world the results of my experience.

D. C. LUSE.

GREAT BEND, Kas., Jan. 9.

#### The Saratoga Show.

SARATOGA, N. Y., Jan. 16.—[Special to Forest and Stream.] This show opened to-day with 321 entries. The largest entries are in foxhounds, pointers, English setters, spaniels, collies, poodles, beagles, fox-terriers, mastiffs. Brampton Beauty is here, and the collies Sefton Hero and Chorlton Phyllis. The quality is well represented. Such kennels as Winchell's, Hellgate, Seacroft, Maybrook, the Governor's, Thurber's, Spring-side, Red House Farm, Joe Lewis's, Seminole, Dixon's, Swiss Mountain, Fiske's Cragstone, Meadowmere, Hillhurst, Hornell-Harmony, Debonaire, Frank Deole's, Beverwyck and Lansdowne are here with some of their best. Woodlawn Park enters thirty-three not for competition. Fine hall and good weather.

Henry Brooks has purchased the Scotch terriers Tiree and Rhudaman. H. W. LACY.

#### New England Field Trial Club.

TAUNTON, Mass., Jan. 14.—The annual meeting of the N. E. F. T. C. was held Jan. 11 at the Hotel Thorndike, Boston. Officers for 1894 were elected as follows: President, Dr. J. W. Hayward; Vice-Presidents, D. A. Goodwin, G. W. Lovell, Harry Dutton, Edward Brooks; Secretary, Arthur R. Sharp; Treasurer, Walter C. Baylies; Board of Governors—E. K. Sperry, J. L. Wells, Chas. P. Curtis, Jr., A. L. Finney, Herbert Ames, Herbert Merriam, H. W. Smith, E. O. Damon; Committee on Grounds and Game, Dr. J. W. Hayward, Walter C. Baylies, Arthur R. Sharp; Delegate to A. K. C., Walter C. Baylies.

The report of the committee on grounds and game showed that good work had been done on the preserve in the way of planting feed for birds, but the severe weather of last winter had played havoc with our supply of game. For this reason we were obliged to abandon our trials. At present we have a number of coveys of good native birds and it is to be hoped that these will winter well, and with fresh importations give us enough to run successful trials. It was the sense of the meeting not to advertise trials for 1894 until we are assured of a proper game supply. ARTHUR R. SHARP, Sec'y.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

*Editor Forest and Stream:* I wish to call your attention to two mistakes in answer to correspondents' column, in issue of Jan. 8. In answer to J. D. C., Concord, N. H., "Alum Erectile" should read "Alum Exsic." And in answer to H. J. H., "Give milk after meals," should read, "Give the pills after meals."—T. G. S.

G. J. S., Pensacola, Fla.—You do not give sufficient details. Are the dogs thin, and do they continue to lose flesh? Have they any skin trouble?

The following have been answered by mail: "G. J. S.," Pensacola, Fla.; "J. M.," Washington, D. C.; "J. O. B.," Lawrence, Mass.; "W. A. K.," Austin, Texas; "O. R. G.," Blacksburg, S. C.

S. M., Washington, D. C.—1. This is a case that requires a personal examination. 2. Why not send the dog to your nearest veterinarian. 3. Any of the advertised verminifuges will answer your purpose.

H. N. S., Oskaloosa, Iowa.—You will find dogs trained on squirrel, advertised from time to time in our columns. They are generally some cross of hound and other things. A cocker spaniel should make a good dog for this purpose.

W. F. F., Winnipeg.—There may be one or two puppies come in subsequent litters that will show the effects of the mesalliance, but if the bitch is bred true afterwards the majority of opinion is that subsequent litters are not affected.

D. A. C., Toledo, O.—Bruce A. (A. K. C. B. 7122), by Anderson's Ned out of Nellie, by Graham's Frank out of Abbott's Tip, by Bismark out of Elmer's bitch; Frank, by Gatzner's Ned out of his Vic. Nellie, by Frank out of Tip (A. B.).—The sire and dam are litter brother and sister. Nelly G. (A. K. C. B. 7344), by Doncaster (3399, Vol. III) out of Fanny, by Buster out of a supposed pure Laverack bitch. Doncaster, by Druid out of Nilsson.

## Hunting and Coursing.

#### Winter Meet of the Worcester Fur Co.

THE Worcester Fur Company, of Worcester, Mass., is the oldest of the numerous fox hunting organizations of New England, and its fall and winter meets never fail to bring together a large number of the lovers of the chase. Sociability and good fellowship rule in these hunts, and, whether the conditions for sport be good, bad or indifferent, one is sure to enjoy himself in greeting old friends, and making new acquaintances, seeing some celebrated hound, or hearing the history of the last successful hunt, and capping one good story with a better one. Hence it is not surprising that these events are always anticipated with pleasure by the club members and their guests, and become, if possible, more popular as the club grows older.

The winter meet of '94 occurred on Jan. 10, when the club hunted the Purgatory district in the town of Sutton. This well known hunting ground is a wild stretch of woodland, the greater part covered with a heavy growth of pine, oak and chestnut. The country is rolling and in the vicinity of the far-famed Purgatory den so thickly studded with boulders and ledges that it is possible for a fox to run a long distance, jumping from stone to stone, without once putting his foot upon the grass or fallen leaves. Hence many of the foxes when hard pressed by the hounds seek to throw off their pursuers near the den, and the runways and roads leading in that direction are favorite stands for the hunter.

The club headquarters for the day were at the Tourtellotte House, Millbury. Many of the club members and guests arrived on Tuesday evening, so as to be ready for an early start on the next morning, and it was indeed a merry party that passed the evening in the hotel office smoking and spinning yarns. There were Messrs. A. B. F. Kinney and John M. White, the former president of the Fur Company and the latter proprietor of the Tourtellotte; both well known to the fox hunting fraternity everywhere as enthusiastic and successful hunters and owners of the celebrated Kinney-White pack of foxhounds. With them was Mr. David M. Earle, whose great feat in fox hunting is depicted in a spirited crayon sketch which has the place of honor on the office wall. The fox is running for his life in the middle of the road, hard pressed, not by the hounds, but by Mr. John M. White's hunting rig, the horses on the run, their owner holding the reins, and Mr. Earle steadying himself for a shot between the heads of the flying steeds. The game was secured—it was a head shot and an unique hunt. In the party, too, was a lucky member of the Fur Company, Mr. R. D. Butler. He is a recruit in the fox hunting ranks, but his place is not in the awkward squad, for he has never yet participated in a hunt without securing a fox or at least getting a shot or two at the wily game. Reynard, indeed, is no sooner jumped by the hounds than he begins to search for Mr. Butler, and is not happy till he yields him his pelt or receives a double salute from his gun. Other hunters arrived from time to time and joined the group about the roaring fire, and many a good story was told before the hands of the clock warned us to turn in if we would be up betimes in the morning.

The Tourtellotte House was astir early on Wednesday. A hearty breakfast was eaten before sunrise, and then the hounds were coupled and stowed away beneath the seats of numerous hunting wagons, while the sportsmen dressed in their heaviest of winter clothing crowded in above them. On the arrival of the early morning train from Worcester the procession started for the hunting grounds, President Kinney in a light, democrat wagon leading the way, the barge "Happines" bringing up the rear. As we neared Purgatory the hunters divided into small parties, each going to an appointed place, so that the region should be well covered with men, and hounds should be cast off in all the places where foxes were likely to be found.

The Kinney-White pack was divided into two divisions. Mr. J. M. White took with him the flyers Logan, Aggie and Fly, the former the celebrated winner of the Brunswick Fur Club field trials of '93, and with his party, which consisted of Messrs. R. D. Butler, C. A. Bigelow, Guy C. Whidden and Bradford S. Turpin, hunted from Gates's. The hounds were in splendid condition, and no sooner were they cast off than they struck a good track, and after a few minutes' trailing jumped their game. Then the music began, but the driving

was not as sharp and continuous as one could desire. Now there was a burst of melody that made one's nerves tingle with excitement, and then all would be still, to be again succeeded by more longings. The hounds worked well together and were full of life and snap, but the hunting conditions were most unfavorable. About half the ground was hidden by a light covering of crusted snow and elsewhere the fallen leaves were full of ice and frost; the scent lay badly and rapid work was impossible. It was, however, a perfect day to be afield; there was no wind, and there was the possibility that the scent would improve at a later hour, so the interest never flagged and no one left the field till the day was done.

No sooner had Mr. White's little pack started their fox than Reynard began to look for Mr. Butler, and after a half hour's search found him at the cross-roads. Mr. Butler thus got the first shot of the day, but for some reason or other failed to secure the game. The fox kept on and finally threw off the pack on the ledges near Purgatory Den, but he doubtless will fall to Mr. B.'s gun later in the season.

Meantime in the pine woods near the old schoolhouse Mr. W. N. Walling cast off his handsome little beagle Belle Diamond and the foxhounds Hunter and Duff, the latter the bright star of Mr. J. H. Baird's pack. The three went to work with a will and it was not long before the fox was up and running for life toward the east. In his path was Mr. A. W. Hunt, but just as he was congratulating himself on his good luck Reynard turned sharply away and headed for Mr. Henry W. Mower. While the fox was rapidly approaching that gentleman Mr. J. Dearden was guarding a runway a quarter of a mile or more away.

There was nothing of interest going on in his vicinity, and just for the sake of doing something, he shot at a crow high on a limb overhead. He missed the bird of ill omen and also turned the fox from Mr. Mower just as his finger was pressing the trigger. On sped Reynard toward Northbridge, the pack driving prettily and the little beagle holding her own with the foxhounds and doing her full share of the work. As the game went through the Poor Farm swamp it ran upon Mr. C. W. Wells. This gentleman had never seen a running fox before, but instead of letting him pass without a shot, as most novices do, he gave him the contents of both barrels and had the satisfaction of knocking him down. Then the hounds came up and finished him after a lively battle, the fox being game to the very last moment.

The work done by the little beagle in this race excited universal praise, but not content with what she had already done, she started in afresh and soon jumped another fox and ran him alone for some hours. Those sportsmen who were unacquainted with the merits of the beagle were more than surprised at Belle's hunting qualities, and one was heard to remark later in the day, "The ky-on-dle is certainly in it." She was indeed, and that, too, despite the fact that she was fat and in no condition to do her best.

Meanwhile President Kinney cast off the second division of the Kinney-White pack in the "dark woods." The hounds were Jumbo, a July—Native cross, and a credit to his name, Ben, Ring, Trump and Diamond, and no sooner were they off the couplings than they harked to a hound driving on Leland's hill, and soon went out of hearing far in the distance. Mr. Byron Stewart hunted with this pack.

In the large party that hunted from Cad's were Messrs. L. E. Divoll and Del Hamilton, with their hounds Jack and Hector; J. H. Locke, O. M. Bond, C. H. Howe, Herbert Hopkins and C. B. Holden. The hunt there, however, was not a success, and only those who left that part of the grounds and went further east enjoyed any sport. Messrs. G. W. Barnes, O. C. Ward and W. B. Gage hunted from Fuller's with the native hound Carl. On the northern edge of the grounds Mr. John Williams ran the well-known field trial performer Jos. J.

That fine little worker started and saw two foxes but neither of them was shot. Hon. John R. Thayer ran Leader, and Mr. C. E. Whitney hunted with him. In the Merriam district Messrs E. S. Knowles, Geo. Newton and E. T. Smith ran Dick Turpin and Spot, and though they did not get a fox they enjoyed a splendid hunt, the hounds running well all day and being within hearing of the hunters most of the time. This district is seven or eight miles distant from Purgatory, and why the scent should have been so good in one place and so bad in the other, is a puzzle difficult to solve.

Among other gentlemen who took part in this hunt were Messrs. E. H. Cate, Alden Rice, Henry F. Rice, George E. Conley, Leander White and A. W. Walls. As the day wore on the driving became more difficult, and there was little good work done after 12 o'clock. Some hunters got together in little groups, ate their lunch, told stories and waited for something to turn up. Others wandered from one part of the grounds to another, trying to get into the hunt, and only giving up at dark because there was no hunt to get into. Finally, as we were moving toward the wagons ready to start for the Tourtellotte, a blinding northeast snowstorm set in and we arrived at headquarters white with snow, but with pleasant memories of the day's sport.

Promptly at 6 o'clock the hungry hunters, reinforced by Messrs. Paul Wheeler, Alvin Fisher, W. R. Dean, Jos. Smith and some others who had been unable to take part in the hunt, were seated at the long tables in the great dining room of the Tourtellotte. The clatter of knife and fork, the merry jest and abundant good nature disproved forever the charge recently made by a correspondent in FOREST AND STREAM that Northern fox hunters are dyspeptic misanthropes.

Never did a good dinner disappear quicker and never was one more enjoyed. When cigars were reached President Kinney in a few words welcomed the guests and members, and then happily introduced a number of gentlemen who spoke briefly. Mr. C. W. Walls told how he killed his fox, and Mr. R. D. Butler was called upon to tell how he missed his. Mr. A. D. Fisher made a plea for the slow hound in fox-hunting, and Hon. J. R. Thayer made a lively speech on hunting ethics. The questions which he introduced were discussed by a number of other gentlemen, and at a late hour, after electing Messrs. R. D. Butler, S. C. Buckman, J. M. Watson and Alvin D. Fisher to membership, the club adjourned, having added another successful meet to its fox-hunting history. BRADLEY.

#### Whippet Racing.

Whippet racing is exciting considerable attention among the "fancy" round London just now and one of the first meetings of the newly formed Whippet Racing Club has just been held at East Dulwich. The sport, as we have many times pointed out, is a most exciting one and entirely free from the objectionable features that brought rabbit coursing into disrepute. The neighborhood round Harrison and Kearney, N. J., is a veritable stronghold for the sport in this country, and those who would like to see how the races are conducted, will have an opportunity of doing so on Washington's Birthday and the Saturday following, when a 200 yds. handicap race will be run off at the Kearney Athletic grounds. Entries close Feb. 12, with Harry Smith at the grounds.

Mr. Bradford S. Turpin, secretary of the Brunswick Fur Club, writes: "I like your editorial on the foxhound standard in the last FOREST AND STREAM. You are quite right." By the way, Mr. Turpin has resigned his position on Shooting and Fishing. This is a surprise, as he had got together a very interesting department. Later he writes that he had a great hunt with the Kinney-White pack on Thursday last. "We had three foxes going at once, all within hearing and all hard pressed. The driving was continuous all day. We got one fox."

### An Impromptu Coursing Meeting.

DENVER, Col., Jan. 5.—In order to keep up the interest at Goodland, Lighthall, Taylor, my brother Arthur and myself took a run down to Goodland on the 30th ult., and took with us Bon Bon, Bonny Belle, Birdseye and Irish Lass. The Goodland boys, who had been advised of our coming, had a delegation at the depot awaiting our arrival. After a few preliminaries we agreed to meet at Walker's store and get up a stake for the following day. At the appointed hour the boys were all of them on deck. The Goodland boys entered four—Rear-Admiral, Rook and Roy's Vanish. Vidler sent down Van's General with Taylor for C. A. White; Lighthall entered his Rough and Ready (a litter brother of the "unknown quantity," Buster), and the St. Patrick Kennels entered the four mentioned above. Taylor was called upon to do the slipping, which he did in a most satisfactory manner, while Frank Bradley officiated in the capacity of judge. Bradley's decisions met with general favor, there not being a single kick heard on the grounds.

At 10 o'clock the road south was lined with about 150 buggies, horses and carriages, vying their way to the little white school house, which had been designated as the starting point. At 11 o'clock the first brace were ordered to the slips.

**REAR-ADMIRAL—ROUGH AND READY.**—Slipped at about 60 yds. Rear Admiral at once shot to the front and made the turn six lengths in advance. He served himself three times before Rough and Ready could get in. Rough and Ready now took a hand, and passing Admiral, wrenched several times, then turned twice, each time placing Admiral, and racing past him. The rabbit then struck a corn row and straightened out, leading the dogs a merry procession for several miles, when he made good his escape. Rear Admiral quit in the cornfield in plain sight of the hare. Rough and Ready won.

**RHEA—IRISH LASS.**—These two white bitches (half sisters) made a pretty brace in the slips, and considerable speculation was indulged in as to which would raise the flag, but when they were slipped Rhea at once shot to the front, turned her hare twice, made a few wrenches, when the hare broke for the hills and escaped. Irish Lass, who was running very cunning, never had a look in.

**ROOK—BIRDSEYE.**—Birdseye made the turn by a good length, placed Rook and passed him, wrenched several times when Rook came in for a nice sequence. Some lively exchanging then took place, in which it was given and taken. Birdseye passing Rook was using her hare nicely when he took to earth. The flag went up for Rook. (I would have given the red bitch the verdict.)

**BON BON—ROY'S VANISH.**—Bon Bon led easily and staying right on top of her hare, scarcely allowed Vanish a look in.

**BONNY BELLE—VAN'S GENERAL.**—Bonny Belle led from the slips and turned the hare two lengths ahead of General. She worked the hare single-handed in full view of the crowd and forced puss to take to earth. General fell twice in the course and ran very awkwardly.

#### First Tie.

**RHEA—ROUGH AND READY.**—Rhea was the quicker away from the slips, and opened the gap until she took the turn fully eight lengths in the lead. She worked puss very rapidly for a long time, finally killing after a very long course. She never allowed Rough and Ready a look in. This course was a hard one on the bitch and used her up, so that she was drawn.

**ROOK—BON BON.**—Bon Bon made the turn by a length, threw puss to Rook, who turned back to Bon Bon. It was give and take until the hare was taken out of sight of the crowd, where puss was forced to take to earth. The hat came off. After the next course they were again put in the slips. Bon Bon led easily and working the closer in a well run course was an easy winner, as the hare escaped in a timber claim.

**BONNY BELLE—BIRDSEYE (bye dog).**—As several bets were made on this course the interest was as keen as in the other courses. Bonnie Belle led, turned, placed Birdseye, raced past and repeated the dose. Birdseye then got in, made several strong wrenches and turned to Bonnie, who dashed in and killed.

Rhea having been withdrawn and the only two being left in belonging to us we divided with them.

Every one voted it a fine day and returned home well pleased. In the evening the Goodland boys entertained us in a pleasant way until our train came along. The rabbits seem to be just as plentiful as they were in October and somewhat stronger. The Goodland boys are keeping the pot-hunters off the grounds and are getting ready for a rousing meeting in February. They have a trainer for their dogs who thoroughly understands his business.

**IMPROMPTU STAKE (Goodland, Dec. 31, 1893).**—Entrance \$5; first \$25, second \$15, third \$10; 10 subscriptions.

#### First Round.

A. C. Lighthall's red dog	Goodland Kennels' white and black dog
Rough and Ready (Lady-Gold)	Rear Admiral (Maj. Glendyne-Lady Alice)
Goodland Kennels' white and brindle bitch	St. Patrick Kennels' white and black bitch
Rhea (Major Glendyne-Daisy Dublin)	Irish Lass (St. Patrick-Daisy Dublin)
Goodland Kennels' black dog	St. Patrick Kennels' red bitch
Rook (Walnut-Humming Bird)	Bird's Eye (Babazon-Queen Belle)
St. Patrick Kennels' brindle and white bitch	Goodland Kennels' black and white bitch
Bon Bon (Dingwall-Miss Fisher)	Roy's Vanish (Walnut-Graham Glendyne)
St. Patrick Kennels' black and white bitch	S. W. Vidler's s. C. A. White's red and white dog
Bonny Belle (Dingwall-Miss Kitten)	Van's General (Babazon-Verdure Clad)

#### First Ties.

Rhea beat Rough and Ready. Bonny Belle a bye.

Bon Bon beat Rook.

#### Second Ties.

Rhea drawn, Bon Bon and Bonny Belle divided.

L. F. BARTELS.

### HUNTING AND COURSING NOTES.

The Green Spring Valley Game Protective Association is an organization composed of a number of large land owners and sportsmen in Maryland. At a meeting of the association held at Rogers Station, Jan. 8, the committee on by-laws proposed a number of rules, all of which were adopted excepting one requiring members to chain their dogs or prevent their running at large. This was approved as far as foxhounds were concerned, and the question of their running at large was left open until the next meeting. The secretary stated that the land owned by the gentlemen who have already joined was something over 16,000 acres, and that others were expected. Gamekeepers will be employed to keep out non-resident gunners and strange dogs. Mr. William Bell Johnson was elected Vice-President, Mr. George Brown being previously elected President, and Charles B. Rogers Secretary. The following Board of Governors were elected: George Brown, T. Edward Hambleton, Stephen Cockey, Wm. Bell Johnson, H. Carroll Winchester, Wm. Cockey, Henry A. Parr and Thomas Brady. The yearly dues are \$10 and a number of new subscribers were enrolled at the meeting. It is proposed to stock the waters with trout and the grounds with grouse and other feathered game.

It is rumored that Mr. W. S. Clarke will judge beagles at Boston show. A good selection, we should think, as many would like to see this experienced beagle man in the ring.

## Yachting.

### Seawanhaka Corinthian Y. C.

The annual meeting of the Seawanhaka Corinthian Y. C. was held on Jan. 9 at the town club house, New York, Com. Center presiding. The reports of the board of trustees and the various standing committees were read, showing the club to be in a prosperous and satisfactory condition. The secretary's report showed a net loss of eleven members this year, the present membership, 383, being just 15 less than the limit. The large increase of the dues from \$35 to \$50, necessitated by the establishment of the Oyster Bay station in 1892, has naturally resulted in the loss of some members who were unable to avail themselves of the increased privileges, and this loss has been larger in the second than in the first year. It has, however, been smaller than first estimated, and has been more than counterbalanced by the addition of new members, the limit being reached for the first time this summer. The present business depression occurred at the

BRITANNIA—CUTTER.  
From an amateur photo.

worst possible time, the second season of a very expensive venture, which had not yet progressed beyond the experimental stage; and all things considered, the club has fared very well, the financial reports were very satisfactory, the fleet is larger than ever before and the membership is very close to the maximum limit. The following officers were elected: Com. G. H. B. Hill, schooner Ariel; Vice-Com. E. C. Benedict, steam yacht Oneida; Rear-Com. Walter C. Tuckerman, cutter Liris; Sec'y. Henry W. Hayden; Treas. Walter C. Hubbard; Meas. John Hyslop; Fleet Surgeon, Dr. J. West Roosevelt; Fleet Chaplain, the Rev. George R. Van De Water, D.D.; Race Committee, Macomb G. Foster, Walter C. Kerr, Valentine Mott, R. A. Rutherford, and George Wendell; House Committee, George Bullock, Walter C. Gilson, Walter T. Owen, W. Emlen Roosevelt and Arthur Deane Weeks; Committee on Lectures and Entertainments, William Van Rensselaer Erving, William Foulke and F. Delano Weeks; Committee on Lines and Models, John Hyslop, A. Cary Smith, and W. P. Stephens; Law Committee, F. Kingsbury Curtis, Alfred Ely and Frederick DeP. Foster; Trustee, Herbert L. Satterlee and J. Langdon Ward.

The retirement of Mr. d'Oremieux from the office of secretary marks a very important decade in the club's history, his term of office having begun in 1883, the year in which the formula now universally known as the "Seawanhaka rule" was first adopted. The thorough

SATANITA—CUTTER.  
From an amateur photo

and efficient manner in which the immediate duties of the secretaryship have been performed for this long period is widely known outside the club; and in addition Mr. d'Oremieux has been one of the leading spirits in establishing the high standard for which the sailing and other rules of the Seawanhaka Corinthian Y. C. are so justly noted. The care and labor which he has so freely given for these many years have contributed in no small degree to the present prosperity of the club. The race committee was authorized to correspond with the owners of the large singlestickers in regard to a race early in the season, for which the club will offer a cup of \$500 value.

### YACHT NEWS NOTES.

The final race for the champion pennant for 10 catboats belonging to the Cooper's Point Y. C. was sailed yesterday. The contestants were the Kinsey and Humphreys. It was an ideal day for racing. A slashing breeze blew from the west, with a southerly tendency, and everything seemed *coulour de rose*. Captain R. G. Wilkins was referee and starter, and he gave the word precisely at 2:30 P. M. Both boats crossed the line neck and neck, carrying their full racing sails. The course was from Wilkins slip round Petty's Island and back. They tore through the water side by side, neither seeming to gain an inch; in fact, sometimes they were so close that glasses could be touched in New Year's greetings. They rounded close together, and then sheets were flattened for the home-tretch. The breeze had meanwhile increased, and they both luffed like mad in the squalls, but neither dared to stop to reef. Tack and tack they neared the goal, each trying to outmaneuver the other, but it was a case of "Jack's as good as his master," and what one did the other did. As they came for the finishing line it was hard to say which was ahead, but the Kinsey had the weather gauge and just crossed ahead of her opponent. The times were: Kinsey 3m. 28s., Humphreys 3m. 29s., one of the closest races ever sailed. Captain Warner Kinsey sailed his namesake, and Captain John J. Grindrod the Humphreys. Both men handled their boats admirably, as the time will attest, making the entire run of 11 miles in this time over the same course has only been beaten on two occasions, namely by the R. G. Wilkins, which did the distance in 57m., and the William Kinsey, which sailed the course in 55m. 9s.—*Philadelphia Item*, Jan. 2.

Com. E. D. Morgan and Mr. C. O. Iselin have in a substantial manner recognized the designer of the boat which defeated the British challenger for the America's Cup. It was intended to give a reception to Capt. "Nat" Herreshoff at New York after the international cup races were over, but the Bristol designer abruptly left for his Rhode Island home and the plans of Messrs. Morgan and Iselin, the heads of the syndicate owning the Vigilant, were frustrated, and it is for the time. It was still felt, however, by these gentlemen and others who composed the syndicate that some recognition was due to Mr. Herreshoff, not only as the designer of the fastest yacht afloat, but also on account of the services which he rendered in the management of

the craft during the races. The result of this feeling was that one day during the Christmas holidays a messenger arrived at Bristol from New York and presenting himself at the door of Capt. "Nat's" residence asked to see the designer. The messenger was informed that the captain was very busy and could not be seen, but he insisted that he must have a brief interview with him. The yacht builder then presented himself and the messenger handed him an envelope and then departed. On opening the letter a handsome Christmas present of five bank bills of the denomination of \$500 each met his eyes, together with a note from Messrs. Morgan and Iselin asking him to accept the sum as a tribute of their appreciation of his services. Captain "Nat" kept the secret well and the facts did not leak out until to-day.—*New York Herald*.

To the many who are familiar with the previous editions, it is only necessary to say that the fifth edition of "The Naval Architect's, Ship-builder's and Marine Engineer's Pocket-Book," by Clement Mackrow, M. I. N. A., is an enlargement and improvement of the fourth edition. To others we can recommend the work as indispensable to all associated with the occupations enumerated. Following the general plan of the standard engineering pocket-books, this book is devoted specially to naval architecture and marine engineering, and is a compact but comprehensive treatise on the subjects. All of the calculations relating to a vessel are dealt with in detail, the mathematical formulas being supplemented by clear and simply worded descriptions. One feature of the work, which will specially commend it to amateurs and to those whose educational advantages have been limited, is a brief but clear and thorough summary of the principles of arithmetic, trigonometry, geometry, mensuration, algebra and mechanics. The many miscellaneous tables include logarithms, sines and tangents, weights and measures of all kinds, weight and strengths of materials, distance tables, tonnage tables and a numerous and useful collection of figures relating to the calculations of the naval architect and designer. The book is clearly printed on thin paper, 700 pages, and is handsomely bound in flexible leather. It is published by Crosby, Lockwood & Son, London.

At the annual meeting of the Biscayne Bay Y. C. on Jan. 6 the following officers were elected: Com. R. M. Munroe; Vice-Com. Lewis D. Benton; Sec. Kirk Munroe; Treas. A. S. Haigh; Meas. Richard Carney. The annual regatta of the club, open to yachts of all recognized clubs, will be held as usual on Feb. 22. Com. Munroe has sold Wabun and is building Duster. The new yawl Flying Cloud, designed by Waterhouse & Chesebrough, built last summer by Lawley for Mr. S. F. Moore, of this club, arrived in the bay and is a beauty. She is 66ft. over all, 45ft. l.w.l., 15ft. 6in. beam, and 4ft. draft, with interior finish of carved butternut. After the regatta she will make a cruise to the Bahamas. Lieut. Henry A. Baucrus is Meas. G. Herbert Millett; Regatta Committee, Louis Wunder, F. W. Bobbett and F. L. Townsend. The secretary and treasurer's report showed the club to be in a prosperous condition. The club fleet consists of three steam yachts, one naphtha launch, three schooners, thirty cabin sloops and yawls, five jib and mainsail yachts and twenty-six cats.

The annual meeting of the Corinthian Y. C. of Philadelphia was held at 1,530 Chestnut street on Jan. 19, the following officers being elected: Com. Col. Anthony J. Drexel; Vice-Com. Russell E. Tucker; Rear-Com. Henry S. Jencks; Sec. Addison F. Baucrus; Meas. G. Herbert Millett; Trustees, Col. Anthony J. Drexel, Victor J. Petry, R. J. W. Koons and Frank H. Rosengarten; Race Committee, Addison F. Baucrus, George M. Freeman and Edward H. Johnson; Committee on Admissions, Charles H. Brock, Edward D. Toland, G. Herbert Millett, Alexander Van Rensselaer and Dr. Archibald G. Thomson. The reports of the trustees, race committee and treasurer were read and showed the organization to be in a prosperous condition.

The annual meeting of the Corinthian Y. C. of Marblehead was held on Jan. 10, the following officers were elected: Com. William P. Fowle; Vice-Com. J. Prince Loud; Rear-Com. David C. Percival Jr.; Sec. Everett Paine; Treas. J. R. Rhodes; Meas. John W. Dunlop; Executive Committee, Francis A. Seaman, Henry Taggard; Regatta Committee, George W. Mansfield, John B. Paine, Harry P. Benson, Arthur G. Wood, Benjamin L. Knapp; Membership Committee, Herman Parker, R. Henry W. Dwight, Fred C. Newhall, John A. Jennings; House Committee, Walter I. Fields, Henry W. Perry, Albert Poor; Board of Judges, George W. Mansfield, George H. Wheeler, D. H. Follett Jr., William C. Farrell, Charles M. Barker. The Treasurer's report showed the club to be in excellent financial condition, its debt having been reduced nearly \$2,000 during the year.

On Jan. 10 Valkyrie was placed on the new balance dock at Tebo's, where she will lie until spring. Mr. J. Beaver Webb has charge of her, and will give her a new outfit of larger spars, with new rigging similar to the Herreshoff boats. Her copper will be removed and the hull smoothed off and recoppered later on, and the interior will be refitted. Canvas has been hung over her sides to prevent the taking of photographs. Mr. Kersey has just returned from a short trip across, and reports that Lord Dunraven will come out in May in company with Lord Wolverton, and will race the yacht here through June. Valkyrie's mast has been sold to Samuel Pine, who has made from it a mizenmast for the coasting schooner Maggie Abbott.

On Jan. 6 an organization to be known as the Harvard Y. C. was formed at Cambridge, Mass., the officers being: Com. H. G. Barby, '94; Vice-Com. B. A. Reed, Jr., '94; Sec. F. S. Saltonstall, '94; Fleet Surgeon, T. A. Mullins, '94; Sec. Treas. C. Morgan, '94; Meas. David Vail, '94; Election Committee—G. D. Wells, '94; H. G. Barby, '94; S. Batette, '94; E. Tuckerman, '94, and C. Morgan, '94. The club starts with a fleet of 30 yachts. The burgee has a black crossbar on a crimson ground, with a white H on the bar. Only yachtsmen may become active members. The annual cruise will begin with a rendezvous at New London on the day following the coming race.

On Jan. 7, the Williamsburgh Y. C. elected the following officers: Com. Alfred Smith; Vice-Com. Alfred Sothen; Rear-Com. Geo. Schmitt; Rec-Sec'y. Henry F. Huper; Fleet Surgeon, William H. Schiller; Treas. Henry Roth; Meas. Lawrence W. Rice; Steward, Edward Einhart; Sergeant-At-Arms, William Neuhoff; Board of Trustees, John Eismann, A. S. Brush, Theodore Meyer, Reinard Perino and William Kahn; Regatta Committee, Edward Einhart, William Jackson and William Neuhoff.

Roi, Cape Cod cabin cat, which arrived in these waters in 1892, has been sold by her owners, Messrs. Lynch & Thomas of Larchmont, to Mr. Chester W. Chapin, owner of sch. yacht Tampa, who will take her to Florida. The Roi was launched in March 1892, and was at the top of her class in 1892, winning six firsts and one second out of seven races. In 1893 she was chartered to a Larchmont yachtsman, and under indifferent handling made a very poor showing. She was built by D. C. H. Crosby.

The nominating committee of the New Rochelle Y. C. have posted these nominations for officers for 1894: Com. Henry Andrus; Vice-Com. R. F. Black; Rear-Com. Jabez Harris; Sec. F. R. Crawford; Treas. B. B. Strong; governors of last year; Meas. H. Morse. The election will take place at the club house, Echo Island, on Feb. 5.

The Capital Y. C. of Washington, D. C., has elected the following officers: Com. John V. Coffey; Vice-Com. C. J. Norris; Sec. I. P. Libbey; Treas. Charles F. Karr; Men's: Leonard J. Wilson. The club is considering the project of a houseboat, located on the Potomac, in the vicinity of the lower terminus of the Alexandria & Mount Vernon Electric Road.

Nonpareil, yawl, Mr. Harold A. Sanderson, after being badly wrecked in the great storm at Larchmont last August, was sold at auction on Jan. 11, being purchased for \$1,800 by C. J. Mahoney. She is 80ft. over all, 67ft. 11in. l.w.l., 15ft. 9in. beam and 11ft. 6in. draft.

Cleopatra, steam yacht, designed by Mr. Watson and built last year for Mr. John Lysaght, former owner of Semiramis, is reported as sold to Mr. Arthur L. Barry, owner of Sapphire, steam yacht, who will use her in American waters.

Messrs. Cousins & Pratt, the sailmakers, of Commercial street, Boston, have issued a calendar with an admirable picture of the schooner Alcaza under light sails.

Sagamore, steam yacht, Mr. E. L. Scott, has returned to Philadelphia from England, the projected cruise around the world being abandoned. The annual meeting of the Hudson River Y. C. was held on Jan. 10 at 989 Eighth avenue, the following officers being elected: Com. E. Langerfeld; Vice-Com. James E. Grover; Sec. A. G. Buckholz; Treas. R. V. Freeman; Meas. D. Little; Fleet Surgeon, William Geoghan, M.D.; Steward, John T. Hufnagel; Board of Trustees, R. V. Freeman, chairman; Joseph Stidger, John Kelly, James E. Grover, E. Helmsdadt, George Allen, C. Ward, Samuel Blum, Charles K. Tucker and Wm. Henderson. Ex-Com. Henry F. Allen, who declined re-election, had served five consecutive years as commodore of the club.

The Monaquet Y. C. held its annual meeting in Weymouth on Jan. 8, the following officers being elected: Com. John Cavanaugh; Vice-Com. Russell G. Hunt; Sec. Chas. G. Sheppard; Treas. Dana Smith;

SAIL PLAN OF SINGLEHANDER.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings of descriptions of boats and fittings, and all items relating to the sport.

Canoeing on the Shenandoah.

AFTER the concluding sentences of Com. Webb's cruise last week, our readers may be glad to know that the cruise of 1893 was a success, and that after a very hard and exciting run of three weeks, with very high water from the great storm of Aug. 28, which overtook the party at Columbian Falls, above Massanutten, the desired goal, Harper's Ferry, was reached. It may interest those of our readers who have followed Com. Webb's many cruises to know that a very good chart of the river, prepared by him, was published in the *Sail and Paddle* of March, 1893. The 1893 cruise, from Mount Cranford to Harper's Ferry, 172 miles, occupied eighteen days, prior to which was made a six-day cruise of sixty miles, from Bushing's to Shenandoah.

Though not intended for publication, the following extracts from a letter from Com. Webb are interesting:

"I am preparing to build a new canoe this winter, as my present one is pretty well battered up after five seasons' hard use. The old one is built upon the lines of your Raritanian model, and it has proved a splendid cruising boat. Its faults are, it is a little too small for entire comfort in stowage and sleeping; also it is a little wet in rough water, owing to the long, narrow bow and in shooting falls, narrow and dams it is very apt to plunge under.

"In 1888 I used a canoe built on the lines of your Jersey Blue, except that it had only a half inch flat keel, and the stern was rounded away like the bow. Take it all around, it was the best cruising model I have yet tried, as it was so roomy and comfortable. Its faults were it was hard to swing round quickly (and in shooting rapids some lively swinging round is frequently necessary), and it was hard to paddle against a head wind.

"It was a remarkably buoyant and dry boat in rough water, and I am going to build my new canoe from the same lines, except that I shall give her a long, sloping bow and stern, something like the Raritanian, so that she will turn quickly."

Com. Webb has sent us copies of the *Stanton Vindicator*, containing accounts of his cruises of 1891 and 1893, for filing in the A. C. A. library with the FOREST AND STREAM account of the 1892 cruise.

CANOE NEWS NOTES.

The sixth annual meeting of the Puritan C. C. was held on Jan. 6, and the following officers were elected: Com., Jas. W. Cartwright Jr.; Vice-Com., Geo. R. Underwood; Rear-Com., Charles D. Cartwright; Treas., Lothrop Hedge; Sec'y, Charles F. Dodge; Meas., John R. Robertson. Directors, Vice-Com., Rear-Com., Treas., Sec., and E. S. Gilmore and Jas. Bragdon. House Com., Com., Lothrop Hedge and Francis B. Wheaton. Membership Com., Jos. E. Hill, Frank A. Heyer and Samuel Johnson 2d.

On Saturday evening, Jan. 6, the Hartford C. C. had its annual Christmas tree. There was a good attendance of the local club and every one received a present, nearly all such being a "grind" on some particular fad or failing. One canoeist who is making a desperate attempt to raise a goat (he calls it an Imperial), received everything possible to make it a success in the line of old razors, straps, etc. Another member, prominent in the militia, received a cap and tin sword, and another man with the same inclinations was presented with a wooden gun. Along in the evening our friend Knappe dropped down from Springfield, and among other things talked "war-can-e," telling us of the races we were going to have at the Eastern Division meet next year. The races in this class which have been so long talked of, seem at last to be a certainty.

The first camp-fire of the Connecticut River Canoeists' Club was held at the house of the Springfield Canoe Association on Saturday evening, Jan. 13. The attendance of about 140 or more speaks very plainly of the good cheer which is dispensed at Springfield, large delegations being present from Hartford, Holyoke, Northampton and South Hadley Falls. F. A. Nickerson, ex-Com. A. C. A., and Messrs. Seavey, of New York, and Parmele, of Hartford, both ex-vice-commodores, were on hand, together with many other shining lights of the canoe-

ing fraternity. The Calla Shasta band furnished the music. Banks first showed his musical proclivities on the bass drum at Willsborough in 1892. Other entertainment was furnished by a band, similar, though not as extensive, to the "coon band," from Sag Harbor in 1890. The men expressed their approval and satisfaction with the first camp fire in glowing terms.

The Hartford C. C. have ordered a 25ft. war canoe from Robertson, of Auburndale, Mass.

We have received from the honorary secretary of the British Canoe Association, Dr. John D. Hayward, of the Mersey C. C., a circular notice of the meet of 1894, which will be held from July 30 to Aug. 20, on Salcombe Harbor, Devonshire, England.

The Shuh-shuh-gah C. C., of Winchester, Mass., has elected the following: Captain, R. Apollonio; Lieutenant, F. B. Moulton; Secretary, H. C. Holt; Purser, J. W. Richards; Executive Committee, J. M. Marshal.

The committee of the new Connecticut River Canoeists' Club has sent out the following notice: "At a meeting of canoeists held Dec. 16 at a camp-fire given by the Hartford Canoe Club it was voted to form the Connecticut River Canoeists' Club, whose object was to unite all canoeists on the Connecticut River and vicinity in a social way, to hold as many gatherings as convenient in the form of camp-fires, etc., during the winter months at the different localities, and the below named committee was appointed from the localities present. The first of these camp-fires will be held at Springfield, Mass., on Saturday, Jan. 13, at the Springfield Club's house, and it is hoped and expected that all interested in canoeing will be present. The expense of these camp-fires will be limited, not to exceed \$1 per capita, and be divided among those agreeing to be present. The committee-man from your vicinity respectfully requests that you notify him on or before Jan. 10 of your intention that he may make necessary arrangements." The committee consists of Emil C. Knappe, Springfield, chairman; F. W. Theis, Hartford, secretary; C. F. Schuster, Holyoke; C. H. Davenport, Jr., South Hadley, and J. R. Giffellow, Northampton.

The Detroit Boat Club, whose house was destroyed by fire last October, has completed all arrangements to build a very handsome house on the old site. It will be 132x104ft., three stories high, and will cost \$15,000. Permission has been obtained from the Government to use the land. This successful recovery from the very serious misfortune which befel the club is largely due to the efforts of the president, W. C. Jupp. The club has ordered a complete outfit of new boats.

In these dull times it is pleasant to learn that at least one boat-building firm is busy; the St. Lawrence River Skiff, Canoe and Steam Launch Co. report more orders than in any previous year, and are now very busy. They will build all of the barges and club boats for the Detroit Boat Club, and have much other work in addition.

A. C. A. Membership.

ATLANTIC DIVISION: Southin S. Farmer, Newark, N. J.

Through Train Service to Florida and the South.

The Pennsylvania Railroad Company, ever on the alert to provide whatever its patrons desire, has established for this season an unexcelled through-train service to Florida and the South.

First and foremost comes "The New York and Florida Special," composed exclusively of Pullman vestibule smoking, dining, observation, sleeping and drawing-room cars. No extra fare will be charged on this train over and above the usual Pullman berth charges. It will leave New York Wednesday, January 10th, and every week day thereafter until April 19th, 1894, at 12:10 P. M., Newark 12:35 P. M., Trenton 1:35 P. M., Philadelphia 2:30 P. M., Wilmington 3:10 P. M., Baltimore 4:45 P. M., and Washington 5:55 P. M., via Richmond and the Atlantic Coast Line and Plant System, arriving at Jacksonville 5:30 P. M., and St. Augustine 7 P. M. the following day.

There are two additional express trains via the Atlantic Coast Line, the one leaving New York daily at 9:30 A. M., Newark 9:55 A. M., Trenton 11:08 A. M., Philadelphia 12:10 P. M., Wilmington 12:50 P. M., Baltimore

2:24 P. M., Washington 3:46 P. M., arriving Charleston 6:50 A. M., Savannah 8:23 A. M., Jacksonville 1:35 P. M., St. Augustine 3:40 P. M., and Tampa at 10:35 P. M., with buffet sleeping cars from New York to Charleston, Jacksonville, St. Augustine and Tampa; the other leaving New York daily at 8:30 P. M., Newark 8:55 P. M., Trenton 10:15 P. M., Philadelphia 11:33 P. M., Wilmington 12:19 A. M., arriving Charleston 11:00 P. M., Thomasville 1:07 P. M., Jacksonville 8:40 A. M., St. Augustine 10:50 A. M., and Port Tampa 7:15 P. M., connecting at that point Mondays, Thursdays and Saturdays with Plant Steamship Line for Key West and Havana, with buffet sleeping cars from New York to Richmond, Thomasville, Jacksonville and Port Tampa. Both of these trains make direct connections, via Jacksonville, St. Augustine and Indian River Railway, to St. Augustine, Palatka, Ormond and Rockledge (Indian River).

Two trains leave New York daily, via Washington, Richmond & Danville and Florida Central & Peninsular Railroads, the one leaving New York at 4:30 P. M., Newark 4:55 P. M., Philadelphia 6:55 P. M., Wilmington 7:41 P. M., Baltimore 9:20 P. M., Washington 10:43 P. M., arriving Columbia 12:05 P. M., Savannah 4:00 P. M., Jacksonville 9:00 P. M., and Tampa 7:30 A. M., with sleeping cars from New York to Jacksonville and Tampa; the other leaving New York at 12:15 night, Philadelphia 3:50 A. M. (or 7:20 A. M., changing at Washington), Baltimore 9:42 A. M. (changing at Washington), Washington 11:01 A. M., arriving Savannah 4:30 A. M., Jacksonville 9:30 A. M., and Tampa 5:00 P. M., with sleeping car from New York to Jacksonville.

Passengers from New England can make close connections with these trains at Philadelphia and Washington by using through trains, with parlor and sleeping cars, leaving Boston, via Shore Line, at 9:00 A. M. week-days and 7:30 P. M. daily, arriving Philadelphia 6:05 P. M. and 6:40 A. M., and Washington 9:45 P. M. and 10:42 A. M. respectively.—Adv.

Rifle Range and Gallery.

New York City Corps.

FOURTEEN members of the New York City Corps had a fine evening's sport on Friday night. The men were divided into teams of seven, under the lead of Capt. Runge and Capt. Kuhlman, and a series of matches was shot off in which the honors were easy. Scores:

First shoot:			
A Runge (captain).....	236	H Kuhlman (captain)....	213
O G Zettler.....	242	R Russe.....	242
A Ludwig.....	235	H Witte.....	239
H Molzen.....	208	C Rehm.....	231
M Wiewer.....	192	H Muuz.....	206
H Radloff.....	234	F Roedel.....	202
H Weldelken.....	239-1537	F Facklam.....	226-1559
Second shoot:			
Capt Runge.....	234	Capt Kuhlman.....	204
Zettler.....	244	Busse.....	241
Ludwig.....	233	Witte.....	230
Molzen.....	234	Rehm.....	230
Wiewer.....	201	Munz.....	227
Radloff.....	233-1353	Roedel.....	201-1345

Empire Rifle Club.

SEVEN members of the Empire Club were present on Jan. 3 to participate in the first shoot of the new year. During the past year a disturbing element (Hymen) has been permitted to fasten itself upon the membership of the society, and the result has been that the attendance at the weekly meetings has been rather light. It is now claimed by the management of the club that they have succeeded in placing a temporary quarantine upon the disturbance, and it is expected that there will be no further development during the coming year. Scores: Ben. Zahn 243, Wm. Rosenbaum 240, L. Buss 234, Jac. Grimm 233, Charles Zettler, Jr. 233, H. Zettler 231, Z. G. Maisenholder 233.

## Jerseymen at the Targets.

The weekly handicap shoot at Armbruster's Schuetzen Park on Saturday of last week brought together quite a good-sized crowd of riflemen and friends of the shoot. The attendance at these meetings is growing larger from week to week, showing that there is an increased interest in rifle matters among the Hudson county riflemen. This week, Jan. 20, the 50-shot match between Capt. Hansen, of the Excelsior Club, and Plaisted, of the Greenville Club, will be shot off on this range. President Walther, of the Zettler Club, is interested in this match and has promised to be on hand to witness the contest. In the 50-shot handicap match shot to-day there were seven entries, Messrs. Dorrier, Hansen, Plaisted, Collins, C. Boag, Chavant, and Scheeline participating. The old champion, Dorrier, was in fairly good form and put up a good score. Capt. Hansen seemed to be in good trim. Plaisted's match with Busse the day before seemed to have exhausted his nerve force; his score was away below his average. Chavant made some brilliant scores, but his total for the 50 shots was hardly up to his average. William C. Collins, with his new Ballard, showed up well, and with a little better acquaintance with his gun will be heard from later.

## Fifty-shot handicap:

Plaisted, scratch.....	19 19 10 24 19 21 12 17 14 20—175
Dorrier, scratch.....	24 18 22 21 22 23 23 23 23 23—221
Hansen, scratch.....	22 22 22 24 19 23 21 20 19 21—196
Collins.....	22 22 22 22 24 19 23 21 20 19 21—196
C Boag.....	22 22 22 22 24 19 23 21 20 19 21—196
C Scheeline.....	22 22 22 22 24 19 23 21 20 19 21—196
Chavant.....	22 22 22 22 24 19 23 21 20 19 21—196

After the close of the 50-shot race Dorrier and Plaisted indulged in a little individual race of 25-shots, in which Dorrier got the best of his competitor by a small margin.

Dorrier.....	23 24 22 22 21 22 23 22 20 20 21 24
Plaisted.....	25 21 17 20 25 18 25 23 20 20 23 23

Capt. Henry Mahlenbrock, of the Hudson Club, was present, and assisted in making matters interesting in the shooting house. The afternoon's sport was concluded with a series of 3-shot pools. Scores:

First pool:	
Dorrier.....	23 24 22—66
Plaisted.....	25 21 20—66
Hansen.....	20 21 23—66
Chavant.....	10 21 23—66
Boag.....	15 23 18—66
Second pool:	
Dorrier.....	23 23 23—69
Plaisted.....	23 23 23—69
Third pool:	
Dorrier.....	23 23 23—69
Plaisted.....	23 23 23—69

## Plaisted vs. Busse.

The 100 shot rifle match between Geo. W. Plaisted of Greenville, N. J., and R. Busse of New York City, which has been looked forward to by our local riflemen with feelings of interest for some weeks, was shot off on Friday of last week in Washington Park.

There was a large gathering of exponents of the rifle to witness the contest, and many of them had their pocket-books well lined hoping to turn an honest penny. Prominent among the many were to be seen Gus Zimmerman, Barney Walther, Chas. Zettler, John Hill, Gus Nowak, H. D. Muller, C. H. Chavant, Geo. Schlicht, Wm. Rosenbaum and others. The conditions of the match called for 100 shots each, Schützen rules, \$50 a side. Barney Walther was made referee and stake holder, and Gus Nowak official scorer. The contest was booked to open at 10:30 A. M. but it was past 1 o'clock before the referee put in an appearance. Another half hour was lost in perfecting the details connected with the match. The weather was clear and cold, and the large stove in the shooting house was kept in active work to supply the necessary warmth to keep the shooters and visitors comfortable. At 11:30, after each contestant had signified his readiness to begin the match, referee Walther called time and ordered each man to his allotted target.

Busse was the first to score, making a 21; Plaisted followed with 22. The first 10-shot string was 213 for Plaisted and 205 for Busse, giving Plaisted a lead of 8 points. The second string Busse gained 4 points. On the third string he gained 23 more, and on the fourth 9 points more, making at the end of the fourth string or fortieth shot a lead of 23 points in favor of Busse. At this point there were signs of a serious panic in the ranks of the Jerseyman. The fifth string showed a slight change. Plaisted cutting down the lead one point. The match was now half through and Busse was 27 points in the lead. With the two men equally matched a lead sufficient to forecast a victory for Busse, and yet there was no betting. In the sixth string Plaisted let out a link, putting up 236 against Busse's 214. In the seventh string Plaisted let loose a little more reserve, making 224 against Busse's 220. At this point Busse's lead of 27 points disappeared and the two contestants stood on even terms. Plaisted's eighth, ninth and tenth strings were 217, 216, 215, against Busse's 194, 206, 203, giving Plaisted the match with a margin of 46 points. Scores:

Plaisted.....	22 24 14 16 24 19 22 21 21—213
Busse.....	23 18 25 17 19 21 20 23—207
	19 21 20 20 20 17 23 24 17—201
	22 22 18 17 17 18 16 21—193
	18 25 21 22 19 19 22 24 21—215
	25 24 30 22 22 21 25 23 23—226

Gus Nowak, scorer; Bernard Walther, referee.

## Hudson Rifle Club.

On Monday evening, Jan. 8, the Hudson Rifle Club held its annual meeting for the election of officers. There was a large number of members present, and after all the business had been transacted and reports read the election took place. Several important resolutions were discussed and adopted. The club no longer has the offices of president, vice-president and secretary, as it was decided to do away with these and to have the captain act as chairman at all meetings in order that no discord may arise. A shooting master was elected to take the place of lieutenant and it is an office which the club has long been in need of. Three committees heretofore attending to all the necessary business of the club were honorably discharged and a board of directors consisting of five of the club's most reliable members were elected. This committee changes the former mode of working and has brought things to a minimum point, so that few will do more satisfactory work than many did before the change.

The election was full of life and great rivalry existed in several of the offices, but resulted in the re-election of nearly all the old officers, as follows: Captain, Henry Mahlenbrock; Shooting Master, Henry E. Boddy; Cor. and Rec. Sec'y, Charles E. Bird; Fin. Sec'y, Charles Stadman; Treasurer, John Rehan; Sergeant-at-Arms, Joseph Buch. Board of Directors—George W. Morgan, Thomas A. Reynolds, A. Braun, Sr., Samuel Middleton and Captain Mahlenbrock. Considerable business was transacted, and after the treasurer's report was submitted, which showed a good balance, it was announced by the treasurer that the club had started the year 1894 free and clear

of any debt. After the close of the meeting several team matches were shot and the boys enjoyed a jolly, pleasant and profitable evening.

The following best scores of 10 shots were made during the evening: C. Hutch 248, H. Hansent 247, H. Mahlenbrock 244, J. Rehan 244, C. E. Bird 241, A. Braun, Sr. 242, T. A. Reynolds 240, H. E. Boddy 240, C. Hadernan 238, S. Middleton 237, T. Pfaffenberger 235, J. Buch 235, G. W. Morgan 230, C. Schleimermacher 219, H. Hoersch 221.

P. S.—Captain Mahlenbrock would like to hear from all the Hudson county rifle clubs in regard to hold a tournament before the winter season.

## Port Chester.

PORT CHESTER, Jan. 8.—The Port Chester Rifle Club started a 50-shot match for the club championship several weeks ago, but every Saturday a stormy day prevented the match from coming off until Dec. 23, when they managed to shoot out 30 shots before darkness set in. It was then agreed to finish the match on the succeeding Saturday. Only one member appeared on that day and shot out his 20 shots, but as it was the only member present the scores did not count, and it was again postponed to Jan. 6, on which day the remaining 10 shots were shot off. The leading member in the first day's race was in decidedly bad form and barely missed losing his scalp. But such are the ups and downs of rifle shooting. The following are the scores:

Jan 6.....	24 23 23 23 24 18 18 22 21—214
Hess, Dec 23.....	14 20 15 21 21 17 11 20 23—183
Jan 6.....	23 20 23 25 18 22 23 15 20 16—204
Bachmann, Dec 23.....	24 20 23 16 14 15 17 15 25 21—190
Jan 6.....	23 14 17 23 21 18 20 19 19 20—193
Horn, Jan 6.....	23 23 21 19 15 16 23 21 23 20—200
McNeil, Dec 23.....	15 17 18 21 15 16 20 19 17 17—185
Jan 6.....	16 21 21 30 15 15 18 25 18 23—196
Boeger, Dec 23.....	15 17 18 21 15 16 20 19 17 17—185
Jan 6.....	15 15 9 13 11 16 21 20 24 19—163
Boeger, Dec 23.....	9 19 16 23 0 22 11 0 20 23—148
Jan 6.....	10 33 14 16 9 9 13 12 24 19—148
Smith, Dec 23.....	19 24 21 16 11 13 9 15 15 30—163
Townsend, Dec 23.....	23 21 21 20 19 23 19 21 21 25—213
Smith and Townsend were absent on Jan. 6.	

## Eastside vs. Columbia.

The Columbia Rifle Club, of Paterson, N. J., shot a team match against the Eastside Club last week for a purse of \$40 a side and the championship of Passaic county. The two clubs have come together before in team contests, and it has generated considerable rivalry among members and friends of the two organizations as to which has the best team. In the last contest, shot in October, the Columbia team won on the small margin of 10 points. In the last match, which was shot on Saturday of last week on the Bunker Hill range, each club put forward its best men. There was a large gathering of the friends of the two teams, and the interest in the contest was kept at a white heat until the last shot was fired. The Columbia team won by a good margin and are now hailed as the champions of the county. The range shot over was 100yds., German 20-ring target, 10 shots per man, possible 200. Scores:

Columbia Rifle Club.	
J. Irons (captain).....	19 18 14 19 15 17 14 17 16—163

Judges—Edward Alcott, John Ranson. Scorers—James McVeigh, Columbia; Wm. Newby, Eastside.	

## Winans Trophy Contest.

DR. SAMUEL J. FORT, of Ellicott City, Md., came forward last month with the following challenge:

"ELICOTT CITY, Md., Dec. 20.—I hereby challenge Mr. W. E. Petty, present holder of the Winans Trophy, to shoot me a match for that trophy, Feb. 6. Match to be shot under rules formulated by Forest and Stream and at a place to be selected by the representative of that paper."

The challenge was promptly accepted by Mr. Petty, and the match will take place on Tuesday evening, Feb. 6, at the gallery 12 St. Mark's place.

This will be Dr. Fort's first appearance in a contest of this kind, but he has long been interested in pistol and revolver shooting, and is a well-known writer for the sporting press on subjects connected with hunting and small arms.

Mr. Petty is shooting in good form at present, though he was recently somewhat out of trim, as a result of experiments with smokeless powders, and the match promises to be one of unusual interest. For the benefit of all out-of-town sportsmen who wish to be present, it may be stated that St. Mark's place takes its start at the junction of Eighth street with Third avenue, and is conveniently reached by the Third Avenue Elevated (Ninth street station).

## Smith &amp; Wesson Pistol Club.

## Lady Miller Club.

The members of the Lady Miller Club enjoyed a pleasant night on Tuesday last, trying to find the center of the bullseye. The ladies shoot weekly, and have become quite proficient with the gallery rifle. The scores: Mrs. Meyns 220, Mrs. Stadler 217, Miss Kloepping 219, Mrs. Fisher 210, Mrs. D. Miller 212, Mrs. Abner 213, Mrs. Borden 208, Mrs. Schroeder 200, Miss Mannheim 201, Miss Volk 204, Miss Sanders 204.

## Greenville Rifle Club.

The weekly handicap gallery shoot of the Greenville Club was well attended on Friday night, nine men members participating. The scores are appended: 10 shots, possible 250. Scores: Agnew 224, Dorrier 220, Collins 238, Graef 204, C. Boag 232, J. Boag 231, Lutz 238, Holzappel 220, Robidoux 237, Scheeline 230, Plaisted 233, Lembeck 204, Wuestner 183, Huelse 206, Daniels 222, F. Wuestner 210, Hill 229, Gassman 205, Becker 211.

## RIFLE NOTES.

The Harlem Rifle Club held its annual meeting on Jan. 5. The new board of officers are as follows: Charles Hutch, Captain; C. H. Denner, Lieutenant; E. W. Busby, Shooting Master; J. H. Boyken, Secretary and Treasurer. The club has one of the finest gallery ranges in the city. It is located corner Third avenue and 115th street, under the Harlem Hotel. With the immense population in the Harlem district to draw from this club should be one of the strongest on Manhattan Island.

Our Paterson correspondent informs us that rifle interests in Passaic county are active as follows: William Dutchers says that a match is on between Dutch and Dietrich on the one side and James Irons and Robert McCulloch on the other, 100 shots per man, on the Bunker Hill range, for a liberal purse.

While the Plaisted-Busse match was going on last Friday, Charles Zettler, being in an enthusiastic condition, challenged the champion, Zimmerman, for a 10-shot race then and there. Gus, being in an accommodating spirit, accepted the "defi," and the match started. The scores are as follows:

Zimmerman.....	27 27 23 22 23 24 24 21 21—297
Zettler.....	21 15 23 18 23 19 24 17 16—193

At a meeting of the Our Own Club, of Hoboken, on Monday last the club voted to enter a team in the Hudson County Gallery League.

The Greenville Club instructed its shooting committee to confer with the delegates of the other clubs who may desire to form a league. We have received many inquiries of late from riflemen interested in our experiments with nitro powder in the rifle. For the time being we are not in position to satisfy the longings of our inquiring brothers, for the reason that thus far our experiments have been limited to a few samples of powder that have as yet not been put upon the American market and the quantity supplied to us has been of such a limited quantity that no definite results have been gained. We are now waiting for samples that were promised many weeks since. When these come to hand we shall go ahead with our experiments and the results of our labors will appear from time to time in these columns.

The Hansen-Plaisted match comes off at Armbruster's Park this afternoon and all lovers of the sport who can spare the time should be on hand to see the sport. President B. Walther, of the Zettler Club, will be master of ceremonies.

Many of our rifle shooting patrons are inclined to the belief that "Diamond Walt" and his .22-caliber has had altogether too much tickle and waltz in the columns of Forest and Stream. Our local gallery shooters, many of whom are expert with the .22-caliber and the .22 short ammunition at the distances for which this cartridge is intended, at times find it difficult to keep 10 shots in a 2in. bullseye at a distance of 100ft. with the machine rest; and when they read the vapors of some snark whose situation is such that it is an almost impossibility to get fresh ammunition from the factory, and who sets up claims for such ammunition as can be picked up at the nearest crossroads store, that can hardly be accomplished with the larger calibers, there is a unanimous desire of those versed in the use of factory ammunition to sit upon the individual.

The three days gallery tournament of the Zettler Rifle Club will be opened on the club ranges, No. 219 Bowers, this afternoon: Any .22-caliber rifle, 35-ring target, tickets 35 cents for 3 shots, 3 tickets for \$1, tickets unlimited, but only one prize obtainable by one shooter, best ticket unlimited. Bullseye target, open to all-comers, 3 shots 50 cents, 4in. bullseye, entries unlimited. Premiums—For the most bags, \$3; second most bags, \$2. Shooting will commence each day at 1 o'clock P. M. and close at 12 o'clock P. M. Intermission from 6 to 7 P. M. Ring target will close at 11 P. M. Bullseye target at 10 P. M. Shooting Committee: Gebhard Krauss, Chairman; R. Busse, H. Holges, H. D. Muller, M. R. Engel, B. Zettler, shooting master.

Our local riflemen are patiently awaiting the final denouement in the "Diamond Walt" match. It is the only panacea for their highly congested interest in these two experts.

R. Busse of the New York City Corps, has instructed us to present his compliments to Ignatz Marten of the Williamsburg Schuetzen Corps, and inform him (Marten) that Mr. Busse would be pleased to shoot him a match of 50 or 100 shots for a moderate stake, distance 200yds.

Charles Zettler has a slight attack of match fever, and is said to be looking for some shooter in his class. Some one remarked that Charles would probably have to go outside his class to find an easy mark.

## California Rifle Shooting.

SAN FRANCISCO, Jan. 1.—"Diamond Walt" is indeed a diamond of the first water if he can do some of those fantastic things with his .22 short mentioned in your issue of Dec. 23. The purity of the air of South Dakota must be unparalleled. Ozone must have replaced the oxygen of the air in the deleterious country. I am afraid "D. W." in such atmospheres as I breathe would lose money on a wager that he could put two shots, instead of eight, out of ten, off-hand, in an 8-inch bullseye at 303yds., with his .22—and he might loop off those three odd yards.

The face-simile of your 50-shot score made with nitro black powder, shows a very fine bulging of shots. I earnestly hope for the quick advent of the day when a clean, smokeless, even-shooting powder will be furnished riflemen for target work.

The series of matches for the possession of the Siebe all-comers' medals for 1893 closed yesterday. Fifty shots on three separate occasions, or 150 in all, were fired by each competitor, on 25-ring target. Winners (final) are as follows: Military (Springfield) rifle, C. Meyer, 305 rings; Capt. H. Geo. Helm, 333; pistol, Col. W. E. Kellogg, 3,314. All-around, Ed Hovey, who made with pistol 2,320, with any rifle 3,162, and with Springfield 2,914—a very good all-round score. ROSEL.

## The Manhattan Athletic Club Shooting Range.

This range at Forty-fifth street and Madison avenue was opened Jan. 2, and since then has been well patronized by the students of Columbia College and many of the crack shots of Conlin's old gallery, corner of Thirty-first street and Broadway, and in the evening many of the ladies who belong to the bowling clubs who meet at the club house in the evenings. Some of them shoot remarkably well and promise to become crack shots. The best score made so far was by John Blydenburgh, full score at long range, 10 bullseyes. This is the first one made.

Several of the revolver shots will try their skill shortly and some good shooting may be expected. All lovers of rifle and revolver are cordially invited to pay a visit and try their skill. J. S. CONLIN.

## Heidenreich Rifle Club.

NEW YORK, Jan. 11.—On Jan. 7 we had a match shoot with the Fort Lee Rifle Club for refreshments with this result:

Fort Lee Rifle Club.	
F. Gooden.....	214
W. A. Hicks.....	220
G. Schlicht.....	238
W. Dalton.....	226
W. Steel.....	221
G. Graf.....	227
Res. Roberts.....	225
E. Wenter.....	223
L. Henders.....	223
Val Horn.....	225-2215
Wm. M. May, Sec'y.	

## New York Rifle Club.

NEW YORK, Jan. 14.—The New York Rifle Club held its regular weekly shoot at Zettler's Gallery, 12 St. Marks place, on the 13th inst. The German target, off-hand, range 100ft., and two target shots each day for medal scores. The following members were present and made the scores opposite their names:

E. R. Chadbourne.....	242 239
E. Barker.....	237 232
O. E. Gensch.....	242 238
F. C. Hamilton.....	231 227
A. H. Isbell.....	241 237
David Crocker.....	220 218
R. J. Young.....	239 238
James Duane.....	222
M. Herrington.....	237 237
V. Daly.....	237
E. R. Chadbourne, Sec'y.	

## Our Own Rifle Club.

The Our Own Club, of Hoboken, seems to be in a high state of activity. On Tuesday night of last week the club held its monthly meeting, its regular weekly shoot, also a special shoot for poultry donated by Capt. Hencken. The scores in the weekly shoot are appended as follows: F. Sessman 237, J. H. Kruse 237, H. Stuber 231, A. Maiz 232, Capt. H. Geo. Helm 233, Bliger 220, V. E. Bohmcke 221, A. Moser 219, C. Feldman 218, Schulz 212, W. Keller 212.

In the competition for Capt. Hencken's poultry the following scores were made, 3 shots, possible 75: A. Maiz 75, F. Sessman 74, Captain Hencken 74, A. Steuber 74, J. H. Kruse 74, W. F. Diller 61, C. Feldman 61.

**Selling Out.**—50 thoroughly broken beagles, rabbit and foxhounds, collies, etc. Also a number of different age puppies of the above breeds. Write or apply Goshen Stock Farm, West Chester, Pa.

**WANTED.**—French spaniel or poodle, 1 to 3 yrs. Weight 10 to 12 lbs., female, altered. Give full description. F. F. PATTEN, Stafford Springs, Conn.

**For Sale.**—Thoroughbred beagle puppies, reg. sire and dam; reasonable. Becker Bros., Scarborough, N. Y.

**DOGS BOARDED.** \$3 per month; extra exercise, \$2 per month extra. J. E. Fisher, Riverside, Ind.

**CROWDED AND MUST MAKE ROOM FOR COM** ing young stock, consequently will sell for half value some well trained pointers of excellent breeding as well as some very choice young stock. Address for prices and particulars, RICHWOODS KENNELS, 230 S. Washington st., Peoria, Ill.

**ITALIAN GREYHOUNDS AND FINE ENG** lish pugs from imported, registered and prize winning stock. In stud—Prize pug stud dog Cricket, weight 10 lbs. HENRY C. BURDICK 15 Wellesley street, Springfield, Mass.

**WANTED.—AN AI BEAGLE BITCH, MUST BE** young, well bred and a first-class show and field dog. Want only the best. Give full description and bottom price.  
BEAGLE, Box 93, Baltimore, Md.

**\$10 EACH.—LEMON AND WHITE POINTER** dog or bitch; also two red Irish setter dogs 12 to 18 months of age, partly broken and not gun shy. Sold for want of room.  
J. HOPE, 305 N. Ninth st., Philadelphia, Pa.

**ENGLISH BEAGLES CHEAP.—5 TO 12 MOS. OLD,** because they lack in benching points. No other faults. The most noted strains in this country. Guaranteed bargains for field or breeding.  
STANDARD KENNEL, Georgetown, N. Y.

**FOXHOUNDS, RABBIT HOUNDS, COON** HOUNDS FOR SALE, FULLY TRAINED.  
F. H. HAYES, Dexter, Me.

**SEND FOR CATALOGUE OF NOTED PRIZE-** winning dogs for sale by Anglo-American Kennels. TOON & THOMAS, Northcroft, Salem, Mass.

**Fine pedigreed Llewellyn setter pups, whelped Nov** 6; bitches \$5, dogs \$10. J. FOX, La Fayette, Ind.

**National Beagle Kennel, Waltham, Mass.** Stud fees \$5. Winners. Stamp for description. Photo 10c. 4

**Well-trained foxhounds, few rabbit dogs; guaran-** teed No. 1. Price low. J. H. Miller, Christiansburg, Pa.

**Russian Wolfhounds.—Choice litter; now ready to** ship. Terra Cotta Kennels, Toronto, Canada.

**FERRETS AND BEAGLES FOR SALE. FRED** MCGOUGH, Richardson, Ill.

**Trained squirrel and rabbit dog, excellent hunter,** price low; must sell. For price and full particulars, address J. C. Carter, box 365, Manchester, Ct.

**Dogs for Sale.**—Coon and squirrel dogs, English beagles; a good skunk dog. Philip Bauer, Tivoli, N. Y.

**For Sale or Exchange.**—Broken setter and pointer and setter pup. Bargains. J. M. Kelly, Montrose, Pa.

**DOGS BOARDED.**—For terms, etc., address J. F. KELLY, Wayside Farm, Carolina, R. I.

**Some fine Irish setter pups, dogs and bitches.** REDSTONE KENNELS, Huntington, N. Y.

**FOR SALE.—SPORTING DOGS.** GEO. W. LOVELL, Middleboro, Mass.

**Irish Terriers.—Of choice breeding. Puppies for** sale by HUGENOT KENNELS, New Rochelle, N. Y.

**Setters! Trained! Untrained!** J. Wrinkle, Lee, Mass.

### Pocket Kennel Record.

For Recording Pedigrees, Produce, Sales and other memoranda.

New edition. New forms. Full leather, 50 cents.

FOREST AND STREAM PUBLISHING CO.,

318 Broadway, New York.

### The Kennel.

ALL THE STUD DOGS AND BROOD BITCHES OF THE

NEW YORK ST. BERNARD KENNELS

ARE FOR SALE.

APPLY AT THE KENNELS,

Kingsbridge, New York.

### CANINE SPECIALIST.

**DR. T. G. SHERWOOD,**  
(M. R. C. V. S.)

854 Seventh Ave., New York.

Consultation and treatment by mail when possible. All communications requiring professional reply should have enclosed \$2.

**BUCHAN'S**  
CARBOLIC SOAP No. 11 is the best DOG SOAP in the world. Sure death to Fleas and a cure for all skin diseases.

**Buchan's Dog Wash** will cure every case of MANGE, kills Fleas and keeps the dog in a healthy condition, makes the hair soft and silky and does not stain. It is also the best disinfectant for the kennel. Ask your druggists for it.

**CARBOLIC SOAP CO.,**

Manufacturers and Proprietors, 230 Pearl st., New York

### AVENT & THAYER KENNEL.

**NEW YEAR CHEAP SALE.**—Will sell at reduced prices a large number of field trial winners, first-class stud dogs, shooting dogs and bitches. Unbroken dogs, bitches and puppies. All bred as well as can be. Times are hard and they are prices below cost for such stock. Also a good pack of deerhounds. Apply for circular with full description. AVENT & THAYER KENNEL, Hickory Valley, Tenn.

### FOX-TERRIERS FOR SALE.

Three or four brood bitches and some young stock by Dusky Trap. Also some prize-winning Cocker Spaniels and young stock. Apply to  
GEO. BELL, Walker House, Toronto, Canada.

### COCKER SPANIELS.

Grand assortment of fancy marked young stock, liver and white, lemon and white, black and white, red, etc. Half grown and full grown stock. New circular. HANDSOME BROOK KENNELS, Franklin, N. Y.

### Rinada Pointer Kennels.

Address P. O. Box 2865, New York City.

**FINE BROKEN DOGS,** brood bitches and puppies for sale at all times. If you want well bred, high class dogs we will be pleased to hear from you. If you want cheap "sooners" write elsewhere.

Kennels at Massapequa, Long Island, N. Y.

### DOGS FOR SALE.

Newfoundlands, St. Bernards, Setters, Pointers, Spaniels, Pugs, Terriers of all kinds, Beagles and Fox-hounds. Dogs and Pups at low prices. Satisfaction and safe arrival guaranteed.  
**JACOB HOPE,**  
305 N. Ninth St., Philada., Pa.

### PUPPY PHILOSOPHERS.

"Listening to the Argument" & "Thinking It Over."

This pair of fine Artotypes, size 8x18 in., mounted on 22x28 extra heavy plate paper will be sent postage paid on receipt of \$2. Send for illustrated circular.  
W. T. HIGBEE, Cleveland, Ohio.

### ST. BERNARDS.

Brood bitches. Also few choice pups.  
G. W. PATTERSON,  
Lake View, Worcester, Mass.

# FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, JANUARY 27, 1894.

VOL. XLII.—No. 4.  
No. 318 BROADWAY, NEW YORK.

For Prospectus and Advertising Rates see Page v.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## SPECIMEN COPIES.

Any reader of the "Forest and Stream" may on request and without expense have a specimen number of the paper sent to a shooting or fishing friend.

## SNAP SHOTS.

A RECENT book of stories by Edward Eggleston is entitled "Duffels;" and the author has a bit of pleasant word gossip about a sportsman's term which "Nessmuk" made familiar. When the Indian trader, or "bushloper," exchanged his goods for peltrie, says Mr. Eggleston, his staple was a certain coarse cloth, brought from Duffel in Holland. After a time the term came to be applied to the trader's stock, of which duffel was the chief part; then to all kinds of small wares, and by a natural transition to the contents of a traveler's or camper's outfit—the pan and kettle and gun and woods whatnot.

Another term which has an interesting development is "sport." This is the commonly accepted appellation for the user of rod or gun in the back districts to which he repairs for shooting or fishing. As such persons usually hail from the town, and are at first practically the only townspeople who invade the wilderness, the word "sport" comes to be synonymous with city man. Afterward when summer hotels are built, and others than sportsmen find their way into the wilderness, they too are classed all alike as "sports." In the Adirondacks the summer visitor from town is dubbed "sport," though he may not know a gun from a fishing rod nor woodchuck ragout from mountain mutton stew. It is needless to say that the clear distinctions, which some of us are endeavoring to popularize, between "sport" and "sportsman" are totally unknown in the woods. The single name does for all; it is broad enough to embrace the respectable member of society who has traveled to Florida this week for a shooting or fishing excursion, and the gentry whose presence and performances there have disgraced the State. We can well understand how a decent "sportsman" southbound might have shuddered at being taken for a "sport."

This is the season when those who are so fortunate as to have opportunity for winter outings are looking toward Florida and the South, and for their benefit we would like to hear from correspondents who may point the way to good fishing and shooting resorts. Information of this nature printed in our columns is of direct profit to many readers. Mr. Hough, of our Chicago office, is just now on a visit to Texas and we may expect that in the near future his "Chicago and the West" budget will enlarge upon some of the favored game regions in the Lone Star State.

Our correspondents "O. O. S." and "Awahsoöse" are engaged in a lively discussion between themselves as to the proper mode of dispatching the man in camp who makes an unendurable nuisance of himself by talking politics. They are agreed that to give him short shrift is the only course open to his outraged fellows; but they appear unable to determine which is the more sportsman-like method of disposing of him, one holding that he should be cast over a high cliff, if there happens to be a cliff available, while the other contends for anchoring him in seventeen fathoms of water, if there be a pond or an ocean handy.

Two topics which are to be avoided not less studiously in these columns than in camp are politics and religion. If, as has been said, a consideration of Sunday fishing laws trenches perilously near upon religion, a tariff discussion comes quite as closely to talking politics. And yet never is the tariff under consideration in Washington but that sportsmen are on hand to make it serve in some way their notions of securing protection for game, and

an examination of such tariff provisions proposed by them may involve none of the vexed questions of home and foreign manufacture, but may have to do only with the preservation of the game supply. Such, for instance, was the proposition of Commissioner Huntington of Ohio to tax the eggs of wildfowl imported from the Northwest, that breeding ducks and geese might not be robbed for the supply of the albumen market. Another is the gun duty scheme projected by a Michigan correspondent, which is detailed in another column as having been suggested to Chairman Wilson of the Ways and Means Committee.

The proposal is in short to increase the duty on firearms and ammunition for the purpose of making these articles more expensive, so that only rich people may afford to purchase them, and that guns, becoming a luxury, may be confined to the use of a few; all this to the end that game may not be pursued by the owners of cheap firearms, but may thrive and multiply and replenish the earth, for the amusement of the rich, as aforesaid.

There is no denying that cheap guns are responsible for the dearth of game in many localities; nor that if these arms were taken away from their possessors the covers might teem once more. To cut off the supply of cheap guns would, in theory, at least, be a factor in conserving the game. If the imposition of an impost on imported arms should prove inadequate for the attainment of such an end, the advocates of a high tariff for game protection only might proceed a step further and lay a good round internal revenue tax on guns manufactured in this country. Once let a Ways and Means Committee be fully committed to a policy of game protection by taxation, and it need not halt at a duty on the gun alone, but might tax the entire outfit, shooting togs, dog and dog whistle, not exempting the tall talk the shooter indulges in when he comes home.

This is theory. As a matter of fact we question whether any such expedient as making the sport of shooting more costly will effect game protection. More than this, we question whether game protection secured at such a price would be a desirable thing to have. We have no sympathy for nor confidence in any scheme which means in effect, "The game for the rich—the poor be hanged." We object to any plan which would determine a man's right to enjoy shooting by the relative bigness of his purse. We do not concede for the moment that in this country the privilege of field sports is to be accorded to the rich and to be denied to the man of moderate means, or of limited means, or of no means at all.

More than this, we believe that such propositions as the one under consideration, by which field sports are set apart as the indulgences of the caprices of a privileged class, are calculated to do more harm to the cause of game protection than ever they can do good. There is enough feeling on the subject already in many sections—a sentiment very generally held by those who live in the country particularly, that shooting and fishing are the sports of a class, that the aim of protection and fish protection is not to secure the benefit of the people as a whole, but of a favored few. This feeling, we may say, and very truly, is mistaken and all wrong, and has no basis in fact. But it exists, nevertheless. It is a very real sentiment, held to none the less tenaciously for being a fallacy; and it constitutes a powerful obstacle to the right protection of game and fish, as every individual or club or association actively engaged in the fight for protection can testify. The true path toward game protection lies not in the direction of intensifying this prejudice-blinded sentiment; but of allaying it. The enlistment of the masses in the cause of conserving the game and fish supply is to be secured by teaching the masses, and truly, that the cause is for the benefit of all, not of a few.

What the future has in store for the shooters and the anglers who are to come after us, we may not foresee. Some prophesy that America is by and by to be without game save in the preserves of the wealthy. It may be. Others are hopeful that with a growing appreciation of the value of field sports, with a wider diffusion of information and of common sense on the subject, and with a corresponding regard for the common rights of all in the

game supply, there may be opportunity for all, without regard to money distinctions.

The preserve system is the one most easily attained. It will come of itself readily enough if we continue to follow a policy of *laissez faire*—"let things slide." To inculcate and cherish a spirit of provident regard for the sportsmen of the following generations, and to create a public sentiment which shall insure to them the privileges with which we of to-day are blessed—this is an alternative vastly more difficult of attainment, but it is the one which should be adopted by every public-spirited and patriotic American sportsman who is enjoying the opportunities of the present.

Mongolian pheasants promise to be in demand for years to come as game birds for stocking public and private shooting grounds. For that reason the breeding of a supply to meet the demand might prove a profitable enterprise for some one having the facilities. Some of the young men who write to us now and then asking for profitable trapping territory, might better turn their attention to raising pheasants for gun clubs. The birds are prolific and easily reared.

Along about New Year's, when January is fairly under way, here and there, in every city and village and hamlet, may be found enthusiasts who begin to reckon up the time that must elapse before the trout season will open. They can tell you off-hand the precise number of days, to that auspicious date. About this time, if not earlier, they spend hours over their fly-tying tables, putting together their contrivances for the taking of fish on that first day. And about this time, too, they begin to write to their fellows reminding them of the important date and exhorting them to let nothing stand in the way of the proposed reunion on the stream. Thus angling is a pursuit which extends its pleasures of retrospection and of anticipation through all the months. And yet there are unknowing folk who would measure the profitableness of a day on the stream by the weight of the catch. But such reasoners are not anglers, even though they may have gone fishing.

A genius who knows nothing about alligators avers in an evening paper that an alligator on land cannot turn about quickly because its legs are so short. On this principle a snake cannot turn around at all, for it has no legs, long or short.

We are frequently given to understand that this is a family journal, by such a note as this from a Scranton, Pa., correspondent:

By the way, we use articles from FOREST AND STREAM to read in the Out Door Department of our Chautauqua Circle and the ladies enjoy them exceedingly.—J. H. F.

And it has been told to us before now that the FOREST AND STREAM is regularly read aloud in many a home. To betray the trust thus reposed in us by confiding friends, and to admit into these pages anything to which exception might be taken would be a most grievous offense. Prompted by such considerations we deem it only fair and honorable to throw out a warning against the promiscuous family reading of the lay sermon in this issue from the pen of Rev. J. H. La Roche. The doctrines there expounded are calculated to make trouble for more than one fisherman who has been used to bidding his family good-bye upon leaving home for camp; for if Mr. La Roche shall have his way the family will refuse to have any good-byes said.

Is the assertion true that the average man shoots better on paper than he does in the field, does more execution with a pen than with a gun, holds with aim decidedly more true when telling of it than in the doing, and brings down his game at longer range in print than in the air? Human nature has something to do with this no doubt; and even the true sportsman is intensely human, so human that he forgets the misses and recalls only the happy shots. Mr. W. B. Mershon of the Saginaw Crowd, whose doings in the Bad Lands were recently chronicled, prides himself, we believe, upon having so far overcome human nature as to give in his relation a true account of the good shots and the misses of that expedition. This, he thinks, may have left in the minds of readers an impression that the crowd was a party of pretty poor shots; but if the truth were known they might prove to have done about as well as the average.

## The Sportsman Tourist.

### PADDLING DOWN THE PATUCA.—III.

A Story of Travel in Honduras.

(Concluded from Page 47.)

A POCK-MARKED, stumpy Sambo dipped his brand new mahogany paddle into the river beside a brand new mahogany canoe at sunrise. With dignity befitting the office of captain of a white patron's canoe he cried in severe tones:

"Lux! Lux!"

Three men forward obeyed the order to push the boat off. The usual farewells were chanted by crew and by friends on the bank at the embarkadero. The village was in sight until we were a mile or more from the landing. The voices of the women floated to us across the placid waters in cadence that grew more melodious as the distance increased. They ceased when we entered a rapid where the weight of the current swept into a sharp bend. Great masses of talpatali, in which the waters had gnawed countless holes, choked much of the width of the river; but there was neither danger nor difficulty in dashing through to the smooth water below.

We entered a long, still reach at noon. Midway down its length stood a dozen watas on a high clay bank that made a narrow terrace at the foot of a low range of hills. We were welcomed by all the habitants of the place, for all were sober. Ualpa-tanti was dull, in fact. The rubber gatherers—the huleros—were in the forests of the Amacwass, or River of Honey Bees, of the Cuyumel, and of the Uas-presini, or Swiftwater, getting together a new supply of precious gum with which to buy yet more precious powder, shot and rum—particularly rum.

It would be unjust, I knew, to judge that camp by its dead appearance. I knew that two or three times each year it was full of life and liquor, of debased men and of women who tried their worst to be more degraded than their fit companions—and failed. But life and property were comparatively safe, for even when one man robbed another of his woman bloodshed rarely followed. Once in a while a man might cut another rather badly with a machete; but they would excuse him because he was quite too drunk to know what he was doing. And they would tie the pieces together and in a few weeks they would be ready to go on again getting rubber or getting drunk.

There was nothing to stay there for. Before me lay an hundred miles of river, wide and deep, wherein were no rapids, no dangers, no excitements. Not a mountain would vary the monotony of the low and level banks. They would be dull but for the profuse bloom, the brilliant orchids, the fuscias, the soldierly palm royals and the bamboos that leaned far out over the milky flood that was the contribution of hundreds of streams, dashing down from the hills of Olancho over placers where golden stores await the batea of the women who wash out a few yellow grains during the week, then piously devote some to the blessed saints, a few more to bet on the next Sunday's cock fight, and thus to dutifully add to the happiness of their spouses. The rest would pay for a bit of bright ribbon.

My Waikna crew were not silent men, nor solemn. Shouts and laughter came often from them. They slapped the water resoundingly with their paddle blades, and yelled enough to scare the scalp from a statue of stone. Now and then one would take a header into the river, and then pretend that he had seen a turtle. Once in a while one did bring up a boca-toro or "bull-mouth" turtle, whereat there would be great rejoicing.

So there was when their keen black eyes would get sight of an iguana barking on the tops of the tall grasses or on some branch of bush or tree.

"Kokomoke, kokomoke, boss!" they would whisper, eagerly. If I could manage to make out the form of the big lizard—that was in color so like the limb or the grass on which it lay, my gun would rise, the men would be as still as the wood they sat in, intently watching. At the crack of the rifle every man would yell like a lunatic. If the game was killed it would be pitched into the pipanti and loud would be the chatter.

As we managed to kill three or four iguanas each day, and as they were usually 2 to 4 ft. long, with enough white and tender flesh in each to make a good meal for four men, we seemed to be in little danger of starvation.

We camped on the edge of a prairie at Uaxmuth, a name that means the "cry of the hawk," and may be a corruption of "hawk's mouth."

One could have jumped from the edge of that prairie into the deep river, 30 ft. below; but it did not occur to me to try it. It was more in my line to sit in my canoe and note how the red volcanic mud and gray ashes had become sifted all through the deep bed of keen-edged, sharp-cornered fragments of milk-white quartz. No man can guess how deep that bed of quartz fragments may be; but any man who knows sugar cane would guess that that red soil would make the best of sugar fields; one need not guess that that land would grow good oranges, for there was ample proof of that on the three or four trees which were grouped where houses stood, before evil spirits took possession and drove the people away.

Superstition is most useful to some people. If fatal sickness often visits a house or a village, it is much simpler to believe that the devil is in it and to abandon the place to evil influences than to go tediously prying into the occult secrets of nature for the cause of the sickness. It is easier to say, "Mafia has taken the house; let us leave it," or "It is the will of God; let us be resigned," than it is to find the sources of disease and remove them. So, through their superstition and experience, the natives of Mosquitia have in the course of generations come to dwelling in salubrious places, that are also free from annoyances, and convenient.

One of the crew started a fire and began getting supper. The others unloaded the canoe and fixed my bed on the ground. I took a look at a tiny brook that flowed among the palmetos not far away. A deer rose from the grass. He coolly stared at me ten seconds, more or less. I didn't hurt him, although I have seldom allowed deer to long stand and make big eyes at me. Vexed as I was I could not have brought myself to shooting the fellow. I hadn't even brought my gun. I had my voice with me, though, and let it go into a yell that would have charmed an Indian. Then the buck went away.

It is very pleasant to have a rifle in camp, sometimes.

There was a big drunk, a mishla, going on in the Waikna village of Cropunto when we landed there. One of the boozy men at the landing gave us first news and invitation to join the festivities. My men looked so wishful, and really needed a big spree so badly that I had not heart hard enough to refuse them. Besides, they would surely have stolen away if I had not, with most generous air, made virtue of the necessity and told them to go. After that they would have felt that a grievous slight had been put on village and on tribe, if I had refused their hospitality.

The way to the village led through a belt of straight young willows to the pine-fringed prairie. A mile from the river stood a grove of mangos, cocoa palms, orange and lemon trees. The houses stood on the northern side of the grove; but, although hidden from our sight, it would have been quite easy for us to find them without guide other than the din that came to us from thundering drum and squeaking pipes of bamboo.

On the great pines beside the trail big spots had been shaved free from bark. On these places curious images bearing crude resemblance to men, had been cut through what was left of the bark. From the lines dripped translucent, glistening tears of pitch. The figures may have been cut to express the Waikna sense of the beautiful in art, but my captain gravely admitted that their purpose was to keep the devil away from the village. I judged that they were frightful enough to drive out of the country even a devil of decently artistic tastes.

A big canoe rested on two logs before the biggest wata in the village. It was two-thirds full of liquid on which floated a score of little cups made of the shell of the calabash. A swarm of little stingless bees hovered about the canoe, or crept down its sides to the edge of the mishla within and drank their fill, or gathered whatever they could of sweet with which to fill their cells.

Beside the canoe a Waikna swayed on groggy legs, while he held out to a friend a calabashful of the tipple. Near them a couple of Sambos embraced with mandrin friendliness. A mother stood beside the drink and held a cup of mishla to the lips of the naked babe sitting astride the woman's hip. Two or three nude youngsters dabbled with cups in the fermenting drink, supping now and then. Men sat talking or dozing in the huts, or under the shelter of the eaves. Other men lay asleep in the shade of the lime trees and the shrubbery. There they would lie until their stupor would so far leave so as to allow them to resume their enjoyment.

Few of the women were as drunk as the men were. Some of the women were quite sober. They took upon themselves to see that none should find machete, or knife or other weapon, and that no half drunken reveler should fire a thatch, and so perhaps turn the whole village out of house and home. They attended to whatever cooking was done during the carnival; but only a little food would be wanted while the mishla should hold out, to fill big stomachs and little.

Quarrels arose, now and then. Two men squabbled before the door in which I stood enjoying the scene. One of them persisted in refusing to pay the value of the wife he had coaxed into leaving the other. This was very unfair, the more so since her first husband offered to take half price for the damaged goods. Possibly he thought the girl would be dearer to him than she had been to her first purchaser at par.

Patience ceased to be a virtue of the wronged spouse. He rushed away to a palmeto thicket and caught up from a bunch of reeds the rusty-headed manatee harpoon he had hidden there. He ran back toward the plunderer of his domestic altar and brandished the spear threateningly.

Then there was a row; women screamed, men shouted. The cause of the fracas looked on. Perhaps she was vain of being the cause of such commotion. No one tried to stop the fierce slayer. It may be that his harpoon looked altogether too dangerous, in the hands of a husband driven to desperation by a deep wrong that nothing less than two red blankets, or a good cow at the very least, could right.

When that weapon came within throwing distance the offender decided to go away. He flew down a grassy slope, the pursuer yelling close behind. The fugitive stopped behind a big pine tree, and picked up a piece broken from a rotten limb by its fall from above. The avenger halted, then turned and ran toward the houses. He was followed by the other and the rotten club. Before the door they began squabbling again. At last the wronged husband declared that he would surely shoot a cow—anybody's cow—if he was not at once paid for his stolen wife. That brought the other to terms. He knew that if that should be done he would have to either pay the value of the cow to her owner, or leave the country. And there was the chance, in fact it might be said to be likely that the fellow would kill one of the best cows he could find; for he was manifestly desperately angry.

They turned to me to umpire their game. It might sound better to say that they elected me judge. The husband demanded that the wife come forward, then told how good a housewife she had been.

"She make big plantation, big," he cried. "She paddle the pipanti better than two men! She cook the fish and the deer better than any woman!" The mireen grinned.

"Oh, no!" shouted the other, "she lazy. I go hungry all the time. She not worth one, one old blanket; but I give one for her."

The girl's smiles vanished.

"She worth ten pine blanket, ten. She is strong like a horse. See how fat she is," he exclaimed, appealing to the judge. "She is fat, big fat, and smooth. Look at her, how young and active. No man will be hungry in her wata, for she can catch the boca-toro and the iguana and the fish. He must pay two blankets—and a cow."

The girl was won completely by such eloquent public proclamation of her virtue—no, not virtue, but her charms. She smiled on her former husband. I thought I saw a way to a Solomon-like decision; but there was no need for haste. Let them dispute a little more. I had plenty of time.

The Waikna, who feared that he would have to pay for his offense against the moral laws of Mosquitia, again labored to reduce the penalty by belittling the value of the property in the estimation of the court. He succeeded so well in counting up her faults that he brought a gust of laughter from the women who were looking on. He also brought a hurricane of vituperation from the cause of contention. She declared that she never would go back to him, and that he was not half the man that her true

husband was. Whereat that gentleman looked hugely flattered.

"Go away now. Come at nightfall and I will give my decision," said I, mindful of the example of those wise judges who manage in like manner to get time to reflect, and perhaps to get counsel of their wives as well.

While the captain of my crew was boiling eggs and roasting plantains for my supper he told me what the women of the place were saying of the case. I sent for the culprit and advised him to give up the girl. I reminded him of the shameful abuse she had heaped upon him, then told him that I would try to get him out of his trouble without the loss of more than one blanket. But he must not tell any one that I had promised to do this. He agreed.

There was no difficulty with the married couple. Each was quite ready to return to the other, who had so boldly published the high qualities both felt that they possessed. The bright red blanket was promised. The wife returned to her happy husband, everybody went back to the mishla and by bedtime they were all most completely, satisfactorily drunk.

'Twas nine o'clock the next morning, before we could get away. The paddlers begged for another day, for such a soul-satisfying mishla as this at Cropunto would not be seen again in years; and life is uncertain at best. But my captain reminded them that the patron had freely given his consent to their staying the day before, when they might have been required to keep on down the river, and so been deprived of all share in the carousal. Besides, if they hurried back they would be in time to get another chance at the festivities and drink.

A couple of the men managed to swill a quart or two apiece of the mishla, before we started. Their fellows in the bow were nearly sober, but their wild paddling gave the steersman trouble. An hour after we started we crashed into the top of a fallen tree at Poon-cara-crichma. The eddy under the point was tremendously strong and deep; but it was only a little way to the sandbar below. I felt quite interested in the question whether or not the crew were so drunk that they would not get out of that whirlpool alive.

There was no need for worrying. The two who were most drunk did sink. The others instantly swam in pursuit of the canoe and our belongings. I held to a branch a minute, looking for the float that was fastened at the end of a long piece of fishline. My rifle was at the other end. When it bobbed to the surface I noted the spot, and considered how I should reach it through the boiling current. It was a stiff pull, but I managed to catch the cord and swim toward the bank. Then one of the two drunken Sambos swam toward me, to give me help in case of need. He may have been sobered by his ducking; his instinct of swimming, born of long lines of ancestry who were dwellers by the sea, and cultivated by daily use from infancy, may have been too strong for mere rum to wash out or to stupefy. However that may have been, he swam high and easily through the eddies, and stayed by me to see that no harm should befall the patron.

The rifle caught in something on the bottom of the river. Down that Sambo promptly went head first along the line, while I stood neck deep and held its end. A minute later he came to the surface and started for the bank with the gun and a mighty puffing.

By that time all the rest of the crew were spreading the baggage in the sunshine on the dry gravel. To have left them wet all day would have been to spoil the goods.

That afternoon we paddled down the western outlet of the Patuca. The channel tortuously led through deep alluvium of unsurpassed fertility. On the banks the Santa Maria stood in groves, and tall ceibas stood, their smooth, swelling boles showing gray amid the brown and green, giant columns that support enormous masses of bloom. Bamboos shot out far over the water; from sunny spots where dense masses of grass, eight or ten feet high, walled the river. Curtains of vines hung from the branches full forty feet above the water; they would be thickly studded in the cool morning with morning glories, purple and pink and white. Floating on the water were clusters of minute and dainty blossoms, resting among delicate little leaves from which pretty pink and white rootlets hung down into the clear water. In broad coves acres of white lilies, pure and fragrant, their perfect petals scarce touched by marring insect, perfumed the gentle breeze.

The banks became low. Vast fields of grass replaced the forest. Cranes and egrets, the ibis and the flamingo stood among the reeds or flapped over the waters. Ducks flew up as each after each, bend after bend opened before us. Great flocks of muscovies quacked in ponds where wild asparagus grew. Ripples widened from moving spots where little knobs showed that alligators' eyes were watching.

We paddled silently along miles of water as straight as any canal, and as uniform in width. Its even banks were like artificial levees. What race dug this channel? Was it done when the great temples of Copan, of Palenque and Uxmal were new, and Central America was rich in people, in commerce and in art; when all the inland waters of this region were connected by navigable channels, and their craft could go without hindrance from Payas Peak to Chiriqui Lagoon in the far south, as they could have done, indeed, scarcely more than half a century ago.

The stars looked down upon us as we picked our way through wide and shallow channels, out into the waters of Cartago Lagoon, rippling under the refreshing trade wind as softly and peacefully as though they had not been through many decades the home of the bloodiest pirates that ever ravaged town on the Spanish main.

It was an hour after we entered the lake before we jumped overboard from our sinking canoe, that was filled by seas that curled and broke breast high on us, as we stood knee deep. We were only a few rods from the bluff edge of the prairie where a white man's comfortable hut stood beneath the rustling leaves of the cocoa palms.

HONDURAS.

### The Minnesota Moose Law Works.

DULUTH, Minn.—A deputy sheriff from the northern part of Minnesota recently brought to the city two half-breeds on the charge of violating the State game laws, by the killing of moose which are protected by our game laws until 1898.

They were given a trial, convicted and sentenced to sixty days each in the county jail. This is the first conviction for the violation of the game laws this season.

Y.

## IN THE INDIAN RIVER COUNTRY.

ATLANTIC, Brevard County, Fla., Jan. 9.—Once more at home on Indian River (for what is known as the Banana is only a part of the same water running around Merritts Island), amid summer sights and summer sounds in this beginning of the new year, only the shortness of the day reminds one of the time of the year.

Looking seaward I see a vessel sailing not far from shore to keep out of the Gulf Stream; looking riverward I see the white sails of a yacht and hear the reports of the guns as the occupants shoot at the ducks on the Banana. I say shoot at, for the majority of those who sail up and down the river duck shooting, seem to consider 200yds. about the proper distance, and as it affords amusement to the hunter and seldom harms the ducks, both parties ought to be satisfied. But when once in a while some one comes who really wants to get some ducks, he finds that they have learned what they consider the safe and proper limit for the sportsman's approach, and do not propose to allow him to get within a distance that might prove harmful. These were the views expressed to me in somewhat different terms by an Englishman, who was a veteran sportsman, but who found it impossible to approach the ducks within any decent range before they would take flight. Little difference does it make to those who, sailing along these placid waters, have only to experience the bliss of being, of mere existence in such an air. I would like to ask some one wiser than myself in bird lore of the habits of some of my feathered neighbors.

There are a lot of jays who are very intimate about the house, coming so far as to perch on the corner of the verandah and make remarks about the conduct of domestic affairs. They seem to fully appreciate the privilege of a large pan of water kept filled for their especial benefit and that of the mockingbirds close to the verandah.

What I want to ask the wise man is this: Why do these jays bring acorns from the dwarf oaks that grow so plentiful here, and deposit them in the center of the pineapple plants? Now the leaf of the pine is armed with a thorny barb, and it is very difficult for us to remove the acorns; it must be for the bird as well. This same saucy jay is the bird which, you may remember, according to the tradition of the colored people, goes to school every Friday and returns on Sunday. Indeed the one who first gave me this information told me that if I would consider, I would remember that I never saw any jays between Friday and Sunday. However it may be with jays in general, our blue-coated neighbors have evidently postponed their visit to the under-world, or perhaps have lost their weekly reckoning; for although it is Friday to-day, they are rather more numerous and loquacious than usual.

Snipe are now quite plentiful in the savannahs—that is, some days they are plentiful and some days there are none. But that is the habit of snipe in this part of the country.

My neighbor, the Artist, does not allow any shooting on his premises, and is rewarded by an occasional view of a deer quietly feeding. It looks as if prohibition in this direction would become the order of the day in the neighborhood; and in that case we shall keep up our acquaintance with wildcats, coons, bear, deer, etc.

Our old friend Jim Ponce, the famous hunter of St. Augustine, has gone to Lake Worth for the season, and is expected to supply the tourists who will make their pilgrimage there with game. He will be an acquisition to the society of the lake, with his inimitable stammer and droll ways, to say nothing of his skill as a hunter. Those who accompany him on his hunting expeditions must learn to view without alarm Ponce riding through the scrub at break-neck speed, with his doublebarreled gun loaded with buckshot lying at full cock across the saddle in front of him, untouched and apparently liable at any moment to fall and explode, scattering its contents in a most promiscuous manner. In fact, however, it never does fall nor go off accidentally; but as a deer bounds up from before the dogs not far away, Jim will halt his horse and raise his gun to his shoulder as if with one motion, and it is very rarely the deer does not fall. Jim will make many new friends this winter and tell some new stories in a way no other man can tell them. W.

## THE SINGING MOUSE STORIES.

Lake Belle-Marie.

LAKE BELLE-MARIE lies far away. Beyond the forest the mountains are white. Beyond the mountains the sky rises blue, high up into the infinite Unknown.

I do not know where the Singing Mouse lives. No man can tell what journeys it may make such times as it is absent from the room that holds the pine table, and the book, and the candle, and the open fire. But last night, when the faint, shrill sweetness of its little voice grew apart from the lonely silence of the room, and I turned and saw the Singing Mouse sitting on the corner of the book, the light of the candle shining in pink through its tiny paws, almost the first word it said was of the far-off Lake of Belle-Marie.

"Do you see it?" asked the Singing Mouse.

"You mean—"

"The moon there through the window? Do you see the moon, and the stars? Do you know where they are shining to-night? Do you see them, there, deep in the water? Do you know where that is? Do you know the water? I know. It is Lake Belle-Marie."

And all I could do was to sit speechless. For the fire was gone, and the wall was open, and the room was not a room. The voice of the Singing Mouse, shrill and sweet, droned on a thousand miles away in smallness, but every word a crystal of regret and joy.

"A thousand feet deep, or more, or bottomless, lies Lake Belle-Marie, for no man has ever fathomed it. But no matter how deep, the moon lies to-night at the bottom, and you can see it shining there, deep down in the blue. The stars are smaller, so they stay up and sparkle on the surface. The forest is very black to-night, is it not, and the shadows of the pines on the point looks like a mass of actual substance. Wait. Did you see that silvery creature leap from the quiet water? You may know the shadow is but shadow, for you can see the chasing ripples pass through it and break it up into a crinkled fabric of the night."

"Do you see the pines waving, away up there in their tops, and do you hear them talking? They are always talking. To-night they are saying, 'Hush, Belle-Marie; slumber, Belle-Marie; we will watch, we will watch,

hush, hush, hush!' Didn't you ever know what the pines said? They wish no one ever to come near Lake Belle-Marie. Well for you that you only sat and looked at the face of Belle-Marie, and cast no line nor fired an untimely shot around her shores! The pines would have been angry and would have crushed you. You do not know how they live, seeking only to keep Belle-Marie from the world, standing close and sturdy together and threatening any who approach. It would break their hearts to have her hiding place found out. You do not know how they love her. The pines are old, old, old, many of them, but they told me that no footprint of man was ever seen upon those shores, that no boat ever rested on that little sea, neither did ever a treacherous line wrinkle even the smallest portion of its smoothest coves. Believe me, to have Belle-Marie known would break the hearts of the pines. They told me they lived all the time, only that they might every night sing Belle-Marie to sleep, and every morning look upon her face, innocent, pure, unknown and unknowing, therefore good, sincere and utterly trustworthy. That is why the pines live. That is what they are talking about. In many places I know the hearts of the pines are broken and they grieve continually. That is because there are too many people. In this valley the pines do not grieve. They only talk among themselves. In the morning they will wave their hands quite gaily and will say, 'Waken, waken, Belle-Marie! Sweet is the day, sweet is the day; God hath given, given, given!' That is what the pines say in the morning.

"The white mountains yonder are very old. How strong and quiet they are, and how sure of themselves! To be quiet and strong, one needs to be old, for small things do not matter then. Do you know what the mountains think, as they stand there shoulder to shoulder—for they live only to shield and protect the forest, here in the valley. They told me they were thinking of the smallness and the quickness of the days. 'Age unto age!' is what the mountains whisper. 'Æon unto æon! Strong, strong, strong is Time!'

"And yet I knew these mighty pillars lived only to shield the forest which shielded Belle-Marie. So I stood upon the last mountain and looked upon the great blue of the sky, and there again I saw the face of Lake Belle-Marie; and the circle was complete. And I sought no more, for I knew that from the abode of perfect, unhurt nature it is but a step up to the perfect peace and rest of the land where lives that Time whose name the mountains voice in awe.

"And now, do you see what is happening on Lake Belle-Marie? Through the cleft in the forest the pink of the early day is showing, and light shines through the spaces of the pines. And down the pebbles of the beach, knee deep into the shining flood, steps a noble creature, antlered, beautiful, admirable. Do you see him drink, and do you see him raise his head and look about with gentle and fearless eye? This creature is of the place, and no hand must harm him.

"Let the thin blue smoke die down. Attempt no foot further on. Disturb not this spot. Return. But before you go, take one more look upon the Lake of Belle-Marie!"

So again I gazed upon the face of the lake, which seemed innocent, and sincere, and trustworthy, and deserving of the protection of the league of pines, and the army of the mountains, and the canopy of the unshamed sky. And then the voice of the Singing Mouse, employed in some song whose language I do not yet fully understand, faded and sank away, and even as it passed the walls came back and the ashes lay gray upon the hearth.

## Natural History.

## FISHING DOGS.

READERS OF FOREST AND STREAM who visited the Esquimaux village at the World's Fair will remember the "husky" dogs there on exhibition. These animals are perhaps the most interesting of all the various classes of our canine friends and during this summer I had ample opportunity to study some of their characteristics.

Of course they are used only in winter, when four or more of them hitched one before the other to a toboggan like sleigh, can accomplish hundreds of miles in a remarkably short time, all the while being sustained by one three or four pound fish a day apiece. During the summer they run wild and rely solely on themselves for their food. While at Lake Winnipeg this summer, I was shooting ducks near a fishing station where forty or fifty huskies which had come down from the North during the winter, were running around.

Their mode of securing food is indeed peculiar. In the morning, they swim across the deep channels at the mouth of the Red river to the shallows where the water is seldom deeper than three feet. They paddle themselves up and down quietly, while keeping a careful watch below them. Suddenly one disappears into the water and when he comes up he has in his mouth a fish. He swims ashore and enjoys his meal at his leisure.

Many times as I have been paddling through sloughs in search of game have I been warned by a low growl, that I was approaching one of the wolf-like dogs, and pushing aside the reeds with my paddle revealed a husky, evidently tired of his swimming tactics, standing in a few inches of water ready to pounce upon the first fish that passed in front of his ambuscade of rushes.

My first experience with these dogs rather startled me. We were returning to camp one bright moonlight night about ten o'clock, after a long day's shooting up the river. We were paddling slowly along about 100yds. from the shore, when a quick splash occupied our attention. It was soon followed by another, then another, then several together, till in all twenty-two objects of some sort had thrown themselves out of the water. Along the path that the moon made on the surface we could see the heads of these animals coming straight for our canoe. We rested on our paddling to see what was to happen. They came near rapidly but still we were unable to determine what they were. At last when within about 15yds., they seemed to notice who we were, and making a sudden turn to the right, gave us a wide berth and passed across our bow. We could then see that they were a band of huskies which were off to do their night's fishing in the neighboring shallows.

ROD. RANDOM.

## "SNOOKS."

I HAVE have often noticed in FOREST AND STREAM some very interesting accounts of dogs and birds that had done wonderful things. I am a great lover of birds, and until very recently was the owner of a pet canary by the name of Snooks. He was without exception the cutest bird that I ever heard of. Every morning when my husband shaved, his favorite place was on the collar of his dressing robe, and his delight was to pick at the hand that held the razor. He had a habit of hopping all over the floor after me, and many a time I have found him between my feet. We had put a bell in his cage and taught him to ring it whenever he wanted us. My husband would say to him, "If you want me, ring your bell." At once he would hop on his perch and ring until we had given him a hemp seed. I always covered him up at night and placed him in one of our closets. Sometimes he would wake and hear my husband's voice. Immediately his bell would ring, although he was in the dark.

He was a good bather, and when he had drained every drop of water out of his bathtub I would bring a pitcher and refill the tub while he stayed in it, then would go on with his bath. Once, when we were away, a friend of ours took care of him for two weeks. She told us that he never sang a note. The night we returned we brought him in our room, opened his cage, and although it was almost dark, he sang to us as if his dear little throat would break. The next morning he did the same, and after that only sang in his usual way. It showed us that the dear little fellow had missed us.

One Christmas morning I went from our front room to the hall room back where we had a sick friend who was very fond of him. He walked after me all the way, then entered her room and perched on a table and looked all around as if to say, "Merry Christmas to you," and then walked back again through the hall to our room. Of course I talked to him all the time to show him I was with him.

The dear little pet was getting old and blind, so we thought it our duty to have a friend chloroform him. For several years we had made a companion of him, so you can imagine how we felt at parting with him.

CLAIRE ADAMS.

## BLACKSNAKE DESCENDING A TREE.

Editor Forest and Stream:

For two or three months I have been almost the sole possessor of a snake story which bothers me, and I have concluded to risk my reputation by telling it, in the hope that some of your naturalists can explain the phenomenon.

One day this fall I was out at Crève-Cœur Lake, and after rambling through the woods until late in the afternoon I came down to the station to await my train. Passing a large hickory near which three ladies and a gentleman were picnicking, I saw a blacksnake on the trunk of the tree about 12ft. from the ground. To the best of my recollection the tree was about 7ft. in girth and 20ft. to the nearest limb. Its bark was very tight and smooth for a hickory of that size, and there were no knots or excrescences below the limbs. The taper of the trunk from a couple of feet above ground to the first limb was so slight as to be imperceptible. The snake was motionless as if asleep. Its position on the tree was, in the main, diagonally upward from left to right, head toward the top, but the body arranged in graceful curves. I wondered how it could support itself on so straight and smooth a trunk.

The ladies were alarmed when I called their attention to the reptile, as they had been under the tree several times, and near it all afternoon. I opened fire on the snake with a pocket revolver, and scored two bad misses, but the third shot broke its back about 6in. from its head.

Then began a singular performance. The snake did not drop. It slowly released its folds, its head gradually slipped lower and lower down the trunk, its body straightened out accordingly, until finally the snake lay perpendicularly on the trunk, head downward, in a perfectly straight line. We could not detect the slightest curve from tail to head. Then it began slipping down the tree so slowly that we could scarcely see it move, but its body still remained rigid and straight, as though paralyzed. I think that in ten minutes it did not slip down more than 2ft. after once straightening out. I then shot it through the head; there was some muscular contraction and soon the reptile relaxed and fell to the ground. It measured 4ft. 10in. in length.

Now how does a snake descend a nearly vertical surface so very slowly without perceptible muscular movement in a perfectly straight line, when its belly scales slope the wrong way for the trip?

HORACE KEPHART.

St. Louis, Dec. 31.

## White Deer.

I WAS very much interested with reading the announcement recently of a white deer being killed in western Pennsylvania, as I have hunted in that locality for a number of seasons (mostly for grouse). I was telling my father about it, when he said: "That is nothing unusual, for your grandfather killed three white deer in one day in Venango county, about nine miles above Oil City, on Oil Creek. I remember it very distinctly, for I was sent to bring them in and skin them. They were snow-white, with the exception of a few grayish spots on either side of the shoulders of one of them." This was probably a few years prior to 1838, when Mr. Joseph Gayetty shot the one on Horse Creek. I speak of this to show that the albino deer was not such an uncommon animal in that locality in early times.

J. S. RICKETTS.

FREDERICTON, N. B., Jan. 12.—Last fall a large albino buck deer was shot a few miles from here. To-day a farmer living in the same section brought into town a last spring's fawn very curiously marked. The head and back are colored like an ordinary deer, but the belly and the inside of the legs and tail are pure white. Its eyes are colored like the common deer and show no traces of albinism.

H. C.

## A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Game Bag and Gun.

### MASSACHUSETTS ASSOCIATION.

THE annual dinner of the Massachusetts Fish and Game Protective Association was held at Young's Hotel, Boston, Mass., Jan. 16, and was in all respects a most enjoyable occasion. There were present more than one hundred members, and among the guests of the evening were Gov. Greenhalge, ex-Gov. Long, State Treasurer Marden, H. A. Thomas and Rev. Charles Follen Lee.

The banquet hall was elaborately decorated with game pieces and other reminders of the woods, and Mr. Walter Brackett's salmon pictures adorned the walls.

At the annual gathering the president usually delivers an address reviewing the work of the year and the promise of the future; and keeping up the custom, Pres. Wiggin spoke as follows:

*Gentlemen of the Massachusetts Fish and Game Protective Association:*

The cardinal principles of our organization are the securing and enforcing of proper restrictions upon the killing of fish and game; the introduction of new species of fish, game and useful birds, and the dissemination of useful information relating thereto. The year which has just closed upon us has been fruitful of events which are of interest to our Association.

It began with the usual contest over the Gilbert trout bill, so-called, in the great and General Court. That bill seems to be possessed of as many lives as the most venerable member of the feline race. It seems to thrive on opposition. Twice, in spite of all opposition, it has passed the lower House, and been defeated in the Senate; and once it has passed both Houses, and received its quietus in the veto of the Governor; but I trust that we have heard the last of that pernicious measure, for the present at least.

Defeated in the Legislature, the author of that bill immediately took measures to test the application and constitutionality of the trout law in the Supreme Court; but there, as in the Legislature, he was destined to defeat. The Supreme Court has passed squarely upon two phases of our trout laws. The two questions raised before the court were these: "Does the law providing for a close season on trout extend to trout artificially raised and owned by a private individual? And is the statute constitutional?" Upon the first of these question the court says, after referring to the several statutes upon this subject:

The object of all these statutes was to protect and preserve the trout. The same statute which first forbade their sale also contained the provisions upon which the present statute is founded, to encourage their artificial propagation and maintenance. In order to make the protection of the trout more effectual, it was deemed necessary by the Legislature to punish the sale, during the close season, of all trout except those which are alive. This was probably on account of the difficulty in distinguishing between trout which had been artificially propagated or maintained, and other trout. On the construction contended for by the defendant, the law could not be so well enforced. In view of the provisions of Sec. 26, it seems to us plain that the penalty imposed by Sec. 53 extends to artificially propagated trout.

2. Nor have we any doubt that the statute is constitutional. The importance of preserving from extinction or undue depletion the trout and other useful fishes of the Commonwealth, has been recognized and illustrated in many familiar statutes and decisions from an early time. Such protection has always been deemed to be for the good and welfare of this Commonwealth, and the Legislature may pass reasonable laws to promote it. Such laws are not to be held unreasonable because owners of property may thereby, to some extent, be restricted in its use. It has often been declared that all property is acquired and held under the tacit condition that it shall not be so used as to destroy or greatly impair the public rights and interests of the community.

So far, then, our trout law seems to be safe. Let us hope that our Legislature will let it remain undisturbed.

In legislation upon our other fish and game laws during the past year the results were equally gratifying to us, for every measure which we advocated became a law, and every measure which we opposed was defeated. I do not wish to be understood as claiming that to the efforts of our association these results were mainly due, for that would be claiming too much, but I do feel gratified to know that after so many years of opposition in our efforts to secure the enactment of wholesome laws, we were at last so nearly in harmony with the people's representatives, or they with us, and I care not which way you put it.

Legislation for the protection of shellfish in this Commonwealth began as early as 1795, and for trout and pickerel in 1822. Legislation for the protection of game came later, the first law having been passed in the year 1839. From the earliest date to the present time great progress has been made in the perfection of those laws, and some of our ablest statesmen have not felt it beneath their dignity to aid in this noble work. It is said that Daniel Webster, just prior to his election to the U. S. Senate, was sent to the Legislature from the town of Marshfield, and served in that body for about ten days, during which time he lent his aid in perfecting the law protecting the speckled trout. And we know that more recently we are indebted to the earnest efforts of ex-Gov. Robinson for those wise and stringent protective provisions contained in the laws of the year 1869. When such men as these are willing to lend their aid to the measures which we advocate, we do not need to apologize for our own existence.

Our earliest laws were framed solely to protect the fish and game, but in later years there has been a growing tendency toward legislation favoring propagation to supply the waste which is constantly going on. Our laws to-day are in the main sufficient for the protection of both fish and game, and I am confident that an enlightened public opinion will in the end secure their enforcement.

The great problem of the future will be to supply the waste that is constantly going on. This field is broad enough for both public and private enterprise.

The restocking of our streams with trout and other fish has already been entered upon by the Commonwealth, but many of us feel that the work is lacking in that vigor and push which should characterize a great and powerful State like Massachusetts. Until last year she had no public fish hatchery within her borders, where she should have had at least a half a dozen. She was the leader in her protective laws, and she should not now be found lagging behind her sister States in making good this waste in her food supply.

The work of propagating game birds in this State has hitherto been solely carried on by private enterprise, and that, too, almost entirely by this Association, but the

success which has attended our efforts has been far beyond our most sanguine expectations.

Since we began our work in this line three years ago, we have liberated in more than sixty different localities in the State, the following birds: Pinnated grouse, 751; sharp-tail grouse, 146; Southern quail, 1,020; Arizona quail, 832; Oregon quail 26; total, 2,775. We also liberated 87 northern hares, footing up to a grand total of 2,862 head of game at an expense of over \$2,000.

So far as we can learn these birds have bred as well as upon their native grounds. If they have, the increase must have been in the neighborhood of 15,000 birds. This makes quite an addition to our game supply.

One of the questions which immediately confronts us is, shall these birds be protected from wholesale slaughter? In one of the recent reports of our committee on enforcement of game laws I find the following: "As to snaring cases, we have been utterly unable to secure evidence sufficient to prosecute. There is no danger of our partridge being exterminated by the gun in open season, or by the depredations of vermin, but it is a very significant fact that probably five-eighths of the birds which are brought to our markets bear no signs of wounds."

The frequent changes in our fish and game laws are a great hindrance to the prosecution of our work. I do not think I exaggerate when I say that those laws have undergone more than one hundred changes in the last ten years, and some of them have now come back substantially to what they were ten years ago. To prevent these constantly recurring changes in this wholesale slaughter of our fish and game, and to push on the work of increasing the supply, in hearty co-operation with our State authorities, will engage the energy and zeal of our Association in the years which are to come.

Witty speeches were made by Gov. Greenhalge, ex-Gov. Long, State Treasurer George A. Marden and others. U. S. Fish Commissioner McDonald wrote: "I feel a keen interest in the objects of your association, and realize that in your sphere you are as important for the improvement of our fisheries as are the fish commissions. While artificial propagation is essential also, and should be conducted on the most liberal scale, the work must be done under the greatest disadvantage unless the results obtained are conserved and made permanent by proper protection. To secure this we must look to such associations as yours."

### AMERICANS IN SOMALILAND.

SOMALILAND, Dec. 4, 1893.—*Editor Forest and Stream:* As elephants are growing scarcer in Africa every day so the reports of encounters with them are less frequent than formerly. I therefore send the following account of a good day's sport I had with the beasts, hoping it will interest your readers.

When we reached our present camp on the morning of Nov. 29 we hardly expected good news so soon, as we had had great luck at our last place. There we three, Dr. W., L. S. and myself, Americans, and S. K., an Englishman, had shot two lions, two leopards, one wart hog, one wild dog and a hyena, and several varieties of antelope. S. K. shot the two lions from a zereba in one night over a donkey.

However, we found on our arrival two reports of elephants from different quarters. We immediately separated, Dr. S. and S. K. going to the north and I to the south. I met with no luck until Dec. 2. I was awakened at 4:30 A. M. by a great deal of loud talking in camp, and presently my tent curtain was thrown back and a crowd of black heads was revealed; as many voices told me I must get my elephant gun at once.

I found that some people from a village near by had come to me with the report that elephants, "hundreds of them," had just passed through their valley. I swallowed a cup of cold tea and putting four biscuits into my pockets started in pursuit. I took my four shikaris and four horses, thinking, perhaps, to drive the elephants. The whole village followed at my heels, much to my disgust. I was shown the spoor and I made out that the elephants were traveling rapidly.

I will now pass over seven long hours' tracking under a broiling African sun as not very interesting reading. About 11:30 I observed a water hole about a mile ahead, indicated by a grove of those magnificent trees called "burray" in Somaliland.

We were sure the beasts must be resting there. As the large number of followers were making a great noise, I made them all stop and await me. I then advanced on foot with my 8-bore doublebarreled rifle and one shikari. I had just reached the woods when I was startled by snorting only about 200 yds. ahead. Making my shikari remain where he was, as he was annoying me in his excitement, I now advanced alone.

There were the elephants, and plenty of them. I think there were sixty in the bunch before me, big and little. One mother with two little ones beside her not bigger than donkeys, others standing from 7½ to 10 ft. high at the shoulder, as I afterward measured. Some were lying down and others flapping their great ears lazily, perfectly oblivious to any impending danger. I took a good look at them and then studied the wind and my chances for escape if charged. Creeping up around a bush, I got within 50 yds. of the nearest, and taking aim at the one with the longest tusks just behind the ear, I fired.

Then I ran; you may be sure I ran, for the whole woods seemed to rise up in protest. All this time there had stood another lot of elephants just to the side of me, that I had not seen at all. Down they came on me, apparently from all directions. I had to dart around bushes, first to escape one pair of great ears with uplifted trunk and then another, until they could wind me no longer. I then fired at one fellow, aiming at his ear a little behind the meatus and had the satisfaction of seeing him drop like a great lump of lead. Loading quickly I fired both barrels at another behind the shoulder, wounding him severely. He only made off as fast as he could. I ran a couple of hundred yards and intercepted about a dozen that were walking away at a quick pace. I shot one of these at about 80 yds. through the heart. He could only stagger a few yards before he dropped. All his companions came for me, screaming as loud as they could. They could do nothing, however, as I had the wind in my favor and could easily dodge them. I emptied two barrels into one of them as he crossed before me at about twenty yards, and then there was another case of "elephant chase man." He could not scent me as I ran hard and dodged behind bushes, but he persisted in his chase. Just at this

moment my men all came running toward me, having heard the shooting.

On they came directly toward the wounded brute. I shouted to them at the risk of having the beast charge me again, but it was of no use. The elephant caught sight of the men in their white sheets and was down upon one of them in an instant. I had just time to fire, and by a lucky shot I turned him toward me again. I shot him for the fourth time as I ran around to get a broadside, and this staggered him. He turned on his heels and walked away in a groggy fashion. I was very much exhausted by this time and would like to have rested, but my men were shouting to me to come after an elephant I had wounded and which was scuttling away. This was the first elephant I had fired at while they were all standing still. My shot had struck just over the heart, but whether it penetrated the heart or not I never found out, as I had no time to cut the bullet out. He showed wonderful vitality, for it took six more bullets to bring him to bag, and all planted about his chest.

I had the assistance of my men now for the first time. The shikari I had taken into the woods with me ran off at the first charge. My men kept the elephant at bay by riding around him until I got up with him. I gave him both barrels at about 70 yds. as he was charging one of the riders, and for the first time missed one of the shots. It was excusable, as I was out of breath from my exertion. I was a quarter of an hour chasing this fellow, which was the most vicious brute of all. I put five more bullets into him. When I fired the last two I was within 25 yds. of him, and, fortunately for me perhaps, I stopped his career. I had fired eight times at him, seven of the 2-ounce bullets taking effect. I had now had about half an hour's chase after firing the first shot, and it seemed to me much longer, as I had been running constantly with my 8-bore, weighing 16 lbs.

The firing was no joke either, as I used 10 drs. of powder to a charge. I used hardened spherical bullets. The afternoon and next morning was spent in cutting out tusks and looking up the two wounded elephants. As it turned out all five elephants lay dead within a radius of half a mile. Nothing could have been more satisfactory to me. I had fatally wounded five elephants with no assistance whatever and on foot. Only did assistance come in finishing up the last beast, the first one I fired at. I was also overjoyed to know that no animal had gone off wounded. When I returned to camp the following afternoon, which was yesterday, I found that Dr. S. and S. K., who had left me four days previously, had found two lots of elephants on two different days and had shot eight. The first day Dr. S. killed four and S. K. two, and on the second day, Dr. S. killed two more.

As we talked matters over we all came to the conclusion that we would let elephants alone in the future and turn our attention to lions, koodoo and other game. We could find more elephants, but we had all the tusks and trophies we desired. A. DONALDSON SMITH.

### THE POWDER TESTS.

*Editor Forest and Stream:*

The powder tests carried out by me in conjunction with other disinterested parties, at Chicago and Carney's Point, and my report on the same, are naturally subject to the laws which apply to all human deeds and creations, especially those of a public character—they are criticisable.

I am far from denying to any one, and particularly to persons more directly interested in the results and affected by my opinion, the right to point out to me any and all errors or omissions which, in their belief, have been made, and to show that my conclusions were based on false premises or shaped regardless of the latter.

I was fully aware at the time that, notwithstanding all efforts on my part, to do justice to all concerned and to avoid, if possible, every cause for controversy, of which I am not particularly fond, I should hardly succeed in accomplishing this end, and I now find that my fears in this respect were well founded.

Mr. Justus von Lengerke takes issue with me on several points in reference to the manner in which the tests were carried out, and to the basis chosen by me for comparing and judging the properties of the several powders.

While I think I owe it to those who assisted me so ably in carrying out the experiments, and to myself to answer Mr. von Lengerke's letter, I shall, in performing this unpleasant duty, confine myself mainly to that part of his criticism which is intended to convey the impression that I was prejudiced in favor of a particular powder, that the instruments employed are either unreliable or were improperly handled, and that the powders were not treated alike. I shall not discuss with him the demerits or merits of the several powders from a commercial point of view. His communication proves that he did not rush into print blindly. He evidently has given the subject considerable deliberation, and has endeavored hard to impart to his ably written comments the highest possible weight.

I further admit that his arguments breathe on the whole a degree of fairness and of justice toward one with whom he pleases to differ, as they are seldom found under similar circumstances.

I have given his arguments a careful study and the attention they merit, and I regret that he has apparently not treated my report in the same manner. Had he done so I ought to have been spared the trouble of here traveling again over a great deal of ground fully covered in my report, and of replying to questions to which the answers can be found in the same.

Mr. von Lengerke has, as I know and as his communication proves, devoted much time to the study of the nature and actions of gunpowders. He has acquired and commands an amount of general knowledge in the premises, rarely found by persons of his line of business and his calling. But his assertions and arguments likewise show that he either does not want to give to the sportsmen the benefit of all he knows about the behavior and nature of gunpowders, especially nitro powders, or that, like for all of us, there is still a large field of observations and researches open for him before he can claim to master the subject thoroughly. All those who have had occasion and still better opportunities and facilities than he to go a little deeper into the mysteries of the theory of shot shooting, agree in the opinion that the bottom of knowledge has not been touched, and that the true character of nitro powders and the laws governing their explosion in a confined space have not been fully

established, and are not likely to be determined in the near future. I shall try to show Mr. von Lengerke that he wrongfully finds fault with me on the principal questions at issue.

I made my reports as exhaustive as possible, I gave all the figures as they were obtained and employed as the basis of comparison in order to afford the readers the opportunity to judge for themselves if my method of judging the powders was a fair and correct one. I should have been thankful to Mr. von Lengerke if he had shown that mistakes were made, since I do not claim infallibility for myself and cheerfully acknowledge an error if I have made it. I have nothing to say against Mr. von Lengerke's objection to the standard of merits as laid down in my report. This settles down to a question of difference of opinion, and a difference of opinion is natural and permissible.

Mr. von Lengerke calls attention to the fact that I once had business dealings with Messrs. Wolff & Co., the manufacturers of Walsrode powder in Germany, or, as he puts it, that I was interested in Walsrode powder, and that I am now on very friendly terms with the firm. This statement, I presume, was made to substantiate his assertion that I have been prejudiced in favor of the powder. The facts in the premises are as follows: About four years ago I furnished to Messrs. Wolff & Co., two cartridge loading machines patented to me the same as I sold similar machines to other European powder mills, ammunition manufacturers and military authorities, and in return I bought of that firm, on the same terms as others, powder, and disposed of the latter in the same way as others. I have had no business transaction with Wolff & Co. for the last three years and am not interested, directly or indirectly, in Walsrode or any other powder abroad or in this country. If I were, I would not consider myself qualified to take an active part in establishing and maintaining in this country a testing institution, and would certainly not blame any one to look upon my assertion that, so far as I am concerned, the establishment will be on carried upon a strictly impartial basis, as a deceit.

I am on friendly, but by no means on very friendly, terms not alone with Wolff & Co. but with all other powder, gun and ammunition manufacturers with whom I ever came in contact, and I shall make due efforts to establish friendly relations with all interested parties in America, and last but not least with Messrs. von Lengerke & Detmold. If I fail in accomplishing this, the fault will surely not be on my side.

Of course Mr. von Lengerke is the sole master of his thoughts. If he thinks that my former relations to Wolff & Co. have clouded my judgment, I fail to see how I can convince him of the contrary.

Mr. von Lengerke complains of a lack of uniformity in my figures of bursting strain and velocities. He thinks something must have been wrong, that either my instruments are unreliable or were improperly handled. His conclusions are false in both respects. My instruments are reliable and they were manipulated right and by experienced persons. The variations were solely due to the bad behavior of the powders, or to be more precise, the powders simply behaved as powders are likely to behave.

The chronograph is not a difficult instrument to handle. It can be manipulated by any person of average intelligence—yes, even by a boy, after a few hours' instruction and a day's practice. It weighs less than 50 lbs., and does not require a foundation of rocks and concrete to stand upon, as Mr. von Lengerke describes it, and as it is suited for a building 20 stories high, all it wants is a firm foundation to prevent its being jarred, that's all. The electric current must be brought in harmony with the magnets and maintained there. For this purpose the instrument is adjusted every time and day it is used, and regulated at certain intervals during the work.

These precautions were all taken at Chicago. The chronograph was placed in a separate room and building some distance from the place where the shooting was done. At Carney's Point the chronograph of Messrs. DuPont was employed, which stands on a solid foundation, and was manipulated by a gentleman possessing a high degree of knowledge on ballistics, and who has been brought up in the powder manufacturing business. This instrument registered the same irregularities as they were found at Chicago, not because there was anything wrong with it, but simply for the reason that the powders repeated there the jumps they made at Chicago.

There will always be variations as long as the primer, the wad, the crimp, the cartridge chamber, the bore of the barrel and other causes too numerous to mention, have a bearing upon the explosion and the behavior of a propelling agent in the gun barrel.

If it is true, as Mr. von Lengerke says, that black powder generally gives very uniform results. But the tests were not carried on with a view to determine the qualities of the different black powders. Not all kinds of black powders were used, and of those employed only the cheap grades were taken. If the black powders had been included in the test, the better grades would have been also tried, and in such a case the evenness, no doubt, would have been much more satisfactory.

I am not in position at this juncture to express an opinion on the merits of the different black powders made and used in this country, but I do believe that Mr. von Lengerke's assertion that "Dead Shot" FFG is the most even and reliable in the world, is a bold one, and that he will have quite a task on hand in substantiating this claim anything like convincingly.

All nitro powders, when tested under different conditions show great variations. They are composed of such chemicals which are more or less subject to change through the effects of storing, dry heat, humidity and cold. They, as a rule, develop their gases more suddenly than black powder, are particularly sensitive to artificial obstructions in the gun barrel, to increased charges, etc. But even when the charges are not increased beyond the limit, when all other conditions appear to be in a normal state, it will occasionally happen that the regular service charge of a nitro powder produces a bursting strain, or as it is sometimes wrongfully called, initial pressure, far higher than the average gun barrel can stand. This occurs even in England, where the climate is comparatively uniform and also the percentage of moisture in the air. Nitro powders have a good deal in common with tamed wild beasts. A wild animal tamed and brought up in captivity may appear docile and gentle for a long time, but its wild nature is liable to show itself at any moment. A smokeless powder too may behave well right along, but it is

nevertheless more treacherous in its action than the black powder, it requires care and constant watching.

Mr. von Lengerke quotes the London *Field* as an authority on ballistics. It may be of interest for him to know, that the *Field's* powder tests are carried out by taking recoil, velocity, penetration and pattern simultaneously. In Chicago only the bursting strain and velocities were taken together, and this can and must be done. But the method employed at Chicago comes nearer to his view, as he will see, than that followed by his authority.

The Chicago and Carney's Point powder tests, as every one knows, bore a public character. They could have been and were witnessed and controlled by disinterested parties. The E. C., Schultze, S. S., American wood and DuPont powders were all loaded by Mr. Wm. M. Thomas, of the U. M. C. Co., who performed his work carefully and thoroughly, and who has no especial love for any particular powder. He commands an amount of experience in loading nitro powders possessed by very few persons the world over.

Not all of the Walsrode powder used was furnished by the Walsrode agent, some was procured by outsiders and loaded in shells by machinery in Germany a year prior. These shells were used as they came.

Mr. von Lengerke says that I ought to have stated what wadding material was used. This question is answered in my report not less than sixteen times. The U. M. C. Co.'s wadding, consisting of a trap wad, a first quality white felt and a black edge wad, was employed for all nitro powders except the Walsrode, for which the cheap-so-called Express wad was used. The diameter of all felt wads was the same. The figures taken for comparison were those, as stated in the report, obtained for all other powders with the Smokeless and Nitro Club shells, for Walsrode those of the special shells. The powders were thus brought on an equal footing as regards the best adapted shells, and the same rule applies to the wadding material.

Where the powders were measured this work was done as carefully as possible, and the variations as determined by weighing five loads of each of the powders were less than  $\frac{1}{10}$  gr. The actual figures were as follows:

3drs. of Schultze powder by measure weighed respectively:	1. 42 $\frac{1}{2}$ grains.	2. 42 $\frac{1}{2}$ grains.	3. 42 $\frac{1}{2}$ grains.	4. 42 $\frac{1}{2}$ grains.	5. 42 $\frac{1}{2}$ grains.
3drs. of E. C. powder by measure weighed respectively:	1. 44 grains.	2. 44 grains.	3. 44 $\frac{1}{2}$ grains.	4. 44 grains.	5. 44 $\frac{1}{2}$ grains.
3drs. of S. S. powder by measure weighed respectively:	1. 38 $\frac{1}{2}$ grains.	2. 38 $\frac{1}{2}$ grains.	3. 38 $\frac{1}{2}$ grains.	4. 37 $\frac{1}{2}$ grains.	5. 38 $\frac{1}{2}$ grains.
3drs. American wood powder by measure weighed respectively:	1. 37 grains.	2. 37 grains.	3. 37 $\frac{1}{2}$ grains.	4. 37 $\frac{1}{2}$ grains.	5. 38 $\frac{1}{2}$ grains.

Does Mr. von Lengerke claim that a difference of 1 gr. one way or the other, or even 2 grs., accounts for the irregularities? Should any powder be so extremely sensitive to such trifling differences in the charges?

All nitro powders, as previously stated, react comparatively very heavy to largely increased charges, bulk for bulk, the Walsrode undoubtedly more so than others. I agree with Mr. von Lengerke that a double charge of Walsrode powder is quite certain to do mischief. But does any one claim that such a charge can be used with impunity? Can any other nitro powder be used in such extreme loads? Does not my report show that as far as the reaction to increased charges is concerned, Schultze powder approaches the black powder nearer than the Walsrode? Has the former not been credited with nearly double as many points of merits as Walsrode in this department?

It was not my office to judge the powders from a commercial point of view or from the standpoint of convenience. Had I done so the various powders would indeed have made a different showing. I could only, as I did, rate the powders strictly on the basis of their relative ballistic merits. Mr. von Lengerke's censure of the Walsrode and his claims for the Schultze and E. C. powders do not concern me, neither do I find it necessary or advisable to discuss with him the best basis and method for judging a gunpowder's qualities, but I must correct one statement he makes. He says the Walsrode powder was fired from the special shells only. My report does not say so. Mr. von Lengerke pronounces it as wrong when I credit a powder with a high point of merit on account of its comparative low bursting strain in view of the fact that this powder shows a mean corresponding velocity somewhat below the average. Here I beg to differ with him. I for one will rather take say five yards less distance in killing force in the bargain for the guarantee that the powder I use is less dangerous than others and less liable, to damage my gun, and perhaps do me bodily harm, and I believe there are others who feel the same way. He claims that a certain quantity of bursting strain is necessary and essential for a sufficient good killing force. I hold that the lower the gas pressure is in proportion to the velocity, and provided the latter is equivalent to a satisfactory penetration, the higher such a powder ought to be rated. I can furnish Mr. von Lengerke black powders which will produce a higher average velocity than any nitro powder with about one-half the bursting strain of the latter. Such a powder means the least danger for the gun and gunner.

Whenever we are in a position to claim for a nitro powder that it will not produce a higher bursting strain than a good quality of black powder, that it is just as safe as the latter, then the days of black powder will be counted, in spite of the difference in price. I believe such a powder will make its appearance some day, but it is not in the market now.

From his statement I am led to infer that Mr. von Lengerke believes that Curtis & Harvey's or any other equally good grade of black powder will produce a higher bursting strain than the cheaper grades of black powder. If his crusher gauge has shown him such to be the case, I can only advise him to drop it, and to follow the example of Messrs. DuPont and the U. M. C. Co. and substitute for it a pressure gun with the modern spring device, as I employ it, for his crusher gauge then has deceived him for once, and very badly at that.

Mr. von Lengerke thinks that I am mistaken when I say that the difference in the arrival of the pellets between those propelled by a quicker-burning black powder and a coarser-grained, slower-burning powder practically amounts to very little. If he does not think that I know what I speak of he may look over his files of the London *Field*, one of his recognized authorities in the premises, and he will find that the *Field* has arrived at the same conclusion as I have.

I am very sorry that it has not been my good fortune to avail myself of Mr. von Lengerke's help at Chicago and Carney's Point. I am glad to know, however, that I shall

have his co-operation in the future. I appreciate his assistance very highly indeed, and am happy to believe that henceforth all points of difference between us can be settled on practical grounds, and that I shall not be called upon again to trespass so largely on the space of your paper and on the indulgence of your readers under similar circumstances. The testing institution ought to be the place for Mr. von Lengerke to enlighten me on the merits and demerits of a propelling agent, to which he, like all others, is most welcome. I am not too proud to learn, and do not claim to monopolize all the knowledge on the theory of shot shooting.

ARMIN TENNER.

MATLOCK, Ia.—*Editor Forest and Stream*: I have been much interested in reading the results of the late powder test as carried on by Mr. Armin Tenner, but there are some points on which I wish some further information, and hope that Mr. Tenner or some of FOREST AND STREAM'S readers will enlighten me.

In testing the black powders for bursting strain, velocity, pattern, etc., (1) would not the higher grade powder have given much better results than the common brands such as were tested, and (2) would not the coarser grain powder of the brands tested have given better results than the fine grain? (3) In what shells were the black powders tested, (4) and would other and higher grade shells have given better results? (5) What kind and quantity of wadding was used, and were the black and nitro powders wadded alike?

(6) In table I, where the nitro powders were tested with black powder priming, the American wood, Schultze and E. C. powders fell so far below the requisite velocity as to be useless for live bird shooting. This is rather surprising as at many large tournaments scores of 90 per cent. and over have been made with these powders loaded in common shells with black powder priming. During the past season I have used for my duck and chicken shooting 3½ drs. Schultze powder in a U. M. C. "New Club" shell primed with ¼ dr. FFG black powder, one card and two black-edge wads over powder, 1½ oz. shot in a 10-gauge gun, and it gave me the very best of satisfaction. (7) It would seem as if the powders were not so loaded as to secure the best results, as in many cases throughout the test the American wood and the S. S. and the E. C. powders did not give sufficient velocity to be regarded as a killing charge, while we all know that these powders, as loaded for the use of expert live bird shots, give almost perfect results. You may say they use heavier charges, but Mr. Tenner states as his opinion that 3 drs. and 1½ oz. of shot will give more satisfactory results than a larger charge. There must be a discrepancy somewhere, and I hope Mr. Tenner will explain it for the benefit not only of myself but of others who may have noticed the same thing.

P. C. BISHOP.

*Editor Forest and Stream*:

In reply to your correspondent's queries: (1) Probably yes. (2) Hardly, if both grains were of the same grade. (3) In the new Club shells. (4) No. (5) U. M. C. Co.'s wadding, consisting of a trap wad, a felt and a thin black edge wad, or several of the latter only. The wadding of the E. C., S. S., American wood, Schultze and DuPont's Smokeless powders consisted of a trap, a white felt and a black-edge wad. (6) The use of common primers primed with black powder has been discarded in Europe, and in some countries the priming with black powder is prohibited by law. If Mr. Bishop and others employ ¼ dr. of black powder for priming their shells, they may thereby secure a pretty thorough combustion of the nitro powder charge, but the pattern will certainly be more uneven than with the No. 3 primer, and under certain conditions such a quantity of black powder may impart to the nitro powder a high degree of violence. The bursting strain of such a load may not be fatal to one particular gun, but many guns will not stand such a pressure.

I would not recommend more than 1 gr. black powder for such a purpose, and if only this quantity, as it ought to be, is employed, the penetration will not reach the limit which governs a corresponding load of nitro powder exploded by a No. 3 primer; 3½ drs. Schultze powder for a 10-bore gun may be regarded as a light charge, and such a charge, even if primed with ¼ dr. black powder, may still be considered as comparatively safe. But some gunners load 4 and 4½ drs., and these maximum loads should not be primed with ¼ dr. black powder.

If Mr. Bishop has never met with any hang-fires or faced some extremely wild shots, i. e., open patterns, with his ammunition, he has been exceedingly lucky. All the powders Mr. Bishop refers to were loaded at Carney's Point by Mr. Wm. M. Thomas, of the U. M. C. Co. and under my supervision and those of others. He may rest assured that all powders were loaded carefully, and properly. Mr. Bishop evidently has not studied the figures of velocities carefully, for as a matter of fact, S. S. and Schultze powders developed under normal conditions very high velocities. E. C. powder, too, made a very good showing in this respect, and American wood only lacked somewhat in velocity with the increased shot charge.

The different powders were rated for penetration as follows: American wood, 16 points; S. S., 18 points; DuPont's, 19 points; Schultze, 18 points; Schultze (Pompton), 20 points; black powder, 20 points; E. C., 18 points; Walsrode, leaf, 17 points; Walsrode, grains, 18 points. If anything, these figures prove that there was not such a marked difference in point of penetration as Mr. Bishop makes it appear, and I fail to see why he should speak of a "discrepancy somewhere."

ARMIN TENNER.

KITTANNING, Pa.—*Editor Forest and Stream*: I would ask Mr. Armin Tenner a question in regard to Table O in your issue of Dec. 23. In the result of moisture test he places the total loss in velocity at 43 ft. for Walsrode powder in grains (taken for example only), and which he has obtained by adding the loss in velocity when subjected to 75 per cent. humidity to the loss in velocity when subjected to 85 per cent. of moisture. Now, it seems to me that the total loss should only be 38 ft. instead of 43 ft., for the loss of 5 ft. in subjecting the powder to 75 per cent. was increased to 38 ft. by an increase of 10 per cent. of moisture, or an increase of 33 ft. for an increase in moisture of 10 per cent.

It is reasonable to suppose there was a loss in velocity for every per cent. of increase of humidity, and when the moisture reached 75 per cent. there was a loss of 5 ft. On the same line, a certain loss resulted from an increase of moisture of 85 per cent.; but it is not to be supposed that

the loss of 5ft. in 75 per cent. humidity is additional to the loss of 88ft. in 85 per cent. humidity.

Now, I hope Mr. Tenner will not be offended at my calling his attention to the above, for there is no offense or censor intended, and the above is called forth by the fact that I desire to obtain as much information as possible from his articles and want to be put right when wrong.

J. M. C.

#### Editor Forest and Stream:

"J. M. C.'s" assumption is correct. The actual total loss in the case cited by him is 38ft. only. The values quoted in Table O should be taken figuratively; they were merely given to show the basis by which the various powders have been judged in regard to their hygroscopic nature.

ARMIN TENNER.

RED BANK, N. J., Jan. 20.—*Editor Forest and Stream:* Mr. von Lengerke says: "So little of Walsrode is safe to use, that if a loader should put in a shell a double load, which is easily possible and without detection, a broken gun would be the result." He further states that the agents dare not sell the powder in bulk, that it can be used in specials only.

As to his statement that we do not dare to sell it in bulk, the hundreds of American sportsmen who have applied for it and are loading it with best results know better. The American sportsman is not so dumb as Mr. von Lengerke would like to make him, he desires straight-forward and fullest information regarding a new explosive, not misleading ones. We have, it is true, refused to put a new invention out at random until we could make sportsmen familiar with it. Our instructions devised by experts cover every point, and no sportsman desiring to load his own cartridges is left in the dark about Walsrode powder, he cannot possibly go wrong unless he willfully disobeys our instructions and overloads; and even here Walsrode gives him fair warning to desist, and thus we are able to-day to show a cleaner record than any other explosive on the market.

A double load cannot be detected, says Mr. von Lengerke. I will throw out a double load of Walsrode put in by Mr. von Lengerke himself and mixed in one hundred standard loads, in five seconds by the watch, and so can any other sportsman. A double load of Walsrode, either in specials or ordinary American shells, and loaded as per instructions, can simply not be shot.

O. HESSE.

#### DEER IN ONTARIO.

TORONTO, Can., Jan. 15.—*Editor Forest and Stream:* Following the example of the neighboring States, the provincial governments of Canada have passed stringent laws for the protection of our game, notably deer. It is not so many years ago since I saw in the Muskoka country a couple of double sleigh loads of venison going to the Bracebridge station for shipment to Toronto, where the commission merchants made a good thing out of it. Since then the law has been altered and now no one is allowed to take more than two deer during the season, which this year was from Oct. 20 to Nov. 15. The season of '93 was remarkably mild and as a consequence many deer were left in the woods simply because they spoiled. I know of one party near the head of Lake Joseph, Muskoka, that lost some ten or twelve through the heat. The weather was more like late spring than fall. Everybody I have spoken to, with the exception of two, favor a season from Nov. 1 to 30, which would insure tolerably cold weather. At Gravenhurst wharf on my way down I made a photograph of some forty deer on their way to the front, and the stench was such that the men in the express car had to leave the doors open all the way to Toronto.

Before the present law came into force, American hunters, as well as our own, went into the north country and slaughtered indiscriminately; but to-day all that sort of thing has been pretty well stopped.

The killing of moose, too, has been prohibited for some years, yet a party of hunters within eight miles of where I was this fall killed one. They were "smart Alecks," and it was decided that the man who did the shooting should inform on himself. He went to Rosseau, told his story to a justice of the peace, and was fined the smallest amount—\$20 and costs. Of course he brought the moose with him and it was confiscated. For safekeeping it was placed in the barn of Monteith's Hotel, but, strange to say, hide, hoofs and horns had disappeared by morning. This rather annoyed Game Inspector Wilmott, and he lay low for the party on their return. He found them at Beau Mauris, in company with the foot of a moose, and the man in whose trunk it was captured has contributed \$50 and costs toward the carrying out of the game laws.

The charge of \$35 to Americans for hunting in Muskoka, Haliburton and Parry Sound districts would be considered very fair and just by many if they were allowed to take their deer home with them; but the law prohibits exportation. I know of one gentleman—in fact, he was a member of our party—who comes from Lockport, N. Y., and who has hunted on Lake Joseph for twelve years. Within that time he has not killed twelve deer, and yet he has to my knowledge spent on Lake Joseph alone over \$8,000. The majority of the hunters here favor a small registration fee to all going into the country to hunt. Americans should be charged a similar amount, but the exportation of any deer they may kill should be prohibited, or else a charge made equal to the value of the animal, so as to prevent pot-hunting.

I am well aware that opinions differ regarding hounding and still-hunting. Yet without expressing an opinion pro or con I may say that the shortening of the hunting season has had a noticeable effect on the number of the deer. However, with all due deference to those who disagree from my opinions I will say that I think the period for hounding should be reduced to a couple of weeks for a few years at least, and then let the remaining two weeks be devoted to still-hunting. I have had some experience in hunting, for I have followed the caribou in Labrador and the Hudson's Bay country, antelope on the prairie of the Canadian Northwest and others of the *Cervidae* in the Rockies and British Columbia.

Now to show how much some people know of deer hunting and how easy it is to get petitions signed I send you one that originated in London, Ontario, and which was sent down here a week ago to the Maple Leaf Club, with a request to secure signatures. It was accompanied by a letter which stated that the petition had been signed

by prominent business men, bankers and others, but it never said that any hunter had signed it.

#### PETITION.

To the Honorable the Speaker and the Members of the House of Assembly for the Province of Ontario:

We, the undersigned, beg to submit to your honorable body, and humbly but earnestly beg to call your attention to the fact that during the open season great numbers of hounds are taken into the forests of the Muskoka, Nipissing and Parry Sound districts, where they are let loose to hunt the deer, which, finding themselves beset on all sides, immediately take refuge in the numerous lakes and bays, where men are stationed in boats and slaughter them in great numbers. It is painfully evident that if this practice is allowed to continue a few more seasons it must end in the extermination of the deer in those districts.

Wherefore we, the undersigned, humbly pray that the heartless, cruel and unsportsmanlike system of killing deer in the water, at present in vogue in this province, may be stopped, and that amendments to the effect following be made to Sec. 2 of the "Ontario Game Protection Act of 1893."

1. The open season for deer shall be from Nov. 1 to Nov. 13, both inclusive, in each and every year. 2. It shall be unlawful to shoot or take any deer or fawn while it is in open water. And your petitioners will ever pray, etc.

Of course the club would have nothing to do with it. As a matter of fact, shooting deer in the water is a comparatively easy matter provided the deer takes to the water and some one is there to get him. But the season in Canada is later than in the Adirondacks and the deer don't go to the water the very first thing when the lakes have a temperature of about 32° F. Anybody at all conversant with deer hunting knows how an old buck will play with a dog, particularly if the dog should be a slow one. The buck has no intention of wetting anything but his mouth, any more than his hunters, unless circumstances render it necessary. Again, there are very few places in Muskoka where water hunting is carried on—withstanding the protests of bankers, brokers and other business men who sign a petition to the contrary.

WAGUSH.

#### ALVAH DUNNING.

ALVAH DUNNING, one of the best known of the Adirondack guides and hunters, and perhaps the oldest, for Alvah says that as a boy he carried water for the soldiers of the war of 1812, has fallen on the ice, fractured his skull, and a doctor who was called to attend him says that he cannot recover. Mr. Wm. H. Durant, owner of Camp Pine Knot, on Raquet Lake, had the old man carried to one of his cottages and has hired two men to care for him. A correspondent of the *Glens Falls Star*, writing to the editor from Raquet Lake, says that Alvah had \$270 in currency in his pocket, and although he was known to have had \$500 in gold besides, he has not been able since the accident to tell where he hid it. Those who have a copy of the report of the New York Forest Commission for 1892 will find the sole illustration of the volume to be a reproduction of a photograph by Stoddard of old Alvah standing in the doorway of his cabin on an island in the Eighth Lake of the Fulton Chain. Those who have ever seen him will recognize the figure at once, although the face is hidden in the shadow of his hat. His hound sits by the side of the door and a deer is suspended on a pole near by. He had another camp on Osprey Island, in Raquet Lake, which long ago made way to civilization in the form of a modern cottage. It was this island, by the way, which was named for Mr. Murray, who made the Adirondacks so famous, but when it was changed to Osprey there was nothing left in the whole Adirondack region with which Adirondack Murray's name was connected.

In Stoddard's illustrated lecture upon the Adirondacks he shows on the screen two pictures of old Alvah Dunning, and in this way his face has become familiar to thousands who never saw him. In one he stands holding a ruffed grouse in his hand, and a good picture it is, but to me there is something pathetic in it when I think of all the big game Alvah has killed, and then to be caught by the sun with a little bird in his hand as a trophy of his skill. It is reasonably sure that old Alvah Dunning killed the last moose killed in the State of New York, although this act is sometimes credited to ex-Governor Horatio Seymour.

Four years ago it was reported that a moose had been killed near Long Lake and I asked Mr. C. E. Durkee, then superintendent of the Adirondack Railway, to investigate the matter for me, and he saw Alvah Dunning and Jack Shepherd, found the statement was untrue, and then repeated to me that Alvah killed the last moose, so far as known, over twenty years before that time.

When "Ned Buntline" lived at "Eagle's Nest" on Eagle Lake, Alvah was in his prime, but Ned and Alvah held different views about the manner of killing game, and it came to the point of armed neutrality, and many stories are told to this day about the two men and their scraps. One will be sufficient to relate here, and it is told for the cold truth to the present time. Ned did not believe in hounding deer, and Alvah did, so Ned warned Alvah not to let his hound run over his property at Eagle's Nest and said if he did he would shoot the dog. One day during a blow on the lake Alvah landed with his hound but stood with his legs astride of the dog's neck. Ned asked if Alvah landed for refuge, and Alvah said no; for convenience, whereupon Ned shot the dog from between Alvah's knees. That is the story; but Ned Buntline told me there was not a word of truth in it. He said he warned Alvah, who knew enough to heed the warning. That Alvah was lawless about killing game, and he taught him one or two lessons for his own good. Old Alvah is about the last of the old-time hunters who have lived alone in the woods in northern New York and found sufficient companionship in nature for his needs during the long winters, and "guided" for a living in the summer. That such a man should, after long years of peril by field and flood, come to his death by a fall on the ice such as one might get on Broadway, is one of the ironical phases of fate.

A. N. CHENEY.

#### Ohio Game Birds and Seasons.

The Ohio Fish and Game Commission reports that they were not remarkably successful in the experiment of introducing the English and Mongolian pheasant into the State, the eggs and old birds coming too late. They recommend that the open season on quail, ruffed grouse or pheasant, wild turkey and rabbit, be made uniform, and that the law be so amended as to make the open season on squirrel, snipe, duck, rail, marsh-hen, plover, woodcock, geese and brant, meadow lark and dove, from the first day of September to the fifteenth day of December.

WILLIE WICK.

#### CARIBOU IN AROOSTOOK.

In many parts of Aroostook county, Maine, caribou are found in fair numbers. During the past three years I have spent two weeks or more in Township No. 7, usually starting on my trip the latter part of November. The old Aroostook road runs through this section and the houses (with exception of an occasional settlement) are about four miles apart.

When hunting for caribou in this region it has been difficult to know where to look for them, they would be here to-day and to-morrow quite a distance away. They seemed to be continually going somewhere and never to get there. Many a time have I taken an early start and going east from the house I was staying in and cruised all day over miles of ground, hard-wood ridges and spruce swamps, seeing plenty of signs where my game had been during the past few days, but failing to find a fresh track and returning at night to find that the game I had been looking for had been during the day all through the woods west of the house, and at times almost within shooting distance of it.

The caribou as I have found them in this region were much easier to still-hunt than deer. Many of the local hunters said that they never had any luck trying to still hunt deer, but could generally do well with caribou. A man living in that region who is a successful hunter said to me, "A caribou is the numbest thing we have in our woods." They do not seem to pay any attention to teams on the road, often crossing quite close to them. They would come out in the open fields quite close to the houses. Three came out one day within 150yds. of the house I stayed in, and were shot at four times by a boy before they left; another crossed a field within sight of the house and was followed and killed.

Following a single caribou, however, I have found to be often rather discouraging. A caribou when traveling alone is likely to keep it up for hours, and as they are fast walkers the chances of coming up with one (unless it stops to browse or lie down) are not very good. I have followed and killed two in this way. One I followed about half a day, and was getting discouraged when I came up with him. The second I saw crossing a lake on the ice, and five minutes after it entered the woods I was on its tracks and followed it nearly a mile, walking as fast as I could before getting a shot; of course, when still-hunting caribou, whether singly or in droves, any one has to work carefully. They may not be as wary and constantly on the alert as deer, but they are by no means fools.

Some remarks have been made recently through the columns of *FOREST AND STREAM* regarding the horns of the cow caribou. I have talked with men who I know have seen and killed a great many caribou, and they claim that not over one out of every three of the cows they had seen or killed had horns. My own experience is somewhat different, but I have not seen one caribou where they have ten, although I have seen and shot fully as many as two-thirds of the sportsmen who go to the Maine woods. Of seven caribou I have seen which I know were cows, all had horns. One of them I shot thinking it was a bull. This cow had but one horn and that was quite large (for a cow) with a number of points. Another cow I shot whose head I have, has a very even set of horns, each horn measuring 12in. in length, and eight points on both. A cow I saw soon after it was shot had a very pretty set of horns measuring 14in. in length (each horn), and having twelve very regular points.

Regarding the horns of the bulls, the men stalked with all said that I would not find a bull with a heavy set of horns after Dec. 1, they claiming that they dropped their horns fully three or four weeks earlier than moose or deer. A large bull I saw when on my last trip which was killed about Dec. 5, had dropped both horns and from appearances they had been off for some time.

WINCHESTER, MASS.

C. M. STARK.

#### MORE TALK ABOUT THE .22.

CLAREMONT, S. Dak.—*Editor Forest and Stream:* I have been greatly interested in the recent articles on the .22 rifle. I am not an expert, but I have had some experience and made some shots with these little guns that go a long way in my own mind to prove the "prairie dog shot" of "Diamond Walt" perfectly possible. I once shot what is called here a prairie eagle at a distance of a few feet over 40 measured rods. The bird was standing on the ground, his back toward me. The bullet struck him at the base of the neck. He fluttered around a little after he was shot, but did not have life enough to get on his feet again. He measured about seven feet tip to tip. I shot him with a Stevens rifle and .22 short cartridge; this was ten years ago, and my experience is that the .22 ammunition is of much better quality now than at that time.

Since this discussion has been going on we have been making some experiments with a new model Marlin rifle, (the only good .22 here), the rear sight being a Lyman leaf, we cannot do any target shooting with it over 150yds., but if "Tode" will take his station at that distance and let me shoot at him, I will guarantee he will find the "spot" he tells about so emphatic that one will last him a life time; and that in future he will have a greater respect for a .22 short. We find this Marlin .22 good for jack rabbits, prairie chickens, &c., up to 150yds.

The small rabbits are frequently seen in the streets of our little village, and one day this fall I shot at one over a block (300 ft.) away, breaking his hind leg. This was done with a cheap rifle and .22 short cartridge.

I hope "Diamond Walt" will go East and see Mr. Fellows, for though he may not succeed in putting eight out of ten shots in an Sn. bullseye at 303, one thing he will do will be to convince Mr. Fellows and some others that they are "not on" to the possibilities of a good .22 rifle with the .22 short.

POCKET GOPHER.

APPLETON, Wis., Jan. 13, 1894.—*Editor Forest and Stream:* Gentlemen, I have been an interested reader of the .22cal. controversy and am surprised at the widely different results reported in this week's issue. "Plainsman" speaks of the poor penetration of the .22 short. There must have been something wrong with gun or ammunition. I have been doing a little shooting with a .22cal. target pistol, "Stevens diamond model," 6in. barrel, with U. M. C. short cartridges. I can hit the bullseye sometimes, and could oftener if I could hold as well as the pistol shoots, but as for penetration, every bullet shot goes right through two inches of white pine, and half at least of them will be buried in a plank behind the target at a range of 60ft. Penetration enough.

C. V. Y.

# SUCCESS IN BREEDING QUAIL.

Editor Forest and Stream:

IN the month of November, 1892, I procured two pair of quail and put them in an ordinary packing box 2x2ft. and about 6ft. in length. Wire cloth was put in one end and in two places on the side, so that the birds could not at any time get out of sight. This box was kept during the winter in a woodshed adjoining the kitchen, and some member of the family was continually passing back and forth before the birds, and a pair of small bantam pullets were put in with them. The quail at first were very wild and were continually dashing about the box whenever any one approached. Before the winter was over they became much quieter, and would at times pick up some of the feed while it was being thrown to them. When the fine spring weather came I had a nice poultry run constructed with poultry netting. This run was 12x6ft., with an addition 6x4ft. closed in and roofed over.

The birds got along very nicely and in June commenced to lay. After they had laid six eggs a weasel got in during the night and killed the two quail hens and badly wounded one of the male birds. The eggs were put under one of the bantam hens, which faithfully attended to her duties; the cock quail meantime standing sentry and promptly taking her place on the nest whenever she came off to feed. Four of the six eggs were fertile and hatched out in due season. The young birds were fed at first with hard boiled eggs chopped very fine, followed later by all manner of feed. But I found later that in the way of grain or seeds, timothy seed was their special delight; and in other kinds of feed grasshoppers were greatly relished by them. The young birds would fly up 5 or 6ft. to take the hoppers from the hand.

These birds are now full grown, very large, with beautiful plumage and as tame as chickens, and if hungry will assail you with a chirping call plainly asking food; and when their wants are attended to they will continue to give evidence of their pleasure and satisfaction.

The poultry netting first used by me was 1 1/2 in. mesh and it was through this that the weasel gained access. To prevent a repetition I again covered the run with 1/2 in. netting, and if I had it to do again I would use 1/2 in. mesh.

I hope to be successful in raising a larger number next season and, of course, will require an enlarged run. If my expectations are realized I will cheerfully give your readers an account of my success with any additional information that may be attained during the coming season.

ALLAN DUNCAN.

WYOMING, Ontario.

## Long Close Seasons on Quail.

MR. W. B. MERSEON sends us this interesting note on the Michigan three years' close season on quail: "As to the success attending the three years' close season on quail, I can say that to some extent it is a matter of speculation. There is no doubt that at the beginning of the close season quail were very scarce in Michigan, and it is an undisputed fact that at the termination of this period they were extremely plentiful. I remember no time when there were so many. I have hunted quail in Carolina, Virginia and in the Western States, and never found better shooting than we had here at home a year ago this fall. But there were no quail worth speaking of last year, and the question arises, was it because they were allowed to be shot off? I do not believe the number the sportsmen killed has much to do with it. A covey here and there are cleaned out by them, but there are thousands of coveys that never have one of their number killed by sportsmen, yet they entirely disappear in the spring. The fact is that during the three years that they were protected we had open winters one after the other; very little snow, a great deal of the time warm; and none of the birds were winter-killed. Yet the winter one year ago was unusually severe, probably the hardest winter we have had in ten or fifteen years. The result was that the birds that were left over after the shooting season closed were winter-killed. That is about all there is to it. With several open winters in succession, we can depend on it that quail will increase; but no matter how many birds there are left at the end of the shooting season, if we get a hard winter like we had a year ago 90 per cent. of them will disappear.

"I believe they will do well this winter. We have had very little severe weather, and I would not be surprised to find them in abundance when the season opens next November.

W. B. MERSEON."

## A Louisiana Quail Country.

NEW ORLEANS La., Jan. 13.—I note in your issue of to-day "W. L. B." wants information regarding quail shooting near New Orleans. He can find as good a quail country as any in the Union in the parishes of Iberia, Vermillion, Lafayette and St. Landry. Should he desire large bags I am sure that he can find his wants in the vicinity of the pretty little town of Abbeville, the parish seat of Vermillion parish, situated on the Abbeville & Vermillion R.R., a branch of the Southern Pacific at New Iberia, the distance from New Orleans being 145 miles, or about five hours. I am just from that section and learn that quail were never known to be so plentiful. I can safely predict that if friend "W. L. B." will consent to making the trip and get a good guide (there are many there, and thorough sportsmen at that) he can kill from 75 to 100 quail a day, and if the weather be favorable he could bag equally as many snipe.

Quail about Abbeville have been shot at but little this season owing to the enormous crops that have kept every one busy, and those who did hunt have shot the mallards in preference, and how they did slaughter them.

Should "W. L. B." decide to make the trip I will give him all the information necessary, with letters of introduction, etc., and if my health permits might join him for a day or two.

A. CARDONA, JR.

## Italian Laborers and the Quail.

DONALDSONVILLE, La.—The game here, such as deer, rabbit, duck, dove and bear, is fairly plentiful, but we have hardly any partridges. Planters have been employing large quantities of Italians, and during the summer they hunt the partridges in the roads as they are rolling in the dust. All plantations are cut up on each side of all roads with large canals, and by getting in and following those they can crawl up almost on their quarry. The birds are consequently being gradually destroyed. The planter takes no interest whatever in the preservation of the game.

A. G.

## That New Jersey Deer Drive.

GENESE, N. Y.—Editor Forest and Stream: I've shot a deer through the back of the head while it was in the water and I'll never do it again. I've let the life blood out of the throat of a poor little spike-horn after both its front legs had been smashed by a big bullet from my old Snider carbine, and had the poor little brute look right up in my face and *ba-a!* and I've done sundry other mean things that I'll never do again, and only hope to be forgiven for them. But if ever I am guilty of taking part in the chasing for two whole days of one little 90-pounds doe by fresh relays of dogs in an open country, as was chronicled by "F. S. J. C." and "J. H. W." in last week's FOREST AND STREAM as having occurred at Port Elizabeth, N. J., in December, I simply won't think of forgiveness either of the Almighty or the readers of FOREST AND STREAM.

I am not a kicker and hate to find a jangle going on in our FOREST AND STREAM camp, but I can't keep quiet this time.

The men who took part in that race were not sportsmen, and the account of it was not worthy a place in the columns of FOREST AND STREAM.

LA CARIBOU.

Editor Forest and Stream:

In a recent number of FOREST AND STREAM is an account of "A Deer Hunt in New Jersey;" a graphic story of an exciting chase ended by the pulling down of the deer. I am not ashamed to confess that my sympathies were with the deer throughout, and it would have been very pleasant to read that the innocent little creature at last escaped. No doubt if opportunity had offered, I would have been an enthusiastic member of the party, without a thought of anything save the capture of the deer, but after the hot blood of the chase had cooled, it would not be a pleasant memory, for then the fright and suffering caused the deer, would have forced themselves forward and would not down. For this reason I have long ago quit chasing game with dogs.

No doubt lovers of the chase will argue that it is no more cruel to capture game with dogs, than with the gun, death comes, as a rule instantaneously and almost painlessly, while in the chase, the agony of fright, and desperate effort to escape, is often prolonged for hours, and in the case cited, for days. It must be admitted that there is an element of cruelty in all field sports. Most of us are in fact more or less ashamed of having enough of the savage in us to want to kill something, and we compromise with ourselves by killing only such things as we or some one else likes to eat. If it were not for easing conscience in this way, it would be just as much sport to shoot blackbirds, as snipe or wild pigeons, yet there are thousands of ardent sportsmen who would scorn to shoot a blackbird, or any other harmless bird unfit for food.

The cruelty in shooting, is wounding game that is not finally captured. I confess admiration for the man who will lose an hour of good shooting, in order to find a wounded bird. It requires self-denial at the time, but a good reward comes, when warmly tucked in bed, the shooter reviews the particulars of the day, and don't have to remember the bird that went off with a leg hanging down, and was not found again.

O. H. HAMPTON.

WILLIAMSBURG, Ind., Jan. 18.

## Nebraska Close Season Shooting.

HASTINGS, Neb., Jan. 16.—Now that the close season is upon us one would naturally expect that the guns great and small would be laid to rest, but as far as my observation goes they are as active as ever. In every town I have visited so far I have seen men starting out, gun in hand, and the inference naturally is that they do not all go after rabbits. By the way, has the State of Nebraska any game laws? My copy of *Game Laws in Brief* says it has. If that, however, is a mistake, please count me in as a candidate for the prize for errors.

While in St. Louis, I saw a wonderful profusion of game of all kinds even for that large game market, and all through the residence portion of the city, men were carrying game for sale at extremely low prices; quail were offered as low as \$1.15 per dozen. As both quail and chickens that were openly offered for sale on the streets showed no shot marks, I infer that a great deal of trapping is going on in that vicinity. This I know, as I ate some of them myself.

Up to date the winter has been remarkably mild, with scarcely any snow, and consequently the prospects for game next season are particularly bright. That is, if the pot-hunters I see daily leave enough for seed. No one, however, seems to take enough interest in the matter to stop it. Are the sportsmen of Nebraska asleep? Something should be done and that quickly or the profusion of feathered game on its broad prairies will soon be like the deer and antelope, but a pleasant memory of the past.

I see from the report of the Fish Commission, that during the past year something like 17,000,000 fish and fry were planted, but from observation I believe it to be a waste of time and money. Fish are seined out faster than planted in all the waters of the State, and no effort seems to be made to stop it, at least I have never heard of a prosecution, and evidence could easily be obtained in any town near water containing fish. The violators of the law as a rule openly boast of their catches.

W. R. H.

[The *Brief* gives the law if not as now "in force," at least as it is on the statute books.]

## Note from the "Saginaw Crowd's" Winter Retreat.

SAGINAW, East Side, Mich.—Game Warden Stone has been stirring up the marketmen here. Recently we made a seizure of fifty-four birds, partridge and quail, the majority of the latter seeming to be snared birds. At Green Brothers' fish market he unearthed a lot more. I do not know how many, but there must have been a dozen or more ruffed grouse.

The "Saginaw Crowd" won't have to go away from home another year. There was an account in our last week's paper of the killing of two wildcats and three bears by a party of four farmer's boys at Lee's Corners. This is only twelve miles from Saginaw. It seems that they were following the track of a wildcat made in the fresh snow that finally led them to a big windfall, which proved to be the hiding place, or winter quarters, for a bear and two cubs. As the wildcat was hotly pressed he stirred up the bear, who in turn was stirred up by the doughty hunters. I do not think this is a fairly tale, for the meat market was adorned with the carcasses of the three bear and the Mossback went home with forty odd dollars in his inside pocket.

W. B. MERSEON.

## Old and New Style Shooting Matches.

JERSEYVILLE, Ill., Jan. 5.—Members of our gun club and other sportsmen in this part of Illinois, are rejoicing over the beautiful weather we have had this fall and winter up to date. No snow, sleet, heavy rains or cold; it is warm and more like May than January. It insures an abundant yield of quail for the coming season, should it continue. One violator of the game law has come to grief here for offense, shooting four quail out of season. He was arrested and taken before Squire Erwin and fined \$20 and costs, amounting in all to \$29.45. It will probably be some time before he sits down to such an expensive dish again. Many of our shooters have been enjoying the good old-fashioned holiday sport of our fathers called "turkey shooting." It has been the custom since I first came to this country, when a boy in 1840, or rather something similar. In the old times beaves, hogs and sheep were shot for, but only with rifles. The natives had no use for the "scatter gun," as the shotgun was then called. Forty yards off-hand and sixty with rest, closest lead to the center. Many a time have I seen the "swallow fork" cut as accurately as though done with a center bit. But now the tables are turned; the rifle here is laid aside and the shotgun is used, turkeys are substituted for beaves, the distance from the targets is 35 and 40yds., dust shot is the size used, and the man that does not get one of these pellets within 1/4 in. or less of the center, is not likely to have turkey for his dinner unless he buys one from his more fortunate neighbor. A match of this kind came off yesterday a few miles east of town. The boys report having a good time along with fair success, and that their turkeys did not cost them more than twice as much as they could have bought them in the market at home for.

L. S. H.

## A Tariff Discourager on Guns.

ANN ARBOR, Mich., Jan. 12.—Editor Forest and Stream: Some months ago I wrote Chairman Wilson of the Ways and Means Committee, asking that he consider a proposition to place a tax on firearms and ammunition. I note that Senator Voorhees advocates such a tax and will probably offer an amendment to the revenue list to that effect.

It seems to me that such a tax would greatly benefit the sportsmen of the country in conserving game, and the community at large in limiting the reckless use of firearms. The fact cannot be gainsaid that for the country at large game is a luxury, and no one should grumble at paying a reasonable price for the privilege of its pursuit.

I have advocated in letters to the aforesaid legislators a tax as follows: On all single-shot guns, rifles and pistols, a tax of \$15 each. On double-barrel guns \$20. On repeating guns and revolvers \$25 each. On ammunition one cent for each shell. The tax on ammunition would of course have to be placed on powder, shot, balls, etc.

There would be some little difficulty in arranging this tax, but nothing insurmountable. The finer grades of powder for pistols and rifles would have to bear several times the tax of the coarser shotgun powders if the one-cent-a-shell tax was to be carried out.

I can see nothing but good from such taxes, so far as the community at large and the sportsmen in particular are concerned. It would doubtless cut down the sale of arms and ammunition, and so work ill to manufacturers. But here, as elsewhere, the good of the many is the first consideration. We have a few factories making fine arms, we have thousands of sportsmen, and above all, we have a fast decreasing game supply.

CHAS. T. MCCLINTOCK.

## Vermont Small Game.

SPRINGFIELD, Vt., Jan. 6.—The open season on ruffed grouse closed last Saturday. The birds are in excellent condition, owing to the abundance of beech-nuts here; and there is a fine prospect of their wintering well, for the weather is very mild thus far and the snow has nearly all disappeared. On going into the woods I find the snow covered with gray squirrels tracks, which shows that the wily gray fellows will be plentiful next fall. By the way, I have been much interested in the many accounts of gray squirrel shooting in your columns, and I would like to give an idea of the facilities we offer for this exciting sport. An hour's ride in any direction from this town will bring one into splendid shooting grounds. Especially is Skitchenaug Mountain, which runs for several miles parallel to Connecticut River, a haunt for the sly beauties. On the sides and top ridges of this mountain one reaches the "forest primeval." Here, on a bright frosty morning of September or early October, as the hunter steals along the winding woodroad or scrambles over ledges and mossy logs and breathes deeply of our pure mountain air, he will find sport that will make his nerves tingle and his heart beat fast.

Let the hunter stay a week at any of the beautiful farms which spread their meadows between the base of old Skitchenaug and the broad Connecticut. The mountain is big enough so that he won't need to spend two days in one place, and if he is worth a little bit, I can guarantee him some royal sport. The best bag taken out of the woods this fall was of twenty-nine in one day by Mr. M. B. White and the writer.

W. W. BROWN.

## East Side Rod and Gun Club.

STAMFORD, Conn., Jan. 18, 1894.—At the annual meeting of the members of the East Side Rod and Gun Club, of Stamford, Conn., the following officers were elected for 1894: Edw. W. Ricker, President; Dwight Waugh, Vice-President; Harry F. Devens, Treasurer; John R. Kinsey, Secretary. Directors: A. W. Sibley, Nathan Olmstead, Charles E. Thompson. Amusement Committee: Henry Oothout, J. D. Goulden, A. S. Pitt. After the election the members present enjoyed a fine supper prepared by the club steward.

J. R. KINSEY, Sec'y.

## Sportsmen's Association of Cheat Mountain.

PITTSBURGH, Jan. 16.—At the meeting of S. A. of C. M., held Jan. 15, the following ticket was elected: President, W. M. Kennedy; Vice-Presidents, W. K. Shiras, W. S. Edwards, D. M. K. Lloyd, Utiles Baird, Nathaniel Ewing; Secretary, Theophilus Sproull; Treasurer, D. P. Corwin; Naturalist and Surgeon, Dr. J. W. Riggs; Board of Directors (seven to elect), W. G. Brown, Dr. Jos. N. Dickson, A. P. Tallman, S. B. Elkins, C. C. Scaife, Geo. Shiras, III., H. P. Pears.

## News from Chicago.

CHICAGO, Jan. 13.—Notwithstanding that this and all the outlying game States have close seasons now in force and nearly all have now export game laws, the game supply is so abundant in South Water street, in Chicago, that it is a drug in the market. The illegal traffic seems to be without any check. Prices are quoted openly. In to-day's (Jan. 13) *Tribune*, prices are quoted cheaper than domestic fowls, as follows: "GAME—Mallard and redhead ducks, \$2.25 to \$3 per doz.; small ducks, \$1 to \$1.35; teal ducks, \$1.75 to \$2; plover, \$1.25 to \$1.50; jacksnipe, \$1.25 to \$1.60; fine dark prairie chickens, \$3 to \$3.50; quail, \$1.25 to \$1.90; antelope saddles, 9 to 10¢ per lb.; venison saddles, 11 to 11½¢ per lb.; jack rabbits, \$1.50 to \$3 per doz."

Some officers of the National Game Bird and Fish Protective Association had a conference Saturday, Jan. 13, with the State Fish and Game Warden and some prominent sportsmen, in respect to taking measures to enforce the game laws. It was stated that the Monday and Wednesday previous, consignments of fish from Fox Lake to a south Water Street firm had been made, and fishing in that lake in violation of the law is reported. A committee of three was appointed to secure evidence and prosecute, a large fund having been raised for that purpose. Messrs. M. R. Bortree and T. S. Baird were the representatives of the National Association at the conference. There will, in the near future, be a similar conference in Milwaukee, to enforce game protection in Wisconsin. B. WATERS.

## Mr. Hedges's First Deer.

MR. CLARENCE E. HEDGES, of Rochester, has of late been entertaining his guests with a deer story; and to substantiate it he has for office adornment the fine Adirondack buck, mounted in lifelike attitude, killed by him in 1893.

## New York Game and Fish Protectors.

J. WARREN POND, Chief Game and Fish Protector, headquarters Capitol at Albany; home address, Malone. JOHN LIBERTY, Clerk, office Capitol at Albany.

- First District—ROBERT BROWN, JR., Port Richmond.  
 Richmond, Kings, Queens and Suffolk counties.  
 Second District—WILLIAM KIDD, Newburgh.  
 Orange, Rockland, Westchester and New York counties.  
 Third District—MATTHEW KENNEDY, Hudson.  
 Rensselaer, Dutchess, Columbia and Putnam counties.  
 Fourth District—ISAAC KENWELL, Indian Lake.  
 Hamilton and all of Essex lying south of a line drawn from the southeast corner of Franklin county, east to Port Henry on Lake Champlain.  
 Fifth District—BYRON A. CAMERON, Ray Brook.  
 Franklin, Clinton and all of Essex lying north of a line drawn from the southeast of Franklin county, east to Port Henry on Lake Champlain.  
 Sixth District—JOHN HUNKINS, Hermon.  
 St. Lawrence, except the town of Hammond.  
 Seventh District—FRANK JOR, Boyd.  
 Lewis and all of Herkimer lying north of the towns of Russia, Ohio, and all of Oswego north of a line drawn from Pulaski to the northwest corner of Oneida county.  
 Eighth District—JOHN FIELDS, Middleville.  
 Fulton, Montgomery, Schoenectady, and all of Herkimer lying south of the north line of the town of Russia and Ohio.  
 Ninth District—SHERMAN F. SYDER, Davenport.  
 Delaware, Sullivan, Broome and Tioga counties.  
 Tenth District—HARRISON HAWN, Cicero.  
 Oneida, Madison, Cortland and Oswego, from Pulaski to the northwest corner of Oneida county district.  
 Eleventh District—JOSEPH NORRUP, Alexandria Bay.  
 Jefferson and the town of Hermon in St. Lawrence county.  
 Twelfth District—HENRY C. CARR, Union Springs.  
 Cayuga, Seneca, Wayne and Tompkins counties.  
 Thirteenth District—PENN. YAN.  
 Yates, Schuyler and Ontario counties.  
 Fourteenth District—GEORGE M. SCHWARTZ, Rochester.  
 Monroe, Orleans, Wyoming, Genesee and Livingston counties.  
 Fifteenth District—CHARLES HIXSON, Youngstown.  
 Niagara, Erie and Chautauque counties.  
 Sixteenth District—JAMES McMILLIN, Broadhead Bridge.  
 Ulster, Greene, Albany and Schoharie counties.  
 Seventeenth District—CHARLES H. BARBER, Greenwich.  
 Warren, Washington and Saratoga counties.  
 Eighteenth District—ENNAM BRANSFORD, Cooperstown.  
 Otsego, Chenango and Oneida counties.  
 Nineteenth District—CAMERON COTTON, Bath.  
 Chemung, Steuben, Cattaraugus and Allegany counties.

## Game and Fish Bills at Albany.

[From Our Special Correspondent.]

ASSEMBLYMAN HENNESSEY has introduced an amendment to the game law so that section 47 shall read: "Crusting, Yarding and Jacking. Deer shall not be hunted, killed or captured by what is commonly known as crusting, nor while they are yarded; nor shall they be hunted, shot at, killed or captured by what is commonly known as jacking or floating, or hunting deer with lights, in order to lure them or attract their attention."

Assemblyman O'Reilly introduced an amendment to the game law as, in section 36, to give protectors power to serve subpoenas issued for the examination, investigation or trial of all offenses against the law; also, section 33, providing that only the actual expense of seizure of nets shall be a county charge; also, that special protectors shall have \$3 a day for the time actually spent, and not to exceed \$100 in any one year in any one county, exclusive of expense, all of which shall be a county charge; also, section 49, including hares with rabbits as to the close season; also, section 244, allowing courts of special sessions in towns and villages, and the several city courts having jurisdiction over misdemeanors to have jurisdiction of all offenses committed within the county where said courts are held, in the same manner as though the defendant had been taken before a magistrate of the town where the offense was committed.

## Concerning "Forest and Stream."

It is hard to make ends meet but I must have the paper.—P. (St. Paul, Minn.)

Inclosed find \$1 of Uncle Sam's hard earned cash. Don't know where I can get more comfort out of it than to send it to you for he "F. and S." for 3 months. May your shadow never grow less.—A. F. O. (Kankakee, Ill.)

I think if some of your writers who are so down on the game hog, out of season shooters and pot-hunters, would make a present to the said undesirable people of a year's subscription to your paper, we would hear less of this objectionable class.—J. B. P. (Granby, Que.)

I think the last number for the month of December the most excellent of all the "good ones" for the past two years. Long may the nimble chronicler of Antwine's "true stories" and the perfect revealer of New England's peculiar shrewd wit and wisdom in homeliest phrase, continue to write. I believe Cable has revealed the Creole type as Miss Murfree has that of the mountains of Tennessee. But Mr. Robinson touches things I know and have heard the like of repeatedly, and is doing equally good work not only from the sportsman's but also from the literary standpoint. No more welcome guest comes to us in type than your paper, and I wish to express my personal and growing appreciation of its increasing excellence.—D. A. J. (West Winsted, Conn.)

The powder test report by Mr. Tenner, the expert, is very interesting and is worth more than the yearly subscription price of your valuable publication, the "F. and S." to every sportsman.—A. G. (Bozeman, Mont.)

## Sea and River Fishing.

## SUBTERRANEAN WATER RIGHTS.

IN the Circuit Court of Ohio for the Sixth District a decision was handed down this morning which will be of wide interest, not only to anglers and fishcultivists in this State but in the entire country. The case was reserved for decision in Toledo from the Circuit Court sitting at Sandusky, to which court it came on appeal from the Court of Common Pleas of Erie county, and is entitled "The Castalia Trout Club Co. vs. the Castalia Sporting Club Co. et al." The facts, briefly stated, are these:

The plaintiff company, duly incorporated under the laws of the State for the purpose of fishing and propagating fish, etc., is the owner of the head springs and pools of Cold Creek and the waters flowing therefrom through their own grounds and the grounds of the defendant company and thence into Sandusky Bay. As is well known, the stream formed from the outflow of these springs is peculiarly adapted to the propagation and growing of brook trout, having a temperature at its head of 53° winter and summer, and in the last few years it has afforded the finest fishing for these and other varieties of the *Salmo* family. The members of Castalia Club Company, known from its location on the stream as the "upper club," are largely residents of Toledo and Sandusky, while those belonging to the Sporting Club Company are principally residents of Cleveland, and this organization is locally recognized as the "lower club." The latter company, it should be added, is also incorporated under the Ohio laws for purposes similar to those of its neighbor.

Nearly three years ago the plaintiff in this case (the upper club) acquired the ownership of a piece of land adjoining the natural course of that part of the stream owned by them, and proceeded to construct upon it a winding stream or channel, which carried the water over a circuitous course some three and a half miles in length before delivering it within the grounds of the lower club. In February, 1892, the latter sunk a large artesian well on its grounds a short distance below the boundary line, and the result was an enormous flow of water which lowered the pool on the premises of the upper club (known as the "Blue Hole") eleven inches, as was alleged. The upper club thereupon filed a petition for a perpetual injunction, alleging that the water issuing from the artesian well of the lower club flowed directly through a natural underground channel from the upper springs of the stream, and claiming that the defendants had no right to divert such stream from its regular channel. In their cross petition the defense alleged that they had no intention of injuring the property of the plaintiff, but that the act complained of was done simply to promote their own interests; but they further asked the court to perpetually enjoin the upper club from diverting the water into what is known as the "meadow stream," alleging that not only was the volume of water delivered to them materially lessened by such diversion, but that its temperature was so much raised by the prolonged exposure consequent upon its circuitous course as to make it practically unfit for the purpose of propagating or growing trout.

The court, all the judges concurring, granted the prayer of the plaintiff for a perpetual injunction restraining the defendants from digging other wells, and announced that it would also issue a mandatory injunction requiring the defendant to close the well already bored by Feb. 24 next. It also declared that it found no grounds for interfering with the "meadow stream," so-called, inasmuch as it did not materially affect either the volume or temperature of the water passing through it. It is probable that the case will go to the Supreme Court on error.

Messrs. Clarence Brown, of Toledo, and E. B. King, of Sandusky, appeared for the plaintiff, and Messrs. E. D. Potter, Jr., and Judge Ingersoll, of Cleveland, for the defendants. JAY BEEBE.

TOLEDO O., Jan. 20.

## ANGLING AND DOMESTIC FELICITY.

Editor Forest and Stream:

The straightforward good sense of Mrs. Tomlin's letter in your issue of Jan. 13 is worthy of serious consideration. Without saying much about it, men are aware that there is room for improvement in the matter of domestic felicity. The discussion whether "marriage is a failure" or not is proof of this. Now some of the most successful matrimonial alliances I have known have been the result of sympathy of interest in outdoor sport and recreation. I have in mind a charming couple who have for many summers whipped the streams of Canada together, shared the rough and smooth of camp life in the wilderness, and seemed to grow nearer and dearer to each as other the years passed by.

The husband is one of the most genial and companionable of men; full of wit, humor and good nature, a man among men and one of those men who "hate contentions and love quietness, and virtue, and Angling." The wife is a strong and helpful woman, delightful in conversation, kindly in heart and brilliant in social graces. What more could one ask? These may have been natural gifts, but one cannot help feeling that their coming close to nature's heart had at any rate enhanced their lovableness.

Like most men who find consolation for the ills of life, and inspiration for duty and work "by field and flood," the writer has tried "his princely hand" on making "fishin' wimmin'" with more or less success. He believes that it is entirely within the range of possibility to make "compleat anglers" out of the majority of American women. You cannot get the love of outdoor sports into some men any more than you can get a joke into a certain class without a surgical operation. It is a matter of moment that the high-strung, nervous and somewhat delicate American woman should find somewhere a source of recuperation. She is overtaxed with work, and household cares and the rearing of children, but especially with the constant demands of social intercourse. It is no great wonder if under this constant strain she grows nervous and irritable. The wonder is that she remains as helpful and charming as she is.

Perhaps if the majority of men were asked why marriage is not more successful they would lay the blame on the nervousness of women. However unjust this may be, there is something in it for women as well as men to consider.

Will not outdoor sports, which mean so much of recu-

perative force to men, act as a palliative to this demon of nervousness?

All hail to the bicycle riding, rod and gun handling sisterhood!

I write to advance the love of sportsmanship among women not only as better than pills and sarsaparillas for tired nerves, but because field and stream and camp open up such rare delights which cannot be found otherwise.

There are some things worth remembering. Patience is the first virtue in angling, good nature the second. Patience in a fishing sense means that calm determination to abide the fish's pleasure about biting, to endure a little fatigue, sometimes mosquitoes and a hot sun, and even an occasional and unintentional bath when the treacherous rocks "cause our feet to slide." Good nature means cheerfulness under all these petty annoyances and the other ills that only give zest to enjoyment if one will so look at them.

The minor details, such as baiting the hook, handling the rod and reel, playing the fish, landing and removing the hook, are very easily learned if a modicum of this patience and good nature are applied.

It is to be hoped that we shall hear more from "fisherwomen" in the pleasant pages of FOREST AND STREAM.

J. H. LA ROCHE.

## LANDLOCKED SALMON IN SEBEC LAKE.

WITH hardly an exception, those who have fished for ouananiche in the Lake St. John region arise and say as one man that there is no fish on earth like their fish, and no sport like their sport. This may be so. There are so many witnesses that it would seem as if it must be so, and yet it is difficult to understand why the landlocked salmon, which is at least morphologically identical with the winnisch, might not afford as good sport in Maine as in Canada, the conditions being the same.

The conditions seem to be that the fish shall be taken from boat or shore, in swift cold water, with tackle light or heavy, according to the angler's fancy. Such conditions obtain very early in the season, when the ice has just gone out, and to a certain extent during the month of June and September, at the inlet to Sebec Lake, in Piscataquis county, Maine. This lake is twelve miles long and about four miles wide in its widest part. It is surrounded by high hills and mountains all heavily wooded. There are very few clearings on its shores. Its principal feeders are the Wilson Stream and the Ship Pond Stream. About half a mile above the mouth of the Wilson there are falls and, alas, a spool mill, and something less than a quarter of a mile above the mouth of the Ship Pond Stream there are also falls. Below these falls on both streams are rapids, and in these rapids the fish are taken in early spring. Fish may also be taken at times by trolling in the lakes about the mouths of the streams from the time of the spring run until the first or middle of June. After the June rise and in September the salmon may be found in the Ship Pond Stream at certain places, particularly at Cow Yard Falls and the Salmon Pool. It was in the latter locality that an incident once occurred where the punishment seemed to fit the crime.

When the C. P. R. R. was being built some Italian laborers came down the Ship Pond Stream to dynamite the salmon pool. One charge of dynamite had been exploded, and just as another was thrown in an Italian waded in after the salmon which had been killed by the first discharge. Dynamite worked the same on the Italian as on the fish, so they took him out and buried him right there, but neither his grave nor his ghost seems to prevent an occasional repetition of his deed. Last fall the pool was dynamited and scores of salmon were left to rot on the banks of the stream. The salmon of Sebec Lake seldom attain a weight of more than 6 lbs., though occasionally one of 7 or 8 lbs. is taken. An average catch will weigh something better than 3 lbs. apiece.

When the salmon first come up out of the deep water in the spring they are very dark and have a greenish cast, but after having been in the quick water for a short time they change to a silvery white color on the sides and belly; the black markings come out in clear relief and they become much harder fighters. The fishing season opens just as soon as the ice goes out of the lake. At this time the smelts run up to spawn, and the salmon seem to follow them. At all events, they appear in the quick water together and go away together. The run usually lasts about ten days.

At that season of the year it is customary to use bait, although I have no doubt that a patient trial of the fly would be rewarded by a certain amount of success. The best bait is a shiner from two to three inches long. In my opinion it is best to hook the bait through both lips, on a No. 6 sprout hook at the end of a 9 ft. single gut light salmon leader, without any sinker, or with only a single duck shot on the snell.

I then let out from 75 to 150 ft. of line and allow the bait to go pretty much where the rapids and eddies carry it. The best of tackle is indispensable to success, and under the most favorable conditions one must expect to lose some fish.

In June and September there is some excellent fly-fishing on the Ship Pond Stream, particularly at the localities above mentioned. There is the usual difference of opinion as to the "most killing flies," but I think it is generally agreed that the dark Montreal, cowdung and professor are among the best. Personally I have had the best success with the dark Montreal, probably because I have used it most.

Sebec Lake may be reached either from Dover or Abbott Village. From Dover one goes by private conveyance five miles to Blethen's Landing, and then takes one of the little steamboats to go up the lake. From Abbott Village there is a daily stage to the head of the lake, leaving Abbott about 11 A. M.

There is a hotel at the head of the lake, where plain, homely fare may be obtained at a dollar a day. There are also a set of sporting camps about two miles down the lake, but I do not know what the charges are. Guides and boats are scarce, although not expensive, about \$2 a day being thought a good price for a boat and boatman.

As regards the size of catch one might expect, I can only say that it all depends on circumstances. Three years ago my catch was 45 lbs. dressed weight; time, two and one-half days. Two years ago a friend of mine and I took 85 lbs. of dressed fish in three days. A year ago I caught 27 lbs. in one day, and then unfavorable weather came on and no more fish were taken for several days. These figures refer to the early spring fishing. On the stream in

June and September one can hardly expect to catch as many.

I do not wish to be understood as intending to compare Sebec Lake to Lake St. John. Sebec Lake is a very small place and the fishing grounds are limited, but the anglers are likewise few, and the expense of the trip small, a consideration which unfortunately has some weight with many an honest angler.

F. S. BUNKER.

## ANGLING NOTES.

### Growth of Planted Land-locked Salmon.

MY note about planting Lake George, N. Y. with land-locked salmon, in *FOREST AND STREAM*, Dec. 30 last, has been the cause of a number of queries that have come to me since that issue of this journal. Chiefly I have been asked how old and how big "fingerlings" were; how soon after the salmon were planted in Lake George would they be large enough to catch; why landlocked salmon were called ouananiche, and what the word meant; and some other questions that no man on earth can answer unless he can look into the future further than the human eye can see, even with a heap of right smart guessing as an aid.

The salmon that the U. S. Fish Commissioner called "fingerlings" in the extract quoted from his letter, will be from ten to thirteen months old depending upon the time that they will be planted and also upon whether their age is reckoned from the time the eggs are taken or from the time they are hatched. The eggs were taken last autumn and are now being hatched at the salmon breeding stations of the U. S. Fish Commission in Maine. When hatched the fry will be reared at the station, until sometime next summer or early fall when they will be brought to Lake George in one of the fish cars belonging to the Commission, and planted in trout streams tributary to the lake. In size they may be from four to over six inches in length, depending upon the food they may get and the time they are planted. A lot of fingerlings of the same age will not be of the same size, for some grow fatter than others. I planted one lot of fourteen-months-old *salar* that had been hatched in the same troughs and reared in the same ponds and they ranged in length from about 3½ in. to 7½ in. as the extremes.

As to the time that salmon, planted this year in Lake George, will be large enough to catch, I prefer to state what had been done in other waters under somewhat similar conditions in the way of growing them, instead of speculating on my own account as to the future of salmon not yet planted.

I have mentioned Sunapee Lake, N. H., as water in which landlocked salmon have become established from plantings of fry. A few miles from Sunapee on a different watershed in the town of New London, is situated Pleasant Lake, a body of water about two miles long, spring fed and from 80 to 100 ft. deep. Two years ago last spring trout and salmon fry from the Sunapee Hatchery were planted in Pleasant Lake, and last fall the men from the hatchery were sent to Pleasant Lake to see how the fish were growing. They took spawn from brook trout 3 lbs. in weight and found landlocked salmon up to 6 lbs. in weight. Please remember that this growth was accomplished in two and a half years time from the date that the fry were planted.

### Lake Pleasant.

Dr. Quackenbos wrote me very recently about this lake, and I must quote from the letter:

"Lake Pleasant is 805 ft. above the sea, very deep, clear and cold, so phenomenally adapted to the ouananiche. Large brook trout were native to its cold solitudes, and a knowing few still capture these incarnations of symmetry and celestial dye, but wisely keep their own counsel. Lake Pleasant has the requisite depth of 100 ft., the necessary extent of territory, the appropriate cold temperature, inflowing streams abounding in vegetable and animal organisms, and what is most essential, an interested and vigilant body of land owners, who have awakened to the fact that the success of their efforts to stock this charming lake will convert their chateaux into profitable boarding houses and make the picturesque hamlet, heavened among the pines at its foot, the seat of select hotels.

"Scytherville may have lost her prestige as a manufacturing village, but a grander future awaits her if Pleasant Lake, which is the pride of her people, shall become the home of the landlocked salmon, superlatively the finest game fish in the world.

"So I predicted two years ago, and I referred to Sunapee as a precedent. The stocking with black bass brought a large but job-lot contingent to its shores who cared for little else than meat. There was one among them, and you know who he was, who raised the Isis veil and beheld the nature goddess in all the details of her beauty and infinity of her powers, who looked beyond the bass at the bare-bosomed Sunapee herself, who felt her mysterious personality and who preached her charms to friends until he brought hundreds to her shrine.

### Best Fishes Draw Best Society.

"I contend that not until the fishes were refined to the extreme—until ouananiche and saibling were introduced—did the most refined element of society seek the 'Shores of Rock.' I contend that they only were capable of loving aright. The ouananiche beckoned them, they came, they felt that unearthly mental calm and heavenly content, they loved and the cultured alone can love—at first sight and forever.

"But you will sicken of poetry, you want facts. Yet Aristotle says poetry is truer than history, and so it is—it is all soul fact, soul utterance of eternal truth.

"In Lake Pleasant the ouananiche breakfasts, lunches and dines on smelts, and takes smelts between drinks. In consequence he grows rapidly; no other fish grows so fast with food. We know to 5 and 6 lbs. in two years and a half from the egg. Twenty such were viewed by Cheney and Sargent as they crawled through the underbrush to a 'hole' in one of the inflowing streams.

"Ouananiche of such size in companies of twenty after two and one-half years, and ready to reproduce their species. It is the triumph of fishculture, the supernal and dizzy summit of the art's effort. Where can it be equalled? You can equal it in Lake George. In three years you can have the millionaire and the foreign nobleman bidding for your farms at fabulous prices. The loveliest lake in this Western land 'stiff' with the gamest of fishes. But Col. McDonald must be thorough, as no doubt he will be. Close every inflowing brook that is planted,

and stock thoroughly along its whole length. Keep stocking for five years, carefully protect in breeding season and you have done it! We have salmon at Sunapee that weigh 20 lbs., big fellows that go right through the nets at spawning time like the charge of an angry rhinoceros, ripping everything to pieces—fish that wreck tackle mercilessly and plunge the coolest heads into buck fever at 120 degrees in three minutes. They are the biggest fighters for their size in water, and he who kills a 10-pounder even, after the conflict cannot help feeling he has not lived in vain. I have arranged with Fraine to mount a 25-pounder I know must be in the lake, and I have a strong presentiment he is coming to my hook, and when he does there will be no buck fever."

Such enthusiasm is contagious, and even as I write the quotation I feel like mounting a rod, putting on snowshoes and going out into the fields to have a cast into the snow banks for practice, to be in readiness for the June fishing at Sunapee which I hope to enjoy. Lake Pleasant is closed for two years more (I believe that is the correct time), but when it is open to fishermen it promises to rival the parent lake for landlocked salmon and brook trout.

### Ouananiche.

Ouananiche, the name by which the land-locked salmon is known in Canada, and which is growing in favor in the United States, is an Indian word, and I am indebted to Mr. E. T. D. Chambers of Quebec for the following explanation of it. In the Montagnai's dialect *ouananiche* means salmon, and *iche* is a diminutive; so that ouananiche means "little salmon." I have an idea that English-speaking people after hearing the Indians pronounce the word spelled it phonetically, "wananiche," "winninich," "win-inich" (for these spellings are all used), which expresses the pronunciation near enough but does not describe the fish except as it is compared with the sea-run specimens, which grow to over 50 lbs., for the ouananiche grows to over 25 lbs. in weight in fresh water, and cannot therefore be considered a very little salmon.

### To Strike or Not to Strike.

From salmon planting to salmon fishing is but a step, and to secure a salmon after it rises to the fly it must first of all be securely hooked, and salmon fishermen do not fully agree as to just how it is done. I really think they do agree more nearly than they seem to when one says he strikes and another says he does not, and it is more a difference of opinion of what constitutes a strike. I think that Mr. David Wilson, honorary secretary of the London Fly-Fisher's Club, strikes the happy medium in telling how he does it. He was wading a salmon river and made a long cast toward a rock in mid-stream, the fly struck the rock and bounded back into the pool where it was taken by a fish as follows: "The salmon was hooked in the roof of the mouth, well toward the gullet, which would point to the conclusion that it had seized the fly when the line was perfectly slack and swallowed it well down. I did not 'strike' in either case. In fact, I never do strike a salmon except in very slow running water, but always make a practice of winding a fish up short at once, and putting on sufficient strain to make sure the hook has gone home."

### Grubs.

From killing a salmon, to the lure that brings it to gaff, is but another step, albeit a step backward. I have just received from Mr. George Holland of Winchester, Hants, whom the Badminton Library says is one of the most excellent professional fly tyers in the three kingdoms, samples of "grubs" which he tells me are now being used for salmon in Great Britain. They appear to be the best possible lure for ouananiche, and unless all signs fail they will prove very killing. They are hackles with the hackles for most part tied in in three sections, although some are tied palmer fashion. They are not unlike some Scotch sea trout flies that Mr. Chambers agreed with me last year were excellent ouananiche flies. The grubs shall have a trial when the season opens, and I'll warrant they will give a good account of themselves when the score is rounded up.

A. N. CHENEY.

## BOSTON NOTES.

THE Boston pickerel fishermen have had one or two very nice days of late, and they have improved them, but without very heavy strings as the result. There is a complaint that the ponds within twenty miles of Boston are badly fished out. Friday last was a most beautiful winter day, or rather it was more like a day in April, and many of the pickerel fishermen were out. On some of the Plymouth ponds there were more men and boys than there was room for holes. The Reading ponds were covered with fishermen. In Andover the ponds were alive with fishermen. On one pond there were twenty fishermen, each with from 25 to 100 traps. A friend of the *FOREST AND STREAM*, who could not go himself, was asked to loan his traps to another intimate friend. He owns a beautiful outfit of about 100 traps, made to order. He much disliked to loan his outfit; but it is hard to refuse a friend. The traps were taken and used. Time came to take them up and start for home. The water was cold and the lines were beginning to freeze. The team was waiting before the lines were half of them out and nicely wound. Haste seemed to be necessary, and the lines were taken out as rapidly as possible and the traps all gathered into a mass. Well, some of the traps were crushed and broken; the lines were badly kinked and snarled. The friend who borrowed had not time to return in good order told his friend when returning the mass of kinked and broken tackle, to have it picked out and put in repair and he would pay the bill. "It was absolutely not possible to wait and take the lines out as they should have been taken out," he said. Those lines have been straightened out; the traps have been put in repair. Has the friend paid the friend for the damage and trouble? Oh, no! Between friends such a small matter could not be thought of. But why will friends ask to borrow tackle of a friend, when they are well aware that the tackle they would borrow is the pet and pleasure of the owner, and that next to wife and children or brothers and sisters, that very tackle is the dearest thing to the friend's heart?

The tarpon fishermen are getting ready and some of them have already started for Florida, though but one or two tarpon have yet been taken, according to the latest accounts. Mr. Charles A. Dean is already in Florida ready for a fight with the tarpon. Dr. Mixer, of Boston, is getting ready for a tarpon trip and will be off some

time this week. W. S. Hills, the blind fisherman, is getting ready for his winter fishing trip to Florida. He is not yet decided as to just what point he will go, but it is to be where there is the best fishing. His health demands the trip, and yet, though totally blind, the fishing is the important item. Mr. Henry C. Litchfield, of Dame, Stoddard & Kendall, fits out his tackle so that he can arrange it by the sense of touch. Mr. Hills's man George Horton will be with him, and his eyes, where eyes are absolutely necessary, will have to answer for both. Mr. Hills is a lover of the *FOREST AND STREAM*. He has it read to him with great pleasure. He remarked the other day that he should very much like to see "Special." "Yes," he said, "I would give a good deal to see him. I would give many thousand dollars to 'see' him!" Well, Mr. Hills shall shake hands with him on the very first opportunity. In the meantime, may some great tarpon shake his rod till his hands are tired, but with a final victory that the *FOREST AND STREAM* shall hear about.

Mr. Patrick Kelley of Cambridge, with his friend, Dr. Golding starts for Florida this week. The Doctor is a successful veterinary surgeon, and Mr. Kelley is a well known builder of Catholic churches. He was a dear friend of the late Father O'Brien, and their trouting trips have been frequently mentioned in this paper. It is curious to note that both Dr. Golding and Mr. Kelley will go to Florida, each well in his own estimation, but for the other's health. They will both take in the fishing.

Mr. Walter L. Hill has lately returned from his winter shoot at the camps of the Ragged Island Club, in Currituck Sound, Va. He goes there as the guest of Mr. Woodward, former president of the club, if not in that office now. The shooting was good, though not up to a year ago in the ideas of Mr. Hill. The five shooters there together, including Mr. Kimball and Mr. Hart, New York tobacco men, had a most enjoyable time, with beautiful weather a good part of the time. They got canvasbacks and all of the best ducks of the season. The birds were rather shy, for the reason that night shooting is being practiced up in the flats where the birds should be allowed to spend the night in peace. Mr. Hill's affection for the Ragged Island Club is growing stronger and stronger, and he hopes to take Mr. Woodward, with some of the other members, on to Moosehead Lake after trout this season. One day the entertainers told Mr. Hill, when he started out for the blinds in the morning, that he must get up as good an appetite as possible, for the dinner that day was to be a special one. When they came in, sure enough there were canvasback ducks done to a turn, with terrapin dug on the island, and all the delicacies of the season. The dinner was fine and so were the terrapin. But Mr. Hill could not forbear telling the story at table of a Yankee who ate terrapin for the first time at a dinner in Washington some years since. "Yes, the dum sculpin are fine," he remarked in an aside; "but I tell you honestly that I'd rather have a dish of Boston baked beans!" SPECIAL.

## PENNSYLVANIA ASSOCIATION.

THERE was a large attendance at the annual meeting of the Pennsylvania Fish Protective Association, held on Saturday evening, Jan. 13, at the rooms, 1,020 Arch street, Philadelphia. At the request of Mr. A. M. Spangler his name was withdrawn as a candidate for the presidency and the election resulted as follows: President, H. O. Wilbur; Vice-Presidents, Edwin Haggert, Wm. H. Burkhardt, Dr. Bushrod W. James; Corresponding Secretary, J. Penrose Collins; Secretary, Marion G. Sellers; Treasurer, Wm. S. Hergesheimer; Executive Committee, Henry C. Ford, Howard A. Chase, Chas. H. Fitzgerald, J. R. Sypher, Geo. T. Stokes, Henry A. Ingram, Col. John Gay, Wm. P. Thompson and Cyrus S. Detre.

The following report was made by the special committee delegated to attend the coast fishery conference in New York:

To the President and Members of the Pennsylvania Fish Protective Association.

GENTLEMEN: The special committee appointed at the last meeting of the Association, to attend a conference called by a number of prominent citizens of the State of New York, for the purpose of considering the subject of the constantly growing scarcity of edible fishes along the Atlantic coast line, respectfully reports, that all of the committee, whose names are appended to this paper were in attendance, and nearly all of them participated actively in the proceedings.

Much to the surprise of the committee, the conference, which it was generally understood was to be composed of men opposed to menhaden and pound-net fishing, as practiced for years past and now, had, instead, a majority of representatives of the destructive methods of capturing coast fishes. Those menhadenites and pound-net advocates came fully prepared with statistics, truthful or otherwise, and which were made part and parcel of the proceedings.

By previous understanding and having a majority, they, in a large degree controlled the conference, restricting debate and voting down propositions of every kind intended to bring about the desired reforms.

The discussion was opened by Mr. Detre, a member of the committee, in a vigorous speech denunciatory of pound-net fishing. He was followed in a lengthy paper by Mr. Huntington, president of the New York Board of State Fishery Commissioners, the opponents of reform interjecting papers, prepared expressly for the occasion. Some of these statements were completely refuted by testimony that could not be impeached, but the reformers from the start worked at a disadvantage, and as might have been expected, the conference was practically a failure.

While a full discussion of the subject was desirable and intended, it soon became apparent that the representatives of the interests the conference had been called to restrict within reasonable limits were in the majority, and, understanding their advantage, became not only aggressive, but in one instance at least absolutely insulting.

It was clearly apparent to your committee that with millions of capital invested, with a number of Congressmen and ex-Congressmen peculiarly interested, and with such organization as guarantees unity of action in endeavor to menhaden or pound-net fishing is assailed, that unless the same unity of action, backed by like determined effort, can be effected by the fish protectionists, the warfare will be a most unequal one for them.

But, discouraging as is the outlook, we should persist in our efforts to abate or at least modify these great evils, having for encouragement what seems to be an absolutely assured fact, that the evil will work its own cure, for so marked has become the scarcity of edible coast fishes, that not a great many years will elapse before menhaden fishing will become unprofitable, unless the steadily increasing scarcity of those fish ceases.

As to pound-net fishing, it has assumed such vast proportions along the coast, and is so terribly destructive to spawning fish in the spring and to the young of those that escape in the fall, that unless such restrictive legislation can be had as will effectually protect the food fishes, there is no telling how soon the supply of them along the coast will be practically exhausted.

All of which is respectfully submitted.

A. M. SPANGLER,  
CYRUS S. DETRE,  
HENRY C. FORD,  
ALFRED HART,  
BERNARD L. DOURDELOURE,  
JAMES H. MILLER.

The work of the Association for the year was reviewed in the report of the executive committee, an abstract of which must be deferred to our next issue.

### Mountain Trout Waters.

Mr. H. L. STORY, formerly of Story & Camp, organ builders of Chicago, but now a resident of San Diego, Cal., where he raises fruit, has been a subscriber to *FOREST AND STREAM* for twenty years. Last fall he visited Macdonald Lake, in northwestern Montana, whither he was attracted by Mr. Charles Hallock's letters to this paper. He made camp with Frank Geduhn at the foot of the lake, of which Macdonald Creek is the outlet. A private letter from the camp says of his experience:

"Trout fishing in Macdonald Creek was excellent. He would catch from 20 to 40 while going down to Flathead River. At the head of the river he caught numerous 2 and 3-pound mountain trout and large landlocked salmon or Dolly Varden trout. From there he went over the range to Camas Lake, where he got satisfied to his heart's content, especially fishing at night. At the head of that lake is great sport. As soon as the fly touches the water one has a fish.

"Later we went to explore the Upper Camas Lake, to which I had never been before. We found it the prettiest of the lot; the most picturesque mountains surround it; two creeks tumbling down their sides in snowy cascades empty into it. At the head of it is partly open country, where we saw, reaching nearly to the water's edge, a huge snowdrift like a young glacier; but the lake was literally alive with large mountain trout. Mr. Story said, 'I never imagined there was such a splendid place in the United States.'

"There is a glacier northeast of Macdonald Lake and a large lake at the foot of it. Two prospectors saw it this summer from a mountain further north." F. G.

## Fishculture and Fish Protection.

### THE COAST FISHERY CONFERENCE.

Proceedings of Conference Held to Consider  
the Subject of the Exhaustion of  
Coast Line Food Fishes.

OFFICIAL REPORT BY SECRETARY E. P. DOYLE.

(Continued from Page 55.)

MR. ATKINS HUGHES, of Massachusetts, said:  
I represent part of the pounds in Cape Cod Bay. I was the first one to put a deep water pound in there in 1891. At that time very few fishermen ran into Boston in the summer time, for the reason that no bait could be obtained. The next year we put in two pounds and they have increased now to about forty pounds. Our principal business is catching bait for these fishermen; there are about forty pounds engaged in it, and the number of vessels has increased from probably three or four to half a hundred. They are depending fully on these pounds for their bait. Only yesterday when I was in Boston, there was a large fleet of vessels waiting for bait. I received a telegram from my captain stating they had 300 barrels of bait in the weirs. I went down and I got an order for 200 barrels of that bait to come to Boston to supply those vessels. If the pounds had not been there, I don't know where they could have got their bait. After these pounds are taken up, for about a month those vessels will be actually without bait. This year we have taken steps to provide for that time when they are without bait, by putting up freezers, which cost about \$15,000.

To show that fishing could not be carried on in Boston without these pounds, if there should be a scarcity of bait in these weirs, you will see sixty vessels collected for bait, and during that time you will see the price of fish advance in the Boston markets; or if the time happens when there are three or four days that we cannot get fish, it increases the prices in the Boston market. So I say for that reason the trap should not be interfered with.

Another reason, which is a local one, however, is that in the town in which I belong it is the only industry they have. Every person in the town is interested directly or indirectly in these weirs. It is the only means they have of getting a living; and I say, as I have said before, that the moment you do away with these pounds in Cape Cod Bay and around there, you will do away with our means of support.

Q. What else did they catch except herring for a bait?

MR. HUGHES—Squid. The net is an inch and five eighths mesh.

Q. So they take the young fry of all kinds that are valueless for food?

MR. HUGHES—They take all kinds of fish that come along. I wish to make a further statement in regard to these weirs. They are taking some edible fish which could not be caught in any other way. Of the albicore or tunny fish we formerly could not sell more than a pound or two a week. This last season we shipped every one we caught to the New York markets. They will average from 50 to 75 lbs. a day, and I have seen 2,000 lbs. taken in a day. At that time we could not make use of them, but now we can sell them. Without these pounds you could not catch those fish. There is another fish that is becoming edible, that is the whiting. They are a very fine fish, and we ship more or less to the New York market. The consumption is increasing every year, and in time there will, no doubt, be a large market for those fish. I say for this reason the pound should not be interfered with.

The following paper was presented by J. M. K. Southwick, being an extract from the Annual Report of the Rhode Island Commissioners of Fisheries for 1892:

#### The Menhaden Fishery.

The present season has been worse than the last, which was exceptionally a poor season for these fish. These two past years have proved a serious setback to this important fishery of our State. The menhaden fishery may be said to have commenced with the invention of the purse net, about forty-five years ago, and has developed into an important industry. In the statistics furnished by the United States Commission we find as follows:

"Rhode Island is now more interested in this branch than any other New England State, and the industry ranks among the most prominent enterprises of the State. The capital invested in 1880 was \$452,925; 573 persons were employed and 177,133,333 fish were handled, for which \$265,700 was paid. The manufactured product, consisting of different grades of oil and various kinds of fertilizers, were worth \$427,757, an increase of \$317,208 over 1887 and \$93,070 over 1888."

The failure of this fishery the past two years was in part to be attributed to the restrictive legislation of other States.

The menhaden are a wandering ocean fish, and according to the best authority we have, spawn upon the ocean, wander along the coast, from Newfoundland to Florida, sometimes appearing at one place, sometimes at another in large numbers. To pursue them successfully it becomes necessary to follow them wherever they are to be found. The antagonism existing in some localities between the practical fishermen and he who fishes for sport or recreation is unwise, and we

believe it often leads to great injustice. We believe in fostering both interests. The one is an industrial interest that produces much that is necessary to life and affords the means of livelihood to those engaged in it. The other, a healthy change and relaxation to the merchant, the student or the professional man seeking relief from over application to their several duties, or any one else who chooses to avail of it, and we believe it right for the State to provide for and preserve this privilege by all fair means, and within reasonable limits, with the same care it would a public park, and very much to the same end.

#### Hibernation.

A boat sunk between Fort Adams and the torpedo station about twenty months ago was raised Feb. 13 and found to contain quite a colony of fish and some small lobsters. The boat had a large quantity of mud in her that had settled so firmly together that it quite stopped the hole made in her, and also the holes in the well, so that both the boat and her well were bailed free of water and the boat floated to the shore at the city dock. The owner thinks that there were half a bushel of cunners and tautog found in her, all in the mud, and we are told that some of them were so embedded in the mud as to leave an imprint of their form.

#### The Fluctuations in the Number of Fish and the Natural Cause of their Depletion.

The fluctuations from year to year and for indefinite periods have been noted all along throughout the whole history of them. Often a great diminution without known cause has occurred and also immense numbers appear with out any known reason; such has ever been the case with fishes. These fluctuations were as clearly observed in the middle ages as now, the increase and diminution then caused the rise and fall of towns; their settlement and opulence, as well as their decay and poverty, have been due to the increase or diminution of the fishes. In later times the changes have been no less obvious and important.

The influences that produce these changes upon our coast is of especial interest to us. Unquestionably the great factor in producing the change in numbers is among the fishes, the larger, or best armed, destroying the smaller or weaker. But those most reduced with us are those that cast their spawn in the fresh upper water of our streams. Some of these have been so long absent, or their numbers so reduced, that we hardly realize that they once existed in great abundance in our waters. Of these the most important are the salmon, shad, herring and bass. While the influence of natural causes is sufficient to produce this change, the generally accepted theory is that the depletion is caused by the obstruction to streams, pollution of the water and such as arise from the development of the country. We incline to the belief that this is the primary cause of the depletion of the anadromous fishes.

The appearance in ever varying numbers of the fishes that visit our coast every season affords room for much study and no end of speculative theory. Their history while absent is one of the unrevealed mysteries of nature. They are governed by natural laws that baffle all efforts at investigation. Still it is a subject of great interest to the student of natural history and to the political economist.

The fluctuation in their number is phenomenal, often coming in abundance when few are expected, and few when large numbers are looked for, for instance, the appearance of scup in our waters in 1872. Prof. Baird said in 1877: "I was quite satisfied in my own mind that unless something of this kind was done, very serious results would happen. Very much to my disgust, I must admit, the next year, even with all the abundance of these engines, the young scup came in quantities so great as to exceed anything the oldest fisherman remembered. Since then scup has been very much more abundant than it was when I wrote my book and report."

Another instance occurred in the menhaden fishery of 1889 (referred to in our report for that year), few being expected, but overwhelming numbers appeared, exceeding that of anything known in former years. So it must ever be until we know more of them. Change is the immutable law of their existence.

#### Some of the Destructive Agencies That Are Always at Work to Decimate Their Numbers.

First of these is the enormous destruction of the spawn by other fish and by storm. The terrible havoc made by other fish upon the young, and the merciless destruction that continues all through their fish life, by other fish, birds and animals, and to this may be added their own cannibal propensity that does not stop to discriminate between their own relatives and others, and to these causes may be added diseases, heat or cold, parasites, convulsions of nature, and the numberless vicissitudes of fish life, known and unknown, observed or not observed by investigators. Sometimes whole colonies are destroyed by unknown causes, as was the case with the tilefish that were discovered by Prof. Baird in such large numbers, and seemed to be annihilated at one stroke.

Having considered the natural causes that affect all fish, and referred to some of the indirect influences of man upon the fresh-water spawning fish, we will now inquire into the direct act of man, the capture of ocean fish in large quantities as is now possible by the use of improved methods.

What is the effect upon the fisheries?

Who can answer?

We had thought to leave this question, but inasmuch as our State has especial interest in the solution of this question, as our largest fishing interest is directly and vitally affected by its determination; we feel that we should not be doing our duty by evading it, lest we might, like too many others, "step in where angels dare not tread."

We will first see what others have to say about it. The English Commission under Prof. Huxley examined a vast number of witnesses, received answers to nearly 63,000 questions and visited nearly all the fishing localities of Great Britain and Ireland, many of which had been fished over for many centuries, and though in addition to our modes of fishing by weirs, nets and seines, the beam trawl is there used, which is far more destructive to fish and their spawn and young than any other mode of fishing by us, that commission came to the unanimous conclusion that there was no danger to the sea fisheries, either in the open sea, or in bays and arms of the sea from over-fishing. The points indicated are the following: "That no amount or kind of fishing can diminish the schooling or wandering fishes of the high sea, such as the herring, mackerel and menhaden."

The same conclusions were arrived at in regard to the great herring fishery of the North Sea, in fact, while the investigation was being made (if we remember right), an immense quantity of their spawn became detached from the bottom by a storm, and were driven upon the shore, where it was fed to hogs or carted off for manure, showing that natural causes were at work that were quite sufficient to produce, and did produce, great changes, compared to which the catch by man was not to be considered.

The late Prof. Baird estimates the daily destruction of other fish upon our coast at 10,000,000,000, or 2,500,000,000 lbs. by bluefish alone, and says that their food consists of menhaden, mackerel, herring, scup and other species.

Does this slaughter go on all the year?

He also gives us an estimate of the number of menhaden devoured on the coast of New England at three thousand million millions (3,000,000,000,000,000) in the summer months.

Does this continue when they are absent from our coast?

He further says "that this calculation might be pursued to any extent, but I have presented enough to show that the question of human agencies in the way of affecting or influ-

encing the great ocean fisheries is scarcely worth considering."

Who is there that knows more about this subject?

Whom shall we consult?

If no better is offered we shall still quote from him: "If it were in any way our duty to take measures for the prevention of the destruction of life in the sea, and of maintaining the field of fish generally at its largest figure, we could accomplish it in no better way than by increasing the extent and magnitude of certain of our fisheries."

"Thus I have shown that there may be a saving of herring by the capture of the cod and ling on the British coast. For every bluefish captured in the waters of the United States many hundreds of other fish are left to enjoy their life, perhaps, however, in their turn to be the means of increasing destructiveness in another series of animals."

"The capture of whales gives a respite to the schools of mackerel and menhaden, while the destruction of the herring and menhaden relieves, though in an infinitesimal degree, the drain upon the crustaceans and the smaller fish."

We repeat the question, What is the effect of the taking of fish in quantities now possible by human methods?

We have in the foregoing presented the conclusions of three different Commissions composed of eminent scientists, who made as thorough investigations as it were possible, and all agree in their conclusions.

We were sure from past experience, there are hundreds ready to "step in" and say there can be no question about it. But we will ask them to pause while we consider the question further, and ask them the questions that we think have an important bearing upon the question before us. The depletion of fish in our waters are chiefly salmon, shad, herring and bass, and as these are all fresh-water spawners and some of them have left our waters long before the adoption of modern appliances, none of them have been taken in large quantities by them. This fact may have some significance as to these fish; but we are not now considering them at all.

We propose to apply all we have to say here to the ocean fishes, those taken by methods considered most destructive to us.

These are the scup, menhaden, and the bluefish, two of these we know to have been rare in our waters, the scup in 1794, and the bluefish in 1892.

What caused the depletion of the scup in the last century? Or the bluefish in the early part of this century?

In 1870 it was thought that scup were being exterminated, since which there has been an uninterrupted fishing for them by improved and continually increased numbers of traps and the catch of the last year far exceeds any former year. How is this possible; were they being decimated?

How were it possible to take such exceeding large numbers of menhaden in 1889 and 1890, if their numbers had been so decimated by previous years fishing?

Will some one wise in such matters tell us where these fish are when absent from our waters?

How old they get to be?

Are they subject to vicissitudes when absent?

What nature?

What becomes of all the old fish?

With such immense numbers the natural mortality must be very large. Why do we not see some trace of them?

Do predaceous fish live on others when absent from us?

Do menhaden live on the spawn of other fish?

Do mackerel devour the spawn of lobsters?

Do menhaden?

If so, what effect does it have upon the stock in the waters?

Do small fish or crustaceans affect the number of large ones by destroying their spawn?

If bluefish destroy menhaden, mackerel, herring and scup, may not these fish compensate by devouring the spawn or young of the bluefish, and in that way retaliate upon their enemies?

If any one can answer these questions, then would we vote wise enough to have a hand in the government of the fishes.

God alone rules the universe and to his infinite wisdom we must leave this until we have learned at least something more than we yet know; then it will be quite time to try to assist him in the government of the fishes of the sea.

We think that there will be found here some difficulty in governing the fisheries suggested, just what to foster and protect, and which to destroy in order to preserve the most desirable and have a favorable result.

Who is there wise enough to know how to do this?

Who is there that can say that any plan to govern is more than an experiment and it apparent success comes he is by no means sure it is through any means he has applied?

#### High Prices do not Indicate Scarcity of Fish.

PROF. BAIRD in Report for 1886, page 23:

"One supposed evidence in our increasing scarcity of fish is the increase in price at such stations. This is, however, a fallacious argument, as the market is regulated by the rates obtainable in the centers of supply rather than elsewhere, and the local prices necessarily must correspond."

This does not entirely account for the advance in prices over former years, when there was no such thing as a fish market and the fisherman sold direct to the consumer from his boat landing or from a wheelbarrow at the street corner.

Now all is changed. The fisherman ships direct to the wholesale dealer, or to the retailer, who have large markets and heavy rents, quantities of ice, and help to clean and teams to deliver, besides long book accounts and losses. The retailer fixes his prices and makes his margin to cover all these contingencies, and most of the fluctuations of the wholesale market, and maintains a quiet, uniform price not much affected by the degree of plenty or scarcity of fish.

The second convention of the Fish Commissioners of the New England States occurred in Boston Nov. 16, 1892. These meetings offered the means of interchange of views of representatives of the different States that cannot fail to be of profit to all. The subjects discussed chiefly were relating to the protection of fish and game. A proposition was favored limiting the size that a lobster could be taken at to 10 1/2 in. We believe that a uniform rule is generally desired by the fisherman, and to some extent it may help the fisheries. But we feel sure that in order to be effective it should include those States that furnish a market for the great bulk of the product.

The lobster business has grown to be of much importance, they furnish a delicious and healthy food, and the taking of them is the means of livelihood of a large class. Experiments are being made to propagate them, and it is with deep interest we watch for favorable development in this line. We trust that some day we may do something in the way of increasing their numbers in the waters of this State. The Fish Commissioner of Newfoundland has under his direction hatched and planted in 1892, 426,285,000 lobsters.

MR. GEORGE N. BLISS, of Rhode Island: I came here at the request of two other members of the Fish Commission, as one member is present to represent the State of Rhode Island. Rhode Island is a small State, but is largely composed of water. It exists only for the purpose of forming Narragansett Bay and the waters next adjacent to the city of Newport, and every man in that State is interested in the fish industry. There are a great many questions of fact here which are disputed. Things are stated to be a fact by one gentleman, and said to be a deliberate lie by another. There should be some fair chance for a jury to hear all the evidence and give a verdict. But, perhaps, if all these papers are printed and all these statements are put in type, we may possibly be able to get some information out of the mass.

I am a fisherman for pleasure. I have been a fisherman all

my life whenever I could get the opportunity. My business is to spend money in fishing, not to make it. At the same time, I have come in contact with fishermen, have been well acquainted with these men who get their living by fishing, and I ought to know something about it. I am satisfied these men have to use the pound nets. You cannot supply by hook and line the demand for fish. It must be done by these improved appliances. There should be an opportunity, of course, to give the fish a fair chance to spawn, and that, I presume, is really the object of this meeting—to devise some method by which the fish may be allowed freer development in the matter of reproduction, so the spawn may have a fair chance to hatch. It is a very easy matter to make statements, but very difficult to devise some method by which to accomplish desired results. I believe the weir, pound and purse nets should remain. There are places like Buzzard's Bay where they should be prohibited, and I think this is the time to discuss the methods by which they may be prohibited, that the spawning grounds may be open and easy of access. I do not believe that man can decrease the fish of the ocean; and I wish to say here, in answer to something that has been said about the Churches, that I have a couple of boys who have been fishermen ever since they were able to travel alone. I sent them out on Church's steamers on several occasions when they were catching menhaden. Those boys were on board when 2,000 barrels of menhaden were taken on a trip, and they could not pick enough edible fish out of the lot to feed the crew. They came back and reported all the facts to me. It is, therefore, not true that they take large supplies of food fish when they are catching menhaden, or that they catch every kind of food fish. The Churches are truthful men and they do not make statements which are not true.

N. B. CHURCH, of Rhode Island, followed Mr. Bliss, and said: There is one statement I want to make in contradiction of Mr. McDonald's assertion in regard to the spawning of menhaden on the coast of New England. I am a practical fisherman and have fished for thirty years along the coast, from Maine to Hatteras. It has always been known by those who are familiar with the menhaden fishery that there is a certain body of fish of that species on the coast in the spring that are full of spawn. We have always argued that the fish do not spawn on the New England coast, but we made that statement in the broad sense of the term.

In the year 1892, contrary to all the observations that have ever been made, there was an immense body of fish struck on the coast about May 17, in the vicinity of Barnegat, that went into the bays and estuaries, and those fish were full of spawn. It was known to all the fishermen on the coast that this was something out of the general run, and against all the statements that we had ever advanced. That was the fact, and no one can contradict it.

From my observation, 90% of the menhaden that leave the coast in the fall are mature or nearly mature with spawn. I have been master of a large fishing steamer, and have had members of the United States Fish Commission aboard my boat on purpose to investigate this subject. They have made observations under my own eye, and ascertained that the fish leave the coast in the fall full of spawn, a fact well known to all menhaden fishermen. These fish return in the spring without any spawn. The conclusion to be drawn from this is that they spawn after they leave the coast. I have no doubt Colonel McDonald will say they go down the coast and spawn in the bays of the South Atlantic States, but such is not the fact. My observation is that, perhaps, two years in ten, the body of large menhaden that leave in the fall strike the coast near the east end of Long Island, and follow down as far as Atlantic City and then disappear. As a rule, however, they apparently go straight out to sea when they leave the bays and sounds. I presume that 90% of the fish that go down this shore in the fall turn off the coast at Brigantine Shoal. So much for the spawning.

MR. ROOSEVELT—Will you kindly tell us where they spawn? A. I have not the least idea.

Q. Do you think they could spawn in the open ocean? A. I can best answer that question by a story. One summer I had on my vessel two boys who got into a hot dispute on one occasion, and after contesting over the disputed matter for half an hour, one of them said to the other, "I would give a good deal to know what you don't know on that subject." That is just the way I feel in regard to this matter—I would like to know all that others don't know.

MR. CHURCH then resumed: About the bluefish—we all know that bluefish were very scarce on this coast in 1887. Bluefish were worth about 25 cents per pound. But in the fall of that year, in September I believe, small bluefish made their appearance in great numbers. I said to a member of the Fish Commission: "Within five years there will be an abundance of bluefish on this coast." In 1888 and 1889 bluefish were caught by the boatloads and cargoes. Everywhere the sea was full of bluefish. In the four years of 1888, 1889, 1890 and 1891 there was an immense body of bluefish on this coast. In 1891, I landed somewhere about forty thousand or fifty thousand barrels of menhaden, and I will venture to say that I could have loaded more bluefish in bulk than menhaden. There were numerous schools of bluefish from Delaware Bay to Portland, Maine, containing from 1,000 to 25,000 barrels. Still, the gentlemen here say there were no bluefish. In 1887 the menhaden catch, as my brother stated this morning, was the poorest we had had up to that time. The total result of all our fleet's fishing was about 140,000 barrels. The next season was phenomenal for the extraordinary plentifulness of menhaden. I could have taken one boat myself and landed at our factory the same quantity of menhaden that was taken by the entire fleet the previous year. This immense body of fish came in, I think, in June, and extended along the coast from the vicinity of Block Island to Maine. I do not think there are many of the gentlemen here who appreciate the marvellous immensity of a body of fish like that which I have referred to, and the most conservative estimate of which would seem almost beyond human conception. Take a school of fish the size of this room. There may be one barrel, 35 barrels, or 25,000 barrels in the school. Go to the masthead of your steamboat, and your eye cannot reach the limit of some bodies of fish that may often be seen. I have little further to say, but if any gentleman wants to ask any question in regard to the fishing on this coast, I am prepared to answer him. There is one other thing I want to say in reply to my reply to the statement made by Mr. Chamberlayne. He made the statement he did, knowing that I was on record, under oath, as saying that in catching menhaden we did not catch food fish to any extent. That will, perhaps, explain why I answered him as I did. That is a matter of record, and why people laugh and scorn at the idea that a man does not catch food fish when he is fishing for menhaden I cannot understand.

MR. ROOSEVELT—Do you mean to say you refuse to catch food fish? A. I mean to say this; that in catching menhaden fish we do not catch food fish. We may set a net 100ft. deep in six fathoms of water but we do not catch food fish.

Q. If you saw a school of food fish would you not catch them? A. Our business is menhaden fishing. It is not uncommon to see a school of food fish, it is a very common occurrence to see bluefish, mackerel and squeteague. There have been instances when food fish were caught by mistake. No man can tell the difference, at times, between squeteague and menhaden when schooling. Food fish are worth from 1 to 10 cents a pound. Do you suppose a man who caught a thousand barrels of food fish would carry them to a fertilizer factory (to be made into fertilizer) at 25 cents per barrel, when he could get so much more by selling them for food? It will not be difficult to see this, for any one can understand that we don't go fishing for fun.

JOHN O. LEWIS, of Rhode Island: I came here to represent the village of Wickford, and I am sent here by our people to show you and tell you that fish for the past six years and for

some few years previous to that have been plentiful with us. The talk is now to stop the trap fishing, because it diminishes the quantity of fish in our waters. You stop the trap fishing, and these fish which I catch, butterfish, squeteague, and if you take away the traps you take away those fish from me, which you cannot catch with a line. I have not heard of a single instance in the waters of Wickford where one has been caught with the hook, but they do catch them once in a while while fishing for blackfish. Take those fish from me which you do not catch with hook and line, and I will not give a cent for trap fishing. Last summer, about July 1, one day we were crossing the bay and we saw something in the water. We could not tell what, but by going on the masthead of the boat we could look down and see below the surface weakfish, and just as far as our eyes could see to show the color red in the water (you know how they show red in the water), this school of fish was there.

I can take my oath that what Mr. Church said here this morning was true about weakfish, and what Mr. Southwick has also said about weakfish being in Narragansett Bay this summer, that they have never been so plentiful before since I have known what a fish was. We have set this summer eight traps. There were times in the summer for three weeks at a time that we could not open our traps, and there were some of them we could not begin to take the fish out that went into them, the traps were so full we could not unhitch the lines. We would simply haul by the line and roll up between two sticks, and the fish we could take care of in one boat we loaded in one skiff. If we could have taken those fish out as we did years previous to that, I would venture to say I could have caught more fish in 1893 than I ever caught in my life, put them all together. Years before we could clean our traps out very well, take out every fish without any trouble. We could take about ten barrels, and that is as many as one can take out and save and get to market in good order.

#### Remarks of MR. ROBERT WALSH:

MR. CHAIRMAN—This question should not be approached unintelligently. From the evidence of the best known and most widely experienced men engaged in fishing as well as from the writings and researches of the scientists and ichthyologists of the United States Bureau of Fish and Fisheries, we have in this country alone sufficient data to decide whether or not repressive legislation would be advisable. But as this evidence has already been placed on record in the publications of the Commissioner of Fisheries, and by the statements of such men as Captain Collins, Mr. Atwood, Captain Church and others, before the Senate of the United States in connection with the reception of evidence concerning the Lapham bill, I think that my appearance in the matter will be more profitably confined by elucidating the comparative effects of such legislation in Great Britain and other European countries.

As a matter of fact, knowledge of the habits of sea fishes was very imperfect until recent years, but the economic value of the supply of fish attracted considerable attention from legislators and rulers from the earliest times, and as a consequence from time to time enactments progressive or repressive were petitioned for and considered. For instance, in 1675 the fishermen of the southern Irish coast petitioned the King through Secretary Burchard that the length of the nets used by the French fishermen broke the shoals of the pilchards and drove them from the coast. This petition prayed that the Government should restrict the use of these long nets by the Frenchmen; but, for some reason or other, the request of the Irish fishermen was not acceded to, and the Frenchmen continued to fish for pilchards inshore and in the deep sea without restraint. It is recorded in the annals of Kinsale that for three years from 1675 to 1678 the supply of pilchards diminished to such an extent that the native fishermen discontinued that industry. The falling off in the supply was attributed to "the depredations of the Frenchmen;" but in the following year, 1679, notwithstanding that a fleet of three hundred French sail, "each boat carrying nine one league in length," swept the coast with these nine hundred leagues of nets uninterruptedly, previous to and during the three seasons referred to, the pilchards returned in "greater numbers than ever before seen on this coast." This fact is proved from the writings of Sir Robert Southwell, who was himself one of the signers of the petition to Secretary Burchard in 1675.

In 1881, '82 and '83, a somewhat similar petition was made by the fishermen on the southern Irish coast concerning the too early fishing for herring by the Scotch fishermen. I was at that time chairman of the South of Ireland Fishing Company, and relying simply on the statements of the local fishermen I heartily approved of their appeal for repressive legislation in connection with the south of Ireland herring fishery, in the shape of instituting a close season. I had not then made any research into the habits of the fishes or concerning the effects of man's efforts, by any method for their capture upon the supply, and with others who were as deeply interested in the progressive development of the Irish fisheries as was I, I was astounded when Professor Huxley and other famous scientists, as well as the inspectors of fisheries appointed by Her Majesty's Government, pooh-poohed our request, and informed us that not alone was there no necessity for appointing a close season, but that from their observations and investigations they had decided that the supply of herrings or of other migratory fishes could not be diminished by any means or appliances that could be used by men for their capture.

The fishermen and boat owners on the southern Irish coast, myself among the number, felt aggrieved by this decision, and it was universally predicted that the herrings would be driven from our coast by the fact of the Scotch fishermen plying their nets—over two thousand miles of them—before the time when the Irish fishermen considered that the season should begin. But no such result has happened. It is true that sometimes for a season or two, or even for five or ten years, the supply of herring and other migratory fishes, such as mackerel, pilchard, etc., seem to disappear, altogether or partially, from the coast. But, as regularly, or perhaps I should say as irregularly, they return with increasing numbers, as did the pilchards in 1679.

These are matters which it will be observed have come under my own personal observation and with which I was intimately connected. It will be understood from what I have said that during the years 1880, '81 and '82, I was under the impression that fishing for migratory fishes at irregular periods and with destructive appliances was economically dangerous to the progress of a fishing industry. But upon learning the decision of the authorities to whom I refer concerning the effect or rather the utility of curtailing the methods employed for the capture of fishes, I studied the question and arrived at the conclusion that the comings and goings of migratory fishes or their production cannot be influenced by man.

Bearing out the statement which I have just made, and upon much higher and practically unimpeachable authority, the following quotation from the report of the commission appointed by Her Majesty, the Queen of Great Britain, un-

qualifiedly takes the position that the supply of migratory fishes cannot be increased or diminished by man. That commission consisted of Professor Thomas Henry Huxley, the Rt. Hon. George Shaw LeFevre, and the Rt. Hon. James Caird. With all the resources of the British Government at their disposal and after three years of exhaustive inquiry into the condition of the sea fisheries of the United Kingdom of Great Britain and Ireland, these men deliberately presented the following report:

"We find the laws relating to sea fisheries to be complicated, confused and unsatisfactory; many restrictions, even of late date, are never enforced; many would be extremely injurious to the interests of the fishermen of the community if they were enforced, and with respect to these and others, the highest legal authorities are unable to decide where and in what precise sense they are operative.

"We advise that all acts of Parliament which profess to regulate or restrict the modes of fishing pursued in the open sea be repealed; and that unrestricted freedom of fishing be pursued hereafter, and for the present we advise that all acts of Parliament which profess to regulate or restrict the modes of fishing pursued inshore be repealed."

In the face of this statement, and bearing in mind the high authority and the historical data at their command concerning the condition of the fisheries which they investigated, it is impossible to come to any other conclusion than that the supply of migratory fishes is practically inexhaustible. But I cannot quite agree with that portion of the report of the Royal Commission referred to which suggests the advisability of enacting laws to permit the unrestricted freedom of fishing inshore. As a matter of fact in the course of his address at the International Fisheries Exhibition in London in 1883, Prof. Huxley made it very plain that the statements made by him and the other Commissioners referred chiefly to migratory fishes. Monsieur Bimband, one of the greatest French authorities, states that the supply of migratory fishes is absolutely inexhaustible and cannot be affected by any means or appliances adopted by men for their capture. But he asserts, and it is pretty generally conceded that fishes which spawn locally inshore might be depleted or even exhausted by continuous or depredatory fishing. The class of fishes known as inshore or local fishes does not comprise mackerel, herring, bluefish, striped bass, whitefish, menhaden, or any other of the great species that form the basis of our industrial fisheries.

I shall only give one other example of the effect of repressive legislation on the economic and industrial development of fisheries, and this example should of itself be considered of serious import in the discussion of any question relating to proposed restrictions, or for the protection, of fisheries. In the opening of the legislative session of the Dutch Parliament 1865-66, the King of Holland drew attention to the fact that for three hundred years, "up to 1857 the Dutch fisheries were burdened with many restrictions intended for their protection and encouragement. The period within which herrings could be fished was limited. The places of fishing, the times, the nets, and the tackle were all under regulations. But the fishery languished and declined, and it was determined by the Legislature to try the effect of another system. A law was passed in 1857 abolishing all restrictions, regulations and enactments as to close time, trawls, nets and lines. Every one was left free to fish the sea in any mode, and at any time he deemed most advantageous, while a Fishery Commission was established to collect the statistics of the various fisheries, and report annually to the legislature on all matters affecting the interests of the fisheries.

"The result has been a steady and continuous improvement."

These statements comprise the result of the investigations of governments and scientific and practical authorities for over four centuries; and in every instance, notwithstanding the erroneous ideas that existed in the minds of fishermen and others, those engaged in the research decided against repressive laws and established the fact that fishing with nets or with any other appliances cannot influence or decrease the supply of migratory food or other fishes.

Now, I do not believe that the gentlemen who signed the petition calling this meeting fully understood the facts to which I have referred, or they would not place themselves in opposition to the published decisions of those great authorities, in science and ichthyology, whom I have quoted and who have in many cases made life studies of the subject which is now under consideration. I notice that in the circular calling this meeting the statement is made that during the past year the spawning ground of mackerel and other migratory fishes has been discovered to be local and in shore. \* This statement is an error—in fact it looks uncommonly like an intentional error. No man knows where these migratory fishes pass the winter, and after twenty years' experience and investigation the best living American authorities cannot definitely locate the precise ground where any of these fishes spawn.

I do not think that I can add further new matter to this argument. It is the duty of the people of the United States to insist through their State and National Legislatures that the food fish shall be conserved and protected; but it is as clear as the sun at noon that the only fisheries which can be benefited by restrictive or protective legislation are those of oysters and other shell fishes, crustaceans, and those fishes that are known not to be migratory. It is therefore apparent that those who seek for the enactment of repressive legislation have not given this matter the attention or study necessary to place before the Commissioners an intelligent argument, and so far as my experience and understanding of the facts enable me to form an opinion, I believe it is the duty of the representatives of the people to oppose by every and any just means all attempts at legislation which would restrict our fishermen in their freedom of fishing for migratory fishes by every means at their disposal.

However, as this question is of such vital national importance, and as no satisfactory solution of the problem has been offered, I would suggest that the following resolution be adopted by this meeting:

(This resolution was not handed in.)

\* The circular does not seem to so state.—ED.  
[TO BE CONTINUED.]

#### First Tour to Florida via Pennsylvania Railroad.

This year's series of Pennsylvania Railroad tours to the land of sunshine and flowers will be inaugurated on Jan. 30th, when a luxurious special train, composed entirely of Pullman sleeping and dining cars, will leave New York at 9:30, Trenton 11:05 A. M., Philadelphia 12:10, Wilmington 12:50 P. M., and thence via the most direct route to the destination point—Jacksonville. At this latter place the tourists are left to follow their own inclination as to where they shall spend the two weeks allotted to them. The great number of side trips that are available renders a selection from which a choice may be made to suit the desires of the most exacting. The unsurpassed climate according with the cloudless, azure-blue sky throughout the immense confines of the State, and the healthful effects to be enjoyed by a sojourn within its borders are sure to be appreciated by the strong as well as the feeble, in whatever direction they are prompted.

\$50 from New York, \$25 from Philadelphia, and proportionate rates from intermediate or contiguous points within a generous radius are made on the most liberal basis, and include railroad fare, sleeping accommodations, and meals en route in both directions while on the special train.

The remaining dates of the series are February 13th and 27th, and March 15th and 27th.—Adv.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable,

POODLES.—These made a strong showing, our two principal kennels coming out in force. In the black curlies, Meadow

mere Kennels had it all to themselves with ten entries in the different classes. They made a smart showing. In open dogs, Mike had no difficulty in scoring over Jumbo. Jabot was absent. In bitches, Dinah won nicely from two others very like her, but she beats them in length of muzzle and general smartness of carriage. Between Juno second, and Jeanne, third, there is little to choose; the former is better in loin, if anything. The four placed ones were also shown in the puppy classes.

In brown curls the Hill-Hurst Kennels made another pretty display, and from the remarks made these unusual colors bid fair to become popular. Poobah and Diamant were placed in order named; there is little to choose between them. In the bitch class, Vivette scores over Bellona in head and in "chic" carriage. The puppies shown one can tell little about as yet.

In corded poodles the only dog shown was Fritz, and though thin in cords, it would take a crack-a-jack to beat him; he has been a frequent winner. Betsy, in bitches, has also been out before and was looking better.

**BULLDOGS.**—At first glance there seemed a big entry here, but the Woodlawn Park Kennels marked their nine entries N. F. C. King Lud was alone in his glory and looking well. The only bitch shown was Lady Nan, and she was at Providence. One cannot leave this breed without giving Mr. Robinson, the manager of the Woodlawn Park Kennels, a word of praise for the way he benched six seven-month-old puppies, by Rustic Sovereign out of Rock Rose. They are all lusty, well grown youngsters, full of life and vigor, fat as moles, and several of them promise to make winners. One especially, a light brindle, has an almost old head, with capital wrinkle. Those who know how difficult it is to raise even one or two from time to time will appreciate the fact when we say that certainly not in this country has such a collection been shown, and we doubt if it has occurred in England. We trust they will feel no ill effects from their little outing, but will turn up bright as ever at New York.

**BULL-TERRIERS.**—Another nice lot, though entries were small. The well-known Kit and Starlight came forward in the challenge bitch class, no dogs entered, and Starlight suffered defeat; she was scarcely in shape and loses to the other in skull, but beats Kit in true shape of muzzle. In open dogs, the Newark winner, Ted Pritchard, scored over Lord Blandford; he is a smarter terrier all over, but is a bit cheeky and was shown a trifle light; both get their tails up. In bitches, Mr. Dole brought out another good one in Edgewood Topsy that simply smothered Edgewood Esther; the former is throaty and brow is a little prominent, and she should have a stronger under jaw; otherwise all round she is a well made one. Nery loses in front and head and tail. A nice pup in Tarquin was shown; neck not clean enough, tail faultily carried; at present shows a capital head and good eye.

**DACHSHUNDS.**—Mr. Manley supplied the only entries with the well-known Don Quixote II. and Jessie Victoria, and they were well shown.

**BEAGLES.**—Two kennels—the Hornell-Harmony and the Debonair—came out in force, and the consequence was a capital display. In challenge dogs Royal Krueger, going a bit in front, beats Doctor in head and body and general type. In bitches champion Elf was alone and looked well, too. In open dogs (4) Sherry again beat Roger W., as at Toronto, but I cannot see where Sport of Rockland beats King Bannerman; admitted that King is too full in eye and brow and a little broad between the ears, his muzzle is excellent, and it is not a bad head, while in front he is better than Sport, and much better in body and stronger behind; he should have been third, and he can beat the winner in brush and carriage, and is not so far off in body. The handsome Daisy Corbett with a little less length would win easily over Popsey, whose full skull and long body are against her. Myrtle the Mouse is much better type; if she were a bit truer in front and did not get her brush over she would be close to Daisy and can beat Popsey, anyhow, in true type especially. Mr. Wixom is too good a fancier, we are sure, to take these remarks in any other way than they are meant. Reserve went to Helen R., feet out and open in toes, long in body and not the type we want. In under 13in. class dogs (2) Razzle was placed over Little Wonder, a big winner. This was correct, as Wonder, though he gets it a little in head and sweet quality of expression, loses so much in substance and depth and coarseness of body to Razzle, Laddie was absent. Hornell-Harmony came to the front again with Evangeline and Dazzle in bitches. The former is well known. Dazzle has much quality, but should be stronger in muzzle, and is hardly true enough in front; here is where she loses to the winner. Actress, third, is long and needs furnishing, and should be shorter in head. Wee Willie, vhc., is too broad in front and skull, body of fair type. Razzle beat Actress in puppies easily enough.

**FOX-TERRIERS.**—These were pretty strong classes for a small show and the Beverwyck Kennels had quite a field day, and what pleased that good fancier, Mr. Rathbone, better, they were all home bred ones. In challenge dogs Beverwyck Punster was alone and looked well. Grouse II. was absent in the corresponding class. In open dogs (10) first went to a new one, Beverwyck Kingpin, scarcely a year old yet; he had a somewhat easy win; his length and shape of muzzle is good but skull is a trifle broad, and neck should be longer and cleaner; stands on capital legs, good bone and nice body, coat fair, and he is a terrier all over. He is by Starden's King out of Moonbeam. Lansdowne Poverina came next; he loses in flatness of skull and was shown a bit light. Beverwyck Bobbin was third; shows a bit too much daylight, is sharp in muzzle, good legs, but hardly clean enough in shoulders. The well known Holster was reserve; his skull is faulty and he loses in character to the others; is a pretty terrier. Of the others, Venio, Jr., was the best, little full in skull yet, but a terrier all over. Blenton Rattler could do no better than c. Mark Twain I liked better than Kenyetta Punch, both he, better head and substance, but rather long cast. Woodlawn Park Kennels had three here N. F. C. In bitches (5) first went to a smart little one in Beverwyck Punlass, weak in muzzle rather, but good front if feet were better. Lansdowne Trim took second; she is round in skull and muzzle should be stronger; she was shown in whelp or seemed to be. Beverwyck Twinkle, third, has too much stop and is big in ear; nice front. Lady Bell loses in head and front, otherwise a nice stamp. King pin won easily in dog puppies and Punlass in bitches. There was only one wire-hair in competition, the well known Oakleigh Bruiser. The other four entries came from the Woodlawn Kennels.

**IRISH TERRIERS.**—If the Woodlawn Kennel had been competing there would have been plenty of competition in all classes with their eight entries, as it was competition rested with Crib and Galtees in the challenge class. Crib's far better head pulled him through though Galtees is truer in front. In open bitches the only competing entry was Hill Top Surprise, the Newark winner.

There were no black and tan terriers entered, something we don't remember hearing of before and wonder what Doctor and Ben could be thinking of.

**ROUGH TERRIERS.**—Glenshea was the only Scottish terrier entered and of course won. No Bedlington, but Skye terriers showed up well with the same dogs that Mr. Shinn showed at Chicago, and which were then described. The Welsh terrier Devr was marked N. F. C.

**YORKSHIRE TERRIERS.**—Two in open dogs, and first went to Actor, a poor sort, dark body color and waxy light tan. Jacks, next, is a silver terrier, a bit large. In bitches Lady Nell still getting lighter and not beautifully so in tan, was alone.

**PUGS.**—Seminole Kennels just about farmed the classes.

Attraction and Midget were the challenge winners. In open dogs first went to the well-known Medlar, getting gray; he was alone. In bitches (4) Silver Queen won; light in body and small-faced, a pretty little thing with nice trace and legs. Bess, well known, came next and pushes the other for the win; cobbler in build. La Belle Petite has nice wrinkle, is a bit long cast, but has a good front and is a smart little piece of dog flesh.

**TOY SPANIELS** were drawn blank.  
**ITALIAN GREYHOUNDS.**—The challenge winners were supplied by Spring and Sprite, both looking tiptop. Another well-known face, Lady Lee, won in open bitches, second going to June, a white and fawn, too broad in skull and large sized.

**MISCELLANEOUS** prizes were withheld and in the selling class first went to Myra, an Irish setter. H. W. LACY.

#### LIST OF AWARDS.

**MASTIFFS.**—CHALLENGE—Dogs: 1st, J. L. Winchell's Beaufort's Black Prince. Bitches: 1st, B. F. Lewis's Ethel. OPEN—Bitches: 1st, W. Norman Higgs's Brampton Beauty; 2d, J. L. Winchell's Ingleside Cambria Princess.

**ROUGH-COATED ST. BERNARDS.**—CHALLENGE—1st, Fred Schmitt's Otis. OPEN—Dogs: 1st, Tracy Gould's Maulpratt; 2d, James Morrissey's Grover. Bitches: 1st, J. Brett's Alberta. Puppies: 1st, Mrs. J. M. Nicholson's Scottish; 2d, Castle Point Kennels' Columbus. Reserve, North Milton Kennels' David B.

**SMOOTH-COATED ST. BERNARDS.**—OPEN—Dogs: 1st and reserve, A. T. Phelps's Survivor and Marco, Jr.; 2d, Fred Schmitt's Hellgate Keeper. Bitches: 1st, 2d and 3d, A. T. Phelps's Burton Belle, Belline of Watervliet and Peggy. PUPPIES—Dogs: 1st, Mrs. J. M. Nicholson's Belvedere. Bitches: 1st, Mrs. J. M. Nicholson's Scotch Gloria.

**BLOODHOUNDS.**—CHALLENGE—Dogs: 1st, J. L. Winchell's Victor. Bitches: 1st, J. L. Winchell's Judith. OPEN—Dogs: 1st, J. L. Winchell's Brough.

**GREAT DANES.**—1st, Calvin S. McChesney's Hepburn Apollo.

**NEWFOUNDLANDS.**—1st, Phil J. Walsh's Carlo; 2d withheld.

**GREYHOUNDS.**—CHALLENGE—1st, Joe Lewis's Wild Rose. OPEN—Dogs: 1st, Maybrook Kennels' Dakota; 2d, W. F. Minard's Uncle Dick. Bitches: 1st, Maybrook Kennels' Miss Dollar III. Puppies: 1st, Maybrook Kennels' Dakota.

**AMERICAN FOXHOUNDS.**—CHALLENGE—Dogs: 1st, Seminole Kennels' Ranger II.; 2d, Dr. H. T. Thurber's Elite. Bitches: 1st, Dr. H. T. Thurber's Femur. OPEN—Dogs: 1st and 2d, F. M. Whipple's Ned and Spot; 3d, Willow Brook Kennels' Drum IV. Reserve, Edgar North's Robin Hood. High com., The Governor's Keyland's Dover. Puppies: 1st, 2d, reserve, and very high com. (2), The Governor's Kennels' Moose, Blizzard, Tempest, Jags, and Nance. High com., C. W. Ernst's Sport.

**ENGLISH FOXHOUNDS.**—OPEN—Dogs: 1st, Willow Brook Kennels' Crook; 2d, Bucklewell Kennels' Mike. Bitches: 1st, Frank F. Dole's Rosemary; 2d, Bucklewell Kennels' Shot.

**CHESAPEAKE BAY DOGS.**—OPEN—Dogs: 1st and 2d, B. Alton Smith's Rough and Cleveland. Bitches: 1st and 2d, B. Alton Smith's Tivoli and Rose.

**POINTERS.**—CHALLENGE—Dogs: 1st, L. A. Biddle's Glamorgan. Bitches: 1st, B. F. Lewis's Sal II.; 2d, Red House Farm Pointer Kennels' champion Fan N. OPEN—Dogs: 1st, G. O. Smith's Molton Banner; 2d and 3d, Springside Kennels' Springside Hal and Hylas of Vaso. Reserve, C. McChesney's John. Very high com., J. R. Hyland's Ossington Boy and Dr. W. Seymour's Peter. High com., J. E. Hodgman's Dock. Bitches: 1st, Springside Kennels' Springside Nell; 2d, W. C. Root's Bloom of Kent; 3d, C. Connell's Fan Tan II. Reserve, Forester Kennels' White Rose. Very high com., Red House Farm Pointer Kennels' Bella and Forester Kennels' Forester Lady. PUPPIES—Bitches: 1st, Springside Kennels' Springside Siren; 2d, Red House Farm Pointer Kennels' Queen Bee.

**ENGLISH SETTERS.**—CHALLENGE—Dogs: 1st, W. Fiske's Glendon. Bitches: 1st, W. Boyce, Jr.'s Spectre; 2d, J. Lewis's Victoria Liberty. OPEN—Dogs: 1st, Victoria Kennels' The Earl; 2d and 3d, H. Pape's Critic and Cactus. Reserve, H. Northwood's Wordsley Duke. Very high com., D. J. Peters' Robin Goch and W. W. Kendall's Carlton Hero. Bitches: 1st and 2d, J. Brett's Maid Marion and Flour of Sulphur; 3d, Mr. Dix's Brownie. Very high com., H. Northwood's Amy Robsart.

**IRISH SETTERS.**—CHALLENGE—Dogs: 1st and 2d, Seminole Kennels' champion Tim and Pride of Paisy. Bitches: 1st, Seminole Kennels' champion Laura E. OPEN—Dogs: 1st and 2d, Seminole Kennels' Moutauk, Jr., and Tim's Daughter; 3d, J. W. McCormick's Bronze. Reserve, W. J. Totten's Exile. Bitches: 1st and reserve, Seminole Kennels' Delphine and Biddy; 2d, Dr. W. Jarvis's Rosamond; 3d, W. J. Totten's Beauty T.

**GORDON SETTERS.**—CHALLENGE—Dogs: 1st, Dr. S. G. Dixon's Leo B. Bitches: 1st, Miss S. A. Nickerson's Janet; 2d, Dr. S. G. Dixon's Lady Waverly. OPEN—Dogs: 1st, Miss S. A. Nickerson's Count Noble; 2d, Dr. S. G. Dixon's Duke of Wellington. Bitches: 1st, Highland Carador's Highland Yola. PUPPIES—Dogs: 1st, Miss E. A. Wadsworth's Dick Noble.

**FIELD SPANIELS.**—CHALLENGE—Dogs (over 28lbs.): B. F. Lewis's Newton Abbott Torso; 2d, E. A. Wilson's Bradford Mohawk. OPEN—BLACK—Dogs (over 28lbs.): 1st, R. P. Keasby's Echo. Bitches: 1st, Castle Point Kennels' Fairy.

**COCKER SPANIELS.**—CHALLENGE—Dogs (not over 28lbs.): 1st and 2d, Swiss Mountain Kennels' champion Middy and Red Doe. Bitches: 1st, Swiss Mountain Kennels' Miss Waggle. OPEN—BLACK—Dogs (not over 28lbs.): 1st, E. H. Fiske's Jay Kay; 2d, Swiss Mountain Kennels' King Raven, Jr.; 3d, H. B. Field's Brantford Jet. Reserve, E. W. Fiske's Wilfred. OPEN—Dogs: 1st and 2d, Swiss Mountain Kennels' Topsy and Rideau Rhea; 3d, E. A. Wilson's Miss Phyllis. Reserve, W. Fiske's Dame Vernon. Very high com., E. W. Fiske's Corktown Cleo and Eugene. ANY OTHER COLOR—Dogs (not over 28lbs.): 1st, C. T. Sackett's Othello; 2d, E. W. Fiske's Brantford Rufus; 3d, Swiss Mountain Kennels' Dandy S. Bitches: 1st, E. W. Fiske's Red Nibbe; 2d and 3d, Swiss Mountain Kennels' Ruth S. and Hamilton Beauty. PUPPIES—ANY VARIETY—Bitches: 1st, G. O. Van Epps's Negress.

**COLLIES.**—CHALLENGE—Dogs: 1st, Highland Kennels' champion The Spire; 2d, J. P. Morgan's Kelsy. Bitches: 1st, L. Stansfield's Highland Floss; 2d, J. P. Morgan's J. J. Myr Dear. OPEN—Dogs: 1st, J. P. Morgan's Setton Hero; 2d and reserve, Seminole Kennels' Goldust and Curzon; 3d, H. R. Barry's Christopher June. Very high com., W. B. Tocher's Cawdor and Al De Ber Collie Kennels' Al De Ber Archie. Bitches: 1st, J. P. Morgan's Charlton Phyllis; 2d, 3d and com., Seminole Kennels' Ormskirr Gipsy Maid, Bertha II. and Sweet Marie. Reserve, H. R. Barry's Passaie Bass. Very high com., W. B. Tocher's Carador Mayflower. High com., L. Stansfield's Highland Rose. PUPPIES—Dogs: 1st, L. Stansfield's Highland Bobbie. Bitches: 1st, W. P. Smith's Trefoil Princess.

**POODLES.**—BLACK CURLY COATED—Dogs: 1st and 2d, Meadowmere Kennels' Milo and Jumbo. Bitches: 1st, 2d and 3d, Meadowmere's Dinah, Juno and Jeanne. PUPPIES—Dogs: 1st and 2d, Meadowmere's Jumbo and Jabot. Bitches: 1st and 2d, Meadowmere Kennels' Juno and Jeanne. BROWN CURLY COATED—Dogs: 1st and 2d, Hill Hurst Kennels' Poobah and Diamant. Bitches: 1st and 2d, Hill Hurst Kennels' Vivette and Bellone. PUPPIES—Dogs: 1st and 2d, Hill Hurst Kennels' Hill Hurst Nap and Hill Hurst Tartuff. Bitches: 1st, Hill Hurst Kennels' Hill Hurst Posey. CORDED—Dogs: 1st, Garden Kennels' Fritz. Bitches: 1st, Dr. S. G. Dixon's Betsy.

**BULLDOGS.**—CHALLENGE—Dogs: 1st, John Congdon's champion King Lud. OPEN—Bitches: 1st, John Congdon's Lady Nan.

**BULL-TERRIERS.**—CHALLENGE—Bitches: 1st, Castle Point Kennels' Kit; 2d, Frank F. Dole's champion Starlight. OPEN—Dogs: 1st, Frank F. Dole's Ted Pritchard; 2d, Castle Point Kennels' Lord Blandford. Bitches: 1st and 2d, Frank F. Dole's Edgewood Gipsy and Edgewood Esther; 3d, Castle Point Kennels' Nery. Puppies: 1st, Castle Point Kennels' Arguin.

**DACHSHUNDS.**—OPEN—Dogs: 1st, Windrush Kennels' Don Quixote II. Bitches: 1st, Windrush Kennels' Jessie Victoria.

**BEAGLES.**—CHALLENGE—Dogs: 1st, Hornell-Harmony Kennels' champion Royal Krueger; 2d, B. L. Lewis's Elf. Bitches: 1st, Hornell-Harmony Kennels' champion Elf. OPEN—Dogs (over 13in.): 1st and 2d, Hornell-Harmony Kennels' Sherry and Roger W.; 3d, Standard Kennels' Sport of Rockland. Reserve, Debonair Beagle Kennels' King Bannerman. Bitches: 1st and 2d, Hornell-Harmony Kennels' Daisy Corbett and Popsey; 3d and reserve, Debonair Beagle Kennels' Myrtle the Mouse and Helen R. (Under 13in.)—Dogs: 1st and 2d, Hornell-Harmony Kennels' Razzle and Little Wonder. Bitches: 1st and 2d, Hornell-Harmony Kennels' Evangeline and Dazzle; 3d, Weeks & Cloud's Actress. Very high com., Debonair Beagle Kennels' Wee Willie. Puppies: 1st, Hornell-Harmony Kennels' Razzle; 2d, Weeks & Cloud's Actress.

**FOX-TERRIERS.**—SMOOTH CHALLENGE—Dogs: 1st, Clarence Rathbone's Beverwyck Punster. OPEN—Dogs: 1st, Clarence Rathbone's Beverwyck Kingpin; 2d, Lansdowne Kennels' Lansdowne Poverina; 3d, Andrew Hopper's Beverwyck Bobbin. Reserve, R. G. Stewart's Volstead. High com., A. T. Cochran's Venio, Jr. High com., Hallock C. Alvord's Mark Twain and Kenyetta's Funch. Com., L. B.

Banks's Blenton Rattler. Bitches: 1st and 3d, Clarence Rathbone's Beverwyck Punlass and Beverwyck Twinkle; 2d, Lansdowne Kennels' Lansdowne Trim. Reserve, Phil H. Donnelly's Lady Bell. PUPPIES—Dogs: 1st, C. Rathbone's Beverwyck Kingpin; 2d, W. H. Keeler's Kingpin. Bitches: 1st, C. Rathbone's Beverwyck Punlass; 2d, J. Bennett's Daltry. Wire-haired CHALLENGE—Dogs: 1st, Hillhurst Kennels' Oakleigh Bruiser.

**IRISH TERRIERS.**—CHALLENGE—Dogs: 1st, W. F. Kenney's Crib; 2d, H. O'Connor's Galtees. OPEN—Bitches: 1st, G. G. Hammill's Hill-top Surprise.

**SCOTTISH TERRIERS.**—Bitches: 1st, T. H. Garlick's Glenshea.

**SKYE TERRIERS.**—CHALLENGE—1st, C. A. Shinn's Sir Stafford. OPEN—Dogs: 1st, S. Barr's Sir Thomas. Bitches: 1st, C. A. Shinn's Princess May; 2d, C. A. Spilux's Lady Stafford.

**YORKSHIRE TERRIERS.**—Dogs: 1st, J. Foster's Actor; 2d, Pomona Kennels' Jacks. Bitches: 1st, J. Foster's Lady Nell.

**PUGS.**—CHALLENGE—Dogs: 1st, Seminole Kennels' Attraction. Bitches: 1st, Seminole Kennels' champion Midget. OPEN—Dogs: 1st, E. Adams's Medlar. Bitches: 1st and 3d, Seminole Kennels' Oliver Queen and La Belle Petite; 2d, Dr. M. H. Cryer's Bess.

**ITALIAN GREYHOUNDS.**—CHALLENGE—Dogs: 1st, Joe Lewis's Spring. Bitches: 1st, Joe Lewis's Sprite. OPEN—Bitches: 1st, Joe Lewis's Lady Lee; 2d, E. A. Hall's Rosa.

**MISCELLANEOUS.**—UNDER 25LBS.—Prizes withheld.

**SELLING CLASS.**—\$30 or UNDER—1st, J. Luckhurst's Myra. Reserve, J. W. McCormick's Dow (Irish setter).

Specials follow regular awards.

#### Philadelphia Kennel Club.

Editor Forest and Stream:

The Philadelphia Kennel Club claim the dates March 27 to 30 inclusive for their next annual bench show, to be held at Tattersalls, Philadelphia.

At a meeting of the Keystone Kennel Club, held on Friday, Jan. 12, it was unanimously resolved to resign from the American Kennel Club and form an amalgamation with the Philadelphia Kennel Club by individual application for membership in that club, which application will be acted upon at the next meeting of the Philadelphia Kennel Club, held at the Aldine Hotel on Tuesday, Feb. 12.

At a meeting of the Philadelphia Kennel Club a resolution was adopted that application be made by the Philadelphia Kennel Club for membership in the American Kennel Club. The secretary was instructed to inclose the treasurer's check for the \$10 admission fee.

It is deemed advisable for the best interest of the dog fanciers of the city of Philadelphia and the promulgation of the dog shows, that the Keystone and Philadelphia Kennel Clubs join issue.

The Philadelphia Kennel Club is the oldest organization of its kind in the country, and has a prestige among dog men second to none. There being a friendly feeling on the part of Mr. Wenderoth and Mr. Mundy, the most influential members of the Keystone Kennel Club, with the members of the Philadelphia Kennel Club, it was deemed for the best interest of all concerned that the Keystone Kennel Club should resign its membership from the American Kennel Club, that the Philadelphia Kennel Club might have a successful dog show, and offered the Tattersalls building for the purpose. The dates claimed for the show being March 27-30 inclusive, will follow immediately after St. Louis and before Boston, which will fit in very nicely for the dogs coming East to Boston from St. Louis.

A large guarantee fund was subscribed in a very few minutes at the last meeting of the Philadelphia Kennel Club and the members were very enthusiastic in their intention of giving a rattling big dog show on the dates claimed.

The newspapers all sent their representatives to the meeting of the club and have assured the members of their friendliest co-operation. The prospects of a most successful show for Philadelphia, to be the largest in its history, are very promising. The premium lists announcing the names of judges and all other matters of interest connected with the show will be distributed in a very short time.

DR. GEORGE D. B. DARBY, Sec'y.

#### Scotch Terriers.

We were unable to give, in a telegraphic message from Saratoga, more than just meagre particulars of the sale of Tiree and Rhudaman, a bit of news which we dropped upon on the journey to Saratoga. It seems Mr. Henry Brooks, who has done so much to bring forward this game breed, has entered into partnership with Mr. Oliver Ames, Jr., and uniting their kennels their dogs will still be shown under the name of Wankie Kennels. It will be remembered that some time since we alluded to the fact that Mr. Ames had become a welcome convert to the fancy that is identified with the Land O' Cakes.

By the purchase of such a good dog as Tiree, both on bench and as a sire, together with Rhudaman, the kennel is creating a monopoly in this breed. Mr. Brooks tells us that they have a fine litter by Tiree out of Culbearn, and two fine young bitches by Kilroy out of Brunhilda, that we believe we have spoken favorably of before, and they will make their debut at New York show. The kennel will show at New York a very even and strong team with Kilroy, Tiree, Rhudaman, Kilree and Tam in black brindles and near one type; then as brindles they will show Culbearn, Diana, and the novice Frieda. In all they expect to show 17 terriers, if novice and puppy classes are made. The old idea which obtained as a rule in this country that these terriers were mere lap dogs, is one that cannot be exploded too quickly. The impression arose doubtless from the nondescripts that masqueraded under the name of Scotch terrier, Yorkshire terrier, Skye terrier, et al, and their acceptance as pet dogs. The Scottish terrier is no ladies' lap dog, and would probably take it as a dire insult to be so thought of, still, as a house dog and a merry, intelligent dog he can scarcely be surpassed; but his true forte is the destruction of vermin. They are working dogs full of gameness and go and deserve to become popular. Mr. Brooks has made a bench show room in his kennels that he may better show visitors and others the good points of the dogs, and also to be able to exhibit them collectively.

#### POINTS AND FLUSHES.

[By a Staff Correspondent.]

THOSE who contemplate visiting the field trials in Mississippi next month may save themselves a great deal of annoyance by engaging accommodations ahead of their arrival. There are signs which indicate that there will be a pretty good attendance, consequently there may be a pressure on the hotel and livery accommodations. Every one who owns a saddle will do wisely to bring it with him. The average Mississippi saddle, at least such as is for hire, is a marvelous combination of awkwardness and dilapidation. The girth is almost certain to be a composite affair of a misfit buckle, a torn and worn piece of short leather, and all missing parts supplied by bits of string. If you haven't a saddle of your own, it is well worth the trouble of borrowing a good one.

The Mascoutah Kennel Club is setting itself at work in earnest for a successful show. The indications are that it will be one of the great events of the year. Then, too, the boys all like Chicago. It has a glorious climate, a good imitation of a seacoast and more unemployed men than any other city. It breaks the record in everything.

B. WATERS,

909 SECURITY BUILDING, Chicago.

## DOG CHAT.

### Banquet of the S. P. and K. C.

The Saratoga Poultry and Kennel Club held its first annual banquet on Thursday evening last at the Commercial Hotel. The guests sat down to the following "feed" at 11 p. m.

MENU.		
Celery.	Blue Potatoes aux Citron.	Olives.
POTAGE.		
Green Turtle aux Queuenelles.		
Finger Rolls.		
POISSON.		
Kennebec Salmon, Anchovy Sauce.		
Potatoes Parisienne.		
ENTREES.		
Larded Quail Stuffed, Currant Jelly.		
Tenderloin of Beef aux Champignons.		
Rice Croquettes, Sauce Maraschino.		
ROTI.		
Vermont Turkey, Oyster Dressing.		
LEGUMES.		
Potatoes a la Duchesse.		
Asparagus Tips a la Cream.		Petit Pois.
DESSERT.		
English Plum Pudding, Brandy Sauce.		
Assorted Cake.		Assorted Nuts.
Neapolitan Ice Cream.		
Cafe Noir.		

The menu card was tastefully arranged; on one side was the list of good things to eat and on the other the list of good things to hear. Mr. F. W. Taylor was toastmaster and sat at the head of one long table where the chicken enthusiasts lived up to the old saying, "Birds of a feather &c." The dog men, or as one envious man put it, "the growlers" occupied another long table, which some of the good chicken men helped to fill also; in all the company numbered about eighty. Before commencing proceedings the Saratoga Male Quartette rendered a "Song of Welcome" in a most acceptable manner.

When cigars were lighted, Mr. Gaylor spoke about "Our Initial Show" and outlined the work of the club, what they had done and what they expected to do. Mr. James Robinson, manager of the Woodlawn Park kennels, responded to the toast of "The Show Room as an Educator." He made a happy speech and dwelt on the good dogshows did to the local interest wherever held, and that but for dog shows the dog would never have reached the high state of perfection and public estimate it enjoys at present. Mr. W. A. Fuller then responded for "The Poultry Fraternity," and one would gather from his remarks that somebody's dog had been at his chickens some time or other. He objected to the chicken men being saddled with the expenses of a dog show and that it was the chicken men who had to go down into their pockets to pay for dogmen's fun, judges etc. This led Mr. T. Gould to jump up and remark that if the dogmen did seem to get the big end of the deal it was only proper, as it is so much more expensive for them to take their dogs round to show and it cost them more to get good dogs than it did to get good chickens.

Mr. F. F. Dole made a happy speech in responding for the "Dog Fraternity." Among other things he said that the man who owned a dog must be a good fellow, and one with a big heart. He said further that next to the time he spent with his family his happiest hours were those he spent with his dogs and the dog fanciers. Mr. German Hopkins then gave us a good song, and H. W. Lacy responded to the toast of the "Dog Press," remarking that the kennel reporter's task was not always the pleasantest, that if he did not console with the "kicker" and meet the views of the one who knows it all, he was apt to get hurt where the chicken did. He assured the company however that professional kennel writers had no animus or bias whatever, and tried their best to help the fancy along, and not injure one man's dog to praise another. He then called upon Major Taylor to help him out. The latter said that he was not there to make a speech, but to report what was said by others, and that they would have what he had to say next week, when it would be safer probably to express his opinion—at a distance. Mr. John Wandell, our host, then spoke for "Our Exhibitors," and said what a nice lot of fellows they were. Mr. Robert Armstrong then responded to the toast of "The Sociability of the Fraternity" in a witty speech that brought down the house, especially when he referred to the fanciers of little America and Great Britain.

Mr. Chas. R. Taylor spoke feelingly in behalf of "The Lady Fanciers," and remarked that they kept the dogmen from going to the dogs. Mr. G. Hopkins gave "Our Host" in an appropriate manner and echoed the sentiments of all present by saying he was a jolly good fellow. The "parting song," rendered by the male quartette was very well rendered but came too soon. Mr. Hoyt also spoke of the "congeniality of dogmen" and made a very able speech especially as this is a subject that can stand a lot of talking about. The only unpleasant feature of this most enjoyable affair was Mr. Gould's uncalled for attack upon the dog press, his remarks were so evidently personal that they were received in the silence they merited. Mr. J. Otis Fellows was called upon for a few words, and took occasion to thank the dogmen for their good wishes and the purse of \$50 that was subscribed by his many friends in recognition of his uniform kindness and ability as superintendent. All voted the first show of the S. P. & K. C. a great success and it was a late hour when the company sought their couches.

### Mascoutah Kennel Club Show.

The premium lists of the above club's forthcoming show are not yet ready for distribution, but the advance proof we have seen, just before going to press, indicates that the club means to have a show this time second to none in the country. The list of prizes is almost as liberal as that of the W. K. C., and 213 classes are provided. On the whole, the list is very fair to all and is one that will be sure to draw a good entry. Those breeds which have \$20 and \$10 in challenge, and \$25, \$15, \$10 and \$5 in open, and \$15 and \$10 in puppy and novice classes are mastiffs, St. Bernards, Great Danes (excepting that puppy and novice sexes compete together), greyhounds, pointers, setters, (all breeds, but no novice classes), collies, (puppy and novice \$5 and \$3 and \$10 and \$5.) Fields panels get \$15 and \$10 in challenge, and \$20, \$10, \$5 and medal in open. Considering the small number of field spaniels that are shown just now this seems waste of money, rather should the cockers get it, they bring much better entries. Those breeds getting \$15 and \$10 in challenge, and \$15, \$10 and \$5 and medal in open, are bulldogs, bull-terriers, foxhounds, Russian wolfhounds. The others range from \$15 and \$10 in challenge classes to \$10 and \$5, and from \$15, \$10 and \$5 to \$10 and \$5 in open classes, the different rough terriers getting the smaller allowance. In view of the rapid strides these breeds have been making lately, and the distance of Chicago from the best kennels, it would be well to deal a little more liberally with them. The club would not lose by it. The club is most liberal with kennel prizes, of \$25 in most cases, and \$15 to \$10 for best single specimens. Other cash specials are also given by friends. The different specialty clubs have done well, especially the Mastiff, St. Bernard and Collie. The Garfield Park cup, value \$150, is up for fox-terriers. As it is early yet the list of specials will be greatly increased. The entries close Feb. 27, but we are not aware what the fee will be, and the show will be held in the old Battery D and Second Reg. Armory. There will not be any too much room. The club offers a handler's prize of

\$100, to the handler showing the largest number of first and second prize winners, and \$25 to the second with same conditions. This is a bid for quality as well. The judges chosen are: St. Bernards, Newfoundland, pugs, Blenheim, King Charles and Prince Charles and rubyspaniels, Miss A. H. Whitney, Lancaster, Mass. Mastiffs, Great Danes, bulldogs, all terriers, Japanese spaniels, Italian greyhounds and poodles, Mr. James Mortimer, Babylon, L. I. Pointers, Mr. Jas. L. Anthony, New York. English and Irish setters, Chesapeake Bays and beagles, Maj. J. M. Taylor, New York. Gordon setters, bloodhounds, foxhounds, deerhounds, dachshunds and miscellaneous, Mr. John Davidson, Monroe, Mich. Field, cocker, Clumber, Irish water spaniels, Jas. F. Kirk, Toronto, Canada. Russian wolfhounds, deerhounds and greyhounds, Mr. R. D. Williams, Lexington, Ky. Collies, Mr. John A. Long, St. Louis, Mo.

This list seems a good one and should create confidence. Spratts will feed and bench, and Mr. John Read will superintend. This is a guarantee that the show will be run properly.

Hard times don't seem to affect our advertisers, they keep up a steady gait, and they are all genuine "bill" ads. too.

### W. K. C. Show.

The committee has decided to make two classes for Boston terriers, to be known as 139A and 139B, with prizes \$15, \$10 and \$5; a class for Russian wolfhound puppies to be known as 34A; dachshund puppies to be known as 144A; wire-haired fox-terrier bitch puppies to be known as 166A, and Scottish terrier puppies to be known as 189A. A field trial class for Gordon setters, to be known as 35A, \$15, \$10, \$5, is also added; also a puppy class for any breed where such class is not already made, provided there be not less than five entries. The following special prizes have been offered since the premium list went to press: Mr. J. G. K. Duer, president of the W. K. C., offers \$25 each for the best St. Bernard, pointer, collie and fox-terrier in the show. A friend of the breed offers \$15 each for the best harlequin great Dane dog and bitch.

### An April Show.

There is a rumor afloat, of a very substantial nature, that a combined specialty show will be held in April next in Madison Square Garden, in connection with the proposed Farmers' Implements, etc., exhibition. The breeds to be exhibited will be collies, spaniels and St. Bernards, and final arrangements are pending. It is thought the clubs will consent to take the show up, as they assume no risk, the "Farmers" standing the expense of premiums, etc. Mr. Mortimer is to superintend. Mr. Thomas Terry, we believe, is the chief mover in the affair.

It is not unlikely that a few of the Albany fanciers will get together soon to hold a show some time this year. Messrs. Clarence Rathbone, John Bennett, John Craig, and P. Donnelly are the plotters. We trust it will come to something; there would be a great terrier show with Mr. Rathbone at the helm.

The Boston Terrier Club have offered two special prizes, consisting of silver medals, at the coming show of the Mascoutah Kennel Club—one for the best dog and the other for best bitch.

Mr. John Congdon, owner of King Lud, has purchased in England the noted bull bitch Cadajas.

### Pittsburgh Show.

Pittsburgh will have a show, after all, but they will wait till Sept. 1. At the annual meeting of the Duquesne Kennel Club held at the Allegheny Athletic Association club house Jan. 17 the following officers were elected: S. Lincoln Boggs, President; James O'Hara Denny, Vice-President; Wm. E. Littell, Secretary-Treasurer; Board of Governors: John M. Chaplin, John Moorhead, Jr., William Arrott, Henry M. Breckenridge, Dr. John S. Phillips. The club has decided to give a show this coming September and \$2,000 will be hung up for prizes.

Dr. Foote has sold the black and tan terriers Rochelle Lord and Rochelle Scott, both known on the bench to Mr. W. A. Scott, New Cumberland, W. Va. Broomfield Madge (within one win of championship honors), to H. W. Lincoln, Brooklyn, N. Y. This nearly cleans the Doctor of this breed, having only the champions Sultan and Mensbrook Maiden and two young dogs of their get left. He is in it strong with wire-hairs now, and will put some of his Brittle stock down at New York.

### The Woodlawn Park Kennels.

On Thursday afternoon, at the invitation of Mr. James Robinson, the manager, a number of visiting dogmen were driven out to Woodlawn Park Kennels in two large sleighs. The kennels are situated about four miles out of town on the banks of Saratoga Lake, on what was known as the old Schuyler estate. In the handsome mansion overlooking the lake Mr. Robinson is settled, and after thawing out, as the drive from town was a pretty stiff one in the teeth of a nor-easter, we walked down the hill to the kennels. New kennels are to be built, but at present the dogs are housed in several cottages and small kennels.

First we came to a batch of make-shift kennels with small yards in which were some Irish terrier pups, by Jackanapes. Adjoining this kennel was another building in which the cooking apparatus and feeds, &c., were housed and, judging from appearances, hard times evidently have not struck this side of the hill. Further on a small cottage, finished in oiled pine, gave shelter to a mixed lot of young stock. The small rooms have been divided off by a wire partition into two compartments. On the ground floor was a corner for the bull matron, Rock Rose, who is by Rabagas out of Roseleaf, and whose breeding is therefore A1, going back to old Duke and others. She is the mother of the wonderful, litter spoken of in our report, and is heavy in whelp again to the same dog. Another room is reserved for bitches in season; another still contained two young bulldogs, the next room was the quarters of the notable pup family and, for the information of other breeders, we may say that these pups get no coddling, the temperature in the room being about 50°, of course they are kept warmer at night. In a room leading off the verandah were five collie pups, by Wordmansterne Trefoil, out of Flora Maid, and about twelve weeks old. One especially looked promising.

Upstairs the rooms were divided in the same way. In one compartment were three pups by Conrad II. out of Gem. Another compartment had three promising fox-terrier pups seven weeks old, by Chief Justice out of Miss Domino, that was imported for George Raper in 1893. In another room was a wire pup by St. Broom out of Jess Frost, five months old, that stood on good legs and boasts a good coat; a smooth bitch pup by Blemton Victor II. out of Maystorm kept him company. She has good length of head and is promising. Beyond this cottage was a range of four kennel yards, with two small kennel buildings dividing each pair of yards. These are the collie kennels, and some lusty-looking collies by Toronto Wonder bounced out. They have capital coats and one or two have good heads. The kennel yards run up the embankment steep enough to suit even a Highland collie.

After a look at the Hilton club cottage, directly on the shore of the lake, a move was made to the house and after a chat and a drink to the health of Mr. and Mrs. Robinson,

we bundled into the sleighs and behind a pair of Col. Hilton's prize hackneys it did not take us long to reach the other side of the city and Woodlawn Park and the Stock Farm. It is a wonderful place with its 36 miles of handsome roads for driving. Under the chaperonage of Mr. Donnelly we were shown some of the handsome hackney stallions and mares this farm is celebrated for, and saw the handsome chicken houses and other stock buildings only in the distance. It was dark when we reached the town again and every one was delighted with the trip.

### Pointer Imports.

The three pointer bitches that Mr. E. O. Damon is importing come through Spratts Co. They are, as stated, from Mr. Heywood-Lonsdale's kennels. They are Ightfield Spree, liver and white, by Prawn out of Guelph; Ightfield Leiger, liver and white, by Loveridge out of Kate, and Ightfield Dove, white and liver ticked, by Loveridge out of Damask. Mr. Damon writes that Strideaway is doing good work in Gray's hands, and that he will be in good shape for the United States Trials B next month. He will be shown in New York if he can get him back in time.

At Cruft's great London show, there will be 538 classes and 245 specials, certainly the biggest thing in dog shows ever thought of.

The Fanciers' Journal plant was purchased at the sale Jan. 16, by the Poultry Weekly and will probably be issued as a monthly.

Mr. Jarrett does not like to miss a show even if he does not exhibit, so he took a flyer up to Saratoga. He did not go back empty handed, for he purchased five collies from the Woodlawn Park Kennels. They are by his old dog Toronto Wonder and are to be sprung at New York—some of them, rather. Mr. A. C. Bradbury also bought another one of the same litter, quite a promising youngster, too. It looks as if there is going to be some fun at New York and keen competition. We have never seen so much excitement among the collie men as to what the other will put down. Mr. Jarrett also bought for Mr. Hopkins two black and white collie pups by Red Roland, 10mos. old, and that are well fit to show. The bull-terrier bitch Matchless he traded to F. E. Dole for the foxhound Rosemary, so she strikes the old trail again. In a note from Mr. Jarrett he remarks "I think I had more fun at Saratoga than at any show I remember," and so say all of us.

### Columbus Show.

Premium lists are piling in upon the dogmen at a great rate and the Columbus Fanciers' Club is the next to command attention. This show will be held Feb. 28 to March 3. Challenge prizes are \$10. In open the prizes are \$10 and \$5 for the larger breeds, and from spaniels down the rest including greyhounds, get \$8 in challenge and \$8 and \$5 in open. This is further reduced in the terrier classes to \$5 and \$3, and even \$5 only for first. The will be handlers prizes of \$60 and \$40 for the largest number in charge of one handler. Kennel prizes of \$10 will be given by the club and other specials will be announced later. Entries close Feb. 20, first day of New York show, with George F. Mooney, secretary, 276 North Highstreet, Columbus, and the entrance fee is \$3.

Mr. Edward Booth has sold the smooth-coated St. Bernard Duke of Alma to Mr. E. J. Hearle of New York city.

Mr. F. F. Dole has sold the bull-terrier Cordonna to Dr. Huidekoper.

We see that the well-known exhibitor and dealer Fred Kirby, has been using his hands in a more direct manner than he generally uses his tongue, and has consequently felt the strong arm of the law. He pleads *non vult*.

The poison fiend is on the alert for victims in Essex, Conn. Last week his record was fifteen well bred "bird" dogs that died from poison. A reward has been offered for conviction or information.

Mr. E. K. Sperry, of New Haven, president of the Gordon Setter Field Trial Club and former secretary of the New England Field Trial Club, has been very sick with "grippe" for the past two weeks, and even now can hardly raise his head from the pillow; but a council of physicians recently decided that his musical voice would again be heard before the blue-birds and the Bob Whites.—B. B.

### Pacific Coast Field Trials.

SALINAS, Cal., Jan. 20.—[Special to Forest and Stream.] In the Derby the winner was W. G. Kerckhoff's Betsy Mark by Gath's Mark, Ightfield Sophie; second, A. P. Kerckhoff's Mercury by Dick Bondhu out of Sunlit; C. Robinson's black pointer Red by Old Black Joe and J. M. Bassford's pointer Adelia by Bismarck and Beulah divided third. All Age Stake first, H. Y. Payne's Countess Noble second, Kemyer's Smoky by Tennessee Bob ex Hoosier Bede, and third, Chas. Studarus' pointer Clay. Rained all week. NAMQUOT.

The trials will scarcely be as successful as they have been. In the first place the weather was bad, rain falling all week. Then the grounds at Salinas were not found to be suitable, most of the underbrush having been burnt off in the fall had left sharp stumps sticking up that would, it was thought hurt the dogs and for this reason many of the sportsmen returned the first night. The main reason however was that the advertised judges, Messrs. Vandevort of Pasadena, and Pugh of Bakersfield, did not turn up and their places could not be filled satisfactorily; there was some friction evident. But we shall know more about it all when the report comes in.

## Hunting and Coursing.

### BRUNSWICK FUR CLUB'S WINTER MEET

THE Brunswick Fur Club held their sixth annual winter meet at Freeport, Me., Jan. 15-20. As a hunt it was not a success, for scent lay badly, except on Thursday, and the deep snow and brittle crust made the work of the hounds difficult in the extreme. Though a failure as a hunt, it was a great success in a social way. The attendance was very large, and the renewing of old friendships and the making of new ones cannot be but beneficial to the club and bind the members closer together. Among those present were Messrs. A. B. F. Kinney, E. D. Buller, O. M. Ball, J. F. Randall, G. F. Lovett, E. S. Bodwell, H. O. Stanley, F. F. Roberts, G. E. Hackett, Robert Jordan, E. A. Graves, G. C. Knight, E. G. Simpson, W. H. Smith, C. J. Gilman, S. Knight, Jr., J. L. Doolittle, L. P. Huntoon, A. F. Varney, A. G. Hall, A. C. Heffenger, W. A. Bragdon, Bradford S. Turpin, H. H. Stetson, W. B. Stone, H. M. Gragg, J. N. Martin, H. J. Given, R. D. Perry, E. M. Snow, F. P. Shaw, E. B. Nickerson, L. E. Conant, F. W. Eddy, A. McDonald, G. P. Ridley, N. Q. Pope, A. B. McGregor, E. Barron, Geo. P. Berry, S. D. Pendar, L. O. Deunison, N. Stewart, E. E. Barker, Geo. N. Drake and many others.

Twenty-three hounds were present at the meet, and considering the unfavorable conditions under which they worked

they did remarkably well. Clay, Pealer, Steve and Bonnie are worthy of especial mention. The pack was composed of: CLAY—White Oak Hill Kennels' b. w. & t. dog (Goodman). STEVE—White Oak Hill Kennels' b. w. t. dog (Goodman). FLINT—White Oak Hill Kennels' b. w. & t. bitch (Goodman).

POLAND PETWORTH—White Oak Hill Kennels' w. b. & t. bitch (Goodman). SUNDAY—White Oak Hill Kennels' b. w. & t. bitch (July). PEALER—White Oak Hill Kennels' b. & t. dog (July). RED JACKET—Robert Jordan's red dog Whitlock (Gold Dnest).

BEN—L. O. Dennison's b. & w. dog Buckfield-Byron). SALLY—G. P. Berry's b. & t. bitch (native). DIAMOND—S. D. Pendar's b. & t. dog (native). POPPLE—R. D. Perry's b. w. & t. dog (Wild Goose-native).

HUNTER—F. W. Eddy's b. & w. dog (native). ROVER—W. B. Stone's b. & w. dog (native). BONNIE—L. E. Conant's b. & t. dog (native). DICK—L. L. Conant's b. & t. dog (native). FOREST HUNTER—A. McDonald's b. & w. dog (native). LINDA—A. McDonald's b. & t. bitch (native). GROVER—A. McDonald's b. & t. dog (Haseltine). PADDY—N. Stewart's w. b. & t. (English). DENNIS—N. Stewart's b. & t. dog (English-Cook). ROCK—E. B. Nickerson's w. b. & t. (Cook-English). MARCH—H. J. Given's b. & t. dog (Avent-native). GOLDEN ROD—W. H. Stetson's b. w. & t. dog (Cook).

The club headquarters were at the Harraseeket House, an excellent hotel, where all were well cared for. The table was good and the rooms warm and clean. The hounds were kennelled in a stable nearby.

The annual meeting was held at the Harraseeket House on Monday evening. As this was the first meeting of the club as an incorporated organization, there was a deal of legal red tape to be observed, and consequently Mr. H. J. Given, who had been chairman of the first meeting of the associates, called the meeting to order and Mr. F. E. Roberts acted as clerk, in place of the president and secretary, both of whom were present. The election of officers for '94 resulted as follows:—President, Mr. N. Q. Pope, Poland, Maine; Vice-Presidents, Mr. L. A. Dennison, Waltham, Mass., Mr. Harvey J. Given, Brunswick, Maine, Mr. W. R. Dean, Worcester, Mass.; M. F. H., Mr. F. M. Whipple, Newtonville, Mass.; Secretary, Mr. Bradford S. Turpin, Dorchester, Mass.; Treasurer, Mr. W. B. Stone, Waltham, Mass.; Executive Committee, Dr. A. C. Heffenger, Portsmouth, N. H., Mr. A. B. F. Kinney, Worcester, Mass., Mr. R. D. Perry, Phillipston, Mass., and Mr. S. Knight Jr., Brunswick, Maine.

President Pope having taken the chair, the reports of the secretary and treasurer were accepted; the latter reported all bills paid, and \$335.60 in the treasury. Dr. A. C. Heffenger, in reporting for the executive committee, suggested that at future field trials the entries be divided into two packs, and that the best of the hounds in these packs be run together on the last day of the trials. It was thought that the large number of entries could be judged better in this way than in any other. He then offered for criticism and suggestion a standard for judging American foxhounds and this standard was referred to the executive committee. It was voted to apply for membership in the American Kennel Club, and to refer to the executive committee the project of making an exhibit of the club's foxhounds at the Boston show. The following active members were elected:—Mr. W. A. Bragdon, Portsmouth, N. H.; Mr. G. W. Pierce, Brattleboro, Vt.; Mr. G. W. Baker, Cleveland, Ohio; Mr. J. F. Randall, Portland, Me.; Mr. E. B. Mallett Jr., and Mr. F. S. Soule, Freeport, Me.; Mr. R. D. Butler, Milbury, Mass.; Mr. H. M. Gragg, Waltham, Mass.; Mr. O. M. Ball, Worcester, Mass. The honorary members elected were: Mr. Wm. L. Thompson, San Antonio, Texas; Mr. F. H. Brown, Waco, Texas, and Editor Turf, Field and Farm. After adjournment a short time was spent in story telling and planning for Tuesday's hunt, and then all sought the comfortable quarters with which the hotel provided us.

TUESDAY.

At daylight a heavy fog hung over the little town and the rain fell steadily; but after breakfast the rain ceased and hasty preparations were made to start for the hunting grounds. Those who had snowshoes were indeed fortunate. They could go anywhere with safety; but the man who went out shod only with the customary footgear of an ordinary citizen had to confine himself to the beaten paths. If in a rash moment he left the road, he at once broke through the crust and floundered about in three feet of snow.

The hounds were divided into two packs. Rover, Forest Hunter, Red Jacket, Hunter and Bonnie were cast off near the shore. A fresh track was difficult to find, but finally Forest Hunter trailed to a start and drove his fox alone for a half hour or more. Then Hunter and Rover joined him, and the three followed well till the fox was shot. Reynard had a long lead on the pack and used all his arts to throw the hounds, but in vain. He was finally headed off by Mr. L. O. Dennison, who thus secured the first trophy of the meet.

Meantime Mr. N. Q. Pope's handsome pack of Goodmans and Julys were doing their best to jump a fox southwest of the village. Clay, the winner of the field trials of '93, showed that he had not forgotten how to hunt, and he was ably supported by Pealer and Poland Petworth. The others, too, were busy, but no fox was started, and by noon the sportsmen were back at the Harraseeket.

In the afternoon an unsuccessful attempt was made to find a fox near the shore. This trip planned as a hunt, developed into a sleigh ride, and many miles were covered by the party, who obtained a fine view of the icebound coast of Maine; but not a fox or a track did they discover.

At a club meeting in the evening the executive committee reported back with approval Dr. Heffenger's foxhound standard, and requested the secretary to send copies to the sportsmen's papers inviting criticism or approval. The proposed standard reads as follows:

"The American Foxhound: His Type and Standard." The best type for an all-round American foxhound differs in many essential points from the English, though the standard for judging the value of each part of the hound, with two exceptions should be the same. The American hound should be a smaller dog and lighter in bone and muscle than the English. He is to be a runner of endurance with killing speed. Dogs should not be over 23in. nor under 21, nor weigh more than 60lbs., while bitches should be from 20 to 22in. and weigh not more than 50lbs.

A hound springing 75 per cent. of the points as hereinafter stated, will outclass at every point in hunting American game his larger English congener. In formulating the American standard the value of the head is reduced from 15 to 10, and general symmetry increased from 5 to 10.

The head (value 10) should be comparatively small, with the muzzle between 4 and 4½in. long, square and slightly expanded nostrils. The drops short and well folded in. The skull may be either domed or rounded, though the latter is preferable. There should be sufficient stop to give symmetry to the head. The eyes should be dark brown and the ears medium or short, low set and closely pendant.

The neck (value 5) should be slim, though strong, and no trace of throatiness should exist. It may be straight or slightly arched on upper surface.

The shoulders (value 10) should be of sufficient length to give leverage and power, well muscled but with a clean run, and not too broad. The scapulae should incline toward the center on top, to give an almond shape.

Chest and back ribs (value 10). The chest should be deep for lung space, the English standard of 30in. in a 24in. round being good, though a shallower chest with well-sprung ribs

gives just as good wind. The back ribs should extend so far that only a couple of inches of flank exists.

The back and loin (value 10) should be broad, short and strong, straight or slightly arched. There should be a straight line from side of back to prominence of hip, to give proper strength of coupling.

The hindquarters and lower thighs (value 10) should be strongly muscled if the hound is to have speed and endurance. The ham should be nearly straight behind. The stifles should be low set, but not too much bent. There is such a thing as having too much muscle in the quarter for freedom of movement, and in consequence speed is reduced and grace of movement compromised.

The elbows (value 5) should be set straight, but not too much in for perfect freedom of motion, for otherwise speed would be compromised, and the hound would be liable to sore in shoulder from friction during every long run.

Legs and feet (value 20) are of the utmost importance, for if they are not of the best they will never hold a hound up during an all-day run in even a smooth country, while in a rough one he would soon become a quitter. The legs should be straight, placed squarely under shoulder, and have plenty of bone without clumsiness. A slight angle at knee certainly gives strength to the joint and maintains straightness of leg. Of course the foot should be round, close, cat-like, not too large, well knuckled and horned, and placed at right angle to leg.

Color and coat (value 5).—A good hound cannot have a bad color. Of course, the black, white and tan markings with the various "pies," are conventional and should be given the preference, though crossing with the harrier has made blue mottled and tan markings perfectly legitimate in the American hound. The coat should be coarse, though less so than the English.

The stern (value 5) should be of medium length, carried like a sabre and with good brush. A docked stern should not disqualify a hound, but simply handicap him in points according to extent of docking.

Symmetry (value 10).—The form of a hound should be harmonious throughout, if the highest speed and endurance is to be obtained, and this is so important that its value has been double over the English standard. He should show his blood, quality and hound character in every aspect and movement.

SUMMARY.

Head	10
Neck	5
Shoulders	10
Chest and back ribs	10
Back and loin	10
Hind quarters and lower thighs	10
Elbows	5
Legs and feet	20
Color and coat	5
Stern	5
Symmetry	10

Total 100

It was voted that the field trials should be held during the week beginning Nov. 5, '94. Mr. G. F. Lovell, Portland, Maine, was elected a member of the club and the meeting then adjourned.

WEDNESDAY.

On Wednesday morning the thermometer stood at 12° above zero, there was no wind, and the sun shone in a cloud less sky. The cold wave had strengthened the crust in the open fields, but in the cover snowshoes were still a necessity, and their possessors were looked upon as particularly lucky individuals. The day was a severe one for the hounds. Trailing on the icy crust was difficult, indeed almost impossible; then, too, their feet were badly cut by the ice, and the course of many a hound could be traced by blood marks on the snow. Nevertheless all worked well and did their best, and the unsatisfactory result of the day's sport was due to the unfavorable conditions and not to the hounds themselves.

Three packs were out in the morning. East of the village the White Oak Hill Kennels pack, reinforced by Paddy and Dennis, trailed for three or four miles and finally had to abandon the track without putting up the fox. While they were at work Grover, March and Rock were cast off further east. They at once winded a fox and in a moment he was running; but the hounds followed only with the greatest difficulty. They were frequently at fault and the pace was so slow that the chase was little more than a piece of cold trailing. Clay and Pealer joined in the hunt, but the fox was lost after an hour's work.

A second pack, Rover, Hunter, Bonnie and Dick, was put to work in the "thousand acre swamp." They, too, had the good luck to wind a fox, but though they kept him moving for an hour he finally escaped with ease after amusing himself for some time playing like a rabbit.

Linda, Sally, Popple and Diamond tried their fortune at the Porcupine ledge, but luck was not with them, and a ten-minute run by Sally was all the amusement they could offer their masters.

An unsuccessful attempt to jump a fox near the village in the afternoon completed the hunting for the day.

THURSDAY.

Thursday morning was cloudy. There was no wind and the mercury marked 15° above zero. Every one predicted a snow storm before 12 o'clock, but the clouds broke away and the day proved to be the best of the week thus far for hunting. The scent lay well on the crust, and rarely does one see better work on bare ground than was done to day under the most difficult hunting conditions. For hours the driving was furious, and though in the cover the hounds broke through the crust at every jump, yet they pressed their game till late in the afternoon despite their sore and bleeding feet. The work of Pealer, Clay and Bonnie is especially worthy of mention; for nearly eight hours they drove their game and then had to be caught off the track.

To-day for the first time all the hunters went to the same grounds and all the hounds were cast off at the same time at the foot of the Porcupine Ledge. Hunter, Rover, Sally, Ben, Dick and Bonnie, with the hounds of the White Oak Hill pack, soon jumped three foxes. One of these skunked away without any of the hounds getting upon his track; but the others were not so fortunate. One was driven far to the east and hotly pursued for hours till he went to earth. The other was driven till late in the afternoon, and was playing in a strip of woodland when the hounds were caught about sunset. The packs were in hearing all day and the fox was viewed time and again by the hunters, and yet none of them succeeded in getting a shot. To be sure, he was fired at once, but only in an unsuccessful attempt to turn him upon another hunter. His escape from death seems little less than wonderful when one considers that a score of men were lying in wait for him at every crossing and runway, and others with snowshoes and sleighs were doing their best to head him off.

This hunt was justly considered one of the best in which the club has ever taken part, and those who were present will not soon forget it.

FRIDAY.

Rain fell during the night, but Friday morning was clear and still. The thermometer marked 42°, and by noon a warm wind was blowing from the south which seemed a foretaste of early spring.

The hounds were cast off on the grounds where we had such good sport on Thursday. But either the scent did not lay or the rain had washed out all the tracks, for no trail

was found which the hounds could work. The hunt continued till noon, and then hounds and hunters returned to the village.

At a business meeting in the afternoon, Mr. D. M. Morris, Camp Point, Ill., and Mr. Joel Hunt, Atlanta, Ga., were elected honorary members of the club.

Many of the hunters went home on Friday, and by Saturday noon all had departed and the winter meet of '94 was a thing of the past.

The Foxhound Standard.

The standard which the Brunswick Fox Club has arranged, and on which they invite discussion, is printed in another column. Before it is adopted finally it will probably need a little trimming, but the main points are good and we invite foxhound men to make criticisms or suggest improvements if any can be made. The Saratoga foxhound men were to arrange something in the way of a standard at a meeting to be held last Friday, at 2.30 P. M., but as our reporter has made no mention of it as yet, probably the thing fell through.

Mr. S. S. Howland, who is hunting the Annapolis, Md., country this winter, has sent to England for twenty couple more of the best hounds that can be secured.

The St. Louis County Coursing Association intend, during the proposed St. Louis show in March, holding a meeting with a sixty-four dog stake with a guaranteed purse value of \$1,000. Ten dollar fees will rule, so that the club will not have to raise very much themselves. This would be a most pleasant adjunct to the show.

Pachting.

Corinthian Y. C. of Baltimore.

THE Neptune Club is a very enterprising rowing club of Baltimore City. It has had among its members a large number who cared more to handle the tiller than the oar who had been led to attach themselves to the club because of the very convenient location of its club-house. These "sailing members" were constantly increasing in number, and last summer the fleet owned by them numbered more than a score. While the club-house was convenient of access, the anchorage was a very poor one in a southeast blow, and the several storms of last August and October damaged more or less every sailing craft anchored in front of the club-house. Some were completely wrecked.

This forced the greater portion of these "sailing members" to seek a better anchorage; and they, together with a number of other yacht owners have organized the Corinthian Yacht Club of Baltimore. The club was incorporated November 20, 1893, and the following officers have since been elected:

Com. Adelbert Nickel; Vice-Com., H. F. Dorton; Rear-Com., P. W. Hemsley; Sec., H. W. Meredith; Treas., W. E. Heiser; Meas., E. W. Graef; Fleet Captain, N. T. Slee; Trustees, W. J. Lord, E. W. Graef, P. W. Hemsley, N. T. Slee, H. F. Dorton and Thos. J. Briery.

The club-house secured is a brick structure pleasantly located on the west bank of Stone-House Cove, an arm of the Patapsco, and has plenty of surrounding ground. The water in the cove is deep and the anchorage is thoroughly safe in any and all kinds of storms. In addition to these advantages the club-house can be easily and quickly reached from the heart of the city by means of an electric railway, which has a station only three minutes walk from the grounds.

The yacht clubs hitherto organized in Baltimore have mostly been formed by the wealthy, and have never been of the Corinthian order. They have as a rule increased very slowly in membership after their first organization. Around about Baltimore, there are a number of small yachts owned by young men who love the water and take much pride and pleasure in sailing their own boats. They have never been gathered into any club for the reason that an amateur sailor is not attracted to join clubs whose boats are mostly sailed by hired hands. The new club, started as a purely Corinthian organization, is just the thing needed, and with the advantages possessed, its future is assured. Indeed it is a fact, taking into consideration that the club was organized after the yachting season had closed and amid a general financial panic, that its success thus far has been phenomenal.

Cleveland Y. C.

THE annual meeting of the Cleveland Y. C. was held on Jan. 10 in the new club rooms in the Case Building. A large number was in attendance and the meeting was very enthusiastic. The following directors were elected to serve three years: J. N. Richardson, John Barth, W. H. Kolbe, G. W. Luetkemeyer, J. O. Gardner. To serve one year as Messengers, C. R. Luetkemeyer; Assistant Messengers, Ernest Junger, Surveyor, Conrad Krause; Surgeon, Dr. E. E. Beeman. The following directors hold over: For two years, G. W. Gardner, P. W. Rice, W. R. Huntington, P. P. Wright, E. W. Radder; for one year, W. P. Francis, Luther Allen, Ed Overbeke, F. G. Overbeke, C. W. Kelly.

Several amendments to the constitution, by-laws and sailing regulations were offered and will be acted on at the next meeting. The report of the secretary-treasurer for 1893 showed the club to be in a most flourishing condition.

Immediately after the adjournment of the annual meeting the new Board of Directors organized and elected officers and committees for the ensuing year, as follows: Com., Geo. W. Gardner; Vice-Com., W. R. Huntington; Rear-Com., F. G. Overbeke; Sec.-Treas., J. O. Gardner; Regatta Committee—Luther Allen, W. H. Kolbe, W. P. Francis; House Committee—E. W. Radder, Ed Overbeke, C. W. Kelly. Capt. Wm. S. Mack was elected to membership in the club.

The members of the club are jubilant over the new club rooms, which were opened for the first time last Thanksgiving Day. The rooms are finely equipped with a combination billiard and pool table, upright piano, elegant carpets, luxurious chairs and all other necessary furniture for the comfort of the members. A large number of the leading periodicals of the day are on file. The members are showing a growing appreciation of the efforts of the directors and officers to give them as much as possible that is conducive to the comfort of members. It is hoped that the club will be able to raise enough money to put up the new club house on the lake shore at the foot of Erie street, the foundation for which was put in last summer.

YACHT NEWS NOTES.

Com. Caldwell H. Colt, Larchmont Y. C., owner of the schooner yacht Dauntless, died on Jan. 21, at the Punta Gorda, Fla.

Mr. Will Fife, Jr., will build from his own designs, a racing 20 rater for one of the Jamesons, presumably Mr. F. B. Jameson, of Dublin.

White Ladye, under charter to Mr. Ogden Goellet, has arrived at Cannes.

The annual meeting of the Corinthian Mosquito Fleet was held at the Sturtevant House, New York, on Jan. 13, Com. Grant presiding. The reports for the year were read, showing the club to be in a satisfactory condition. The new club-house erected this year at Echo Bay having been fully paid for, and a balance left in the treasury. A large number of expenses of running it had been paid. The membership of the fleet has reached a total of 80. Some amendments were made to the constitution, among them one creating the office of Rear-Commodore. The following officers were elected: Com., Charles Pryer; Vice-Com., R. T. Clark; Rear-Com., C. M. Connolly; Sec., J. D. Sparkman; Treas., C. A. Harriman; Executive Committee—Charles Pryer, R. T. Clark, J. D. Sparkman, C. A. Harriman, F. S. Grant, H. A. Goun, and Chamberlain and W. P. Stephens. Com. Pryer, F. B. Jones and W. P. Stephens, were appointed a committee to prepare a revision of the racing rules. The fleet adopted a very neat and attractive cap device, a white button encircled by a wreath of laurel leaves, the white ground bearing a blue cross with a white star in the center. Largely through the efforts of Com. Grant, the fleet has been placed on a permanent basis and installed in a suitable home during the past season, and it begins the new year under very encouraging auspices. One proposed feature which is likely to be popular is a scrub race every Saturday afternoon for any small craft which may present themselves at the station.

The Schoodic Y. C., of Calais, Me., held its annual meeting on Jan. 9, and elected the following officers: Com., Willard H. Pike; Vice-Com., E. A. Davidson; Sec'y, Louis M. Todd; Treas., Geo. W. Hinds; Meas., Stephen Chambers; Chairman of Regatta Committee, Irving W. McAllister. The club burgee, adopted in 1893, is a triangular flag, blue ground, with a red diamond extending one-half way from point to base, and with a white star in center of the blue. The length of star to be one-half width on haliard. Fly to be one and one-half times hoist.

SCARECROW—SAIL PLAN.

THE FIN-KEEL SCARECROW.

THE little fin-keel which was first described in the *FOREST AND STREAM* of Nov. 24, 1892, has proved by far the most popular design which we have ever published, and a number of boats were built last year and have given general satisfaction to their owners. Beside the original Scarecrow, for Mr. C. J. Stevens, Mr. Ayers, then at Bay Ridge but since then located at Nyack, New York, built two of the 18ft. size and two 15ft. of a slightly different model, also from a design by Mr. W. P. Stephens, designer of the original; the St. Lawrence Skiff, Canoe and Steam Launch Co. of Clayton, built eight in all, of both sizes, one of the smaller size forming a conspicuous feature of the Company's exhibit at Chicago; while a number were built by amateurs. Most of them were intended for cruising and general sailing only, but in England the design was reduced to 16ft. l.w.l. to make 0.5 rating, by Mr. Wm. J. Hodge, the builder, of Dartmouth, and a very light and handsome little racer was built from the lines for Capt. Henry E. Bayly and Mr. G. A. Passingham; Picaroon, as she was named, making a very good record in her class about Plymouth and Dartmouth.

Various arrangements of fins and heavy boards, and several rigs, have been tried on the different boats; but the sail plan and fin originally designed by Mr. Stevens is to all appearances the best combination for speed, and we illustrate them in preference to any others. As stated when the design was originally published, the peculiar sail plan was designed by Mr. C. J. Stevens after a long experience in canoeing, and the design for the hull to fit this plan was made by Mr. W. P. Stephens, while various details of the boat were worked out in company.

The end in view was a fairly fast boat under a moderate sail plan, to carry two men and all cruising duff, or to carry four or five persons in ordinary sailing, the boat to be used about New York for short cruises and day sailing. This purpose she has fulfilled admirably during the past year, being in constant use about the Lower Bay, her anchorage being at the New York C. C. station, off Bensonhurst, and at times making runs through the Gate and into the Sound as far as Norwalk and Oyster Bay. With a crew of two, three or four, she has proved fast, able and comfortable, while easily handled by one man. The sail area, just over 300sq. ft., has proved about right for such work; but for racing the boat will easily carry some 50ft. more.

In the case of some boats built from the design a mistake has been made as to their power and intended use, and they have been over-canvased and overcrowded, as though they were Cape cats in dimensions; as much as 450sq. ft. being disposed of in mainsail and jib, while the ballast and live weight have put the centerboard trunk fairly under water, flooding the cockpit. It is hardly necessary to say that when abused in this way the design has not proved a success; but to all those who understand the capabilities of a model, and who desire a boat for cruising, afternoon sailing or even racing in certain classes, the Scare-

crow can hardly be improved upon, so far as general excellence at a moderate cost is concerned.

The lines here given appeared with the first description of the boat, on Nov. 24, 1892, but as this number has been for some time out of print, while the demand for it continues, we are obliged to republish them, reserving until next week the construction drawings and description of fin and method of building. The hull itself is closely allied to many light draft designs before published, and is equally well adapted for a common centerboard and a small amount of inside ballast, instead of the fin; the sail plan of course being reduced in proportion. One of the 18ft. size built by Mr. Ayers, had instead of the fin a heavy centerboard, of 600lbs., carrying a yawl rig of 318ft.: 178 in main, 75 in jib and 65 in mizen. Another had a plate board of about 175lbs., with a yawl rig of 290ft., but with some 500lbs. of lead cast to fit inside. The smaller size, 15ft. 4 1/2 in. l.w.l., would answer well with a plate of 100lbs., and 175sq. ft. of sail, a moderate amount of inside ballast being required when sailing alone, the weight being made up at other times by extra passengers or cruising equipment.

The interior of the hull may be divided to suit the taste and uses of the owner, but the arrangement shown, of a watertight and self-draining well, has proved very satisfactory, while the tight bulkheads are essential to safety in a ballasted boat. For some purposes the watertight floor may be dispensed with, the ordinary floor boards on the ribs being used, giving a greater depth inside and more room for stowage, and for accommodating the largest possible number in afternoon sailing and smooth water this arrangement will be the best, provided the centerboard trunk is built higher, as the hull will easily bear an extra immersion under such circumstances that would submerge the low trunk shown in the drawings.

In the original Scarecrow the well is narrower than here shown, but 2ft. 9in., but of the same length and oval at the ends. A deck hatch is placed just forward and another just aft of the well, giving access to each compartment, the hatches being made flush, to match the deck planking. In the construction plan a different and better arrangement will be shown, the bent oak coaming extending sufficiently far over the well, both forward and aft, to admit of the hatches being placed within it, where they are better protected from spray, while they do not mar the appearance of the bright deck.

The original design, of 18ft. l.w.l., was made to a scale of 1 1/4 in. to the foot, but as a smaller boat may be equally well built from the same lines, all dimensions were taken off, including the second table of offsets, with a scale of 1 1/4 in. to the foot, an odd division, but which gave a very good size, a little over 15ft. l.w.l. We may explain again here, in answer to a question that is frequently asked concerning the drawings in the *FOREST AND STREAM*, that the original designs, usually from 24 to 42 in. long, and on various scales, 1/4 in., 3/8 in., 1/2 in., 5/8 in., or 3/4 in., are each reduced by photography to make the largest possible reproduction that our page will admit of, 14 in. extreme length. In nearly

every case this involves an odd scale, and the usual fractional scales of the draftsman will not fit; but as the proper scale for the drawing is given with it, this is of little moment, and in addition, we endeavor to give all dimensions so fully that there is little need of measuring the drawings.

At the same time, any desired scale may be used on the reduced drawing as published; for instance, a scale of 1/4 in. applied to the present design as printed will give a length of 27ft. 10 in. over all, 20ft. l.w.l. and 6ft. 1 1/2 in. beam, while a scale of 3/8 in. would give a waterline of but 13ft. 6 in. The design is capable of expansion or reduction to any size within the limits of 20 or 21ft. l.w.l. down to 12ft., and by the use of the scales mentioned, or of special scales made by dividing the waterline in any desired number of parts, a boat of any size may be built from it. The tables of offsets are for the two sizes, 18ft. and 15ft. 4 1/2 in., but similar tables may be taken off from the body plan on the appropriate scale for the desired size of boat.

The dimensions and elements are as follows:

The fin of Scarecrow is of 1/4 in. Tobin bronze plate, the actual weight being 247lbs., while the estimated weight of the lead bulb is 400lbs. To these weights must be added 12lbs., the weight of a flanged casting bolted to the upper side of the fin to support it in the trunk, a total of 660lbs. The slot was made the full length of the well, as a matter of

\* Transom.

All measurements to outside of plank. Small figures are eighths of an inch.

convenience and also to allow of a little variation in the position of the fin; but on trial it proved that the weight, with the fin as far forward as possible, was a little aft; the boat, with a crew of three in their proper places, going slightly by the stern. As an experiment, a weight of 100lbs. of lead was stowed close by the heel of the mast, and this brought her to the proper fore and aft trim, while the position of the fin, as regards the lateral resistance, proved just about correct. Although there was no need of this extra lead, so far as carrying sail went, the general result was so satisfactory that it was left in her through the season, no alterations being made in the weight of the bulb. In the full-size sections of the bulb, which we shall give next week, the form has been slightly altered to throw the center of weight further forward, while this weight has been increased to 440lbs (giving 275lbs. for the smaller size). The estimated weight of a 3/4 in. plate of Tobin bronze for the larger size is 242lbs., and of 3-16 plate for the smaller size, 130.5lbs.

The intention was to rig the fin so as to be easily lifted, using a pair of sheer legs stepped on or beside the trunk, and a small differential block. The block was secured and carried as ballast, but no attempt was made to hoist the fin during the whole season, and save for convenience of shipping and unshipping, it was practically a fixture. By means of such a block and sheer legs, a fin of 600 or 700 might be readily lifted for beaching or on any special occasion, but with anything heavier the whole apparatus should be solidly built into the hull.

At the same time the method of construction shown, with a tight

trunk coming up to a high floor, has certain structural advantages apart from the lifting of the fin, and where space low down is not a requisite, it may well be followed in place of the usual plan, of securing the fin by angle bars entirely outside the hull. There is an element of weakness in the trunk and deck, and the cutting of the keel; but on the other hand, while the same construction is carried out safely every day in center-board boats, and presents no special difficulties, it offers less strain and leverage on the floors and keel than if the fin be bolted directly to the latter. In the present case the fin plate extends up to the top of the trunk, the trunk being well braced by two half bulkheads on each side, as will be explained later, and the leverage on the keel is materially lessened, as nearly a foot depth of the plate is housed in the trunk as compared with some 3in. or less embraced by the angle plates. If the trunk is properly constructed, this method may safely be depended on, and may be used even where it is not desired to lift the fin. In this case, the strength may be materially increased by two or more bolts, similar to that of a common centerboard, through the sides of the trunk and the fin, one at each end and one in the middle, and as low down as practicable. With such a construction, the fin may be shored up in the water and the hull lowered down over it, or floated over it at high tide, the bolts being then inserted and set up; and the fin may at any time be dropped in shoal water in the same way.

The sail plan of Scarecrow is a marked departure from the boom and gaff mainsail found on all American sail boats, and is the result of an extended course of evolution carried out on canoe sails by Mr. Stevens since 1884, beginning with the old square-headed balance lug, peaking the yard higher in each new sail, and finally, on the advice of Mr. Wilson, of Wilson & Griffin, the yacht sailmakers, abandoning the battens just as they were coming into use in yachting after a long trial by canoeists. The mainsail was illustrated in the FOREST AND STREAM of April 19, 1888, the details being the same in this new and larger sail, except for the battens.

Like the sails then described, those for Scarecrow were made by Mr. F. M. Wilson, of Port Jefferson, Long Island, and being well made originally and very carefully tended in use, they have been a success in every way. The rig here shown, a mainsail and jib, was tried by Mr. Stevens on a canoe several years since, but was abandoned because the room in a canoe is so limited that the crew and the main boom were constantly in each other's way. No such difficulty exists in the new and larger boat, and the canoe rig, of main and mizen, has been discarded for the sailing boat rig of mainsail and jib. The sails are made of a special grade of light cotton, selected after many trials. The spars are hollow, made by Mr. C. K. Young, of Bridgeport, Conn., who also made a very neat outfit of blocks for the boat, the boxwood canoe blocks being too light and the best of the regular yacht blocks too clumsy and heavy.

The chainplates for the main shrouds and runners are of Tobin bronze, 3/4 in. thick, the traveler is of 3/8 in. round Tobin bronze. The standing rigging is of phosphor bronze wire rope, 3-16 in. in diameter for main shrouds and forestay and 3/16 in. for runners. A special light turnbuckle was made for the shrouds, one on each side. The main boom is fitted with a light bronze jaw, neatly leathered, with a tack line to hold the boom down. The heel of the yard is fitted with a similar jaw. On the yard are two cheek-blocks, and on the masthead are two similar blocks. On deck at each side of the mast are three blocks, rope stopped and lashed to brass screweyes; one on each side of main halyards, one on each side for quarterlifts, one to starboard for jib halyards and one to port for a special heel rope for the yard.

The main halyard is one long line of English linen cord, the bight passing around the mast from forward aft, the two ends being rove each through its cheek-block on the yard, and then over the sheave of its mast block and down to its leading block on deck. In the bight is a knot which keeps the middle of the halyard always near the yard. The two ends are taken in hand together and then through halyard up nearly to place, then one end is belayed and the yard set up hard by the other. When the sail is reefed, the heel rope comes in to hold the yard firmly in to the mast in its lowered position.

The jib halyard block is spliced into an eye in the end of the halyard and a loop is then made around the hounds of the mast, with a light lashing to hold it in place. The loose end of the halyard is then rove through the block in the head of the jib, and then through halyard up in the halyard and down to the leading block on deck. The jib sheets are led well aft, their position having been shifted several times from forward aft, and with a gain each time. With the area shown, no bowsprit is required, the tack of the jib merely leading to the stemhead, but any increase of area would probably call for a short bowsprit.

This rig, which is very similar to the lug sail used on all small racing boats in England, differing mainly in the mode of setting, the lug being hoisted with a single halyard and a hook and traveler on the mast. The double halyard, jamming the mast and yard tight together in its bight, helps to support both spars better than when the yard hangs loose from the traveler. The rig has the advantage of light weight of spars and also of a low center of effort, and with the spars properly proportioned to their work the sail sits very well. Mr. Young's spars are noted for their strength and lightness, and in this case he has taken special pains to secure both qualities.

W. P. S.

[CONCLUDED NEXT WEEK].

It is announced that Valkyrie has been placed in dock at Brooklyn, New York, and she will undergo some preparation for the early American regatta. We understand that the object is not so much to test Valkyrie's capabilities against the American yachts as it is to familiarize her crew with the general surroundings of American yacht racing, including also its social amenities, which are vastly different from anything of the kind in this country. The first effect of the polite attentions of American citizens on a simple-minded crew unused to attentions of any kind is said to be quite overpowering. If this is the case, it is very necessary that they should become inured and hardened in this pleasant side of American yachting. With regard to the America Cup, matters rest pretty much the same as they did at the conclusion of the last races. No challenge will be given this year, but if all goes well, two English noblemen will associate in issuing a challenge for races in August or September, 1895.—Field.

Romola, steam yacht, née Catarina, ex San Peur, will leave New York for England, in charge of Capt. Hammond, late of the Lady Nell.

## Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

### Reforming the A. C. A.

Editor Forest and Stream:

In the FOREST AND STREAM of Jan. 13 Mr. J. T. Holden asks for a discussion of the question as to "what the A. C. A. is doing or is going to do for its members," and then proceeds to set forth certain statements which are partly true and to make certain suggestions which are for the most part not feasible.

To my mind, the question should be put in another way—What are its members going to do for the A. C. A.? In an association which is supported by an annual subscription of \$1, and in which the officers hold no large amount of work and take a good deal of abuse for nothing but love of the sport, it seems to me that if anything more is

to be done than is accomplished at present, it should be for and not by the executive.

Before entering on a discussion of the faults which prevent the growth of the A. C. A., it would be well to be agreed as to what those faults are. Mr. Holden seems to lay the blame principally upon the ladies' camp and the racing contingent; but I think if he reconsiders the subject it may occur to him that the lack of interest in racing is due to the laziness of the general-purpose-built-by-himself canoeist, rather than to the activity of the individuals who spend money and time in perfecting and using the racers.

This is demonstrated by the fact that at the Brophy's Point meet a race for cruisers and open canoes, for which the handsome prize of any was offered and in which the conditions were made for the especial purpose of keeping out the racing men, was only entered for by seven or eight canoes, or at least that number was all that started. The conditions of the race were published in the FOREST AND STREAM and in the Year Book, so that no member can plead ignorance of them.

The paddling race for single paddles, also for a special prize, was even more poorly contested; and it was found that the most interest centered in the races where known racing men, such as Messrs. Butler, Archbold and others of the ilk, contested with the most perfect appliances that could be procured.

If the larger class of canoeists represented by Mr. Holden want to remedy this state of affairs all they have to do is to attend the meet, and if in their opinion the present racing regulations do not suit them I am sure any reasonable suggestions will be considered by the regatta committee.

Now just a word as to the other cause assigned by Mr. Holden and other correspondents for the decline of interest, to wit—the ladies' camp.

There is, no doubt, a certain contingent of A. C. A. men who object to Squaw Point, but in my own experience of Association meets, which has been intensive rather than extensive, I have been unable to see why this feeling exists, and I am sure the general opinion of the members could be ascertained the majority would be found in favor of continuing what has been, in their opinion, one of the pleasantest features of the meet. Last year—1893—the dance and camp-fire may have been overdone, though that should be attributed rather to the excess of hospitality of the home club than to the existence of Squaw Point. No doubt the 1893 meet had its faults, but for Mr. Holden's information, in that the hotel, a frame structure containing eight bedrooms and nothing else, was remote from the site of most of the camp-fires and that the dancing platform was roofed in by the canopy of heaven. The general mess, without which the general camp would suffer more than Squaw Point, was, to say the least, not a scrupulous affair, and was regarded by a great many members as an education in the right direction, inasmuch as it promoted a tendency to private messes as being more satisfactory and less expensive.

The suggestion as to an A. C. A. publication has been dealt with by you, and I think an analysis of the financial report of the last two years will show the absurdity of such a proposition, while the maps and charts may be set down in the same category as racing; it remains with the members themselves to remedy the evil.

But we may all agree with Mr. Holden that the advance of the A. C. A. is not what it should be, and he is quite right in starting a discussion relative to the cause of its retarded growth. The suggestion I would offer is that this matter can be dealt with by the canoe clubs better than by individual members, and as an instance of what can be done I would like to tell you about our own club, the Cataract.

Formed of old and enthusiastic A. C. A. men, of whom the city contains but one or two, the Cataract has made a leading principle of the A. C. A. must be considered of as much importance as the club itself, and to that end it was arranged that unless a member signified his wish to the contrary, his first annual subscription or initial fee of \$2 is paid by the club purser to the A. C. A. as his initiation fee to the A. C. A., the club getting no money from a member during his first year, but the second year and so on is still \$2, but \$1 is sent to the A. C. A. and the balance retained for the club funds. In consequence of this practice the Cataract is not very rich, but they have a goodly A. C. A. representation.

This example might be followed, with modifications, by almost every club, and when the fees are larger it will be all the easier. In this way the clubs, as such, will have a direct interest in the Association, and the best location for them will be taken in such a way as to give the club sailing and club four paddling. More than that, if there was a real rivalry between clubs, the racing board might see their way clear to putting on other races, such as the war canoe, tug of war, etc., which will test the strength of the canoeist real and proper, and in which the "camp dude" will not have a place.

It seems to me that what we want is an increased membership, and from the best location for them, and changes that are necessary for the good of the Association. Let us have some more suggestions as to how to secure that enlargement.

R. EASTON BURNS.

### Western Canoe Association.

ANNUAL MEETING OF THE EXECUTIVE COMMITTEE.

The midwinter meeting of the executive committee of the Western Canoe Association was held on Jan. 13 at the Hotel Pfister, Milwaukee, at 2 30 P. M. Com. Woodruff, Vice-Com. Huntington and Sec-Treas. Gardner were present, and Mr. P. A. Mettling was represented by Mr. N. H. Cook. An invitation had been extended to all the members of the W. C. A. by the Mahan-Wauk Canoe Club of Milwaukee to attend a banquet at the Hotel Pfister on Saturday evening, given in honor of the meeting and the visiting canoeists.

Previous to calling the meeting of the executive committee to order an informal meeting of all the members of the W. C. A. who were present to attend the banquet, about thirty-five, had to discuss the best location for the 1894 camp. Of course Ballast was suggested, as all the members who have ever been at Ballast are in love with the place and are anxious to see the meet there every year. But the preponderance of favor was for some point in Wisconsin, preferably on one of the lakes near Madison, and it was recommended to the committee that they select Picnic Point, on Lake Mendota. A general discussion of the matter of the standing rig for the class of canoes was also agitated and the committee was requested to take some action.

All but the members of the executive committee then withdrew and Com. Woodruff called the committee to order. The minutes of the last meeting were read and approved and the treasurer's report was read and accepted. After the discussion as to the much discussed place for the 1894 meet had been decided and seconded by Mr. Huntington that the 1894 meet be held at Picnic Point, Lake Mendota. The motion was carried. After consulting the almanac to insure a full moon at the time of the meet, it was decided to hold the meet from July 7 to 21 inclusive.

A motion was made by Mr. Cook to change Rule 1 to read, "Class 3, paddling length not over 16ft., beam not over 26in., depth as above not over 9in." The motion was seconded by Mr. Huntington and carried.

The following races were recommended by the regatta committee and accepted:

1. Paddling, class 3; one-half mile.
2. Paddling, class 4; one-half mile, record event.
3. Hurry-scurry; run 25yds, swim 25yds, paddle 25yds, turn canoe over and over and paddle 25yds. to a finish.
4. Sailing and paddling, classes A and B; one and one-half miles, sail first half mile, paddle second and sail third; record event.
5. Sailing for Gardner cup, free for all classes; best two heats in three, each heat to be two turns of the course, or three miles; record event.
6. Sailing for the W. C. A. trophy, classes A and B; best two heats in three, each heat to be two turns of the course, or three miles; record event.
7. Sailing for Wentworth cup, class C; best two heats in three, each heat to be two turns of the course, or three miles.
8. Sailing, cruising races only; 3 miles.
9. Sailing (passenger race), free for all classes; 3 miles.
10. Consolation race.

The discussion of the standing rig was then taken up and fully considered, but a motion to allow it was lost by three to one, as follows: Ayes, Huntington; nays Woodruff, Cook and Gardner. A motion to adjourn was carried.

The banquet in the evening was a most magnificent affair and was thoroughly enjoyed by all who were present.

### A. C. A. Membership.

ATLANTIC DIVISION: H. W. Fleischmann, Philadelphia, Pa.

### CANOE NEWS NOTES.

The annual meeting of the Hartford C. C. was held on Jan. 16. The old officers were re-elected, with the exception of F. B. Lewis, Secretary, and G. D. Wright, of the executive committee. The officers for the ensuing year, who also compose the executive committee, are: Pres. Dr. Geo. L. Parmelee; Com. John D. Park; Sec. Lincoln S. Hickmott; Treas. William Davidson; Member-at-Large, J. W. Danforth. No office was created to accommodate the growing needs of the club, Reginald Birney being elected Vice-Com. The various reports were read and accepted. The committee in charge of the annual dinner announced that it would take on Feb. 24. A war canoe has been ordered of Robertson, of Auburndale, Mass. It will be 25ft. long and will accommodate from 10 to 15 men, and is expected to prove a source of much enjoyment.

leave Chicago at 3:23 o'clock each afternoon during the carnival. Regular morning and evening trains, leaving at 8:28 A.M. and 8:23 P.M. will stop to let off passengers. Chicago Tribune

FOR THE GUN.**

A new work by an English writer, "H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:

"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Price \$2.50, postpaid, by the

## A PLANK.

THIS is 1894. We have just been celebrating the four-hundredth anniversary of the coming to this continent of men equipped with firearms. For four centuries, from the time of Christopher Columbus to that of Charles Delmonico, we have been killing and marketing game, destroying it as rapidly and as thoroughly as we knew how, and making no provision toward replacing the supply. The result of such a course is that for the most part the game has been blotted out from wide areas, and to-day, after four hundred years of wanton wastefulness, we are just beginning to ask one another how we may preserve the little that remains, for ourselves and our children.

With all the discussion of the subject in the columns of the FOREST AND STREAM from 1873 to 1894, there has been and is a general consensus of opinion that the markets are answerable for a larger proportion of game destruction than any other agency or all other agencies combined. The practical annihilation of one species of large game from the continent, and the sweeping off of other species from vast regions formerly populated by them, have not been brought about by the settlement of the country, but by the unrelenting pursuit for commercial purposes. The work of the sportsman, who hunts for the sake of hunting, has had an effect so trivial, that in comparison with that of the market hunter it need not be taken into consideration. The game paucity of to-day is due to the skin hunter, the meat killer, the market shooter.

From the beginning wild game has played an important part in the development of the country. It has supplied subsistence when there was no other food for the pioneer and the settler. Buffalo and elk and deer and grouse and quail and wild goose and wild duck have sustained the men who first cut into the edge of the unbroken forests of the continent, who blazed the trails westward, and pushed their way, directed as mariners at sea by note of sun and stars, across the billowing prairies. Many a halt would have been made by these advancing hosts, had they been compelled to depend upon sutler trains, instead of foraging on the abundant game resources of the country as they took possession of it. For generations, then, it was right and proper, and wise and profitable that game should be killed for food; that every edible creature clothed in feathers or in fur should be regarded as so much meat to be spitted or potted or panned.

But times have changed. Conditions are not what they were. Game still affords food for the dweller in the wilderness, for those who live on the outskirts; and for people in such situations venison is a cheaper commodity than beef. But for the vast and overwhelming multitude of the people of the continent game is no longer in any sense an essential factor of the food supply. It has become a luxury, it is so regarded, and it is sold at prices which make it such. With the exception, perhaps, of rabbits or hares, the supply of wild game as marketed is not such as to reduce the cost of living to persons of moderate means. The day of wild game as an economic factor in the food supply of the country has gone by. In these four hundred years we have so reduced the game and so improved and developed the other resources of the country that we can now supply food with the plow and reaper and the cattle ranges cheaper than it can be furnished with the rifle and the shotgun. In short, as a civilized people we are no longer in any degree dependent for our sustenance upon the resources and the methods of primitive man. No plea of necessity, of economy, of value as food, demands the marketing of game. If every market stall were to be swept of its game to-day, there would be no appreciable effect upon the food supply of the country.

Well, then, why not recognize this, and direct our efforts, in line with such a recognition, toward the utter abolition of the sale of game? Why should we not adopt as a plank in the sportsman's platform a declaration to this end—*That the sale of game should be forbidden at all seasons?* To share and express the sentiment is one thing, to put it into execution is quite another. Perhaps the time is not ripe for such stringent measures. Yet this very rule of no game traffic holds in certain county

laws in this State; and one of these days it will hold in every State, East and West, North and South. It may not be brought about in our day, but the present moment is not too soon to adopt the plank as a working principle and to work for it.

That which stands in the way of the present prohibition of the sale of game in the larger cities is the magnitude of the commercial interests involved. The traffic is one of large proportions, much capital is invested, and the business not one which would readily be sacrificed. No one of these considerations, however, can withstand a campaign of education and the creation of a public sentiment which will surely follow when that education shall have taught the community the true place of wild game in the economy of the civilization of the present.

## NORTH AND SOUTH.

THE Governor of North Carolina might say to the Governor of South Carolina: "We do things differently here." For, while in South Carolina they now tax the non-resident shooter \$25 and put him into jail for thirty days if he goes gunning without a license, in North Carolina they welcome the sportsman from abroad, lay open their hotel registers for his name, point the way to their quail fields, and send him home with an invitation to come again.

Just now the citizens of Southern Pines, in North Carolina, are doing their best to make happy a company of visitors from the North and the South, who have gathered in response to their invitation to join in a "week of old-time Southern sports." The fun began last Thursday, Feb. 1, with a quail hunt; Friday there was another quail hunt with an opossum hunt at night; to-day the programme calls for a rabbit chase; Monday it will be a squirrel hunt; Tuesday a wild turkey hunt, with a coon hunt at night; and on Wednesday a deer hunt by day and a fox chase by night. Just how the committee in charge has arranged with the game for this programme is not explained; but every self-respecting coon, mindful of the honor of the Tar-heel State, doubtless remained closely at home on the night put apart exclusively for the opossums, and the foxes will keep out of the way when it comes the turn of the coon. In addition to the hunting there are set down a barbecue, a possum supper and other festivities, not to mention speech-making, which of course will not be up to the mark of that heard over Asheville way in Buncombe county.

Altogether this is a very agreeable way for Northern and Southern men to come together; and such meetings cannot but promote friendlier feelings between the residents of different sections, who participate in them. The exchange of courtesies between the sportsmen of the North and the South has been going on ever since wartime picket lines were abandoned; they will continue and multiply and exert their blessed influences, even in the non-resident license fee districts.

## SNAP SHOTS.

In his interesting story of the last wild turkey hunt of western New York our correspondent, Mr. J. L. Davison, tells us that being asked why he had not killed one of the birds, he replied, "I have not lost any turkeys." In the West "I have not lost any bears" is the conventional retort when one is rallied for not hunting the grizzly. It is a retort which has been current for hundreds of years. In an old-time volume entitled "Epigrams both Pleasant and Serious, written by that All-Worthy Knight, Sir John Harrington, and never before Printed," London, 1615, is the rhymed version of it:

A Gallant full of life and void of care,  
Asked his friend if he would find a hare,  
He that for sleepe, more than such sports did care,  
Said, Goe your waies, and leave me heere alone;  
Let them find hares that lost them, I lost none.

If the sportsmen of the seventeenth century were as much given as are those of the present day to putting into type hunting stories "never before printed," it would be reasonable to assume that this one had been going the rounds for a hundred years or so before.

There are more old stories than new ones under the sun. For instance, that familiar anecdote told by "Antler" and others, of the genius who was taken out by his host to hear the music of the hounds. When the pack was in full cry, he was asked how he liked the music. "The dogs make such a confounded racket that I can't hear any music," was the response. This was in Tennessee.

As told in "Wit and Mirth," in the works of John Taylor, the Water Poet, printed at London in the year 1630, the story runs: "A Mayor that was on hunting (by chance) one asked him how hee liked the Cry. 'A curse take the Dogs,' saith he, 'they make such a bawling, that I cannot heare the Cry.'"

Speaking of bears, we have all heard the story of the man who was wrestling with the bear and prayed, "Lord if you can't help me, don't help the bear, but stand one side, and you'll see the all-firedest bear fight you ever did see." Well, this is old too, older than the oldest settler; for away back in the days of the Leshes, their chief once prayed before going into battle: "Be on our side! An' gin ye canna be on our side, aye lay low a bit, an' ye'll see thae carles get a hidin' that must please ye."

Gen. Peter Turney, Governor of Tennessee, seventy years old, is an enthusiastic deer hunter and rider to fox-hounds, and has the credit of being able to stand as much hard work in the field as any other man of the State, old or young. "Uncle" Tim Dyer, of Vinal Haven, Me., is twenty years older than Gov. Turney, and, according to the Lewiston Journal, he has celebrated his ninetieth year by taking alone and unaided, fishing in an open dory, a halibut weighing 332lbs. This teaches us that while there is life there is hope of catching a bigger fish than we have ever caught before. Our frequent contributor, Mr. J. G. Rich, of Bethel, Me., is seventy-three years old, and has to his score as hunter a credit of seventy-three dead bears, equivalent to one for each year. Perhaps Mr. Lew Wilnot of Washington may tell us of some one in the Northwest who can equal this record, or "Coahoma" may find an equally redoubtable bear hunter in the Mississippi swamps. The lists are open to all—"Podgers" alone barred.

Some years ago after the first stories of "Uncle Lisha's Shop" had found their vast and appreciative audience, Mr. Robinson suggested that some of the future chapters might be illustrated with portraits of Uncle Lisha, Sam Lovel and others of the Danvis folk; and he sent down what he averred was a faithful likeness, done by his own hand, of Lisha Peggs. No doubt it was, but the face and the figure there sketched were so at variance with the portrait we had conjured up while reading the Shop papers, that we told Mr. Robinson that his sketch must certainly disillusionize a multitude, destroy at one fell swoop unnumbered hosts of the Uncle Lishas of individual fancy, and find but a sorry welcome for this new one—even though the true one—with which he sought to supplant them all. So the portrait was not printed, and to-day Uncle Lisha is known to FOREST AND STREAM readers as a personage of a thousand forms and faces, and never two of them the same.

Hill City is a town of Kansas in the jack rabbit belt. The Mayor and the Council sent out a frantic wire the other day offering to contribute 10,000 of their jacks to the poor of large cities, if only a prize fight arranged for a Florida city could be transferred to Kansas and set down in Hill City's "midst." Here is a precious band of philanthropists for revenue only. Having 10,000 rabbits to give to the poor, they yet refuse to ship them, unless two bruisers can be induced to maul one another in Hill City in the sacred name of charity.

A novelty in game protective schemes was a measure under discussion, and rejected the other day, in the Ohio Legislature, to make every alternate year a close season on quail. This would be a capital plan, if only due care were taken to put it into effect so that the close time should follow the hard winters; and to insure this, the Legislature might call in the help of the weather sharps to predict the cold years, as Joseph foretold the seven years of famine in Egypt.

It is an old saying that we must have our winter some time, meaning that if the cold weather be not prolonged during the usual term it will come with intensified rigor before the opening of spring. Nevertheless, this is proving to be so far a season of unusual mildness, and in consequence of marked advantage to game, over a wide area in this latitude. If the favorable weather conditions shall continue in corresponding degree through the winter, the result will be manifested next autumn in an increased supply of quail and other game.

## DANVIS FOLKS.—XXI.

## June Training.

BESIDES beautifying the earth with the greenness of woods and fields, the bloom of innumerable flowers and the sparkle of limpid yet unshrunk streams, and gladdening it with the songs of thronging birds as happy as the golden days were long, the first month of summer brought also upon its first Tuesday the June Training.

In the year whereof this partial record is made the day was unseasonably ushered in, according to established usage, by the ceremony of "wakin' up officers." A party of the younger men made the rounds of the homes of those dignitaries, arousing them with volleys of musketry, when, if they were men of proper martial spirit and alive to its encouragement, they would come forth with refreshment befitting warriors.

The cock's prolonged clarion notes were saluting the unfolding banner of dawn, when Captain Peck was awakened by a volley whose rattling thunder was intensified by wads of green grass rammed down on the double charges of powder.

The Captain speedily made his appearance at the door, rubbing his sleepy eyes with the back of a hand that held a tumbler while the other bore a brown jug that coldly bumped his naked leg.

"Mornin', gentlemen," he said in tones that strove valiantly through drowsiness to become hearty; "hope I see ye well this mornin'. Walk right up an' refresh yourselves."

He essayed to advance toward them, but hastily withdrew his bare foot from the dewy doorstep.

"Sarjint Daow, won't you jest kinder take a holt o' this an' pass it raoun'?"

The tall sergeant, setting his gun against the doorpost, swung the jug over his arm, and with accurate judgment of his men measured out to each a fiery charge suited to his caliber.

Then with a lusty cheer for "the Cap'n in his uniform," they departed to surprise as stealthily the lieutenants in their strong-holds.

Meanwhile their commander bore the depleted jug to its cupboard and the burden of military honor back to bed. He did not feel himself at all a hero when he curled up his legs in obedience to Mrs. Peck's petulant command:

"Solerman Peck, take your col' feet off'n me. They're julluk tew frawgs. I don't b'lieve it no part o' military desiplyne fer a captain of a company to be a-galivantin' raound in—his—shirt tail—in middle of er—night tu—tu—squerronk," and with a trumpet blast delightful to his ear she resumed her interrupted march into the land of Nod.

The beautiful day was not far advanced when the one street of the Forge village began to exhibit the half indolent bustle of a country holiday. Boys were arriving, heated and panting from a haste that had not till now permitted them to stop even for the nursing of stubbed toes. One of Antoine's brown-skinned, black-poll'd brood carried a smooth bit of board on the hollow of his arm whereon were displayed twists of molasses candy, and already was crying his home-made confection in his father's own English:

"Lassin candle. Two for cen' a piece."

Militiamen came in, on foot and in wagons, and men straggled from one to another of the increasing groups on Hamner's stoop, the steps of Clapham's old store and of the new and popular Bascom's as interest or curiosity impelled them.

Here and there a man hurried about his belated chores. White-haired exempts sat at their doors, agape with languid, senile curiosity. Women in unwontedly early tidiness of dress went back and forth from house to house, bearing openly or under aprons, some neglected or forgotten provisions for the day whereon relatives or friends might desire entertainment.

A very fat and no less benevolent-looking old man in a blue homespun frock, seated on a tall-backed, splint-bot-tomed chair, in a lumber wagon, that also held a barrel of spruce beer behind him, drove his fat and sedate old horse near to the front of Hamner's hostelry, and clambering carefully down over the stout thill, unhitched his horse and led it away.

"Wal," said one housewife, as she dropped the rush curtain under which she had watched him, "I guess the' haint no daoubt but what its trainin' day, fer ol' Beedle's come, an' he's sot up clus tu Hamner's. Won't that rile Hamner? But it don't make no dif'ence, his cust'mers aint hankerin' arter spruce beer."

Not far off a little board booth that had grown the day before, began to blossom out with the yellow cakes of ginger bread, a jar of striped candy and green tumblers of lemonade, which attracted many flies and a few boys to its rough counter.

Old Beedle coming back, removed the end board from his wagon and made a counter of it whereon he placed his tumblers, shoved the tap of the cask beyond the end of the box, took out the chair, seated himself comfortably, and proclaimed his readiness to serve customers with beer at one cent a glass, counting the change that he carried in a canvas shot-bag, while he awaited their coming.

Then Joseph Hill and his father drove in, with the long gun aslant, the son being permitted to carry it to-day in such honorable service, for so the veteran regarded it, though "June trainin'" was becoming a mere farce among a people whose martial spirit seemed almost dead.

Sam Lovel marched past in his long-strided fox hunting gait, followed by Pelatah with downcast eyes, bearing his irksome gun. Time was when he looked forward with a thrill of pride to the day Lowizy should see him adroitly practicing his lesson in the art of war, but that

Hamner's clock. "Sarjint Daow," he called, as he bustled forth, "you can fall in the men naow."

At the word, the drummer began to rattle the call familiarly set to the words, "Uncle Dan, Uncle Dan, Uncle Dan, Dan, Dan," and the men came straggling into line, a few ready and alert, but the greater part listless and careless, and some bearing only clubs and broomsticks in place of proper weapons.

Standing stiff as a ramrod at the head of his rank, Sam looked with supreme disgust on these military mummers who should have withered under the fiery indignation of Granther Hill's glances.

"You'd orter be court-marshelled an' shot, blast ye!" he growled, "an' so ye would ha' ben, ef ye lived when folks hed spunk tu du anythin'," and he shook his impotent staff. "Pooty critters you be tu make sojers on!"

It gave him some comfort to see his own gun, upheld by his son, towering like a naked color staff in the center of the line.

"Jozeff haint turrible hefty on sojerin', but he kerries a gun 'at's used tu the business, anyway," he remarked to those about him.

Uncle Lisha, standing by his side, uttered in snorts and ejaculations his grief and indignation at the spectacle of the unsoldierly bearing of men whose fathers had so gallantly borne the evergreen emblem of Vermont through the storm of Plattsburgh fight.

At last the company was got into line and partially straightened by the united efforts of all the officers, in pulling a man here and pushing another there, then they faced to the right. The fifer rocked back and forth from foot to foot to assure himself of the time the order was given to march, fife and drum struck up "Yankee Doodle," and with an irregular tramp of four-score pairs of feet, the Flood-wood Company of Danvis went marching down the street, all the boys running beside it, the women waving their handkerchiefs and the Captain's pompon bobbing proudly before it.

Then it was countermarched and returning to Hamner's, halted there and went through some antique manual of arms, during the performance of which some who felt the need of refreshment after such arduous service, dashed out of the ranks and into the barroom and presently reappeared wiping their lips to leisurely resume their places, without reprimand.

The men were soon dismissed for their nooning, and a cordial invitation was given by the genial Bascom, to all who would, to partake of a free lunch of crackers and cheese at his store, thereby greatly increasing his own popularity and depreciating that of his less patriotic rival who sat almost alone in the shadow of his own store, placidly awaiting his foreseen time, as he said softly to himself,

"That feller's got pretty nigh the len'th o' his rope. He won't be givin' away crackers an' cheese next trainin'."

The Captain dined at Hamner's with his officers and most aspiring privates. Cap'n Hill and Uncle Lisha were honored guests of village friends to whom they told stories of the warlike days of which they had been a part. The larger number of the militia men having providently brought their rations in pockets, tin pails and baskets, gathered in picnicking groups at centers most convenient for the irrigation of their dry fare, some squatting on the platforms of pumps and well curbs, where the gulping crescendo of the one and the splash and bump of the other's bucket, often interrupted or overbore the flow of joke and repartee.

Some roosted on the thills and other available perches afforded by old Beedle's wagon, where draughts of the spicy beer were within easy reach, and some, burning with a valiant thirst that neither water nor beer could subdue, occupied the thin benches in the noontide shade of Hamner's stoop, firing volleys of wit at each other and at the boys who stole past them to gaze on the Captain's sword that now hung peacefully behind the bar, while its owner wielded meaner weapons against the sacred rage of hunger.

A horde of boys swarmed about the benevolent old Beedle who dispensed smiles and kindly words with his foaming glasses of innocuous beer and always gave the right change for every "fo' pen' sha p'ny," though its Spanish blazory of pillars and scroll was quite effaced. And boys crowded about the booth in eager purchase of the choky but delicious gingerbread as yellow as old gold and of greater worth to their hungry stomachs.

Meanwhile there was hospitable clatter of plates, knives and forks in every wayside house, the sound whereof made hungrier every passer by.

"A turrible free-hearted creature" said one of Bascom's guests to a fellow soldier, jerking his head sidewise toward the smiling proprietor, while he turned a fresh cracker in search of the best point of attack, "an' pears

YELLOWSTONE NATIONAL PARK—GRAND FALLS OF THE YELLOWSTONE.

was an ended dream. Now, Beaver Meadow and Stony Brooks were calling him with concerted babble, and he would rather go a-fishing than join in this foolery, or rather, still, go out to battle, to die and forget and perchance draw one tear from those blue eyes that were always haunting him.

Capt. Peck, scarcely recognizable by those to whom he had first appeared that morning, was proudly conspicuous on Hamner's stoop in a square-topped, broad-visored cap with a red, white and blue pompon, enormous yellow epaulettes on the shoulders of his tightly buttoned blue claw-hammer coat. White trousers incased legs that were frequently entangled with the scabbard of his huge sword. His first lieutenant wore a bell-crowned beaver hat and a blazing red coat, a relic of some defunct uniformed company, while his junior in rank was designated only by a huge red sash encircling his loins and the cavalry saber depending from it. The fifer and drummer sat on the steps toying with their instruments, with a group of boys gaping in tireless expectancy before them. Sergeant Dow lingered near, awaiting orders, without a trace of drowsiness from his self-imposed early duties.

The Captain endeavored to draw his watch from its padded fortifications, but failed, and went to consult

to be a candid sort o' man, but it beats all natur haow he's borryin' of ev'rybody."

"N'yum, n'yum, n'yum," mumbled his full-mouthed comrade with assenting nods.

"Yis, borryin' of ev'rybody," continued the other. "Why they say 't he's borried \$300 of the Butties gals 'at they'd laid up a tailorin', without a nite o' security. Poor ol' critters, fifty year ol' the youngest on 'em is. All they'd got saved up. Hope they won't lose it, but I d' know."

Sam overhearing them, raised his eyes from the smoked herring he was peeling, to study the face of his friend Bascom, a genial, beaming face, with restful eyes that met another's but for an instant, but surely there was no guile in it.

During the nooning, the village street so nearly resumed its ordinary peaceful aspect that Joel Bartlett, clad in his Quaker garb, appeared in it as a not incongruous figure, mounted on a wagon load of grain and driving sedately toward the mill. Millers being exempt from military duty, and but few grists being likely to come to the mill on this day, it seemed a propitious one for Joel. He was suspected by some of possessing a worldly, unconfessed love for music, embracing even the martial strains of the fife and drum.

As he slowly turned the corner, holding an attentive ear, and casting a wistful, furtive glance up the main street, he attracted the notice of Beri Burton, whom frequent calls at Hamner's bar had made pot-valiant and more than usually aggressive.

"See that aire dumb sneakin' Quaker," he mumbled, with one-half a doughnut in his mouth while he pointed at Joel with the other half. "Goldumb Quaker, ridin' roun' comf'ble, when better men 's sarvin' the country. Goldumb ef I don't make him git daown off'm his waggin an' shoulder my muskit." And starting up from the group with which he was lunching, with long, shambling strides, he advanced rapidly toward Joel, shouting vociferously, "Hol' on thar, you Bartlett, I got some'pn fer tu tel ye."

When Joel became aware that he was addressed, he drew rein and awaited Beri's approach, asking quietly as the other came beside the wagon:

"Was thee a-wishin' to speak to me, friend Burton?"

"Yis, I be," growled Beri, "but I haint none o' your 'friend Burtons'. I want you tu git ri' daown here."

"No, I thank thee, I don't feel drawn to get down," Joel answered. "I can converse quite freely where I be."

"Goldumb ye, you will feel drawn daown 'f ye don't pile off'm thar. What business you got a-ridin' raoun' wi' your dumb drab broad brim clos' when decent folks is a-duin' thar dooty. You gotter git ri' daown here an' shoulder a muskit like a hones' man oncte in yer sneakin' life."

His brawny hand grasped one of Joel's butternut-dyed stockings and Joel drew the other close under his haunch.

"I'm a man of peace," he said, "and hev no call tu handle carnal weepsons."

"You come daown er I'll pull ye daown, I will."

"Oh, you'd better let him be, Beri," mildly expostulated a militiaman who had drawn near. "He haint 'bliged to train, ye know, an' if we want we wouldn't."

Beri's answer was a more vigorous jerk of the enthralled member.

"If thee yanks me so hard, friend Beri," said Joel calmly, "my f'other foot is lierce to slip, an' if it should hit thee in the face an' hurt thee I should feel grieved."

Beri pulled more savagely, roaring, "Come off'm thar."

Joel, as he slid a little from his lofty seat, let fly his loose foot full in the face of his uncouth adversary, who, staggering backward with his hand to his battered nose, howled with pain and rage.

"Dumb ye," he roared, glowering darkly up over his bruised features, and making feeble demonstrations in the same direction, "I've a good minter break yer neck."

"Friend Beri, I hope my foot won't slip agin, but if it does I haint answerable."

"Goldumb ye, I won't dirty my fingers wi' yer Quaker carkiss. I've hed a wolf's foot in my maouth, an' a Quaker's hoof in my face, an' I do' want no wus disgrace."

Joel's contracted brow and closely puckered lips relaxed and his face assumed its usual placidity as he resumed his seat, and chirruping to his horses they moved sedately onward, while Beri shamled away, as much abashed as it was in his nature to be.

Joel had the miller and mill to himself for half the afternoon, but it was noticeable that when the company paraded for afternoon drill and fife and drum struck up "The White Cockade," "Yankee Doodle" and their one other tune, "The Road to Boston," he took himself out of the noise of the mill clack and rushing water, and with his back resolutely turned to the music gazed into space in abstracted meditation.

At about 1 o'clock the drum resumed its monotonous iteration of "Uncle Dan," and "the sinners of war," as their commander flatteringly styled them, wandered again into crooked alignment, shouldered arms, marched and countermarched, wheeled right and left like a wave-tossed seine, "charged bay'net" to the affright of the scurrying host of boys, and at last, at 4 o'clock, "pised arms" and disbanded; and the farce of "June Trainin'" was ended.

After buzzing about for a while with as little purpose as a swarm of flies, the greater part of the militiamen and spectators departed, while some lingered to do forgotten errands or regale themselves with the seductive sweets of gossip and strong waters at Hamner's.

Berries of boys trudged homeward shrilly recounting the events of the day. Old Beedle went jolting over the highway, his empty cask rumbling and his well-filled shotbag chinking a tune very pleasant to his ears.

Sam, Pelatiah and Antoine bore each other company homeward.

"By the gret horn spoon!" the first exclaimed, "I'll stay tu hum an' pay my fine afore I'll jine sech foolin' agin. It gits wus an' wus every year, a-pomponadin' back an' tu like a passel o' sheep, every man duin' jest as he's a mind tu, an' larnin' nothin'. I'd rather stay tu hum an' du nothin' er work in Huldy's posey bed."

"I'd rather go a-fishin'" said Pelatiah, regretfully, as his wistful eyes followed the winding copes and straggling ranks of elms that marked the courses of his favorite streams. "An' what's the use o' trainin', anyway? The' won't never be no more fightin'. It's gone aout o' fashion, seems, ough."

"It won't, never, I'm afeard, till folks gits tu be angels er geese, which they're gittin' mighty nigh. Fust ye

know, the' 'll come a war, kerslap, an' nob'dy ready 'mongst all the stuff, we've got tu make sogers on, jest as good sogers as fit in the Revolution an' eighteen-hunderd-an'-twelve. But I s'pose it don't take long tu larn tu kill folks, an' it's hopesin' we won't haf tu."

"Ah 'll goin' tole you de truf, sah, Sam," said Antoine, who had been a cordial and interested spectator. "It was mos' look wus as de Papineau war, on de Patrick side of it. De British he look pooty honly he 'll gat too much gaun an' shoot it too much. He can leek more as honded tousan' you feller. Why, seh, he 'll leek me, mahsef."

Just relieved of his holiday coat and hat, Uncle Lisha sat sweating in his shirt sleeves when Sam entered his kitchen. Joseph Hill, who had come a mile from home to rest himself, lounged in an easy chair.

"I seen one man tu-day," said Uncle Lisha, looking at Huldah, "at looked julluk sech sogers as we hed tu Plattsburgh, an' the fust letters of his name is Samwil Lovel."

"I doan' know but what I'd jest about as lives train as not tu; an' about as lives not tu as tu," said Joseph, serenely unenvious of the compliment that reddened Sam's cheek, "on'y it makes father swearin' mad 'cause I can't git the right foot forrid tu, which it 's allers the left, he says, an' I don't see haow on airth you're goin' tu, erless ye take kinder of a half hitch, hipperty-hop."

"Wal," said Uncle Lisha, "there's Bubby, an' the womern folks, an' me an' Drive haint got tu train, hev we, Bubby? Ah! seee here, daddy's man, he's go fin' aout what 's in Uncle Lisher's cut tail pocket. It felt julluk a sugar plum a-tunkin' agin' the calf o' my laig all the way hum."

With the little boy holding on to his tan-stained forefinger with one dimpled fist and leading the sad-faced hound by the ear with the other, he went over to where the blue coat was hanging on the wall.

ROWLAND E. ROBINSON.

**UNCLE ISIAH ON THE HAMMERLESS.**

HE was seated on a box in front of one of the little cabins that "befoh de wah" served as quarters for the field hands employed on the plantation.

A solitary chicken of doubtful sex and very nondescript breed was pecking in the gravel at his feet, and a delicate wreath of blue smoke circling from his corn-cob pipe formed a halo around his shining black pate. The warm sunshine, for although it was near Christmas the rigor of winter had not yet reached Virginia, poured its yellow rays over him and glistened on the barrels of an old-fashioned fowling piece, which he was busy oiling and putting in order.

My new Parker hammerless had arrived that morning and I was naturally anxious to test its shooting qualities, so I called around to get Uncle Isiah to accompany me. Hearing my footsteps on the gravel walk as I turned the corner of the smoke-house, he hastily removed his blackened pipe from between his lips, and, half shuffling to his feet greeted me with: "Good mohnin, howdy, howdy Marster Ned? I done been a hearin' de quail pipin' all de mohnin down yon'er by de ribber, an' I was just a cogitatin' wedder I'd better go up to de house an' call you, case I know you all couldn't miss no such mohnin as dis; jess listen to dem quail, 'peahs like dey jess pipin' ter be shot!"

"What you got dere honey? Dat yo' new gun? Lemme look. Laws-a-mussy, you done broke it all raidy! My! Yo' pa sholy will be mad? 'Taint broke! Yes it is, look yeah, an' yeah, don't tell me dis gun ain' broke, whar's de hammers?"

"Hammerless gun—cose it is, jess like I said; made dat way—go way—don't pester me wid no sich foolishness! what good am a gun what haint got no hammers? How you gwine to shoot hit off?"

"Law me! Well, dat ob de beat me, for a fac! Dey's insidel' Well, dat am de mos' curiousness gun I ebber did see. Lemme look agin. Umph! What fo' dey put 'em on de insidel' What's dat? Jess you hark heah. De pussen what climbs a fence an' den done turns roun' an' pulls de gun through after him, jess 'serves to be shot, an' he's sure ter do it some way if you done gib him de bestis and safes' gun in de worl'."

"Dis yeah suteny does s'prise me, 'deed it does!"

"Didn't I done teach you all how to handle a gun? Didn't I tote dat big duck gun ob yo' pa's down to de corn-fiel', so as you could shoot yo' fust rabbit? Didn't I go along wid you de day after 'Chris'mus fo' yeahs ergo come nex' 'Chris'mus, when you got yo' new breechloader? Didn't I teach you how ter climb de fences—huh? An' now you ain't know enough to han'le a gun wid hammers on it—I-se powerful ashamed ob you, suh—yes, suh, I cert'n'y is!"

"Look yeah, you see dis ole gun? Don't you turn up yo' nose—dere haint no style about it—I knows; dis yeah piece ob string am wrapped around de place where it broke de time yo' pa fell down wid a big wounded buck on top of him. He done gib me de ole gun for killin' de deer jess in time. 'Tain' no breechloader, an' you jess hab to pour de powder into de top end, but she's a mighty pow'ful shooter jess de same, an' when Mister Cottontail see me a-comin', he jus' 'low he gatter git up an' move mighty quick, an' keep er-movin', or he done fin' hisself dead. When I see ole Bob White line up plumb between de hammers I know Bob White done gwine to sizzle in my skilket befoh night. No, suh—you keep yo' hammerless gun; dis yeah nigger's done got used ter de ole times, an' he's like de ole mule what hab done trabbled in de furrow all his life—you can't make no bob-tailed fancy circus horse outen him, no mattah how hard you try."

THE GENERAL.

**Canadian Folks Are Not Cockneys.**

SOREL, P. Q., Jan. 31.—*Editor Forest and Stream:* In your issue of 20th inst. I regret to notice a curious inaccuracy in "Kelpie's" interesting letter—I refer to the cockney dialect which he puts into Canadian mouths.

I know eastern Canada pretty well from Halifax to Winnipeg, and can assure "Kelpie" that a misuse of the aspirate is not a characteristic of Canadians. The last paragraph of his letter plainly infers that it is.

During a residence of several years in the United States I have met at odd times people who apparently believed Canada to be a pocket edition of England, and thought all Englishmen were cockneys. I should have expected a man of "Kelpie's" attainments to be better informed.

PINTAIL.

**Natural History.**

**THE VARYING HARE.**

THIS animal, the Northern hare (*Lepus americanus*) abounds in northern Maine, New Hampshire and Canada. It is pure white in winter, cinnamon brown in summer. Weight about 6 lbs.; ears, length of head; hind feet very large; small forward; a very swift runner, outstripping the fastest dog. They feed on grasses in summer and tender twigs of birch, hemlock and spruce in winter. Live entirely above ground, making forms of dried grass or leaves on which they lie, under thick cover of shrubs and evergreen bushes. Chiefly nocturnal, choosing a dry, sunny knoll in daytime, where they quietly ruminate in daylight, commencing their travels about sunset, and on moonlight nights roaming continuously, otherwise starting out at daybreak for a morning frolic. This hare does not occur in the Western States.

The Northern hare is a beautiful animal in its winter dress, and appears very much larger than it is, having long ears and legs which deceive the eye, and making immense bounds when started, giving it the appearance of a flying creature. These hares have been sent into many of the States of the Union to stock preserves. A curious fact in regard to this animal is, that it cannot be baited in the summer season, when the herbage of nature is green and fresh. Only when the earth is covered with snow will they enter the boxes set for their capture. For the last ten years I have sent perhaps thousands into many of the States, several hundred each year; more to New York perhaps, and Pennsylvania, also Virginia, Maryland, New Jersey, Connecticut, Rhode Island, Massachusetts, Michigan, and even to Florida and to islands in the sea.

The beagle is the best dog for hunting them, and they give great sport ahead of these dogs, circling in large circuits sometimes a mile away. I have known two hunters to start out without a dog, one with a gun, the other acting as dog, following and barking in imitation of a dog, and in due time bringing the hare around to his partner with the gun. They will thrive equally well on mountains or in swamps, and are great breeders. They always circle when started by man or beast. I once saw one come out of the woods on to Mollychunkumunk Lake, and start off down the lake on the ice. A few minutes later a fisher cat came on to the lake on the hare's track and spun down the lake in pursuit. As soon as the hare perceived that he was followed, he commenced to circle, the fisher keeping the inside ring, and the circuit growing smaller in each round until finally the fisher made a game dinner of his prey.

Many carnivorous birds feed on this animal, especially hawks and owls, and also the beasts of the forest. The bear, fox, mink, martin, fisher, lynx and many others, and it seems a wise provision of nature that the hare should breed so prolifically to supply the needs of such a horde of meat eaters, and can it be any worse for the hare to be killed by a dog than by the lynx or fisher, or picked to pieces by an owl? After all, it is the survival of the fittest law.

J. G. RICH.

BETHEL, Maine.

**Another Grouse in Town.**

ALBANY, N. Y.—On Sunday afternoon, Jan. 14, a ruffed grouse was discovered in the poultry yard of the Olcott mansion, on the heights east of Greenbush, across the Hudson from this city. The bird seemed to have dropped in to feed, and three gentlemen, Douglass Olcott, H. A. Vanderpoel and H. H. Valentine, watched it from the windows of the tool house. Presently the bird became alarmed at the appearance of a cat and it rose to clear the picket fence, but apparently did not see the wire screening above the pickets, in the meshes of which it became entangled and finally fluttered down into the space between the wire and the pickets, where it was easily caught by Mr. Valentine. Upon examination it was found that the foot and shank of one leg were missing, but there was a perfectly healed "stump," and the grouse (a hen) seemed to be in otherwise excellent condition, being fat, clean-feathered and of first-class wing power as was shown later. The bird was examined with great interest by the gentlemen and by two setters and a pointer who were present; then Mr. Valentine took it out to the eastern edge of the hill, the side of which is wooded, and offered it liberty. It rested quietly upon the man's outstretched hand for a moment, not seeming to realize its release. Suddenly it raised its head and with a mighty rush tore through the trees, down the hillside, and disappeared on the opposite side of the wide valley.

HORACE B. DERBY.

**Big Tracks and a Large Yell.**

ASHLAND, Wis.—I am in the woods a great deal of my time, as my business is surveying and looking up lands for different lumber companies. Last fall I had a fifty-five days' trip, and my attention was drawn several times to a certain animal's track always in the largest swamp and roughest country. The track is about 3½ in. in diameter and generally there are two together. The steps are very regular and about 32 in. apart and in a direct line. The beast travels over a great deal of country. The track is round and shows three toes and a center very plainly. I should judge the animal is as heavy as a good-sized dog from the appearance of the signs. I have been very close to it. One night about 9:30 I went out of the camp and very near the camp, say 50 yds., the same animal gave the most terrifying yell I ever heard in the woods. I have heard wolves a great many times and have shot and trapped them; but this is no wolf. I am told it is a panther; some say it is a jaguar, others a cougar, some a Rocky Mountain lion. I believe all these names to apply to the one animal. If you would be so kind as to give me some information in regard to this animal through your valuable paper or otherwise I will be very much obliged.

J. A. G.

**Foreign Travel.**

ATTENTION of travelers is called to the advertisement on page vi of the *Crédit Lyonnais*, of Paris. This is one of the largest banking establishments in the world, having a capital of forty million dollars. It occupies a magnificent marble building in Paris, and has branches in most European cities. Letters of credit may be procured of the leading banks and bankers in the United States, and cards admitting to the reading and writing rooms will be furnished by their New York representative, Charles Einselder, 15 Wall street—adv.

## Game Bag and Gun.

### HUNTING WITHOUT A DOG.

SPORTSMEN will one and all admit, I think, that the ruffed grouse furnishes by far the finest sport of any of the feathered tribe. At any rate, such is my opinion, and consequently, most of my time afield has been spent in his pursuit.

His rendezvous is the choicest part of the woods, among the pines and hemlocks. Just such a spot as I would choose were I to live in the woods, and, in fact, I have been many times tempted to desert the city and live out here with the grouse, as Thoreau did. Is it to be wondered at that the grouse is an independent, saucy fellow, living, as he does, out in the woods all the time, breathing the pure air, scented with the odors of the forest? How I envy him. It is a pleasure simply to be out here, even if no game is secured; and many a happy day I can look back upon when I have wandered about from sunrise to sunset without firing a shot or seeing a solitary bird. The question, How many birds have you secured? never concerns me in the least. Ask that of the pot-hunter or market-hog. I go for the pleasure and recreation, and many times having secured a brace of birds, I have left others untouched for a future day.

The first question to present itself was, what kind of a dog should be used; and in working out its solution, I have tried about every variety known to the sportsman's category. Taking all into consideration, I have found the cocker spaniel most satisfactory. It is a pleasure to watch these little fellows quarter back and forth with shining eyes, their excitement amounting almost to frenzy at times.

One spaniel that I used would occasionally play some very shabby tricks on me. Led by curiosity, I followed him into the cover and watched him, to learn the cause of his pranks. I soon found that he was having as good sport as I, and that I was missing half the fun. The grouse were playing the pranks, not the dog.

On my next excursion, I determined to try the experiment of leaving the dog behind and doing the hunting as well as the shooting myself. I soon discovered that never before had I known anything about the ground I had been in the habit of working over. Heretofore I had supposed that I was perfectly familiar with every piece of cover within a radius of twenty miles of my home; and so I was, with the ridges, wood-roads and foot-paths; but never before had I even dreamed of the existence of so many bewitching nooks and shady dells as were hidden away in those woods. I was so engrossed in exploring them that I completely forgot about the grouse; until as I was passing down the deep bed of a narrow streamlet, thickly shaded above and on both sides by a heavy growth of scrub pine, a grouse jumped from the bank into this ditch and ran its whole length at lightning speed before he rose. That was his trick, and he had fooled me a dozen times before at this very spot, while using the dog. A heavy charge of shot stopped him this time, however. It was a greater pleasure to me to outwit that wily fellow than to secure a score of ordinary birds; and it was with a feeling of triumph that I laid him away in my game bag. I never pass the spot now without penetrating to that little stream in the pine clump and living over that bit of sport.

Since then, I have come more and more to hunt without any dog. It is harder work, of course, or better exercise, whichever you may choose to consider it. A strong suit of canvas is necessary to withstand the brush and brambles. I enjoy passing quietly along through the woods, meeting new acquaintances, no dog to scare the animal life away, veritable still-hunting. The habit is soon acquired of judging the most favorable spots to find the birds. The sides of a well-wooded gully or blackberry patch, or, in late fall, the sunny edge of a clearing, are promising spots. You have but to seat yourself in a favorable locality and exercise a little patience to discover their hiding places. The young birds practice drumming in the fall and will soon be heard calling, as it were, "Here I am, come and try your luck." When the snow is on the ground, the tracks reveal the presence of the birds, and form a sure guide as to their whereabouts.

It is my custom, a few days before the opening of the season, to take my own dog, borrow my neighbor's and any one else's that I can, and, going of course without my gun, work over the entire ground with the dogs; thus finding about how many birds there are and where to look for them. Then, on the opening day, I saunter out by myself, "To hear the lion in his den, the Douglas in his hall." No necessity of watching a dog all the time, and bursting the lungs bawling after him; but plenty of opportunity to enjoy the surroundings.

The majority of the shots secured will, of course, be snap-shots in the brush at short range, and require a great deal of skill. But the greater the skill required, the keener the sport. Then, there is the satisfaction of having met the game on an equal footing and taken no unfair advantage of him. But best of all, the lively scramble up and down has thoroughly tested every muscle, and filled the lungs with the elixir of the woods.

I would be pleased to hear through these columns from other sportsmen who have tried this method of grouse hunting in densely wooded districts, where it is impossible to see further than a few yards at the utmost. B.

### Nova Scotia Moose Heads.

WINCHESTER, MASS.—*Editor Forest and Stream:* In my description of a moose hunt, under the heading of "Two Guaranteed Moose," in a recent number of FOREST AND STREAM, I spoke of C. R. Peavey as being very successful in finding moose for parties he guided. I have just received quite a long letter from Peavey, in which he says: "The day after I saw you at No. 7 a party came to my place and engaged me to go after moose with them. We started early from Oxbow and reached camp that night. On the third day I put them up to three large bulls, and they killed the three. They were the three finest heads I ever saw together, all with big antlers. One had ten large prongs on one side and nine on the other. The second had eleven points on each horn. The third had the largest antlers, twelve points on one horn and nine on the other. The one with eleven on each horn is said to be the best head seen in this region during the season. We swamped a road to them and hauled them out. I had been home four days when Algie and his man came out, each having killed a bull." C. M. STARK.

### MARYLAND'S GAME INTERESTS.

ELLCOTT CITY, Md.—The well developed movement in this State toward a better protection of its game supply is exceedingly gratifying to every one who has aided in bringing it about, and to none more than myself. Recognizing that we have all the natural elements of a vast game preserve, I have seen, year by year, a gradual decrease in the sum total of game, and a wonderful increase in the number of men afield, as well as a marked development in the effectiveness of both men and firearms.

Indulgence in trap-shooting during three-fourths of the year has added many recruits to the army of devotees of field sports, and increased their skill in a measure. Against this what has there been in favor of the game? Nothing, beyond a few desultory efforts upon the part of a few enthusiasts to restock the depleted coverts. The severe winter of '93 had its effect in aiding the general destruction, the market gunner and trapper got in their work, the hawks and foxes helped along, and the curious specimens of legislative action known as the Maryland game laws overshadowed the whole thing, actually abetting game destruction rather than aiding game protection. Just take the law as at present in force upon Bob White in the several counties:

Oct. 1-Jan. 1 in Alleghany.	Nov. 1-Dec. 31 in Talbott.
Oct. 15-Dec. 1 in Garrett.	Nov. 1-Jan. 1 in Frederick, Wicomico.
Oct. 15-Dec. 31 in Harford.	Nov. 1-Jan. 10 in Cecil.
Oct. 20-Dec. 25 in Washington.	Nov. 1-Feb. 1 in Caroline, Dorchester, Worcester.
Oct. 20-Dec. 24 in Carroll.	Nov. 1-Feb. 15 in Somerset.
Oct. 31-Dec. 24 in Howard.	
Nov. 1-Dec. 15 in Montgomery.	
Nov. 1-Dec. 24 in Anne Arundel, Baltimore, Charles, Prince George, St. Mary.	

The general State law makes the open season Nov. 1 to Dec. 31; yet here we have local county laws which practically make an open season throughout the State, for all sportsmen able to travel and for the ubiquitous market-shooter, from Oct. 1, the date of the open season in Alleghany county, till Feb. 15, the last day of the open season in Somerset county. It may be argued that there are also local trespass laws and others requiring licenses to shoot, which prevent indiscriminate shooting throughout the State. But I am sure that any fair-minded sportsman will admit that the trespass laws and the license business is as much honored in the breach as in observance.

In Howard county, where I live, a non-resident is supposed to require a license to enable him to come into the county; up to date there have not been a dozen sold, and I know by personal observation that a hundred non-resident sportsmen is not an overestimate of the number hunting in Howard this season without license. I have no hesitation then in asserting that such laws are practically dead letters, and are better off the statutes than on them.

To still further lengthen the open season, look at the rabbit law. Here again we have a State law making the open season from Nov. 1 to Dec. 31. Now look at the county laws:

Sept. 1-Jan. 15 in St. Mary.	Nov. 1-Dec. 31 in Talbott.
Oct. 15-Dec. 24 in Carroll.	Nov. 1-Jan. 1 in Caroline, Frederick.
Oct. 15-Jan. 1 in Alleghany.	Nov. 1-Jan. 15 in Somerset, Washington, Worcester.
Oct. 20-Jan. 15 in Dorchester.	Nov. 1-Feb. 1 in Montgomery.
Oct. 31-Dec. 24 in Howard.	Nov. 1-Feb. 15 in Wicomico.
Nov. 1-Dec. 24 in Anne Arundel, Kent, Prince George, Queen Anne.	Nov. 5-Jan. 1 in Harford.
Nov. 1-Dec. 26 in Baltimore.	Nov. 20-Jan. 10 in Cecil.

Here we have an open season from Sept. 1 to Feb. 15. Could anything be more inimical to the welfare of the game, more satisfactory in making people law-breakers? Or less effective in the object for which the laws are supposed to be made?

These same laws make a virtual open season for woodcock from June 10 to Feb. 24. I met a man this fall who is in the habit of killing woodcock late in February during favorable seasons about the time of the evening when these birds begin to perform their curious mating evolutions. Verily we have need of not only stringent game laws, but a campaign of education as well.

The great scarcity of game this season past has created a reaction, and there seems to be a widespread feeling that a general close season of at least one year would be an advantage, and a bill to make that a law has been introduced into the Legislature. If passed this will surely give us time to make headway in securing either the repeal of all county laws and the enactment of a general State law or the revision of existing laws and each county adopting the same open season.

Dr. Ellzey's letter in a recent issue of your paper is one of the best I have yet seen and should have due weight, for the Doctor is a student of nature as well as a sportsman from the ground up. His suggestion of having certain days of the week as hunting days during a general open season, is in my opinion the most sensible and practical idea of breaking up market-shooting and other unfair advantages taken against the game that has been offered so far as I know. I do not agree with his boundary dates, for I think Oct. 20 too early by eleven days in our latitude. We rarely have killing frosts until Nov. 1, sometimes not until Nov. 15. At the same time, while not agreeing with Dr. Ellzey to secure legislation along the lines he has suggested, I will gladly aid in securing the passage of such a law making the dates Oct. 20 to Dec. 20.

There is one question I would like to ask Dr. Ellzey in regard to the period during the "late unpleasantness;" I was then too young to remember about the weather conditions, but during the four years' compulsory close season was not there any winter corresponding to last winter, which did not succeed in killing out the birds?

I must confess that I do not favor the so-called migratory theory as to the disappearance of the birds in certain vicinities. That some, perhaps many Bob Whites, migrate, we know or surmise, but that there is a general migratory movement I very much doubt. The movements of Bob White seem to me to be governed by the food supply of a vicinity, and the cover supplied by that locality is another factor in causing the so-called migration. For instance, where I live the entire district is yearly getting cleaner, and yearly I have noticed that the gross number of Bob Whites seemed about the same, but the coveys were more widely distributed, always using as near good cover as possible. On my own place there are usually two coveys hatched out and raised, this year three. One covey stayed, the other two left, one, as well as I could determine, going to an adjacent farm where there was a large swamp, the other to a branch about a mile distant from my house, where there was such excellent cover that fully one-half

the cunning rascals are alive and hearty to-day, with fair prospects of pulling through the winter.

Of course there is only subjective testimony; the birds certainly hatched in my fields; there were no birds in either of the two localities that could be found by two dogs and a man who knew every foot of the ground. Later, when cold weather came and the fields became bare and food scarce, two coveys were lost from my place, and when the season opened I found two coveys, one in each of the above mentioned places, where none were found before.

There is one other argument in favor of a close season—that we could undoubtedly succeed in getting together a fund to purchase rabbits and partridges wherewith to restock our coverts. Fifty thousand pairs of Southern birds put out through the State and a close season for one year would, I think, make a very decided increase in the general supply. Short open seasons thereafter with resting days between shooting days and all could have sport. May this, the millennium of sportsmen, become an accomplished fact. SAMUEL J. FORT, M.D.

ELLCOTT CITY, Md.

### ADIRONDACK DEER SEASON OF 1893.

MR. W. E. WOLCOTT has compiled and published in the *Utica Herald* a statistical report of the Adirondack deer supply, which is well worthy a careful study.

In order to obtain all the information possible concerning deer and the workings of the game laws, the opinions of prominent hotel men and well-known guides in the Adirondacks have been asked, and the views expressed by each are given in brief below:

A. D. Barber, Honnedaga Lake, Herkimer County—I think deer are increasing very rapidly in this section, and believe the reason is the stopping of jacking or floating in the Adirondack League Club preserve. I have noticed several articles in the papers about deer starving, which I cannot understand, for beech nuts are plentiful. The deer have not as yet yarded up, but are traveling about everywhere and feeding on nuts. My men see deer every few days while at work near this lake, and they say they look nice, and must be in good condition. I still think the season for running dogs should begin later, say not before Sept. 20, or even Oct. 1. Everyone knows the meat is far better then than early in September.

David Helms, Long Lake, Hamilton County—Deer are increasing. I think that as there are so many sections of the woods where the deer are starving for lack of food, the hunting season should be extended until Dec. 1. I saw a guide from Moose river tract last week, who assured me that according to the best of his belief there would be at least 200 deer starved this winter in that section. I was in the Beaver river country in June, and saw acres where there was hardly a green twig in sight. I do not wish to be understood to say that there is not feed enough in the woods for the deer, but in certain sections, where they yard thickly, as the snow gets deep they do not move around much and finally cannot get away far enough to find sufficient food to keep them alive. In the Cold river and Preston pond region last spring, there was a large number found dead with no marks on them, and the men who found them said they had starved. So long as venison is not shipped away to market, there is no danger of deer being killed off to any harm.

Henry Studor, Bisby Lakes, Herkimer County—Deer are about holding their own. The guides in our locality do not favor jacking. By this mode of hunting many deer are wounded and go off in some thicket to die. The idea of deer starving to death is all nonsense. There is as much feed in the woods now as there was twenty years ago, if not more.

Theodore C. Remonda, Morehouseville, Hamilton County—Deer are decreasing. The guides and people generally favor a law that would prohibit hounding and give a hunting season open from Sept. 1 to Nov. 15. There are three things necessary to the increase of deer: The prohibiting of hounding, mild, open winters, and protectors that protect. If the present mode of hunting deer continues the deer will soon be exterminated.

O. L. Howland, Rudeston, Hamilton County—Deer are just holding their own. It is the opinion of the guides and other people about here that hounding should be abolished and the hunting season extended a month later. Floating does not harm the deer after Aug. 15. Hounding is what destroys the deer, and it must be stopped in order to protect them and have them increase.

Byron E. Cool, of North Lake, Herkimer County—The game law of 1893 seems to give satisfaction both to the sportsmen and guides, but it is a fact that many deer were killed out of season in this locality last year, and the unlawful acts can not all be laid at the door of the woods-men that live or work here. From signs that do not fail it is evident that some who call themselves sportsmen had a hand in it. What we must have is better protection. I do not notice any change in the number of deer.

C. H. Bennett, Raquette Lake, Hamilton County—The guides in this section would like very much to have the hounding extend from Sept. 15 to Nov. 20. They would like still-hunting allowed until Dec. 15 and jack hunting done away with altogether. This would give general satisfaction to both guides and sportsmen. Deer are increasing.

Sam Danakin, Fourth Lake, Fulton Chain, Herkimer County—Deer are increasing. I find that the vote of the guides in the Adirondacks is almost unanimously in favor of abolishing the jack and leaving November a hunting month. There never was any need of blocking out November, as the law limiting the number of deer killed covers the whole business, and every hunter and sportsman knows that November is the natural hunting month. When I say "guides" I do not mean the great army of boys and men of all occupations that flock into the woods with their jacks for their summer outing, and pose as guides during the season and return to their jobs again.

Munroe H. Bullock, Stillwater, Lewis County—Deer are increasing. This locality is now owned by a club and we only kill what deer are wanted at the house. The guides think the game law is all right as it is for it gives everybody a chance to hunt as he likes.

Charles Fenton, Number Four, Lewis County—The number of deer reported as killed here by hounding last fall, 280, may appear large, but it is below the true figure if anything. This portion of the woods was filled with hunters and dogs during the hounding season, and the deer have been nearly exterminated. Guides and others in this vicinity are now opposed to hounding.

Jack Thomas, Cranberry Lake, St. Lawrence County.—Deer are increasing here. The general opinion of guides in this locality is to have the open season from Aug. 15 to Nov. 15, and stop jacking. Give us the same time to bound deer as they have in other counties.

Orrin Harris, Pyramid Lake House, Essex County.—Deer are increasing. Guides and everyone else in this section would like to have the law changed so as not to permit the hunting of deer in any form until Sept. 15. They would also like the season extended to Nov. 15, and to have the time for still-hunting and hounding the same. I have hunted deer more or less for 45 years, and have studied the matter a great deal.

W. H. Roblee, North River, Warren County.—Deer in this locality are increasing. There should be no jacking or floating. We would like fifteen days more bounding and fifteen days in November for still-hunting. Guides Henry Maxham, Frank Maxham, Richard Burch, George Raymond, Henry Straight, Nathan Bennett, Henry Bennett, W. H. Bennett, Fayette Weller, Fred Barrs.

Thomas Salmon, Sacandaga Valley, Saratoga County.—Deer are increasing in this locality. The guides and hunters think the hunting season should open Sept. 15 and end Dec. 1. Venison can not be kept during warm weather. Eight out of ten deer spoil when the attempt is made to keep them early in the season. As parties are anxious to carry venison home it is the opinion of all who hunt deer that the season should be set a month later all around, and that there would then be fewer deer killed and more eaten.

Reports from various sources give the estimated number of deer killed last year in the localities mentioned as follows:

	Floating.	Hounding.	Still-hunting.	Total.
Honnadaga Lake.....	45	5	50	
North Lake.....	5	31	36	
Bisby Lakes.....	13	5	18	
Pulten Chain.....	65	45	110	
Stillwater Beaver River.....	10	10	20	
Number Four.....	25	250	325	
Harrisville.....	6	100	130	
Morehouse Vie.....	30	7	43	
Wilhurst.....	5	30	40	
Rudston.....	30	200	245	
Long Lake.....	25	40	90	
Raquette Lake.....	50	100	160	
Cranberry Lake.....	200	15	250	
North River.....	50	50	50	
Sacandaga Valley.....	..	50	50	
Pyramid Lake.....	..	6	7	
Total.....	471	995	208	1669

The figures given above show that 1,669 deer were killed last year in the localities specified, and as there are some points from which no reports have been received, there seems to be every reason to believe that the aggregate number of deer killed in the Adirondacks during 1893 was over 2,000.

DUCKING ON A CALIFORNIA RANCH.

LOS ANGELES, Jan. 4.—“Then you will come by for me in the morning, Bob?” “All right, Dave, 6 A. M. sharp; till then good-bye.”

According to promise, 6 A. M. next morning found me turning the corner at F. street, and, dark as it was, I could see Dave standing in the doorway, bundled up in a overcoat which looked as if it might have been left behind by a member of the Peary expedition. Dave jumped into the light buggy, along with a mixture of gum boots, hunting coats and canvas decoys, and we were off.

As our destination was only a little over six miles distant, we let the two dogs run, in order to keep them warm, for, although we were in semi-tropical southern California, the morning was fresh, to say the least. One of the dogs, a Gordon setter, Nellie, could trace her pedigree back to the time her ancestors had come over with Noah. The other was a common, everyday “yaller” dog, who gloried in the name of Shep. But what Shep lacked in pedigree he made up in usefulness and general good sense, and consequently we were not averse to his company.

After a drive of about forty-five minutes, we pulled up at the gate of the ranch whither we were bound. Signs were displayed in conspicuous places to the effect that any and all trespassers would be prosecuted to the full extent of the law, and warning would-be shooters to keep out. But these possessed no terrors for us, for nestled safely in the pocket of my coat was a permit for myself and friend. The lake is situated on the extensive ranch of Col. A., who very generously allows me the esteemed privilege of shooting on it. It is about a mile long and very narrow, in some places not more than 40yds. across, in others it reaches a width of about 200yds.

The greater part of the lake is full of a dense growth of tule, which affords an excellent hiding place for the myriads of web-footed wildfowl which frequent it; but there is a stretch of open water at each end where there is room to set decoys and enjoy blind shooting. Besides this open water, there are numerous openings in the tule where one may surprise an old mallard quietly feeding on the smartweed and wild celery. Very few people are allowed the privilege of shooting here, and this, combined with the fact that the birds are not shot at more than once a week, makes this place a very superior one for duck shooting.

After reaching the lake we walked on down to the boat house, putting up several flocks of widgeon and teal on the way down, but we refrained from shooting at them until we should have our decoys set and our boats hidden. It was agreed that Dave should take one boat and Nellie and pull for the lower end, while I should take Shep and the other boat and go to a certain opening in the tule, where I surmised I would get good shooting. Dave had the longest way to go, so he said that he would fire a shot to let me know when he was ready.

It did not take me long to row to the entrance of my chosen opening, but I did not row in, as I could hear the widgeon whistling and occasionally an old mallard croaking, and I wished to get a shot at them before I set my decoys. So after bidding Shep to charge in the stern I inflated the decoys and laid out some shells where I could get at them conveniently. Then, as I had nothing else to do, I sat down in the boat and waited for the signal to begin. Dave put up several large flocks of green-winged teal on his way down to the lower end; and as they wheeled by me with a graceful sweep, not more than 40yds. away, I was strongly tempted to let drive into them, but I recollected my promise to Dave and refrained from doing so.

Finally the welcome shot rang out, and with a quick shove of the oar (the water was not more than 5ft. deep), I sent the old boat gliding toward the opening, not more

than 40yds. away. Quietly guiding its course with the oar, until I had almost reached the opening, I laid the oar down and quickly caught up my gun. I took a firmer grip on the barrels, and as the boat shot from behind the last bunch of tule, the ducks left the water with a roar of wings. This was my opportunity, and a hasty double shot into the thickest of them brought down five, all widgeon, while two more glided off at an angle, plainly hard hit, and finally fell dead at the other end of the opening. I dropped the decoys overboard, one by one, and without stopping to retrieve the fallen birds, I pushed the boat between two clumps of tule, which effectually hid it from sight. I could hear Dave's gun booming away at the lower end, and I knew that he was having good sport. I did not have much time for reflection, however, as flock after flock wheeled over the tule, either to pitch headlong among the decoys or else to cautiously circle around to assure themselves that all was well, when with set wings they would glide down and drop their feet to alight. I levied a fair toll from most of the flocks, though sometimes missing what were apparently the easiest kind of shots.

For the first hour or so the shooting was fast and furious, and it was with difficulty that I restrained Shep from jumping out of the boat in his excitement. After that it settled down, and the birds came sometimes singly, sometimes in pairs, and at other times in small flocks. The way those teal decoyed was a caution! Dave's gun would ring out, and I would see a dark cloud rise out of the tule from the lower end and head in my direction. Then I would square myself in the bow, and here they would come, rushing through the air like bullets, so fast that it would make my head swim to watch them. Sometimes they would swerve off, and drop down in some other part of the lake, but oftener they would attempt to light among the decoys, for the opening which I had selected was a favorite resting place of theirs.

And so it went, the birds swooping down, giving me a splendid opportunity to cover myself with glory by making a handsome double or leaving me to bless the shells and the poor quality of powder with which they were loaded, as the case might be.

When the sun, from his high perch in the heavens, announced high noon, and the “inner man” strongly hinted at substantial refreshment, I pulled out from my hiding place, and put Shep to work retrieving the birds, at which job I helped him by means of the boat.

When finally the last duck was placed in the bottom of the boat, there was a goodly heap of them, and I was not ashamed of my morning's work. After pulling leisurely along in the genial rays of the sun, occasionally waking up a long-legged blue crane from his midday siesta, I arrived at the boat house. Dave soon came up, and I knew from his contented look that he, too, had been successful, and indeed he had been, as the pile of ducks in the bow of his boat proved.

After lunch we counted and strung the birds, and found that we had bagged just 81 ducks to the two guns. There were nine varieties represented—canvasback (in the minority), mallard, sprigtail, widgeon, spoonbill, bluebill, greenwing teal, cinnamon teal and ruddy duck. The majority of the birds were teal and widgeon, with a fair number of sprig and mallard. It was no small job packing the heavy birds to the corral, so we concluded we would drive down after them in the buggy. We piled everything into the buggy, and although this necessitated putting our feet in our pockets, we reached town safely, and delighted with our morning's sport. CULPEPPER.

THE LAST WILD TURKEY OF NIAGARA.

LOCKPORT, New York.—Mr. D. G. Elliott's interesting article on the wild turkey of North America brings to mind “fond recollections” of an incident of nearly thirty years ago. I am not an old turkey hunter, for I never hunted wild turkeys more than half an hour in my life; but within that short time I claim to have killed the last wild turkey in Niagara county, New York. It happened in this way:

A Mr. Townsend, who lived just beyond the present city limits of Lockport, and adjoining the home of the late ex-Governor Washington Hunt, had procured some wild turkey eggs, which were put under a domestic hen turkey, and she succeeded in raising a brood of sixteen, which as far as circumstances would permit, were practically wild turkeys. They kept to the woods of Wyndham Lawn, some twenty or more acres, and adjoining fields, and it was almost impossible to get within shot of them, except a rifle.

A few days before Thanksgiving Mr. Townsend invited Mr. Charles Craig, an expert with the rifle, to come down and shoot his wild turkeys. That afternoon I was out after quail. At that time Bob White was plenty within two miles of the city, and the first I ever saw sold was when a gentleman from Boston bought from a shooter on the street a dozen for one dollar; while now you could not contract for a dozen of Niagara county quail for \$100.

On my way home I passed through the woods of Wyndham Lawn, and when about in the center was startled by a large bird flying out of a tree overhead. As it sailed through the woods I saw that it was a turkey, and wondered why it should have been so high up in the trees; it was at least forty to fifty feet from the ground. A few minutes later I met Messrs. Townsend and Craig, and the former asked me if I had seen anything of turkey. I told him that I had just frightened one—or one had frightened me by flying out of a tree over my head. He asked me why I had not shot it. I told him that I had not lost any turkey, and did not know that it was ruable to shoot other people's turkeys when they were in the woods. He said that this was the last one of sixteen that they had been hunting during the day, and had looked for this one for an hour; and that if I saw it again I was “to shoot it on the spot.”

I carried a 16-gauge muzzleloader with No. 8 shot. This I withdrew and put in No. 6, and started in the direction the turkey had taken. Coming to a high stone wall at the edge of the woods and looking over, I saw the turkey skulking along another stone wall running at right angles with the one I was against. It was at least ten rods across to him, but I thought it was my only chance, and I took it, and so also did the turkey. I climbed over the wall and went for him. I found that one shot had gone through his head. Hearing the shot Townsend came in that direction. As I got back over the wall he came up, when I handed him his turkey, and walked up to his house where he showed me the other fifteen, which Craig had shot with the rifle, most of them through the head,

To make this story complete I suppose I should have said that they were all shot through the head—as that was Mr. Craig's intention—but some of them were shot through the neck.

I also presume that I should say that Mr. Townsend gave me one for Thanksgiving; but he must have forgotten to do so, and it never occurred to me to propose such a thing. But I have the satisfaction of thinking that I shot the last wild turkey of Niagara county and possibly the last of New York State. J. L. DAVISON.

LOCKPORT, Jan. 20.

CHAT OF GAME AND GUNS.

PROVIDENCE, R. I., Jan. 22.—The State Game Protective Association have acted on a good idea. They have had printed a large number of cardboard signs stating the fact that the law is now on for all game in the State, and threatening punishment for any offense. These are being posted in conspicuous places throughout Rhode Island, and may let the out of season shooter know that he has something to respect.

The liberated quail seem to be doing well, but we have reports that the lawless are killing a few. We have in mind a private reserve not far from the city, where a genial sportsman goes with a few select friends now and then. He purchased a supply of quail and liberated them on his farm, but we hear that more or less of them are being shot by surrounding farmers. We understand that our friend don't care to make a complaint for fear of getting the ill will of the farm folk. Of course this is his own lookout, but it hardly seems right for one man to supply birds for others to kill, and out of season at that.

A little different case was that at our “farm.” The club has a shooting privilege of nearly a thousand acres, and on this tract are a good many promising rabbit spots. A certain person owning a small tract near by rather defied the right of our club to stop him from using ferrets, but when he found that we meant business and that one or two of the members were authorized constables, and were prowling around with blank warrants in their pockets, hunting for rabbits, and “keeping their eyes peeled” to catch him in the act—well, we believe he has quit. If we can't win such men over with good argument, treat them as sportsmen and show them that we are only doing what is right (and the average farmer will come around if you use him right), then with the mulish species we must try the other measure. The way of the transgressor is hard, but the Protective Association's is harder.

People wonder how gunning accidents occur. Here is a possibility, and it shows the ignorance of some thick-headed handlers of a gun. Some few days ago we boarded a car bound for the outskirts, to experiment with a rifle. Out in the mill district two specimens swung aboard with shotguns. One was a rusty single-barrel. On the nipple, for it was a muzzle-loader, was a bright new cap, and the hammer was set firmly down upon the cap. And still we wonder at accidents. We kept pretty close to the butt of that gun every time the car rounded a curve, for the individual holding it was not over-particular how he allowed the hammer to swing around.

Probably if an accident had occurred on the car sportsmen would be debarred from carrying guns thereafter. TODE.

IMPORTING BIRDS FOR VERMONT.

To Members of the Vermont Fish and Game League, and to all others interested in the introduction and propagation of new varieties of game:

At the third annual meeting of the League, held in Burlington, Nov. 17, a committee was appointed for the purpose of introducing new game into our State.

It is proposed by the committee to begin their work at first with a few hardy varieties of feathered game, such as are adapted to our climate and State.

Through the kindness of the president of the Maine Game Protective Association we can import with them black game and capercaillie from Norway and Sweden, and sharp-tailed grouse from the Northwest. We also expect to be able to secure a quantity of quail from Tennessee.

The black game, which are the largest of the grouse family, thrive in countries where the flora is similar to ours and the winter climate much more severe than in any portion of our State.

The sharp-tailed grouse are very hardy game birds, as they are found in large numbers north of the Saskatchewan River, where the winters are extremely severe. They are bud-eaters and would do as well as our native ruffed grouse in any part of our State.

It is believed that the common Virginia quail can, with a very slight expense, be helped through our winters, and is a very desirable game bird for our lake and valley towns.

The time has arrived when energetic and vigorous measures should be taken to protect our fast disappearing native game, and to introduce and propagate new varieties. To do this latter work requires funds, which we propose to raise by subscription, and we now appeal to you and to your sportsman friends to assist in making Vermont the banner game State of New England.

The first cost of black game is \$4.50 a pair, with quite as much more for transportation charges, and the cost of sharp-tailed grouse will be about the same. We expect to be able to land quail here at 50 cents a pair. Arrangements will be made so as to secure desirable localities to be used as game preserves, where these birds can be bred and then be distributed to other parts of the State.

To perform this work successfully the committee should have at least \$500 to \$800, and the orders for black game and grouse should be given at once. This we shall do as soon as a sufficient sum is subscribed to guarantee payment on first lot of birds. Please send in your subscriptions promptly to A. W. Ferrin, Treas., Montpelier, Vt.

National Association.

In our report of the National Association resolutions, the resolve as printed to “pledge each and every game and fish warden to the moral and financial support of the National Association, should have read, “pledge to each and every,” etc.

## GUN TAX AND GAME MARKET.

*Editor Forest and Stream:*

As to the idea of taxing firearms for the purpose of lessening the destruction of game in this country, will you permit a reader of your valuable paper to express the view that such a plan would utterly fail to accomplish the desired end. The rapid destruction of game is due more to the profit which "market gunners" find in pursuing their vocations than to shooting for sport; and the man who finds a living in such work will be far more likely to pay even a heavy tax upon his implements of trade than he who goes into the field purely for amusement and recreation. The result would be, therefore, that many who now shoot occasionally would give up the practice as being too costly, while those who kill probably nine-tenths of the game would have the field practically to themselves and, the interest of the true sportsman having flagged, "pot-hunting" and trapping would flourish as never before.

Prohibition of sales seems to the writer the only possible remedy for the difficulty, and with proper laws there should be no great obstacle to practical accomplishment of this. It may be urged that prohibition does not prevent the sale of liquor, but the fact is that the cases are not similar. The passion for stimulants and the desire to eat game dinners are scarcely comparable, besides which fact is a still stronger one, that the men engaged in the liquor business, or rather, who would engage in it contrary to law, are a very different class from those who deal in provisions. Entire prohibition would perhaps not be accomplished, but with the appointment of inspectors in the large cities the sale of game would be immensely decreased, and the incentive to market shooting correspondingly lessened. Game cannot be watered or adulterated like liquor, and the price would rise to cover the risk, so that the demand would fall off, and dealers find the profits too small in proportion to the risk. SALENO.

## NOTES FROM MOOSEHEAD LAKE.

*Treed by a Moose.*

ON the first day of January, '94, William Hamilton, a law-abiding guide and woodsman of Greenville, went into the woods to "explore" for spruce. It being the first day of close time, he left his rifle at home, feeling that it would be better not to fall into temptation than to be delivered from evil.

While picking his way through some old "works" and thick black growth, Hamilton stumbled upon a big bull moose. The moose seemed offended at having his privacy thus intruded upon, and after spending a few seconds in tossing around a pile of old spruce tops, he started for Hamilton. In the meantime the man had climbed a little spruce, and from the top of this managed to get into a big birch, where he spent six long and weary hours waiting for his majesty to withdraw.

## The Results of Protection.

Speaking of moose, there seems to be no doubt that the moose are steadily becoming more abundant, in spite of the hide hunters and summer "sports." Along the Canadian boundary the hide hunters are most abundant. They come over the line, kill everything they can that has a hide or pelt, and then return to the place whence they came, leaving no trace of their work except the rotting carcasses of their victims. The summer sport may be a dry-goods clerk, or he may be a Brooklyn millionaire, but whether rich or poor he is the same selfish, jealous, cowardly, mean-spirited vagabond. To "get his share," he kills wantonly, if he can, for the love of slaughter, or for the joy of boasting of it afterward, everything that runs, swims, or flies. And with shame it must be confessed that many of those who should be most interested in protection, the hotel keepers and guides, close their eyes to these crimes, for the sake of a few ill-gotten dollars.

Caribou are probably holding their own in the more inaccessible regions north of Katahdin and on the Alleghush, but near the southern boundaries of the great forest they are becoming scarce.

Deer are wonderfully abundant. Twenty-five years ago, as the writer well remembers, deer were no more common than moose are now. But under the protection of the much-abused game laws, the deer have steadily multiplied, until they are now almost a nuisance to the farmers whose grain fields are on the borders of the hunting grounds. Still they are the same shy animals, and patience and skill, and oftentimes good luck to boot, are needed before the hunter can fill his lawful quota.

The Maine game laws may have worked injustice in isolated cases—dogs may have been killed which ought to have lived, wardens may have taken bribes from the rich and punished the poor, the backwoodsman may have been cut off from his natural supply of meat—but still the final result is that large game is becoming more plenty, and that is what the law was made for. Therefore it is good law—it is accomplishing its purpose.

## Open Season for Trout and Togue.

The open season for trout and togue (to residents of Maine) begins Feb. 1. There has been a difference of opinion as to whether this winter fishing should be permitted. The law was passed as a compromise, by which the anti-protection element secured to the native population a portion of their "rights" while giving up others, such as the right to snare and spear fish on spawning beds, etc. But after all, the winter catch in Moosehead Lake consists mainly of togue or lake trout, comparatively few brook trout being taken through the ice; and it is a matter of doubt whether the summer fishing is at all injured by the capture of these "lakers." The lake trout is hardly considered worth mentioning as a game fish where "square tails" abound, and furthermore, he is accused (though I think unjustly) of living largely on small brook trout; so, all things considered, it was perhaps wise to allow the farmer and his boys the doubtful pleasure of fishing through the ice with a limited number of lines.

F. S. BUNKER.

We take great satisfaction in the fact—for it is a fact—that fish and game protection in Maine is a wonderful success, especially in regard to the big game, some three or four deer having been killed in this little county during the late open season, a statement that could not have been made during any year of the last forty.

There is one matter of great importance that troubles

the philanthropist along our coast—is the encroachments made on the rights of our shore fishermen by the menhaden and mackerel seiners, who log-rolled through the Legislature last winter a repeal of a portion of the law forbidding the use of seines in our small bays, etc. We are in the hope that this thing will be straightened out next year, when we trust our law makers will get their eyes open to the true state of the question. N.

Bath, Me.

## A GUN TESTING INSTITUTION.

NEW YORK, Jan. 10.—*Editor Forest and Stream:* I send you the following prospectus of an American testing institution for sporting firearms, powders and ammunition:

## Principal Aims.

THE American testing institution is intended to perform in this country the work done in Europe by the so-called proof-houses and by the several private establishments devoted to the systematic testing of hand fire-arms, gunpowders and ammunition. The main object of this institution is to serve both the American shooting fraternity at large and the interests of our home industry in the several branches and lines related to this class of trade, by conducting ballistic trials and researches involving questions which, to be solved convincingly and conclusively, require continuous and systematic labor, and which very rarely can be brought to a satisfactory and beneficial issue through the individual gunner and in the absence of the necessary scientific instruments.

The work of the institution, although serving as a whole the same end, may still be divided into three distinct classes or departments.

## Department A.

This department is devoted and embraces the testing of hand fire-arms, gunpowders, ammunition and their parts, wadding material, shot, etc., as the same are now in the market and as they may be introduced, from time to time, hereafter.

The experiments of this class will, as a rule, bear a public character and their results will be made known either through the columns of the principal journals devoted to shooting, or by means of printed proceedings distributed among the members of the institution.

These experiments will chiefly consist in determining as often as circumstances may require the ballistic values of the various articles referred to.

All such tests are carried out at the expense of the institution, and in view of the fact and considering that they involve considerable expense and continuous labor, all sportsmen in sympathy with the undertaking and favoring the good cause are requested to aid the institution by having their names enrolled upon the membership list.

The annual membership fee is \$2, payable at the time of the filing of the application, and for every subsequent year, as long as a member desires to retain his membership, twelve months from date of first and every further payment respectively.

A contribution of \$25 at one and the same time entitles to a life membership. The privileges of members are set forth in another chapter.

## Department B.

This department is devoted to tests of a private nature and all information furnished herein to the gunner will be strictly confidential.

In view of the well known and established fact that the shooting qualities of a gun are governed by certain factors, and greatly affected by the peculiar properties of a propelling agent, by the size of the powder and again the size of the shot charges and pellets; by the proportions of the powder and shot charges; by the wadding material and the diameter of the wad; by the crimp of the shell, etc., the gunner, not meeting and knowing how to meet these conditions, frequently, although using the best ammunition money can procure, and which may render very satisfactory average service, finds himself unknowingly handicapped merely for the reason that the cartridges and loads he employs are not the best suited for his particular gun. With the gun barrel material, the machinery and tools at present at the command of the gun manufacturer, the latter scarcely, if ever, succeeds in producing two guns with shooting qualities precisely alike, and for reasons of a similar nature the same loads will behave differently in one gun than in another. One gun will give the best mean pattern and penetration with a heavier powder and lighter shot charge, one again with the proportion of these charges reversed to a certain extent. One gun will do the best service with a coarser shot; one gun requires a larger size wad, and one gun will shoot a certain powder better than others, etc.

The individual gunner is seldom in a position to determine this quite important question. This problem can be solved more systematically, readily and satisfactorily by the testing institution, where for this purpose all the different kinds of powder, shells, wads and shot are constantly kept in store, and where these tests are carried out with the aid of the requisite suitable instruments, and other means not at the command of the great mass of gunners.

The institution will take pains to establish for every gun, new or old, the most advantageous and best adapted load.

The charges for such work on a double-barreled shotgun of any gauge will be, exclusive of ammunition, \$5; for *bona fide* subscribers of FOREST AND STREAM, \$4; for members, \$2.50.

Unless instructed otherwise every gun and barrel will be tested with black and four different nitro powders, which the holder of the gun may designate.

A copy of the records of such a test is furnished to the owner of the gun, thus enabling him to judge for himself whether the conclusions arrived at by the institution and the counsel given him by it are justified by the results obtained.

## Testing New Guns for Pattern and Penetration.

A gunner contemplating the purchase of a new gun should first of all duly consider what kind of shooting he intends to do and probably will do principally with the gun, and whether he is a poor, fair, or first-class shot. Generally the gun manufacturer or dealer is asked to furnish a very close shooting gun, one which he will guarantee to

give a pattern all the way up to 80 to 85%, although a gun of this description is rarely found among twenty thousand, provided the standard load of No. 7 shot is used and the target is placed 40 yds. distant from the muzzle. In most cases a gun of this kind would prove comparatively worthless in the hands of the shooter, and even a gun averaging a pattern of 65% means often a very severe task upon the shooting talent of the purchaser, and will not do nearly so well in the field and close range shooting as one producing a mean pattern of only 50 to 55%. All tests for pattern are comparatively useless unless the corresponding velocity or penetration is established simultaneously and found to reach the standard figures. But if the demands of the gunner are within reason he has a right and ought to know what his gun in point of pattern will and can be made to do, and no manufacturer or dealer in guns should hesitate to guarantee the shooting qualities of a gun.

There are several tricks known and sometimes practiced by unscrupulous dealers to make a gun give the very best pattern. The gunner reads the figures obtained or even counts the pellets in the 30 in. circle and is happy. He does not comprehend that this beautiful showing means nothing in the absence of the corresponding velocity.

In testing a gun for pattern the velocities developed by the loads employed must first be established and if necessary raised to the standard limit. This done the standard of merits as laid down in the accompanying table should form the basis for determining the shooting qualities of a gun.

These figures are based on exhaustive pattern tests, in which thousands of guns of different gauges, grades and makes were used. A manufacturer or dealer declining to have a gun subjected to a test on this basis is hardly deserving the confidence and patronage of the shooting fraternity.

## Points of Merits Governing the Shooting Qualities of Better Class Guns.

IN 30 IN. CIRCLE AT 40 YDS. FROM MUZZLE.

	10-gauge.		12-gauge.		16-gauge.	
	Pellets.	Per c't.	Pellets.	Per c't.	Pellets.	Per c't.
Common cyl. barrel,	160-180	35-40	135-150	36-41	112-124	35-40
Improved cyl. barrel,	170-193	39-44	145-162	38-44	118-134	39-44
Light chokebore bar.	185-225	40-52	155-195	42-52	128-158	40-52
Medium chokebore b.	218-260	48-60	185-225	50-60	152-186	48-60
Full chokebore barrel	240-280	58-65	215-240	58-65	178-200	58-65
Extra full choke bar.,	260-295	60-66	230-250	60-67	190-205	60-66

A certificate stating the shooting qualities of the gun and the loads employed, and giving the number of gun, length and weight of barrels, names of maker and owner, etc., is furnished to the gunner. Every gun so tested will have the testing mark of the institution impressed upon the round of the barrel near the breech:

F. (G) (H) E. C. 44.

The mean patterns obtained with a gun will be divided into three classes: F. will stand for fair, G. for good and H. for high. An average pattern of from 40 to 45% will be considered as a fair pattern, one of 45 to 55% a good pattern, and one of 55 to 65% a high pattern.

The marks impressed on a gun barrel as above would mean that the gun gives a fair, good or high pattern, whatever letter may be employed, and that it produces the best mean pattern with 44 grains of E. C. powder.

The names of the several powders will be abbreviated as follows: Sch. for Schultze, E. C. for American E. C., A. W. for American wood, S. S. for S. S., W. for Walsrode, D. P. for DuPont's smokeless, L. d. for Leonard, and B. P. for black powder.

## Charges of Testing a Double-Barrel Shotgun for Pattern.

Any gauge \$5, for *bona fide* subscribers of FOREST AND STREAM \$4, for members \$2.50, exclusive of ammunition.

## Sporting Rifle Tests.

Finished sporting rifles will be tested for strength—final proof—with a black powder charge double by weight or measure of the regular service charge, or, at the holders' option, with an equivalent load of nitro powder.

Charges for testing a sporting rifle for strength, \$3; for *bona fide* subscribers of the FOREST AND STREAM, \$2.25; for members, \$1.50, exclusive of ammunition.

## Establishing for Sporting Rifles the Proper Charge of Nitro Powder.

The same reasons which prompt the sportsman to substitute a smokeless powder in the shotgun, let it appear desirable for the hunter to use, if possible, the modern propelling agent instead of black powder in the sporting rifle. The superiority of the nitro powder over the black is even more marked in connection with the rifle than with shotgun ammunition.

As a rule, the smokeless powder will give a more even and flatter trajectory than the black powder, and the recoil of the former is decidedly lighter; two factors of importance in point of accurate shooting. Smokeless rifle powders are fast taking the place of black powder for hunting large game, in several European countries, and a huntsman who has employed a smokeless powder for his rifle once, very rarely nourishes the desire to fall back upon the old propelling agent.

The nitro powder is much less noisy than black, and the report of a rifle shot frequently resembles that produced by a strong cap. Provided the wind is favorable, the huntsman often finds time for a second and third shot at game standing some distance from him, if he happens to miss his mark with the first or second shot. This is rarely the case when the noisy black powder is employed. At short range the huntsman can easily de-

termine not only whether his shot has taken effect, but also *where* the bullet has hit.

It is hardly necessary to point out here the causes why the different powders intended for shotgun ammunition are not adapted for the rifle. It is worse than folly to attempt to load rifle ammunition with smokeless gun powders. A rifle powder must burn slower and develop the gases less suddenly than a gun powder, and even when a powder meets these requirements the layman is not in position to establish the suitable charge for his rifle. There are many points to be taken into consideration, and in attempting to accomplish the object in question the hunter will find himself confronted by various problems which can be solved only with the aid of instruments.

The twist of the barrel, the size, shape and weight of the bullet, size and shape of the shell, and the primer, each and all must be considered separately and combined.

The first step for finding the proper charge is, of course, to determine the velocity and bursting strain as produced by the service charge of black powder, and then to make the nitro charge conform to these values. Even when and after this is accomplished it is often found that the bullet will strike regularly a point from 1 to 3 in. above the mark. This result is frequently blamed to the powder, whereas it is simply due to the lesser recoil, and can readily be remedied by a slight change of the sight.

As a rule, the shooting is more accurate, the deviations are smaller with the nitro powders than with the black, the penetration showing about the same values in both cases. The majority of smokeless rifle powders require a special primer, black powder priming will only answer in rare instances, and special primers are always preferable. The No. 3 primer, as employed for smokeless shotgun shells, is not adapted for rifle ammunition, but suitable special primers for all kinds of metallic ammunition are now being made by the U. M. C. Co., and shells provided with these primers will soon be available to the sportsmen. Such special primers will be used for making the experiments herein referred to. The Institution is prepared to establish for every make of sporting rifles and all kinds of rifle ammunition the proper corresponding charge of nitro powder. It is preferable if the rifle is sent to the Institution, together with a number of loaded shells as heretofore used. For the regular standard rifles and metallic ammunition the corresponding nitro powder charges can be established in the absence of the particular rifle or cartridges. Rifles sent to the Institution for this purpose will be stamped similarly to the barrels of shotguns.

Charges for establishing the proper nitro powder charge for a rifle, irrespective of caliber, \$5; for *bona fide* subscribers of the FOREST AND STREAM, \$4; for members, \$2.50, exclusive of ammunition.

#### Department C.

This department is devoted to proving raw gun barrels or finished guns for strength with the proof-house charges of black powder and shot, or any nitro powder the shooter may designate.

The proof-house charges for a finished gun are 6½ drs. DuPont's FFF black powder and 1½ oz. of shot No. 7 for 12-bore. Any substantially built gun ought to resist and withstand the strain developed by such a load, and no manufacturer or dealer should hesitate to see a gun subjected to such a test.

But the case is different whenever nitro powders are to be substituted for the black powder. Many of these change their properties through the influence of climate or age. They are all, loaded bulk for bulk, more violent than black powder, at least whenever the charges are increased beyond the standard loads. For this reason it cannot be expected that a gun manufacturer will guarantee a gun against the action of highly increased nitro powder charges. It can fairly be presumed, however, that a gun having been subjected to the black powder proof-house test will withstand any gas pressure developed by a slightly increased charge of nitro powder, and if such a gun is bulged or burst by such a load afterward, this is either due to the nature of the powder or to some extraordinary cause.

Even the cheapest kinds of guns are subjected to the proof-house test in Europe before they are salable; and since American guns, as a rule, are built stronger than the cheap grades of European guns, no well-founded reason can be presented why American guns should not be subjected to such a test. This, however, is a matter to be settled between the gunner and manufacturer, and the institution does not recommend that such a test should be made compulsory just at present, at least not as far as the raw barrels are concerned. The buyer of a gun, or rifle, however, has a just right to condition the purchase upon the test for finished guns and rifles with the same propriety as a man will condition the purchase of a horse upon the examination by a veterinary surgeon. All guns and rifles tested for strength will have the institution's marks impressed upon the barrel.

12 CH. 3. SCH. 52.

The marks impressed upon a gun as above would indicate that its caliber is 12, that it is chambered for a 3 in. shell, that in addition to the black powder proof charge it has been tested with 52 grs. of Schultze powder, and that the barrel is chokebore.

The charges of powder and shot for testing finished shotguns are as follows:

#### 10-GAUGE.

8 drs. or 219 grs. DuPont's FFF black powder, or 5 drs. of E. C., American wood or Schultze, 4½ drs. S. S., 4½ drs. DuPont's smokeless or 50 grs. Walsrode powder, and in each case 2 oz. or 87½ grs. shot No. 7.

The respective service charges being: 4 drs. black, E. C., Schultze, S. S. and American wood, and 3½ drs. DuPont's smokeless, and 38 grs. Walsrode powder and 1½ oz. of shot.

#### 12-GAUGE.

6½ drs. or 178 grs. black powder or 4 drs. of E. C., Schultze, S. S., American wood, 3½ drs. DuPont's smokeless, or 40 grs. Walsrode powder and 1½ oz. of shot No. 7. The respective service charges being: Black, E. C., Schultze, American

wood and S. S. powders 3 drs., DuPont's smokeless 2½ drs., Walsrode powder 29 grs., and 1½ to 1½ oz. of shot.

#### 16-GAUGE.

5½ drs. black powder or the equivalent in any of the nitro powders and 1½ oz. of shot No. 7.

Service charges: 2½ drs. or 75 grs. black and 1 oz. of shot. In order to save to gun manufacturers unnecessary expense and inconvenience in transporting guns to and from the institution the latter will make arrangements to have guns tested for either strength or shooting qualities or both by their officers at the works and on special terms.

#### Privileges of Members.

From the charges quoted heretofore it will be seen that the members of the institution pay only one-half of the regular prices.

In addition to this concession the institution will answer all questions submitted by a member and pertaining to shooting, free of charge. The members will also receive all printed proceedings gratuitously. Furthermore, the institution will assist its members in ascertaining the true causes for damaged guns, with a view of substantiating a claim for indemnity. All damaged guns, especially when the barrels are bulged or burst, should be sent to the institution with as little delay as possible after the occurrence, and before the traces of the damage have been clouded, accidentally or intentionally.

The gun should be accompanied with a statement describing the circumstances in connection with the accident, and in which the following questions ought to be answered:

1. Did the accident occur in the field or at the trap, and if in the field did you climb any fences prior to firing the shot causing the damage, or pick up a dead bird from soft or marshy ground?
2. Are you sure that the barrel, when the shot was fired, was free from artificial obstructions, such as dirt, snow, wads, or parts of the shell?
3. Did you fire a number of shots from the other barrel previously, and may it not be possible that the crimp of the shell had given away and the top wad, with the shot charge, moved from the shell and up in the barrel?
4. What size shell, what kind of powder and how much, what size shot and what charge, what kind of wadding material did you use?
5. Have you fired the same ammunition from the gun previously, and to what extent?
6. Did you load the shells yourself, or did you buy them, and of whom?
7. How long have you used the gun, and from whom did you procure it?
8. Has it ever, to your knowledge, been rechambered or previously bulged?
9. Do you intend to be indemnified, by whom and on what ground?

A number of the same lot of shells used at the time should be furnished with the gun. If the institution finds that the cause for the damage is unmistakably due to some of the agents beyond the control of the gunner, and that either the material of or the workmanship on the guns are poor, or the powder employed shows a marked degree of violence, the institution will assist the owner in placing the fault where it belongs and in being indemnified to the extent of his loss.

In order to facilitate our researches for the cause of the bulging or bursting of gun barrels, and in regard to the behavior of the different powders, all damages to guns coming under the direct notice of sportsmen should be reported to the institution.

It is the intention of the institution to establish, as soon as circumstances make it expedient and permissible, branches in different parts of the country, and one at Chicago, Ill., in the near future.

Whenever a large number of members or gunners desire to have experiments carried out in closer proximity to their homes than New York or Chicago, they may correspond with the management of the institution with a view to have such tests conducted in other localities, and if considered expedient by the latter, such a request will be complied with on terms to be agreed upon.

#### Working Programme.

Experiments as contemplated being carried out in the near future, and questions to be solved in Department A:

1. To what extent are the several propelling agents for shotguns known and employed in this country affected by cold, and how can this influence be prevented or neutralized?
2. What constitutes the maximum range for 8, 10, 12 and 16-bore shotguns, respectively (a), for still producing a pattern securing a fair chance for hitting a duck or similar size game, and (b) at what distance do they cease respectively to produce a killing effect with the different powders and sizes of shot?
3. What constitutes the best wadding material for shotguns? Is the lubricated felt wad preferable to the dry felt and why? What should be the diameter of the wad for the various bores to insure the best pattern and penetration? How far does the consistency of the felt influence the shooting effect?
4. How do the different materials of the shotgun barrels compare in point of strength or power of resistance?
5. How should the various nitro powders be loaded and used?
6. What are their chemical compositions and how do they compare in point of stability with black powder?
7. Which is the best shot in the American market?
8. What shells and primers are best adapted for the several nitro powders?
9. Will common shells if primed with black powder give as good a result as the No. 3 primer?
10. What caliber of rifle should the gunner employ for large game shooting, and what are the relations of the different bores, size, nature and weights of bullets in point of producing a certain and sudden killing effect?

It is hardly necessary to say that the last-named problem can only be solved satisfactorily and conclusively on practical grounds. To determine this important question in a convincing manner, suitable live animals will be employed as experimental objects.

As previously remarked, all tests carried out in this department are intended to serve and benefit the shooting fraternity at large. They involve considerable expense and require continuous and hard labor. It is therefore hardly necessary to say that every sportsman in sympathy with the objects herein set forth should contribute

his share toward defraying these expenses, and induce his friends and fellow sportsmen to follow his example.

The shooting sport is nowhere in the world followed by such a large number of men as in the United States, and if countries much smaller in size than America and with a less number of shooters can, as they do, maintain similar institutions, it would hardly speak well for the spirit of the American shooting fraternity, and our desire to be independent of Europe as regards a source of popular knowledge and education on the theory of shot shooting, if such an institution cannot be maintained here merely for want of appreciation and support at the hands of the American sportsmen.

The institution believes that its objects can only be reached if all intelligent gunners will aid its work by offering suggestions in what directions the tests should be made, and kindly submit to the institution such observations of value which they may have obtained in practice or by experiments. For this purpose an Advisory Board has been created, consisting of members capable and willing to assist the work of the institution by offering suggestions intended and suited to form a basis for further experiments. The members of this board are: Wm. Bruce Leflingwell, Chicago, Ill.; Wm. M. Thomas, ballistic expert, U. M. C. Co., Bridgeport, Conn.; Lieut. G. N. Whistler, ballistic engineer, New York; Justus Von Lengerke, New York; Paul North, Chamberlin Cartridge and Target Co., Cleveland, O.; D. Kirkwood, Boston, Mass.; R. J. Carroll, M.D., Sec'y Red Hook Gun Club, Red Hook, N. Y.; J. A. Krieger, M.D., St. Louis, Mo.; Will H. Cruttenden, Cazenovia, N. Y.; Chas. F. Tolman, Canton, N. Y.; James M. Colwell, Kitanning, Pa.; E. D. Fulford, electrician, Utica, N. Y.; M. F. Lindsley, American Wood Powder Co., West Hoboken, N. J.; W. K. Park, Wilkes-Barre Gun Co., Wilkes-Barre, Pa.; H. E. Winans, Newark, N. J.; W. R. Fall, Las Cruces, N. M.; R. L. Young, Las Cruces, N. M.; J. Palmer O'Neil, Pittsburgh, Pa.; Wm. Edward Carlin, New York; Chas. Macalister, Esq., South Seaville, N. J.

The institution will be established at Dexter Park (P. O. Station E), Brooklyn, N. Y. ARMIN TENNER, Sup't.

#### The Old Stamping Grounds.

WISCONSIN used to be my old stamping ground twenty-five years ago, when I beat with dog and gun over its brown stubbles and grassy coverts, for chicken and quail; tramped its sloughs and marshes for "Jack" of the sinuous flight; worked its rivers, lakes and bayous for teal, mallard and canvasback, with waders, canoe and punting boats, and the bass and pickerel with shimmering and twinkling spoon spinning with throbbing pulsations along upon their rippling surfaces, or with the mocking lure and the deadly spear through the hole in the ice, shaded by the windowless house over it, and the watery depths lighted up beneath by the reflected rays of light from without. When I camped with genial spirits in the early summertime upon the bold banks of old Koskonong with canoe, rowboat, sailboat and steamer, to pay our yearly devoirs to ye finny tribes; and as regularly camped in the Indian summer of the brown October, amid the scarlet and russet lined woods of the timbered lands bordering the streams, and upon our favorite island at the head of Koskonong Lake, surrounded by lake and bayou, by lagoons creeping through mazes of reeds and wild rice, teeming with ducks; there to steep ourselves for weeks, in the hazy golden glamour, and the sensuous delight imparted by the atmosphere of this intoxicating epoch in the life of the departing summer.

It is twenty odd years since I left these experiences behind. I have traveled far and wide in other lands, while most of the sporting friends of those days have dropped at intervals off the trail, and but few of us are left to recall them; but it is a pleasure nevertheless for the survivors to do so.

I formerly wrote for *Wilkes' Spirit* under the name of "Paulson," and but few of the writers upon it in those days are left. D. B. BREMER

#### More About that Deer Drive.

McKEE'S ROCKS, Pa.—*Editor Forest and Stream:* After reading "A Deer Hunt in New Jersey in 1893" I am indignant. Here is a well-told story of how a lot of men set a pack of dogs on a poor doe and chased it two whole days, and finally to death, bringing "the tired dogs to heel until they were rested," and then "put on the trail fresh, so that the deer was always pursued by fresh hounds, until 4 o'clock of the second afternoon, when the whole pack was let loose upon her." No shooting was allowed on the second day. It seems to me that it would have been more merciful to shoot the poor beast before it was so tired that it could not run any more, than to let the dogs run it down and kill it, as the story goes. If there is sport in this manner of worrying a poor beast to death, there must be sport in dog fighting. In the latter each contestant has an equal chance, while the poor doe had no chance at all with the fearful odds against it.

I cannot imagine anything more cruel than this chase seems to me. I was born in New Jersey and lived there until I was old enough to understand the stories of hunting told by grandfather and uncles. They did not chase deer to death in those days. J. H. B.

TORONTO, Jan. 20.—*Editor Forest and Stream:* I was very much pleased to read in the FOREST AND STREAM an article by Oscar Hesse, under the head of "Save the Deer." I also read the article to which it referred, and was disgusted at such unsportsmanlike hunting. In my opinion, the use of dogs should be stopped, and then there would be no such hunting as this. OLD WOODSMAN.

#### A Virginia Game Section.

SURRY, Va., Jan 23.—In this section deer are found in large numbers. I know of several parties who have killed some eight or ten this season. I have myself seen in the last few weeks as many as six in one drove, and it is a very common sight to see two or three at one time. Wild turkeys are found here in flocks of from five to twenty-five, and our local hunters kill quite a number of them. Squirrels abound in great numbers. I have killed as many as fifteen in one afternoon without a dog, and that in two hours. Wild ducks are found during the latter part of the season, but not in such large numbers. In the ponds and creeks are found chub but they are not as plentiful as they were a few years ago, owing to so many of them being speared during the spawning season. C.

### Small Game in Central New York.

ITHACA, N. Y., Jan. 19.—A great many ruffed grouse were left in the covers of Tompkins and adjoining counties at the conclusion of last season's shooting, and this supply, by reason of the unusually mild weather which has marked the winter thus far, has done splendidly. The past season was notable for the large number of grouse bagged in central New York counties. In Tompkins county a local law forbids the shooting of quail for five years. But unless restocking is resorted to, the expiration of the five-year limit will still find the quail supply too small to tempt one afield. No more vivid example of game extermination is afforded than that which marks the almost total blotting out within a comparatively few years of the seemingly almost countless number of quail. Only the wary grouse, aided by advantages which the less timid quail does not take kindly to, seems able to cope with the invading and ever-increasing army of gunners. It is this characteristic of the grouse which makes the sportsman hopeful that, with a proper enforcement of the law, good shooting may be vouchsafed to him for years to come.

A good many rabbits were killed during the past season, enough were left to insure good sport another fall. But the right to use ferrets should be stricken from the statute books.

M. C. H.

### A "Big Bear of Arkansas."

HOT SPRINGS, Ark.—Here is an account taken from recent issue of my paper, the *News*, of a bear hunt in the mountains adjacent to Hot Springs: "The largest black bear that has been seen in this part of Arkansas for several years was killed Dec. 6 by a party of hunters composed of Messrs. E. F. Bledsoe, M. L. Duncan and W. J. Bledsoe. They found the bear on a high peak of the Ozark Mountains, thirty miles north of Hot Springs, and trailed him for several miles over the mountains with a pack of bear dogs, and finally surrounded him on a high rocky peak, where he was held at bay by the dogs until the hunters arrived. After killing two dogs and wounding three others, he was finally brought to the ground by several well directed shots from Winchester. Mr. Duncan had a narrow escape. After the bear was badly wounded he made a savage rush at him, and not having time to get away, the bear struck at him with its ponderous paw, tearing his coat almost to ribbons. The bear measured 8½ ft. in length and was 13 in. across the head." Game shooting in this section is fairly good. Bear and deer shooting may be found in the mountains twenty or thirty miles distant from the city. FOREST AND STREAM is a welcome visitor to me.

J. L. WADLEY.

### Northwestern Iowa.

MATLOCK, Iowa.—The chicken season of 1893 was without doubt the most unsatisfactory of any in the history of the State. Birds seemed to be fairly plentiful during the summer, but after the season opened, they proved to be almost impossible to find and very wild. The last two weeks of the season were the best. I did not hear of a person getting over thirty during the entire season, and most of them scored only ten or a dozen.

The quail shooting was more satisfactory than the chicken, though not so good as the favorable conditions would seem to warrant. Reports from some parts of the State indicate that the rabbits are becoming so numerous as to be a nuisance.

P. C. B.

### The Winter and the Game in New Hampshire.

CHARLESTOWN, N. H., Jan. 23.—Our postmaster is a sportsman, and told me yesterday that he had been out in the woods and that they were full of gray squirrel tracks, showing that they were "wintering over" well. The bitter cold of early December, of which I wrote you (20° below zero), moderated about Christmas, and so far we have had a mild January, in great contrast with last year, but cold enough to make a good ice crop and snow enough to harvest it without interfering with the cutting; and the loads of logs are going by, as I write, to the mill.

SAM WEBBER.

### To Fight the Grouse Trappers.

MITCHELL, S. D., Jan. 18.—*Editor Forest and Stream:* The crusade against the pot-hunters in this part of the State, and particularly about Vermillion, for trapping quail and prairie chickens has begun in dead earnest. The gun club here is on the lookout, and will enforce the law in order to make the number of game hogs less. They deserve no sympathy and will in this way meet their proper classification. The sportsmen at Sioux City have contributed \$300 toward enforcing the law.

H. G. NICHOLS.

### Mass Meeting at Seneca Falls.

A MASS meeting in the interest of fish and game protection will be held at Seneca Falls next Monday, Feb. 5. President Bruce of the State Association, Mr. S. J. Trusden of Rochester, and others will be among the speakers. The meeting will be held under the direction of the Honest Fisherman's Association, a new body which is setting out with much enthusiasm and earnestness of purpose to restore to the public its heritage of fishing waters.

### Ohio Game Legislation.

CINCINNATI, O., Jan. 25.—The House of Representatives yesterday discussed whether or not quail should be protected. The discussion finally resolved into a bill which strictly forbids the sale of any quail, under any consideration. Another bill, closing the season for a year and for each alternate year thereafter, had just been defeated. It is made unlawful to sell or ship out of the State at any time of the year any of the birds mentioned.

WILLIE WICK.

About a year ago the Joseph Dixon Crucible Co. of Jersey City, issued a pamphlet on painting graphite. It embodied an elaborate scientific opinion by Prof. E. H. Thurston on the value of graphite as a lubricant, and much interesting information on the subject from practical men. The pamphlet has had a large circulation, and the company has been enabled to obtain from well known men a vast amount of additional knowledge on the uses of graphite. Another pamphlet, twice the size of the former, will be issued early in February, and a copy will be sent free of charge to all interested in the subject of friction and lubrication.—*Adv.*

MANY sportsmen and others are deterred from visiting the South in the winter months by the considerable expense of a railroad trip. They are thus deprived of a great deal of pleasure that they might otherwise obtain and of renewed health and strength to combat the ills of modern civilization. These individuals should turn their attention to our fine fleet of coastwise steamships that run regularly between Northern ports and the Southern seacoast towns. The expense of a trip on one of these vessels is small, and the ocean voyage delightful under favorable circumstances. The Mallory S. S. lines connect New York with Georgia, Florida and Texas.—*Adv.*

## Camp-Fire Flickerings.

"That reminds me."

In the fall of the year 1890 I spent a few days visiting friends in the village of Portage, Cambria county, Pa. While there I became acquainted with a family whom we will call Green. Mr. Green was a professional miner, but delighted in the sports of rod and gun. It was no unusual thing for him to spend a day or two in the mountains during the hunting season when work was slack, and seldom did he come home without a well-filled game pouch, which brought sunshine to other families than his own.

One day Mr. Green and a companion were out after squirrels. They traveled some distance before they reached their favorite hunting grounds. Game was not very plenty that day, and they feared they would have to return to their homes with but little to show for their day's sport. Finally they reached a rocky ledge, and there near the top of a good sized sugar tree they espied a fine gray squirrel. At the crack of the rifle the squirrel fell a few feet where it lodged in the forks of the tree. All their efforts to dislodge it proving unavailing, Mr. Green being an expert climber, resolved that he would not go home without the squirrel. A few feet from the large tree in which the squirrel was lodged, stood a small tree whose top reached to the lower branches of the larger one. To climb this was the work of a few moments only, and when among the branches of the tree that held the prize, he easily ascended to the forks where he secured his game. This was at an altitude of about 30 ft. from the ground. On his way up he saw the skin of a large blacksnake, but it gave him no uneasiness, as he had often seen such skins before. He was standing on a large bare limb, and just beneath him or rather in front of him, he saw to his horror the form of a large blacksnake issuing from the hollow of the tree, and making such demonstration as to convince the hunter that he intended to resent this unwelcome intrusion on his domain. It was impossible for Mr. Green to descend without sliding over the hollow from which the snake was advancing.

"Well, what did you do then?" I asked as he stopped to fill his pipe with his favorite brand of tobacco. After enjoying a few puffs and assuring himself that it was in good working condition, he answered:

"What did I do? Well, I did not know what to do. I first felt like jumping from the tree, but when I looked down 30 ft. at the rocks below, I concluded that if I must finish my hunting now, I would do it bravely like a man. I knew that if that snake got a few coils of his cold body around my neck, I must soon depart for the Indian's happy hunting ground. My companion could not render the least assistance, as he could not see the monster, and he could not shoot him without endangering my life. It took but a moment to take in the situation. I could not take hold of him with my hands, as with one I must hold on to the limb, and I doubt whether a giant grip with two hands could have held him. Neither could I use my feet against him, for his position was such that I could not reach him in that way. The only weapon I could lay my hands on was a little switch about ½ in. thick and 2 ft. long. With this I began to strike at the snake, but he managed to dodge it every time, and he seemed to me to be coming nearer and nearer every moment. I was about to give up in despair, when I succeeded in hitting him a sharp blow on the head. Immediately he drew back, and finally retreated into the hollow of the tree. I then feared to cross the hole, fearing he might return to the attack. I saw the hole was full of dry leaves, and quickly as possible I struck a match and applied it to the leaves. Almost instantly the whole inside of the tree was ablaze, and without waiting to learn what effect it would have on the snake, I slid over the burning hole and soon reached the ground in safety. I tell you, Mr. Brown, when I see a snake skin on a tree, nothing can tempt me to try my snake experience over again."

REV. G. W. BROWN.

## Sea and River Fishing.

### FISHING RIGHTS IN CONNECTICUT.

HARTFORD, Jan. 29.—*Editor Forest and Stream:* In your issue of Jan. 27 I find considerable comment upon the relation of tariff and internal revenue taxation on guns, to the preservation of game. I do not think I can improve on your able article in defense of the rights of all classes to enjoy the sport; but permit me to carry the argument further and apply it to such legislation as is within the power of States to apply.

If any sportsmen believe that the supply of fish and game can be maintained by narrowing the number of citizens who participate in it to a few wealthy ones who can afford to maintain what is called a preserve, and this to be stocked, as is often the case in Connecticut, at the expense of the public appropriation for fish (we having no Game Commission), such a theorist has my sympathy for his lack of judgment. If any one can point to a single object of importance that was sought and successfully brought about and maintained, that benefited a few at the expense of a large majority of the people, I should like to be informed of it and how it was done. If we are to maintain the supply of fish and game it must be done by annually propagating and stocking our forests and waters; at least, this applies to our own State of Connecticut, where there are no remote districts. Such work must be carried on by a proper commission at the public expense, therefore, how can such work go on if the public do not get the benefit of it? Our Fish Commission will have a good deal to answer for before the next Legislature unless a different policy is pursued from the past. All trout supplied by this State are given to any citizens who apply for them, and all restriction placed upon applicant is wholly confined to the blank form of application; 95 per cent. of these fry are placed in private waters. Further, our statutes provide that all waters stocked by the Fish Commissioners shall be public waters, thus plainly showing that the intention of the law is to have the Commission stock our State waters themselves.

And still another menace to the general public. Notwithstanding that we have a number of good public streams a trespass sign nailed to a tree along its bank pre-

vents the public from getting access to such waters. While no fair-minded person wishes to take the right of a farmer to protect his crops away, still, there is no reason why the public should be prevented from walking along the shore of any public water where the land is not cultivated. Before our different towns hold their elections for members to the next Legislature there should be a fair understanding from the nominees of both parties as to whether the people at home are to be heard or the lobby backed by money. If the latter, then the sooner the sportsmen of ordinary means accept the issue and prepare to fight it out to a finish, the sooner we can settle it. It is enough to remind the people from the small towns that their representation is much greater than in the large cities in proportion to the population, and only the greatest degree of fairness can command the support of any number of those now in sympathy with them.

Will the true sportsmen of Connecticut prepare for one big fight for their rights? C. W. HALL.

### ANGLING NOTES.

#### Birds and Fishes.

ONCE when I was fishing in Brant Lake in the border of the Adirondacks, my boat was anchored quite near to the shore, and on a tree overhanging the water was a kingfisher, or rather it took its position after the boat was anchored. After the kingfisher had taken a good look at me and the guide—sized us up as it were—it proceeded to do some fishing on its own account. I had a field glass in the boat, and through it I watched the bird, entirely neglecting my own fishing, for the bird was having better luck than I dared hope for.

Over and over it dived from the limb of the tree into the water and nearly every time it brought out a small fish, but occasionally it missed. Somewhere I have a memorandum of the kingfisher's catch, but I shall not look for it as I have a score to quote which will give mine cards and spades and a beating. Then I was more impressed with the fact that such fishing as I saw done by the kingfisher was as destructive of young fish as the work of the human poacher is destructive of adult fish than I was with the number of fish caught in a given time. Now, from later advices I am inclined to think that there are feathered poachers who can discount human poachers when poaching against the watch.

Mr. J. J. Armistead, proprietor of the Solway Fishery in Scotland, says: "A heron shot at the Solway Fishery on Dec. 13 was found to contain twenty-four American trout (*Salvelinus fontinalis*), some of them over 6 in. long. The bird had not been at the pond seven minutes, as he was seen to arrive and was immediately stalked and shot by one of the men."

Twenty-four trout, some of them over the legal length provided by the New York game laws, caught in seven minutes by the watch would seem to be one of those transactions which is called "crowding the mourners." I doubt if anglers, as a rule, object to fishing birds getting their share of fish, for "tis their nature to" as much as for "bears and lions to growl and fight," and they cannot really be blamed for it, for Watts says, "God hath made them so." But when it comes to the point of a fishing bird making a "fish hog" of itself, that is another matter, and a pocket rifle (not one of those rear-pocket affairs with a cork in the muzzle), carried by an angler along a trout stream and used as opportunity offers, might arrest some of the fishing birds that are caught in the act of overdoing the business. Fishing birds will not be convinced that a trout diet is too rich for their blood, and for this reason a friend of mine takes a rifle to kill the halcyon as certainly as he takes a rod to kill trout. Personally I do not object to the kingfisher, and prefer to regard him as a guide, as John Burroughs says he is, instead of a fish poacher to be killed on sight. Burroughs says: "He will not insure smooth water or fair weather, but he knows every stream and lake like a book, and will take you to the wildest and most unfrequented places. Follow his rattle, and you shall see the source of every trout and salmon stream on the continent." I cannot, however, plead for herons that kill twenty-four trout in seven minutes.

#### Exit the Sea Serpent.

We have been told that George Washington's hatchet is a myth; that William Tell did not shoot an apple from the head of his son; that Robin Hood, Friar Tuck and Little John did not exist in the time of Richard I., or any other time; that Columbus did not discover America, and have been told various other things that have shaken and shattered certain beliefs of our youth; but all through this period of disillusion in later years we have clung, feebly to be sure, to a belief in the sea serpent. Now the sea serpent must go, has gone in fact, and we begin to doubt if anybody really ever struck Billy Patterson.

Dr. Jordan is who disposes of the sea serpent in a California newspaper as follows: "Although there have been many reports of the 'sea serpent,' there is not at present the slightest positive evidence to prove that such a creature now inhabits the sea. It is not within the realm of probability that any marine reptile of large size other than sea turtles now exist."

"The sea has been as fully explored as the land. The fishes of the sea, from the surface to the depth of five miles, are as well known as the animals of similar size on any of the continents except Europe. The larger animals which swim near the surface in the open ocean are for the most part well known and have been known ever since oceanic navigation began. Probably not half a dozen specimens of marine animals reaching a length of 15 ft. have been discovered in our century. Most of those now known were known to the ancients."

Jordan classifies the sea serpent story under seven heads, but as there is no sea serpent it is not necessary to give here the list of things that have been taken for it. I am satisfied to say *vale* the sea serpent, but I expect it will pop up again next summer, in the newspapers.

#### Fresh Fish for Lunch.

Mr. A. H. Savage Landor has written a book of travel with the title, "Alone with the Hairy Ainu," describing a visit to the island of Yezo or Yesso, a convict settlement of Japan. As he traveled north on the island to find the hairy people he halted at a wayside tea house for refreshment. Every one knows that fresh fish are better for the table than fish that are not fresh, but hereafter I shall question the oft repeated question that "fish cannot be too fresh," for Mr. Landor proves that there are times and

places when fish may be too fresh, not in a slangy sense, but literally. He thus describes the serving of his lunch: "I sat down in the tea house on the soft mats, and my *benito*, Japanese lunch, was served to me on a tiny table. There was water-soup; there was seaweed; there was a bowl of rice, and raw fish. The fish, a small *funa*, was in a diminutive dish, and its back was covered by a leaf; the head projected over the side of the plate. On the leaf were placed several neatly-cut pieces which had apparently been removed from the back of the underlying animal. As I had long been accustomed to Japanese food of this kind I ate to my heart's content, when to my great horror, the *funa*, which had been staring at me with its round eyes, relieved of the weight which had passed from its back into my digestive organs, leaped up, leaf and all, from the dish and fell on the mat. All the vital parts had carefully been left in the fish, and the wretched creature was still alive.

"For days and days after I could see in my mind the staring eyes of the *funa*, watching each movement of my chopsticks, and its own back being eaten piecemeal! I had often eaten raw fish before, but never had I eaten live fish!"

Mr. Landor had an experience of a highly exciting nature when he attempted to make a sketch of a group of the Ainu engaged in cutting up a fish. The hairy men, when they discovered what he was doing rushed upon him, destroyed his picture, palette, brushes and paint box, and threw him upon the sand and waved a big knife over his head. He took them to a Japanese police station, where an apology was made to him and the explanation offered that the strange people believed that to paint the picture of a fish caused all the fish to disappear from the water. What a pity that among more enlightened people there is not a superstition of this sort that will cause them to rush upon some of the artists who paint pictures of fishes and destroy the paintings and the artists.

#### Distribution of Trout Fry.

The season is now approaching when the various Fish Commissions of the land begin to distribute the fry of brook trout that they may have hatched during the winter. Trout fry are sent out from different hatching stations at different ages, from the stage just after the umbilical sac is absorbed up to fingerlings, or yearlings. In a recent personal letter from Mr. Henry C. Ford, President of the Pennsylvania Fish Commission, he tells how the distribution is made in his State:

"Our trout fry are reared in troughs and are distributed between April 1 and June 1, when they are from three to five months old. The mortality in the troughs is very slight and scarcely noticeable.

"Competent messengers are sent with the cans when the fish are distributed, and it is unusual to find more than five dead fry in a can containing 1,500. I have made personal investigations in regard to this point.

"I recall an instance when six cans of fry were sent 200 miles by railroad on a warm day in June, and then transported over 20 miles of mountain road before they were deposited in the streams. There were but three dead fry, the six cans containing 9,000 trout. Of course they had competent attention *en route*. When there is any mortality among the young fry (and I have seldom heard complaint of any), I have found that it has been owing to neglect on the part of the parties receiving them to properly care for the fish after they had left the hands of our messengers.

"The great increase of trout in the Pennsylvania streams, an increase substantiated by hundreds of letters from parties benefited, is the result, doubtless, of our system of distribution at a medium age as above stated."

This is a most excellent and satisfactory showing that Mr. Ford makes of the work of his Commission, and one, doubtless, the people of the State are proud of, as well they may be. Commissioner Demuth, of the Pennsylvania Commission, writes me that at Allentown and Corry hatcheries they have about 3,500,000 trout fry that will be ready for distribution after the spring freshets are over; and that at the Erie hatchery they have hatched and planted in Lake Erie a large number of whitefish and pike-perch.

A. N. CHENEY.

#### Kennedy Smith.

KENNEDY SMITH died at Stratton, Me., on Jan. 8, of pneumonia, after a short illness of four days. Mr. Smith was born in Readfield, Me., in 1833. His life was like that of most Maine boys, up to the time of the breaking out of the war of the rebellion; and he was among the first to answer the call of the country and enlisted in the First Maine, a three months' regiment. After serving that period he re-enlisted in the Tenth Maine, for two years. Serving that time also, he again re-enlisted in the Twenty-ninth Maine, for three years, and was discharged with that regiment at the close of the war, having had about five years active service at various points from the Potomac to the Gulf.

He was a born hunter and fisherman and lover of nature, and as a pioneer of Franklin county he commenced the development of the Dead River region in the interest of sportsmen in 1873, by cutting trails into the forest and building camps at Tim Pond for their accommodation, and later at Seven Ponds and Round Mountain Lake.

His social and genial qualities were such that he made hosts of friends among sportsmen all over the New England States, who will feel a personal loss in his decease.

M.

#### Tri-County League.

DETROIT, Mich., Jan. 26.—On the evening of Aug. 10 last, upon a numerously signed petition, a number of gentlemen met at the parlors of the Russell House in this city for the purpose of organizing a fish and game protective association. It was contemplated that the jurisdiction of the club so formed should comprise the counties of Wayne, Macomb and St. Clair, which practically cover the American waters of Detroit River, Lake St. Clair and St. Clair River. The meeting was organized and an association was formed for the purpose specified and covering the territory named which was called the Tri-County Fish and Game Protective League.

It was determined to make the organization a popular one, in which the interests and sympathy of every man who loved game and sport might be enlisted. For this purpose the membership fee was made low and the yearly dues the same, both being placed at the sum of \$1. The club has about 150 members, and the meeting of January,

1894, was its first annual meeting. At this meeting reports were received of the work to date. After the election of officers and an executive committee of two members from each county, the president and secretary being ex-officio members, the club authorized the bringing of suits against parties who were infringing the laws by winter fishing, and the meeting adjourned.

HERSCHEL WHITAKER.

#### A HENRY CLAY FISH.

BOSTON, Jan. 27.—It seems that there must have been big trout in the near vicinity of New York in the days of Henry Clay. The other day Mr. William Bellamy, a brother of the gentleman who wrote "Looking Backward," showed me a rare diagram of a brook trout. Mr. Bellamy is with Mr. Geo. D. Dodd, of the firm of George D. & Horace Dodd, fur dealers, on Milk street. The shop itself is a curious place for the naturalist, if not a genuine old curiosity shop. Very rare stuffed animals are to be found there, and without "stopping to tell a lie," Mr. George Dodd shows me the "real George Washington hatchet." If the implement is not really the truthful hatchet, it is certainly old and of antique pattern enough to have been lied about a great many times. In the same shop it is matched by flint-lock guns and rifles enough to please the collector of ancient arms. The first time I called Mr. Dodd met me with flint-lock in hand. The gun laid away, the brook trout diagram was brought out, with this inscription: "This is an exact outline of the 'Clay trout,' taken by Francis Dodd, in Snedico River, Long Island, on March 4, 1848, at 1 o'clock P. M. Length, 19 in.; girth, 12 in.; weight, 3 lbs. 14 oz., after having been freely and been taken two hours; named unanimously by the company present at Snedico, the 'Clay trout,' with the health of that illustrious individual drunk standing."

On the other end of the diagram is further inscribed: "Presented to the Hon. Willis Hall, on the occasion of his dining Henry Clay, the city's guest, on the 8th day of March, 1848."

I have never read that Henry Clay was a lover of the line and the rod, but his character would indicate that such must have been the case. Mr. George Dodd, grandson of Francis Dodd, is of the opinion that Mr. Clay was both a hunter and a fisherman during the few leisure hours of his very busy life, and notwithstanding he had been defeated in the race for the chief magistracy of the country, the fishermen of Long Island all loved him. Doubtless the sportsmen who fish the Long Island streams for the fingerlings of to-day in the early spring will be interested in the above record of a big brook trout.

The Boston pickerel fishermen continue to be disappointed. Early last week the weather had continued fine and the pickerel ponds were covered with fishermen and their traps. But the results were very few fish. Some of the fishermen of greater experience, though fully intending to have tried the pickerel once more this winter, observing the ill success of the rest, have staid at home. It is suggested, now that a storm and bad weather has come, that if the pickerel are allowed to "rest awhile," that some good strings may be taken in March. Some of the pickerel fishermen are glad that the ice-fishing has come to an end, even though the fact that the ice fishermen are getting no fish, for they do not approve of ice fishing at all, and anything that defeats the methods they despise is satisfactory.

Some of the ponds in Maine are yielding enormous quantities of pickerel this year. A traveling salesman who came down over the Maine Central Railroad the other day tells me of some pickerel fishermen who got on the train at Winthrop with some big strings. They set an ordinary washtub full of pickerel into the baggage car. The fish were doubtless taken in either Lake Maranacook, which is above the village of Winthrop, or in Anabesacook, which is below. But some miserable net-fishing is going on in Maine this winter. Mr. James L. Raybold calls my attention to three enormous boxes of pickerel, sent from "down in Maine," for sale. One of the boxes weighed over 1,000 lbs., but the other two were not quite as heavy; but the whole must have contained at least a ton of frozen pickerel. About the necks, or just behind the gills are the marks of the deadly gill nets. The fish are taken in great quantities by the net-fishermen after the ponds are frozen.

It is doubtful if the ton of fish netted the fishermen above \$50 after all the charges were paid. Think of the hours of sport and recreation this ton of fish would have afforded to legitimate fishermen with rod and reel. Think of the summer boarders they would have drawn! Think of the boat and camp rentals and the guide and cook hire that ton of fish might have represented! Now the ponds from which they came must be simply exhausted. Trout and bass must be destroyed as well as pickerel. Truly one man is as good as another in this country and has as good a right to what he can earn. But the right to earn a paltry \$50 for a couple of men should not be allowed to stop the incoming of thousands of dollars to the great majority of men, to say nothing of the sport of catching the fish with rod and line, to which sport the net-fishermen have just as good a right as other men. SPECIAL.

#### Cayuga Lake Nets.

ITHACA, N. Y.—A petition is circulating in this community which has for its purpose the passage of a law by the present State Legislature granting the right to use seines and nets at the Ithaca end of Cayuga Lake for the taking of bullheads, suckers, etc. The petitioners claim that if it is right and just for the people residing at the lower end of the lake to haul seines for the capture of all but game fish they should enjoy the same privilege. In other words, that there should be no discrimination against the citizens at one end of the lake in favor of those at the other extremity.

M. C. H.

#### The Tarpon Season.

MR. E. VOM HOFFE sends us a note from Mr. George B. Magoun, written from Punta Gorda, Florida, in which the writer says of the 1894 tarpon season: "Last week I killed three tarpon weighing 95, 99 and 78 lbs. respectively. The two first I killed on the same day, which breaks the record for this place for the month of January. These fish are rather small, but I am hoping for larger ones later. My brother killed a fish last week weighing 90 lbs. Only four others have been killed here this season. As it is unusual to take them so early, I think that the season promises to be a fine one."

#### Visalia County Waters.

VISALIA, Cal.—We in this county are just beginning to feel the necessity of preserving and improving our game, and have begun during the past season by stocking our nearest mountain streams with 40,000 rainbow and "cut-throat" trout, with the promise from our State Fish Commission of more during this next year. M. L. W.

## Fishculture and Fish Protection.

### THE COAST FISHERY CONFERENCE.

Proceedings of Conference Held to Consider the Subject of the Exhaustion of Coast Line Food Fishes.

OFFICIAL REPORT BY SECRETARY E. P. DOYLE.

(Continued from Page 77.)

MR. CHARLES F. CHAMBERLAYNE, of Bourne, Mass., submitted the following paper:

#### Buzzards Bay; An Experiment.

MR. CHAIRMAN AND GENTLEMEN: Theseaboard States owe much to the zeal and public spirit which have prompted this meeting. They are all intensely interested in finding a happy solution for the problem here presented. How best to make fish food abundant and yet keep in mind the just claims of the future; how the fact that spawning fish must be protected is to be reconciled with the other fact that it is only while spawning that most food fish visit the coast; when to limit the short-sighted greed of the fish pirate and not too timidly save what was destined to be used; in short, just what is income, to which, as life tenants, we are entitled, and what is principal, which the trustees should keep intact for the remainder of men, are important and difficult questions. The inherent difficulty is intensified not only by conflicting interests and the prejudices so created, but to a still greater degree by the slight range and uncertain nature of our knowledge. Whether the little we know about fish is accidental or fundamental; whether facts hotly disputed really exist, and if so, what they prove; whether both sides are each seeing one side of a shield, and what is needed is a wider range of vision to harmonize and explain conflicting stories, are the mysteries which are met rather by assumption than demonstration, or by an inconclusive reasoning from defective premises which only makes the darkness deeper. Indeed, it may well be that no general ironclad regulation, applying indiscriminately to all waters, will work justly to all interests, but that the part of wisdom will be found to consist in preserving the fisheries of particular waters by methods especially adapted to their demonstrated needs. For this reason actual experiments in fish preservation, under fixed and observed conditions covering a considerable period of time, are of more than local value. Such an experiment has been made in Buzzards Bay, and its general results are respectfully submitted to this distinguished meeting. It is of course distinctly understood that Buzzards Bay is not here to urge anything regarding waters other than its own.

#### Conditions Stated.

Our experiment took place under the following conditions of situation, formation and temperature. The general course of Buzzards Bay is from northeast to southwest, with an extreme length of 20 miles and an average width of 6 miles. Not over 12 fathoms at any point, the depth of its channel averages 8 fathoms, rapidly lessening toward the headwaters and either shore; ledges and other fishing grounds seldom showing more depth than 8 to 12 ft. In temperature, its waters at the mouth of the Bay are about 2 degrees warmer than adjoining waters. This temperature rises as the water shoals, being 8 or 10 degrees higher at the head than at the mouth. The Bay is entirely free from strong currents; is practically landlocked; the shores are sandy or marshy; the bottom is gravelly or covered with eel grass. Its headwaters run into innumerable shallow coves and lagoons, often extending long distances inland. Tidal rivers, streams, brooks and creeks, rich in fish-food, both algae and clams, quahags, scallops, mussels, oysters, razor fish and many varieties of crustaceans, empty into it.

#### A Spawning Ground.

It is apparently due to these and similar conditions that Buzzards Bay is a spawning ground and nursery for fish. It has been derisively asked whether every well conducted fish as soon as it begins to apprehend the pains of maternity, heads for Buzzards Bay to enjoy the distinction of spawning in so favored a place. The originator of this little pleasantry is a very distinguished Boston lawyer. Poor fellow! he was having a rather hard time! He was contending that Buzzards Bay was not a spawning ground, face to face with an ocular demonstration that the claim was false. Before him, on the table, were 26 bottles, in which were 26 species of young fish, 16 edible, including menhaden, scup, squeteague (weakfish) tautog, bluefish, sea bass, etc., ranging from half an inch to an inch in length, caught in Buzzards Bay, and preserved in alcohol. These specimens had been caught by the expert of the National Fish Commission Station at Woods Hole with a sweep seine of  $\frac{1}{2}$  in. mesh. With a bolting cloth surface net he catches young fry of all kinds with the sack still attached. In number these fry are simply beyond computation.

#### Legislative Protection.

As early as 1856 certain public spirited citizens, entirely uninfluenced, we may assume, by what are now amiably called "dudes," "sportsmen," "gamesters," millionaires, etc., then unknown in the matter, brought the attention of the Legislature to this situation, and inaugurated for the benefit of whom it might concern, a systematic effort to remove nets from Buzzards Bay. A glance at the map is needed to explain the story. The headwaters of the bay separate Wareham on the west from Sandwich (now Bourne) on the east. Following down the east side of the bay is the town of Falmouth. On the west side of the bay Marion, Mattapoisett and Fairhaven succeed Wareham. But little was attempted at first. The statute of 1856 (Chap. 176) prohibited the use of "any seine or net for the purpose of taking any fish, except bluefish," within one mile of the shores of Sandwich and Wareham. In 1870 (Chap. 249) this protection was greatly extended by drawing a line across the head of the bay, including Wareham and Sandwich and parts of Falmouth and Marion. Within this protected zone no person was permitted to "draw, set, stretch or use any drag-net, set-net, purse or seine of any kind, or construct, maintain or use any fish weir, yard or pound, for taking fish of any kind anywhere (within the limits established) or in any bay, cove, inlet, creek or stream bordering on or flowing into said waters." In 1874 (Chap. 283) the protected zone was further extended down the bay to include a portion of Mattapoisett. The following situation had been created: Within the protected zone all nets, fixed or movable, were forbidden. Below it movable nets were permitted without restriction. Fish weirs, etc., could be set under licenses granted by the selectmen of the respective towns, below the line, to their citizens.

Considerable apprehension was apparently felt regarding these pounds and weirs, and attempts were made to regulate

their action and determine their precise effect on the fisheries. By Chapter 104, of 1876, as amended by Chapter 28, of 1881, the owners of all mechanical apparatus for catching fish were required to return under oath to the Fish Commissioners, their daily catch of edible fish, specifying each kind, upon blanks furnished for the purpose, under a penalty of not less than \$10 or more than \$100. Chapter 61, of 1880, provided that from May 1 to June 15 no pounds, etc., should be set in Buzzards Bay "between the hours of 6 o'clock on Saturday morning and 6 o'clock on Sunday evening," under a penalty of not less than \$100 or more than \$200.

#### Steady Growth.

As in 1856, the first nets to be abolished, when a change came, were gill nets etc.; not because regarded as at all so dangerous to the fisheries as pounds, but because as a matter of town politics, it was easier. Outsiders, from anywhere, could, it was claimed, injure town fisheries by gill nets while pounds had at least the advantage of being profitable to one's own townsmen. In 1886 (Chap. 192) a sweeping act, covering the entire bay provided that no person should "draw, set, stretch or use any drag net, set net or gill net, purse or sweep seine of any kind for taking fish anywhere in the waters of Buzzards Bay, within the jurisdiction of this commonwealth, nor in any harbor, cove or bight of said bay," except certain parts of Fairhaven. In 1890 (Chap. 229) and 1891 (Chap. 327) these exceptions were repealed. The use of all movable apparatus was absolutely prohibited in Buzzards Bay.

#### Pounds Abolished.

Pounds, etc., continued for some years to be licensed by the selectmen. But the citizens of Falmouth, Mattapoisett and Fairhaven took a hand in the matter by the simple expedient of electing selectmen pledged against licenses. Fairhaven led off. In 1890, after two unsuccessful attempts, the anti-pound element, composed equally of line fishermen and citizens (Fairhaven has practically no summer residents or visiting sportsmen) elected their candidates as selectmen. In 1891, by an increased majority and in 1892, with practical unanimity, the town re-elected the same officers on the same platform. In 1891 and 1892, Falmouth at its annual meeting, by a two-third vote elected its selectmen to issue no more licenses. In Mattapoisett, the selectmen refused to issue licenses, and were continuously re-elected on this understanding. In 1887 (Chap. 198) Westport procured a law which they construed as forbidding them to set pounds, and in 1892 the entire bay, except Dartmouth and the Elizabeth Islands, petitioned the Legislature for the removal of pounds. The effort succeeded the year later. By Chapter 205 of 1893, it is provided that "No traps, weirs, pounds, yards or station any apparatus of any kind for the taking of fish, shall be set, used or maintained in the waters of Buzzards Bay or any harbor, cove or bight thereof." The experiment of 1856 was thus completed in 1893, and no nets, fixed or floating, are at present permitted in Buzzards Bay, except so far as pound licenses already issued are allowed to expire by limitation.

#### Restriction Popular.

Even from so bare and brief a story, certain deductions follow. In the first place, in at least one instance, consistent fish preservation has strongly commended itself to native populations. From 1865 to 1893 there has been no step backward. No community to which fish protection has been extended ever asked for a return to the old conditions. Each extension of the protected zone has always been demanded by a new community anxious to share advantages enjoyed by their neighbors. No one from without has imposed these restrictions. Honestly or otherwise, at any rate frequently, it is said that such fish protection has been the work of "sportsmen," for wanton pastime or elegant leisure, contemptuous of the rights and interests of their less fortunate neighbors. If there is still an honest believer in so ancient and discredited a fallacy, let him visit the annual March town meeting of a Buzzards Bay town. It is a gathering which every one attends. It is a leisure time. It is the event of the year. Everything in which the average citizen is interested, schools, roads, taxes, town officers, etc., will be settled for a year. The summer resident, the sportsman, are far away. Here and there is a long-boated fisherman, but the wielder of the 8oz. rod is sought in vain. Faces, clothes, speech, manners, everything, is eloquent of the very quintessence of town meeting democracy. Every man is aware that, to put it modestly, he is just as good as his neighbor. It is a motley, turbulent, but earnest and honest assemblage. Its shrewd common sense is not easily misled by specious reasoning. It can neither be led nor driven against its will merely to oblige some one else. Indeed, if our excellent Buzzards Bay citizen has a fault in the world it is that he is rather apt to regard his neighbor's wanting something as reason enough for opposing it.

Yet precisely such meetings as this, year by year, have enacted that there shall be no pounds in Buzzards Bay. Under such circumstances, to claim such exclusion to be the work of sportsmen is simply false. The expression is graphic, if not parliamentary.

It will be noticed also that the larger the area over which restriction has been extended the more rapid is the growth of popular opinion in its favor. It accordingly has happened that while the earlier steps are short ones and occur at long intervals, the final steps are giant strides and follow each other in quick succession. In fact, it has long been an open secret at our State House that outside opposition to fish preservation in Buzzards Bay has not come so much from a feeling that Buzzards Bay ought not to have what she wanted, but from a deep rooted apprehension lest the rapid growth of sentiment among our people in favor of this change might prove contagious to other localities and thereby bring on a flood of similar attempts in other parts of the State, which might seriously complicate the bait question for Gloucester and other fishing ports of Massachusetts.

#### A Natural Feeling.

It is easy to account for this growth of local feeling. The experiment in the first place has borne results in the matter of food. The persistent claim for netting has been that it made cheap fish. Our people find no fish cheaper than those they catch for themselves. To them no fishing is really cheap which ends in local extermination, and they find that while under the new conditions Buzzards Bay yearly recruits the stock of food fish to enrich adjacent waters, it also furnishes to any who dwell upon or visit its shores in perfect equality of opportunity an unfailing supply of cheap and nutritious food. It is unnecessary to say that this is exceptionally beneficial to the poor. A much quoted instance is that of Fairhaven. In 1889 so persistently had netting been carried on that the goose of the golden egg was dead. Everything had been cleaned out, and the netters themselves no longer cared to oppose the naturally intensified demand for a change. The effect of abolishing traps was marvelous. From an absolute dearth of fish they began to be again plenty, of larger size than formerly, and found in places to which they had long been strangers. So marked was the change that the overseers of the poor of Fairhaven testified before the Legislature that they could appreciate the removal of pounds by the decreased demands for town relief. They were satisfied from seeing the large number of poor men—heads of families—who fished from the long bridge between Fairhaven and New Bedford that never had anything occurred in the history of Fairhaven so beneficial to the poor. They testified also that the market price of fish in Fairhaven continued as low if not lower than formerly, the line fishermen finding no difficulty in furnishing the market with a steady supply of excellent fish.

This benefit of cheap food is not confined to our own citi-

zens. People from all parts of the State and all sections of the country enjoy, on equal terms with ourselves, the benefit of cheap fish food. To cite one instance among many. The valuation of the village of Onset Bay, in the town of Wareham, is about \$450,000. Included in this total are over 300 houses of non-resident tax-payers, costing less than \$1,000 each. This can mean but one thing—that people of moderate means find that during the heated term the fish they buy or can catch enable them to live cheaper in a modest seaside cottage than at home. To their children, equally with those of the rich, are extended all the health-giving privileges of the shore, its bathing, fishing, air and scenery. Cheap trains, cheap rents and cheap fish food bring health and recreation within the reach of all classes of our people.

#### Handline Fishing.

An incidental result of removing pounds has been a great increase in handline fishing. In our experience the price of fish, like that of other commodities, has been found to be regulated by demand and supply. The pound netters themselves and many others of our people have found profitable employment in supplying the market, and find no difficulty in doing so, with little, if any, increase of price. The moment more than a fair profit is realized, others go into the business. This arrangement is much more satisfactory, both to consumers and to the fishermen, for several important reasons. (1) The supply is regular and "dependable." The catch of the line fisherman is not subject to the violent fluctuations characteristic of pound netting. For days a pound may make small catches and then suddenly there comes an avalanche of fish. There is no market that will take them. It will not pay to ship. Many fish, especially smaller ones, are killed by suffocation or gilled in the nets. They are thrown away. The other fish are yarded, waiting for a market, without food and chafing against each other, until, in an enfeebled condition, they are sold. (2) The fish, as caught by line fishing, are fresh, mature and in good condition, comparatively free from spawn. (3) The present method more evenly distributes over the community the common wealth of the sea. For a few men making large profits and employing a few persons for a short time in the spring to drive the poles, it substitutes a large number of persons making a fair living over a long season. A few figures will explain the feeling of our people in this connection. In eleven years four men in Falmouth by the aid of pounds caught 7,997,365 edible fish, divided by species as follows:

Striped bass.....	2,549	Kingfish.....	1,382
Shad.....	2,687	Bonito.....	5,007
Squeteague.....	82,769	Sea bass.....	45,661
Mackerel.....	86,187	Sea herring.....	1,037,372
Bluefish.....	28,362	Alewives.....	917,716
Tautog.....	51,088	Menhaden.....	987,711
Scup.....	3,433,207	Butterfish.....	525,114
Flounders.....	91,977	Squid.....	235,506
Spanish mackerel....	211	Other edible fish.....	480,380
Eels.....	2,439		

In 1889, a single year, six pounds in Falmouth caught 31,848 menhaden, 82,720 alewives, 191,201 butterfish, 301,394 scup, and other fish making a total of 603,176 fish. Three Mattapoisett pounds caught 43,280 fish. The eight pounds of Fairhaven caught 275,976 alewives, 256,487 butterfish, and a total of 504,345 fish. The thirteen traps of Dartmouth caught 276,487 alewives, 112,770 scup, 130,208 butterfish, and a total of 569,707 fish.

Here are thirty men catching at least 2,007,604 mature edible fish, nothing being said of spawn and young fry. The instinctive feeling of injustice from comparing such catches with the average catch of a handline fisherman who is equally meritorious and whose rights in the common property are precisely equal, has had no small effect with us in changing the system. The more even distribution of the harvest of the sea is apparent in the prosperity of our boatmen, the increased comfort of their homes, and the large number of splendid fishing boats in which their earnings are largely invested.

#### "Sport or Business?"

Only less important than the value of the food which fish give us is considered attractiveness to others. In this is involved our general means of livelihood. The fish as food not only has proved an attraction to large numbers. The incidental or accidental sport attendant on their capture has brought us prosperity in still larger measure. It is practically all we have. Take it away and we would have but little left. Our people once led a seafaring life. The sea is no longer open to our ships. We used to manufacture. The conditions are not such as to enable us to carry it on. Our sterile soils cannot compete on staple crops with the fertility of the West. The Buzzards Bay towns, in this necessary absence of other pursuits, have largely and seriously entered upon the business of entertaining summer guests.

This new element has very happily arrived to supply in part, at least, our previous loss. Abandoned farmhouses have become tea-table residences; unproductive fields magnificent estates. Drowsy towns have become hustling communities. Sandy highways grown to broad avenues. Generous in-doorments for social and educational improvement has become the order of the day. Falmouth, from a quiet town of small valuation, and high tax rate, boasts a valuation of about \$5,000,000 with a tax rate of \$6.15 per thousand. The valuation of Wareham has increased \$500,000 since 1876, while the manufacturing valuation has fallen off nearly \$200,000. Onset growing from \$600 valuation in 1876 to \$450,000 in 1890. Bourne since 1884 has added over \$345,000 to her valuation, adding in 1890 over \$96,000, and in 1891 over \$83,000. Nothing else, even remotely, compares with this in beneficial results. It is impossible to put a dollar's worth of new valuation into a town without benefiting all its inhabitants. But entire communities show the direct, as well as the indirect, advantage of the influx. The liberal wages paid to our carpenters, masons, teamsters, plasterers, painters, and a host of others, who find steady and remunerative employment in building the houses, often of moderate cost, which are needed; the ready and excellent market which is furnished our farmers for their produce; to our grocers and provision dealers for their supplies; the wages paid for services of boatmen, gardeners, coachmen—all tell the same story. There are very few families in all our towns who do not owe some welcome increase of comfort or accession of income directly to the new prosperity.

I am keenly conscious that this phenomenal growth in wealth and population attendant on and largely based on the fish preservation will be met with the outcry that this is preservation for "sport." As a matter of fact this is not so, as has been seen in the successive action of forty Massachusetts legislatures in endeavoring primarily to protect the food supply. This is not the place or any consideration of the general value of "sport" and "sportsmen." But Buzzards Bay has never recognized the proprietary right of a market man in the fish of the coast. In endeavoring to preserve the equal rights of all citizens in their common property it has considered that, within common limits, the right of one citizen to catch fish for food in an orderly manner, gaining health and relaxation from the incidental pleasure, was fully as good as that of his neighbor to catch the same fish for the market. Sport has not yet been decreed a crime and it has not been definitely ascertained that wealth, leisure and refinement place their possessor beyond legislative protection.

#### Cost Value of Sport.

Indeed Buzzards Bay recognizes that there may be hard cash for it in the pleasures of others. This is an aspect of

the question which daily becomes more obtrusive. To the visitor the fishing may possibly be sport. But to the hotel-keeper with whom he stops, his money is "business." To the boatman who carries him, it means merely a hard day's work for fair pay. To all whom the innkeeper's prosperity or that of the boatman may benefit, it is most strictly "business." Should the visitor enjoy his trip, he buys land—more "business" to the man who sells it; he builds a house, which makes "business" for a host of others; he builds a family, and his improved land, are then perpetual tribute payers to the town. He brings his friends to repeat the process. Each bluefish he catches brings us at least \$15 or \$20, the benefit of which must go through the community. The market value of the same bluefish is usually not over fifty cents.

This business seems to us as legitimate as any other. To furnish health through relaxation may be fully as beneficial to the community at large as furnishing it through medicine. This business is our bread and butter. It is an incidental result of preserving our food supply of fish. If the food supply of the country needs these fish, it must have them. But if the food supply is best conserved and recruited by methods which incidentally yield such splendid results in giving livelihood to whole communities, the result is to the credit of the experiment. At any rate, Buzzards Bay so regards it. To multiply instances of how much this means to us is unnecessary. The distinguished President of the United States will suffice as a conspicuous example. It is commonly accepted as true that he has been attracted to Buzzards Bay largely, if not solely, by our excellent fishing and the incidental enjoyment which to him means health and beneficial energy for serious work. He catches a moderate number of fish, the market value of which is not high, and allows none to be wasted. To enable him to do this he has bought, from our people a large estate at a good round price, and on it he pays a good round tax. He employs native boatmen during the season and native caretakers, gardeners, etc., throughout the year. The establishment patronizes local tradesmen, icemen, milkmen, farmers, etc. This year he builds a lodge and extensive additions to his present house. Native carpenters, painters, masons, teamsters, etc., are given steady employment. When these buildings are completed, our assessors will visit them. The value will be added to the valuation of the town. In so far as it extends, this increase will benefit the whole town, the whole country, the entire State. Every citizen of Bourne will either have more town comforts for the same money or the same town comforts for less money. Buzzards Bay would hardly be benefited by exchanging all this for the market value of the fish which the President catches, whether considered as food or fertilizer. This aspect of the fisheries brings our section in many times the amount of revenue resulting from the market value of all her fisheries, and it represents an industry which is great and growing. Our people realize that it is an industry directly dependent on the fishing, both for the measure of its value especially in regulating the duration of the season during which the golden stream flows in our direction. It is therefore not surprising that our towns have insisted upon fish preservation with ever increasing emphasis and keener appreciation of the advantages accruing from it. It is therefore not to be wondered at that Buzzards Bay is to-day practically a unit against any change of the existing system; and that any degradation of sea-shore values so caused would generally be regarded as practical confiscation.

#### Minor Results.

We have not only learned in Buzzards Bay the value of fish preservation itself, but experience has given us some definite results as to what legislation is valuable in securing it. We have ascertained, for example, that any limitation of the species of fish for which fishing is permissible is absolutely delusive. If any fishing is permitted with a forbidden device, no fishing with that device can be prevented. Under the law of 1856, while seines and nets were forbidden in Buzzards Bay within certain limits, their use for bluefish was prohibited. It was soon learned that all persons operating a net or seine within these waters were invariably fishing for bluefish. It was impossible to show the contrary. Officers were unable to enforce the law. "Its teeth had been drawn." Any such limitation was, therefore, dropped in subsequent statutes. So in 1892, when fishing of the purse seine was absolutely prohibited in Buzzards Bay, a certain fisherman of Fairhaven, engaged in fishing for fresh cod, complained bitterly that he was unable to catch menhaden for bait in his own town for his own vessels. He made out a case of undoubted hardship and slight direct injury to the fisheries. His legislative counsel suggested an act limiting the catch at any one time to 50 barrels, required obtaining a license from the selectmen of his town and other precautions against injury. His bill was rejected by the Legislature, however, on the sufficient ground that, as a practical matter, any such restrictions were necessarily futile and incapable of enforcement. If purse seining for bait were allowed, all purse seining would be for bait. No officer would incur the trouble and risk of boarding a vessel if any reasonable chance existed that the conduct of the vessel could be lawful. It is only when any fishing of a kind easily recognized is absolutely forbidden within certain limits that evasions of the law are found to be difficult and officers are enabled to enforce it with the necessary confidence. For similar reasons, any regulation of size of mesh, depth of seine, etc., are of no value, and an attempt to allow short purse seines in shallow waters would, so far as our experience goes, work irremediable mischief.

Neither have we found it possible in the absence of an efficient ocean patrol, for which no facilities exist and which could be maintained only at great expense for fish preservation to get any advantage from prohibiting nets during certain days of the week. Most alewife fisheries of the bay are so regulated, and such regulations, if they could be adequately enforced, would be, as our people have claimed, a good solution of the pound question in certain waters. Indeed, it was the remedy suggested by Prof. S. F. Baird in 1872. But Buzzards Bay has tried that to its satisfaction. In 1880, as has been said, it was provided that pounds should not be in use between 6 A. M. Saturday and 6 P. M. Sunday between May 1 and June 15. The idea would not work. The law was a dead letter. No one was charged with its enforcement, and laws do not enforce themselves. The expedient of forbidding pounds absolutely during certain seasons of the year would not seem open to these objections. It has not been tried on Buzzards Bay.

Our experience has amply demonstrated the advantages of rewarding the diligence of our officers and citizens generally with a certain proportion of a large penalty or forfeiture. The conditions almost invariably attending the violation of such laws, especially at night, make it necessary in the absence of a coast patrol boat, that an immense amount of nerve and patience be used to secure convictions. It is perhaps inexpedient that this should be left to private enterprise, but as long as it is so left it is obviously necessary that it should be enlisted and rewarded. No instance of an unjust charge induced by hope of reward has been ever suspected. In case of conviction, the labor, at best, is poorly paid.

#### Our Enemies.

The only other possible value of the Buzzards Bay experiment is a mention of the enemies which the fish preservation has encountered. A more continuous legislative warfare does not exist in Massachusetts. Each session of our Legislature brings its annual attack. But to Buzzards Bay even this also has its compensation. It bears eloquent testimony to the success of the experiment; for the intensity of the efforts to break down the fence is usually somewhat in proportion to the richness of the pasture. The fish are there and

these men know it. As other waters become depleted the contrast becomes still more striking.

These attacks have come mainly from two sources: 1. Domestic netters. 2. The United States Menhaden Oil and Guano Association.

Of the two, our domestic netters make us comparatively little trouble. Their claim always has been very simple—that the food supply of the country is dependent on them; that were it not for them fish would be beyond the reach of the poor. The disinterestedness of this claim has never deeply impressed the Legislature, in view of the fact that however much the poor might indirectly profit, the immediate benefits of pound netting entered the pockets of the netters, whose share in the common property becomes grossly disproportionate to their equitable claim.

It is otherwise with the United States Menhaden Oil and Guano Association. This trust aggregation of capitalists in its desire to catch menhaden for oil and guano has apparently found Buzzards Bay a thorn in its side. So far as known, Buzzards Bay has never attacked the Menhaden Association except in self-defense. It does not concern itself with other waters; proclaims no crusade against nets; merely defends itself; has no capital, no especial organization; does not question the right of this rich and powerful association to go anywhere its energetic and intelligent managers please to send it except into Buzzards Bay. Yet for many years the Association has waged unremitting war against Buzzards Bay's protection. In 1889, in defiance of the law of 1886, the Association's steamers openly used their purse seines in our bay, inflicting injuries upon the fish supply which are even now but partially repaired. They were arrested and their boats confiscated after a stubborn hand to hand fight with the Massachusetts officers. The legal questions involved were carried to the Supreme Court of Massachusetts on appeal and to the Supreme Court of the United States by writ of error. In both courts, the protection of Buzzards Bay was sustained. In February, 1892, the Buzzards Bay towns were called upon to remonstrate at Washington against a bill brought by the Association and their allies, to annul their legislative protection by a proposed act of Congress called the "Lapham Bill." The allies of the Association were out in force. The wholesale fish dealers who desired to sell the fish of Buzzards Bay on commission; the fertilizer dealers, who wanted to sell the ammonia and phosphoric acid of their fish for manure; the oil men who wanted the porgy oil; the net and twine men who wanted to sell the seines, etc., necessary to catch the fish, united their money and their efforts under able counsel and astute leadership against the protection of Buzzards Bay. The public at large were promised cheaper food; the farmer cheaper and larger crops; the shoe-maker and rubber better and cheaper oil, if only Buzzards Bay could be opened to the steamers of the Association. Again the protection of Buzzards Bay stood; the bill being rejected on such principles of the constitutional limitations of congressional power as apparently preclude its revival. While the bill was general in its terms, the assault in argument was directly on our bay.

As this law cannot be defied with impunity or annulled with success, there is but one further assault against Buzzards Bay open to the Association. It can possibly induce the Legislature to repeal our protective legislation. Already its fertilizer customers are attempting to persuade farmers of Massachusetts that their interest lies in buying Buzzards Bay fish in an ammoniated fish scrap superphosphate at \$85 per ton when staple ingredients, like nitrate of soda or nitrate of potash will give better results for \$14 to \$19.50 per ton; already the men who buy the Association's menhaden oil are using the public press to teach the leather men, the painters, the miners, that their business will thrive beyond precedent if they can only get the menhaden from this little tract of water. After a business career of twenty years, with unlimited freedom to range the Atlantic Coast, the Menhaden Association now declares that unless it can get into Buzzards Bay next season, it must go out of business. Buzzards Bay, remembering the dreadful days of 1889, when the Association literally ladled out with purse seines 100ft. deep all the fish in her 12 fathoms of water for oil and manure, knows that millions of property and the food and livelihood of thousands of her people demand that the Association should be excluded. It is for her, therefore, a matter of life and death. The Association say it is the same to them. It is therefore a combat *à l'outrance*—a battle of extermination. It is in fact a conflict of distinctive principles. It is fish preservation against the most destructive agency ever devised by the wit of man; of the idea that spawning fish should be protected in their periodical visits to the coast against the notion that fish are inexhaustible in fertility and that we know nothing about them except that they must be killed whenever, wherever and however possible; of the people against a trust; of thousands of hardy fishermen against a gigantic monopoly; of the rights of the coast dwellers to the bounties of the shore against the claims of foreign capitalists to make the sources of food and prosperity into superphosphate manures. Financial support of the interested nature which contributes largely, Buzzards Bay does not and cannot have. Moral support, if her cause be just, she claims and ought to have. May we hope that enough has been shown to entitle her to that of this very distinguished congress?

H. B. JOYCE, of Massachusetts, said: I am in the mackerel fishing business, and have been for quite a number of years, and as far as education and knowledge of the subject goes, I have the feeling that I perhaps know as much as the general run. Our industry is threatened by adverse legislation because we use the large seines to capture fish, and a large portion of the season it is not practicable to capture them by any other method. There are times, however, when the hook can be used.

The mackerel is a fish we have pursued from Cape Hatteras to the mouth of the St. Lawrence River, and we really feel sure that the same fish travels that distance. In connection with that fact I would mention other fish, like the menhaden, which appears in May on the Long Island coast, and the bluefish which turns up near the Florida coast, and some seasons comes as far as Maine, and other seasons has been known to stop as a body south of Hatteras.

My experience leads me to believe that all fish of any size, except lobster and halibut, are migratory to a great extent. Even the codfish, which we have taken off the shores of Cape Ann have French hooks in them, which they must have got at a distance of 700 or 800 miles from where they were finally caught. The halibut are the same. They migrate from a depth of 2,500ft. of water to six or eight or ten near the shore.

I do not know whether spawning has the effect of making these fish journey or not. The movements of almost all classes of migratory fishes are occasioned primarily by the desire of spawning or reproduction; but in another great majority are influenced by the enemies that follow after them, and in the case of these fish I remember perhaps 75 per cent. of the destruction of the species is caused by enemies of one class or another of migratory or predatory fish. In connection with this we have had to compete with Canada. We think that Canada has a hand in the fight in this matter; and we have information of where Canadian fishermen have stated that they are negotiating, or taking measures for negotiating, an international agreement, regarding purse net fishing. Their interest in doing that is that the great bulk of their mackerel fishing is carried on by means of pound nets on the Nova Scotia coast and gill nets on the entire coast. The gill nets extend from a mile to six miles to sea. If any sort of legislation can be had whereby we can be ruled out and their system of fishing remain, I for one shall feel

very much disappointed. There has been some legislation in regard to our industry to prevent the catching of fish during the spawning season. We do not have any means of knowing whether that has been of benefit or not. We have had increased production for the past two seasons, perhaps an increase of 200 per cent. over five years ago, and the experiment was too short to determine really whether the results were beneficial or not. But if any legislation can in any way benefit fish, I contend that it can only be by covering the hatching grounds as far as possible and protecting them from damage, and that every one who fishes should have a free right to use any device or invention that the needs of his business may make most successful or practicable.

BY THE CHAIRMEN—Were there any practical results from the close season?

MR. JOYCE—We know we have had a little better catch for the past season. Whether that came from the close season or not, we don't know.

Q. What is your judgement about making a close season for mackerel?

MR. JOYCE—The only benefit I can see to accrue from that would be that the markets would be cleaner and we would have a better price when we did get at it.

MR. CHAMBERLAYNE—Would not it take about three years for the benefit to become obvious?

MR. JOYCE—I think it would.

MR. RUSSELL REED, counsel for the Game and Fish Protective Society of Massachusetts, said that for the past five years he had the honor of being the counsel for this Society, and that the sentiments of the last five gentlemen, except Mr. Chamberlayne, who spoke from Boston, and who represented what we call the Fish Trust of Massachusetts, does not entirely represent the whole sentiment of that State. I shall speak for the State, and what they do not represent the whole fish. We believe that laws are necessary for protection of fish. In all these years ever since I came of age, I have believed in protection.

I came here years ago at the request of the FOREST AND STREAM to help form an association for the protection of fish and game. Every time I find any question raised regarding the protection of fish and game, especially regarding protection of fish, I find the dealers always oppose any consideration of the subject whatever. After the law is passed we have a little consideration and a little protection. But always as we go along we find the right sort opposed to anything, and I regret very much to say, with all possible deference to some of the friends in Massachusetts who have spoken to-day, that we have in our State I believe the most outrageous system of game laws known to any part of the United States. It is an awful thing, we know, and we have tried to remedy it. We cannot do it and it is thanks to our dealers that we cannot.

Statement of MR. IVES W. ADAMS, treasurer of the American Net and Twine Co., before the Conference of Fishermen, New York, Dec. 13, 1893:

I represent the netting manufacturers who have interests in common with the fishermen and in the supply of our food fish, both salt and fresh water. Fish have been caught with the use of nets, etc., ever since we have any record of anything. The industry which I represent has been established in this country over half a century, and its experience with fishermen and fishing firms and supplies of fish has been varied, and in my opinion is of importance in determining the diminution (if such there be) in this supply. I desire first of all to make a point, upon which I think all parties are agreed, and which should not enter into the discussion of these matters, and that is that we all agreed that such fish as salmon, shad, fresh-water herring, trout and kindred fish whose instincts take them into fresh water to propagate their species, all such fish need protection undoubtedly. It is manifest that these species coming into fresh water to spawn can be completely destroyed by the illution of the water or the excessive use of nets. But fish like mackerel, menhaden, bass, herring, bluefish, squeteague, etc. do not need protection. The supply of these fish depends more upon natural causes, which causes science has not been able to determine. Why there have been years of plenty and years of scarcity is still an unanswered question, and implements of capture are not a factor in these changes.

I present for consideration a chart showing the catch of mackerel as reported by the State Commission of Massachusetts, taken and commencing with the year 1809 up to the present date. No stronger argument, we believe, can be adduced in regard to the changes in the supply of the sea spawning fish than this simple report. It has been claimed that the purse seine was the cause of the present diminution of these fish. Why the purse seine was not invented or in use until the year 1865. The hook and line was the method of taking these fish up to that date. It will be seen by simply referring to this chart that during the years previous to this date—1865—there were seasons of great plenty and seasons of great scarcity. Did the hook and line cause it? By no manner of means. It will also be noted that after the use of the purse seine for twenty years, one of the largest catches of mackerel that was ever taken on the New England coast was made in the year 1884. Therefore, does it not prove conclusively that the methods of catching these fish has nothing whatever to do with the supply?

I am also pleased to present a list of the wholesale prices of the leading kinds of fresh fish dealt in by the T Wharf Fresh Fish Association, of Boston—an association which handles more than one hundred millions of pounds of fresh fish annually. It will be noted that the average prices of these different kinds of fish were less in 1893 than in 1883, the two dates during which these prices were compiled. This, we think, goes to prove conclusively that the prices of salt-water fish have not appreciated in value during the last decade, but, on the contrary, are growing cheaper as compared with early dates.

Another point which I desire to emphasize is the one bearing upon bluefish and menhaden. It is claimed that menhaden are food for bluefish and other kinds of free roaming salt-water fish. And while I do not pretend to deny that the bluefish do prey on the menhaden, I do deny that they are a special food for the bluefish. It seems to me that a stronger evidence of this cannot be adduced than the presence in Buzzards Bay this last season of immense quantities of menhaden during practically the entire season, and at the same time the absence, notably, of bluefish, notwithstanding bluefish were found in very large quantities upon this coast, all around the Cape and in Vineyard Sound, but were not to be found or caught in any number in Buzzards Bay. If bluefish feed upon menhaden largely, is it not fair to suppose and expect that they would be found present with them? Or where they were in admittedly immense quantities during the larger part of the season of 1893?

I could go on and give many more instances bearing upon this point equally as conclusive to our minds, as the result of our intimate connection and association with fishermen and fishing firms in this business for the last fifty years. Is it for one minute to be supposed that we would advocate that extent of fishing which would destroy or annihilate the very means by which we gain our livelihood?

In conclusion I would say that I feel that the different sides of this question could be brought much more nearly together if there were less prejudice and more knowledge brought about by experience in these matters.

Speaking for myself and those interested with me, I feel that we are entirely willing to submit these questions to careful and practical investigation by representatives from the different interests. I believe that such an investigation carefully and thoroughly made, taking plenty of time, would

result in removing from all minds the prejudice which now seems to me to exist without cause. I should like to offer the following resolution:

Resolved, That the object and purpose of this conference is to inquire into the general condition of the Atlantic Coast Fisheries and consider what can be done (if anything) to improve them, and the representatives from the several interests be appointed to conduct this investigation and report at such time as in their judgment may be thought best.

Statement furnished by T Wharf Fresh Fish Association, of Boston, an association distributing one hundred million pounds of fresh fish annually. Prices are for two dates, 1883 and 1893, showing lower average prices for the later date.

Statement of I. C. YOUNG, a member of the Massachusetts Fish Commission:

I represent the shore fisheries of Massachusetts, and when I say shore fisheries, I include pounds, weirs and lobster traps along our coast. These fisheries are of great value to us. The pounds and weirs of Massachusetts not only furnish a large supply of food for the citizens of our own State, but are distributed through New England and the West. This is not a local question, it is national. It has been well said by Mr. Hughes, of Truro, "that without the traps and pounds of Massachusetts Bay, the fresh fish business of Boston would be practically destroyed."

Certain seasons of the year they take all their bait from these weirs along the coast of Massachusetts, and even to Maine. If they could not procure their supply of bait here, they would be obliged to go to the British Provinces, and it is the experience of the past that so much time has been spent about the harbors in waiting for their bait, that the trips were unprofitable, even if they secured a fair catch of fish. And for this reason, if for no other, our weir industries should not be disturbed.

It was the decree of the Massachusetts Legislature of 1893, that Buzzards Bay should be exempted from the operations of the pound and weir fishermen, after the termination of their present leases. We hope to see good results from this legislation, and will report to you after giving it a trial for a few years.

The matter of bluefish, of course, is an important one to fishermen and sportsmen, and many of our fishermen make good money by taking these fish by hook and line or nets along the coast, and particularly with hook and line in Buzzards Bay and the waters of Vineyard Sound.

In 1886 there was a bill reported to the Legislature prohibiting all seining about the islands of Martha's Vineyard, which included all kinds of fish. An amendment was put in which exempted mackerel. When the bill was before the House the friends of the prohibitory bill said "there was no such thing as mackerel to be found and caught within the three-mile limit." The amendment was accepted and the bill passed.

I will ask any mackerel fisherman, dealer or any one interested in this particular branch of our fisheries, what the outcome would have been had the bill passed as originally drawn? Why, sir, a very large proportion of the catch of mackerel on the New England coast for the season of 1893 were caught on the Atlantic side of Martha's Vineyard, within the three-mile limit.

I contend, as far as the fishermen of Massachusetts and New England are concerned, the value of the shore fisheries cannot be counted in dollars. They furnish untold employment for our citizens by the shore, and there are hundreds of thousands of dollars invested on account of these fisheries. And why should they be legislated out of the State to the advantage of the Provincial fishermen? They should not.

As for the diminution of food fish in the ocean, as has been said here to-day, it is beyond the power of State Legislatures to regulate them. This year we have a good catch; next year, of any particular kind, we may not have any. I was in the fish business for years, in 1884, when there was a catch of mackerel of nearly 600,000 barrels, and from that time until 1892 there was a constant decrease of these valuable fish along our coast, and in part I think this was owing to the over-fishing of that year, as the mackerel were so abundant and were taken in such large quantities, that too many small fish were undoubtedly worthless destroyed and others driven from our shores, and have since sought other feeding grounds. They are gradually returning, and without doubt in a few years they will be as plenty as in former times.

A few words more before I finish. The protective laws that Massachusetts now has on her statute books will be enforced. And as for Massachusetts, in speaking for her, she will legislate in the future as in the past—for the greatest amount of good to the greatest number.

[TO BE CONTINUED.]

#### Its Appreciation Is Continent Wide.

From a letter written in Boston, Mass.

Mr. Robinson's writings are a constant delight. My old home is not far from that of Uncle Lisha and the rest. I spent my vacation on the shores of Lake Champlain last summer, and had intended to initiate a "little one" of six years into the order of bass fishers, and show him how his father used to take them when he was a boy, but alas! I arrived there sick and passed the whole two weeks in bed. Not quite that, though, for I did crawl down to the boat one day, and propped up with pillows, the boys rowed me out for a troll. I took a nasty long pickeral about as long as my arm and a lively little bass. So ended my '93 vacation, and FOREST AND STREAM must keep my spirits up till the time again comes around to "get among them" again. Long may you prosper, bulldog pictures and all!

From a letter written in Silverdale, Wash.

You have never had my name on the mail list, but nevertheless I have managed to find FOREST AND STREAM at almost any point in the West, and have taken some long rides through the burning sun of the sage plains to secure this same paper! Sometimes I have been without it for several weeks, but always hunted up the back numbers as soon as I could reach a newsdealer, and then—well, I don't rest until I have read it from cover to cover. Heretofore I have been a rolling stone, never long in one place, and consequently had no fixed address,

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Feb. 20 to 23.—Westminster Kennel Club, at New York. James Mortimer, Superintendent.  
Feb. 27 to March 2.—Columbus Fanciers' Club, at Columbus, O. G. F. Mooney, Sec'y. Entries close Feb. 20.  
March 7 to 10.—City of Straits Kennel Club, at Detroit, Mich. Guy D. Welton, Sec'y. Entries close Feb. 21.  
March 13 to 16.—Mascoutah Kennel Club, at Chicago, Ill. J. L. Lincoln, Sec'y. Entries close Feb. 24.  
March 30 to 23.—St. Louis Kennel Club, at St. Louis, Mo.  
March 27 to 30.—Philadelphia Kennel Club Show, at Philadelphia, Pa. Dr. G. G. Darby, Sec'y.  
April 8 to 6.—New England Kennel Club, at Boston, Mass. D. E. Loveland, Sec'y.  
April 18 to 21.—Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.  
May 2 to 5.—Pacific Kennel Club, at San Francisco, Cal. H. W. Orear, Sec'y.  
May 15.—Portland Kennel Club, at Portland, Ore. D. L. Williams, Sec'y.

#### FIELD TRIALS.

Feb. 1.—Blue Ridge Futurity Stakes, at New Albany, Miss.  
Feb. 5.—Southern Field Trial Club's Trials, at New Albany, Miss. T. M. Brumby, Sec'y, Marietta, Ga.  
Feb. 12.—United States Field Trials Club's Spring Trials, Grand Junction, Tenn. P. H. Madison, Sec'y, Indianapolis, Ind.  
Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallagher, Winnipeg, Sec'y.

**Don't forget that New York show entries close on Monday, Feb. 5, with Mr. James Mortimer, Room 310, 44 Broadway, New York. Entry fee \$5.**

### PACIFIC COAST FIELD TRIALS.

SALINAS, Cal., Jan. 19.—The eleventh annual trials of the Pacific Coast Field Trial Club were finished to night. The light entry, the rain and the kicking of a few disgruntled ones caused the trials to result in a partial failure. The trials were held on the estate of Mr. Jacks, some 20,000 acres of rolling land covered with manzanita, scrub oaks and sage brush. On Sunday the early arrivals drove out to look at the grounds and were only shown one corner of this vast acreage. It so happened that the corner shown them was a very undesirable spot for holding field trials, on account of high brush, and some of the party became very much dissatisfied, both at the grounds and at the club's committee that selected them. On Monday, it more than rained, it poured, and the entire combination induced a few of the party to give up in disgust and go home. In consequence several parties who had dogs in training for the All Age ordered their trainers not to start them. It was thought that the attendance would break the record, but these reports and the wet cold and threatening weather kept the people at home. From 85 to 100 people followed the dogs during the week in place of from 100 to 500, as is usually the case.

The first impression that we received of the grounds and the evil that resulted from it was without foundation. The first heat of the Derby was run on bad ground, but before the second heat was finished we found thousands of acres of as fine field trial ground as one could wish for. Had the weather been bright the trials would have been very successful in spite of all the other drawbacks.

The club and visitors were the guests of the Salinas Rod and Gun Club, represented by C. Z. Hebert, and for open-handed hospitality we never saw their equal. On our return from viewing the grounds a "bull's-head" dinner awaited us. On Wednesday evening we were given a concert in the parlors of the Abbott House, the headquarters of the club, by the local brass band. On Friday night a ball was given in our honor that, in spite of the rain, brought out 100 couples, followed by a banquet. And in every possible manner the gun club endeavored to make the stay of the visiting sportsmen a pleasant outing.

At the annual meeting of the club on Thursday evening the following new members were elected: W. H. Bryant, Suisun; Crittenden Robinson and W. S. Duval, of San Francisco; J. M. Morrison, H. J. Kilgariff and E. C. Weinreich, of Sacramento; E. F. Northam, of San Jose, and Judge N. A. Dorn, C. L. Hebert, A. F. Bullene, J. C. Meador and G. Lapierre, of Salinas. The officers elected for the ensuing year were: President, J. G. Edwards (his eighth year in office); First Vice-President, C. Z. Hebert; Second Vice-President, Andrew Jackson; Secretary, J. M. Kilgariff, Executive Committee: Judge C. N. Post, C. Robinson, P. D. Linville, W. J. Golcher, W. G. Kerckhoff, Wm. Schreiber and Judge N. A. Dorn. Resolutions of regret at the death of C. J. Miller were passed, and Judge Post, J. M. Bassford and H. T. Payne were appointed a committee of three to draft same.

The system of running now in use by the Eastern Field Trial Club was adopted for the next trials. In short, the spotting system in place of the heat system.

Resolutions of thanks to the Salinas Rod and Gun Club were adopted.

Among the many that visited the trials were President J. G. Edwards, Secretary J. M. Kilgariff, P. D. Linville, Wm. Dornier, Andrew Jackson, C. A. Haight, Thos. Higgs, H. T. Payne, E. T. Allen, A. E. Magill, A. Russell Crowell, W. J. Golcher, J. Ross Jackson, Crittenden Robinson, David Thorn and R. Little of San Francisco, Judge C. N. Post, Chas. Studarus, N. E. White, E. C. Weinreich, J. E. Terry, Henry Gerber, H. J. Kilgariff and J. M. Morrison of Sacramento, R. M. Dodge and W. H. Bryant of Suisun, Wm. De Motte of Raymond, John Hughes of Capay Valley, J. M. Bassford of Vacaville, E. F. Northam of San Jose, W. H. Shockley of Candelaria, Nev., M. D. Waters of Galt and many other well known sportsmen.

The dogs were run as follows:

#### The Derby.

The start for the grounds on Tuesday morning was delayed until after 10 o'clock by a very heavy shower, and then through a misunderstanding the party drove to the grounds by way of the bridge, about six miles or more out of the direct route. As Mr. Jackson, the chosen judge, had not arrived, J. M. Kilgariff officiated in his absence.

**REX AND MERCURY.**—The first brace, the black pointer Rex, handled by owner, and the English setter Mercury, handled by M. D. Walters, were put down at 1:05 in heavy brush. The heat was an unsatisfactory one. The brush was too high and too dense. Mr. Robinson was lost by the judges several times, and of more importance still, Rex was lame, starting in on three legs. He is naturally a wide-ranging, fast dog, but from being lame and the coddling that naturally follows an injury of the kind—a sprained ankle—he was disinclined to leave his handler for any length of time.

After being down about forty minutes Mercury located a bevy, but they flushed wild, and as it was found to be impossible to work them in the thicket, the dogs were ordered up, and after a drive of a half mile or so were again put down in more open ground. Mercury immediately pointed a covey in low brush, Rex caught wind of the same covey and pointed staunchly. Birds flushed wild and flew into a dense thicket. Shortly after Mercury pointed a single bird, and Walters shot and killed. Both dogs steady to shot and wing. Down nearly two hours. Mercury much the best in pace and range.

**BETSY MARK AND ADELIA.**—The second brace, the English setter bitch Betsy Mark, handled by M. D. Walters, and the

pointer bitch Adelia, handled by Chas. Studarus, were put down in good low chemise and sage brush cover shortly after 8 o'clock. Like the former brace it was an unequal contest as Adelia has a large swelling on her neck, doubtless goitre. Like the other pointer she was disinclined to leave her handler. Betsy Mark showed phenomenal pace and range from the start and kept it up. Betsy soon located a covey which flushed wild, she started to break in but stopped instantly at command. Adelia pointed the same covey just as they flushed. Walters shot to make the birds lie. Moved on a short distance Betsy again pointed staunchly. Adelia when called up refused to back. Adelia then found a single bird and pointed it staunchly. Betsy when called up to back walked all around Adelia and pointed the same bird from the opposite side of the brush. The dogs were taken up for water at 3:53, then put down again immediately. Betsy pointed a single and Adelia backed for an instant and then moved on. Order up at 4:03, Betsy Mark winning the heat.

#### Second Series.

**MERCURY AND BETSY MARK.**—This brace were put down at 4:07 to decide first money. After an hour's hunting Betsy pointed staunchly and Mercury backed. A single bird flushed. A little further on both dogs pointed staunchly a few rods apart. Mercury's bird flushed wild, and when he was called to back did so just as the bird flushed. Moved on, Betsy pointed again and Mercury backed. Ordered up at 5 o'clock. Betsy is the best in pace and range, Mercury the most stylish. Betsy won the heat and first money.

On Wednesday morning a report reached headquarters that the river was rising and the ford dangerous. A party was sent to investigate, and this caused another delay. Shortly after 9 a start was made and the ford crossed without accident. Andrew Jackson, the substitute judge, arrived on Tuesday night and took the place of J. M. Kilgariff during the balance of the trials. The weather was dark and threatening, with occasional showers.

**MERCURY AND ADELIA.**—This brace were put down at 10:50 to decide second money. Mercury was the first to find; the bevy were runners but he roared and pointed again. The birds were flushed by the handlers. Ordered on Adelia pointed two singles in rapid succession. Then both dogs pointed singles. Then both dogs pointed but no birds could be found. After being down nearly one hour they were ordered up and Mercury given the heat and second money. Rex and Adelia divided third without running.

#### SUMMARY.

The Derby, 25 entries, 4 starters, \$5 to nominate, \$15 to start, 50% to first, 30% to second, 20% to third.

A. P. Kerckhoff's lemon and white English setter dog Mercury (Dick Bondhu—Sunlit), beat Crittenden Robinson's pointer dog Rex (Old Black Joe II.—Black Bess).

W. G. Kerckhoff's black, white and tan English setter bitch Betsy Mark (Gath's Mark—Ightfield Sophie), beat J. M. Bassford's liver and white pointer bitch Adelia (Bismarck—Queen's Last).

#### Second Series.

Betsy Mark beat Mercury.

#### Third Series.

Mercury beat Adelia.  
Betsy Mark won first money, \$92.50. Mercury won second money, \$55.50. Rex and Adelia divided third, \$37.

#### The All-Age.

It was thought that the All-Age this year would be the largest in numbers and best in quality ever run in this State, but the miserable weather and the false report about the grounds and birds caused the owners of Glenheigh, Starlight, Sam Weller and other good ones to withhold their entries. The entry was small, but what it lost in number it made up in quality. Six better dogs it would be hard to find. Mr. Bassford withdrew his entry, Tommy Tickler, after the first heat. This action we can only condemn. While the heat was very hotly contested and very close we think the decision just, and Mr. Bassford is old enough in field trial work to take his "medicine" with better grace, even though it be a little bitter.

**LUCINDA AND BETSY MARK.**—This brace, the first in the All-Age, were put down at 12 o'clock in long cover. The former a daughter of Rip Rap, handled by De Motte; the latter a daughter of Gath's Mark, handled by Walters. Betsy located a single almost immediately. Lucinda, when called up to back, refused, ran in ahead of Betsy and failed to point; Betsy perfectly steady. Walters shot and killed. Betsy retrieved tenderly. Betsy soon after pointed and then left. Soon after Lucinda pointed at the same bush, but left it. Shortly after the reporters jumped a bird from the same bush. Betsy next located a covey and roared, but Walters called her off. Ordered on, both dogs pointed, but no birds were found. Betsy then located and drew to a staunch point on three birds; Lucinda backed staunchly. Moved on a few rods, Betsy pointed again. Down a little over one hour. Betsy best in pace, range and point work. Betsy won.

**COUNTLESS NOBLE AND TOMMY TICKLER.**—This brace were in the writer's estimation the best pointer and best English setter ever run in a Californian field trial, and a more brilliant heat could scarcely be imagined. Countess Noble was handled by Walters, Tommy Tickler by De Motte. In range they are about equal. In pace the pointer has shade the best of it. In style I prefer the pointer, but it is a matter of opinion only. Countess is just as stylish a setter as he is a pointer, but somehow his dash and high head, his rigid points and quick action pleased me a little the best and at least one of the judges was of the same opinion. Countess was the most obedient. In point work they were about even. Judge Post's score placed them exactly even on points of merit with three points off Tommy's score for breaking in. This breaking in is disputed by handler, owner and one-half the spectators. Judge Post and the writer declare that the dog certainly started to break in. The other judges were not in sight of the dog.

The pair were put down in low cover but soon worked into cover waist high. The most of the heat was run in low chemise and sage on the sides of low ridges in full view of the spectators. Another thing that caused the spectators to growl was the impression that the pointer got the first point. It was frequently asked, "Why did the judges prolong the heat when the pointer had the best of it from the start?" This impression was a false one; Countess was the first to point. It was in heavy brush and no one but her handler, Judge Post and the two reporters on horseback saw her. Tommy was lost shortly afterward and found by the marshal staunch as a rock on point. His horse nearly ran over him. De Motte flushed the bird and shot. It was thought that he missed, but shortly afterwards Countess drew to point and Tommy backed. De Motte's dead bird was found. The brush was too dense for good work, and at 2:15 the dogs were ordered up and a move was made to better grounds. The grounds used for the balance of the heat cannot be excelled for field trial purposes in the wide world. The ground is covered with low chemise and sage brush, and is just rolling enough to afford a good view of the work done, and there is at least 5,000 acres of the same nature.

At 2:40 the dogs were put down again. Countess made a very wide cast and located a large covey, roared it beautifully and came to point on the brow of a rise. Tommy, called up by handler, winded the covey and pointed an instant before Countess. Birds flushed. Moved on, Tommy pointed and Countess backed. Countess then pointed a single, which flushed wild over the hill. Ordered on, Tommy pointed a single. De Motte fired and killed. Tommy broke

in, but stopped instantly at command. Cast off again, Tommy pointed a single and De Motte shot and dropped the bird, but Tommy could not find it. Countess next pointed a small bevy, and Walters shot and killed. Countess retrieved quickly and well. Ordered up at 3:25. Down 1h. 25m. Countess won.

**SMOKY AND CLAY.**—The former a large, heavy-boned English setter, handled by Walters, the latter a stylish pointer, handled by Studarus, were put down at 11:30 A. M. Thursday in sage brush and low cover. Clay found very quickly, and a bunch of three or four were flushed by Studarus, who shot and killed two. Clay was steady to shot and retrieved well. Smoky made a good cast and pointed a covey staunchly; Clay winded same covey and also pointed staunchly. Smoky next drew to a point, but broke it and went to roading; no birds found. Moved on to the scattered covey and Smoky drew to a point. Clay when called to back ran in ahead. Smoky then roared again and made two points in rapid succession. Walters shot and killed. Smoky when ordered to retrieve pointed the winged bird and pinched it a bit when he retrieved it. When he was pointing Clay again refused to back. Clay next pointed a single bird and Smoky two. Ordered up at 12:35, Smoky winning. Smoky is the widest ranger and is stylish in roading, but Clay is the most stylish on point.

#### Second Series.

**COUNTLESS NOBLE AND SMOKY.**—This brace were put down at 3:20. Countess pointed a single after a long hunt, then Smoky pointed a single and Countess backed. Ordered up at 4, just in time to avoid another sharp shower. Heat undecided. The same grounds were used on Friday as on Thursday, but the cold and rain had apparently driven the birds to the bush, as they were not found very plentiful. This brace were put down again about noon in low cover, Countess winning in a walk. She excels in quartering, pace range and style. She pointed three singles and a covey to Smoky's one single, and won first money.

**SMOKY AND BETSY MARK.**—This brace were put down after lunch to decide second money. It was thought that Betsy had a cinch, and she is unquestionably the better of the two. But the unsteadiness that made itself manifest in the Derby completely took possession of the bitch. She pointed four singles and a covey to Smoky's six singles, and excelled in pace and range, but spoiled her chances by breaking in three times. Smoky won the heat and second money.

**BETSY MARK AND CLAY.** were put down at 3:30. Clay first pointed a single and then a covey after roading very prettily. They were ordered up at 3:48 and put down again in new country at 4:05. Clay soon pointed another single, but birds were still very scarce. Betsy is the best in pace and range, but Clay is more stylish and shows an excellent nose. Ordered up at 4:40, Clay winning the heat and third money.

#### SUMMARY.

All-Age Stake, \$20 entrance, 50% to first, 30% to second, 20% to third. Six starters.

W. G. Kerckhoff's black, white and tan English setter bitch Betsy Mark (Gath's Mark—Ightfield Sophie) beat William Schreiber's liver and white pointer bitch Lucinda (Rip Rap—Sal).

H. T. Payne's lemon and white English setter bitch Countess Noble (Stanford—Lilly C.) beat J. M. Bassford's lemon and white pointer dog Tommy Tickler (Bismarck—Beulah).

K. E. Myers's black and white English setter dog Smoky (Tennessee Bob—Hoosier Belle) beat Chas. Studarus's lemon and white pointer dog Clay (Berge's Tom—Queen Croxteth).

#### Final Series.

Countess Noble beat Betsy Mark.

Smoky beat Betsy Mark.

Clay beat Betsy's Mark.

First, Countess Noble; second, Smoky; third, Clay.

NAMQUOIT.

#### W. K. C. Show.

FOR the convenience of intending exhibitors at the W. K. C. show, we have a number of premium lists and entry blanks at their disposal, and we shall be happy to afford any help or instruction to those who desire it in making their entries. There is always a little grumble among the "regulars" about the entry fee of \$5, but it must be remembered that the W. K. C., while it indulges in the largest premium list, also assumes a much larger financial risk than any other kennel club. Something like \$15,000 is at stake before an entry is received. The rent of the Garden alone is \$6,000, and their advertising bill last year was \$2,600. For these and other good reasons we hope the exhibitors will see that a good entry is forthcoming.

The American Spaniel Club offers the following special prizes, open to members of the club only:

**Cumber Spaniels.**—James L. Little offers \$5 for the best kennel of four or more, and the same for best bitch and dog.  
**Field Spaniels.**—Newton Abbott cup (donated by E. M. Oldham), value \$50, for best bitch; to be won four times.  
**Geo. R. Preston**, \$5 for best pup, dog or bitch. The Oborg Camera Co. (A. C. Wilmerding, proprietor), one Tom Thumb camera, value \$10, for best other than black. A. E. Foster, camera, value \$6, for best black dog; donor not to compete.

**Cocker Spaniels.**—Henry Brooks, \$5 each for best American bred black dog and bitch pup; \$5 for best American bred pup, dog or bitch, any other color. C. G. Browning, gold-mounted fountain pen, value \$6, for best headed cocker. Swiss Mountain Kennels, \$10 for the best trio of cockers bred by exhibitor; donor not to compete. C. T. Sackett, \$5 for best black cocker in open classes, and the same for best other color cocker in open classes. Charles M. Nelles, \$5 for best dog or bitch, other than black, never having previously won a first prize. William West, \$10 for best bitch. The Blair Camera Co. (New York), one Bullseye camera, value \$8, for the best dog, any color. Dr. F. W. Kitchel, one silver-mounted pipe for the best liver and white dog or bitch.

E. M. Oldham offers \$5 for the best moving spaniel of any breed. The club also donates a nice list of cash specials to the Detroit, Chicago and Boston shows.

Irish water spaniels will be divided by sex. A field trial class will be made for Gordon setters with prizes of \$15, \$10 and \$5. "A Friend" offers \$15 for best American bred wire-hair fox-terrier in open, puppy or novice classes.

#### White Wonder.

Editor Forest and Stream:

In your notes of White Wonder on Dec. 30, 1893, you say: "White Wonder was never shown here after it was proved he was deaf at Boston in 1890." Will you kindly correct that statement, as it was proved he was not deaf at Boston in 1890 and won first in the open class.

[We were under the impression that the dog did not compete for the special against Attraction after we placed him first in open class on account of the decision that the dog was deaf. If a dog cannot possibly hear a whistle close to his ear he is deaf according to the rule and this was the case with White Wonder at Boston in 1890.]

#### Fox-Terrier Stakes.

Editor Forest and Stream:

In the premium list of the Westminster Kennel Club just sent out, under the head of specials and stakes offered by the American Fox-Terrier Club, an error is made in publishing the fact that the second division of the seventh Grand Produce Stake and the Yankee Stake of 1893 will be judged. Both of these stakes were judged at Providence last fall, and were included in the above list through a printer's error.

THO'S SMITH, Sec'y A. F.-T. Club.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

In a Chicago daily paper, under date of Jan. 18, I note the following dispatch from Washington, D. C.: "W. I. Buchanan, of Iowa, was to-day nominated as Minister to the Argentine Republic. Mr. Buchanan is well known in Chicago through his connection with the World's Fair. He is one of the original Grover Cleveland Democrats. A good many influences united to secure him the Argentine mission, which he sought. It is the most desirable of all the South American posts."

I am sure that every one will rejoice at Mr. Buchanan's good fortune and success. As chief of the Department of Agriculture, he brought together exhibits from nearly every part of the world, and presented a magnificent department for the instruction of the people. It is true that he made a failure of the dog show, but that comparatively was but of secondary importance and but one detail of thousands. I have a mild suspicion that if Mr. Buchanan finds that there is not a single dog in the Argentine Republic, he will not grieve thereat. While he was the subject of a great deal of frank criticism in connection with the dog show, when criticism was in order, I have always felt that his opinions of dogmen would be well worth reading.

Stud Fees.

The reduction in the stud fee of Lad of Rush will be hailed with satisfaction by pointer breeders. In this connection Mr. J. L. Adams, his owner, in a private letter writes me: "I have decided to put him at \$50, to be in the reach of all. I have done very well with him. He is a great sire as well as a great dog, and the public will find that out next fall. There are now five of his pups, out of my Devonshire Jill, 10 months old the 3d of this month, now in training. Horace Smith of North Carolina has one belonging to Mr. D. G. Rowland, of this city. C. H. Smith of South Carolina has two belonging to me, and Blankenbaker has two belonging to me. All five are good ones and will be heard from later on. All the handlers, or at least Smith of North Carolina and Blankenbaker speak very highly of the ones they have. I have had no report from Smith of South Carolina. He has not had his but a few days."

Pointer men can justly feel a pride in the present good standing and records of the pointer, and should feel encouraged to added effort, particularly when the opportunities for breeding are available at such reasonable rates.

Prizes at Field Trials.

There is a matter in regard to the prize money which is put up each year by the different field trial clubs, which I think is worthy of discussion, and that is the largeness of such sums. Each club tries to give the largest sum it can possibly raise.

For sport and for an incentive to trainers to compete, such large sums are not really necessary. In any event, the club which hangs up large sums of money for competition sooner or later gets embarrassed financially. The Central Club, I believe, lost an important sum of money every year.

The Eastern Club at one time had quite a large sum in its treasury, and now has a respectable balance, but small compared to what it once was.

The United States has a good balance, but a real unfortunate trial would come near exhausting it. It is harmful to the sport when a club quits permanently in consequence of being a loser. It were better to go on year after year on a sound basis than to give one or two trials and quit losers.

The money won is but a small part of the value received at a field trial. Dogs make reputations and are a source of revenue to the owner, to say nothing of the honor of the winning. Bitches which have made a reputation by winning are more valuable sometimes in the way of a revenue than the stud dogs.

Moreover, when there are so many field trials and the patronage divided up a good deal, each club assumes a greater risk in offering large sums. There is nothing inherent in it as a sport which requires such large prizes. Unlike nearly every other sport which is displayed in public competition, there are no gate receipts. All depends on the number of entries. Taking into consideration the history of field trial events in this country and the deficits which several clubs have experienced, it seems to me that all have been trying to do more than they safely could. Again, it is necessary to give so much money in prizes to induce owners and handlers to come forward and make reputations for themselves and their dogs, all of which is so much capital?

Heavy Mastiffs.

Editor Forest and Stream:

In your last issue Mr. J. L. Winchell writes a very excellent article on "Heavy Mastiffs," and the FOREST AND STREAM comments slightly on the same.

The fact that mastiffs are again forging to the front is certainly encouraging to the breeders who have hung on to the grand old breed. I have been confident for several years such would be the case.

The real value of a mastiff is not appreciated until one is owned. I admit, on the bench the more showy St. Bernard, with his gay color and brilliant coat, overshadows the mastiff. But when a dog is wished for—a general all-round companion, yard and house dog; the mastiff, of all large dogs is king.

A St. Bernard washed, groomed and in good coat, as seen at a show, is indeed a pretty sight, but take one to your home, give him his liberty in wet weather and dry, in hot and cold climates, and see how much he resembles the beauty you saw at the show, unless indeed you can keep a groom for him alone.

A mastiff, owing to his short coat, is much the easier to handle, in fact, a roll on the grass is all he needs to keep his coat in shape, and he will generally take care of himself.

Of course the sensational prices paid a few years ago for St. Bernards was bound to set breeders for revenue crazy, and St. Bernards became the rage. And another reason why mastiffs were given up in the East (Note—I will not admit such to be the case in the West, for where in the West in any years did you see as good a display of mastiffs as at Chicago in 1892 and 1893?) is the fact that a good mastiff is perhaps as hard to breed as any animal I know of, and many, after trying and failing, gave up and dropped by the wayside. If you breed a poor mastiff you have nothing but a yellow cur. A St. Bernard, even not up to show form, and though lacking in muzzle and character, owing to his showy color will often pass with a novice, whereas a mastiff without type, muzzle, skull and all that goes to make a mastiff, is a cur in appearance.

What I started out to say I must now bring forward; Mr. Winchell lays great stress on size. I would sound a note of warning; size is one point only and really about the last to be considered, if we are to sacrifice anything let it be size. Indeed I have made up my mind after years of study on the subject, the perfect mastiff should not weigh above 150 to 160 lbs. and the bitch 125. In my own kennel I value some 100 lbs. to 110 lbs. mastiffs more than I do some weighing 150 to 175 lbs., equally as well bred, but not so trim or symmetrical as the smaller bitches. In the past we all have striven for size and what have been the results? Ruined legs, cow-hocked, snipy muzzles and awkward ungainly beasts.

In this second wind which mastiffs are gaining, let us lose sight of size and breed good mastiffs with soundness and type. I well remember what "Billy" Graham once wrote

me years ago. I gave him an order for a good mastiff to be purchased in England, but my one instruction was he should not weigh less than 175 lbs., my one idea was size. Mr. Graham replied "he could find no good mastiffs that heavy, but at 150 lbs. could send a typical and sound mastiff." This set me to thinking, and I have since learned there is much besides size to a mastiff.

Mr. Winchell mentions the names of his dogs and uses the names of them in his article, which I believe gives me license to also refer to them as an illustration, otherwise I should mention no particular dogs. We want type and we want soundness. We want to breed dogs with type as found in the head of Black Prince, but we do not want his short body or bad hindlegs. In Boss's Princess is the body and soundness without the type as presented in the head. As I have pointed out we must have both. What is a head without body, and what is a body without a head? The even, well-balanced mastiff is what we want, and not the typeless giants. In breeding for a while, should we not let size go?

I believe a bitch of the description of Boss's Princess, no matter what her size, should always be beaten by smaller typical bitches. In support of my theory follow mastiff literature backward for twenty to forty years and he will find the majority of all good mastiffs were not giants. Take, for example the mastiff of this age—Beaufort. He easily stands at the head, has type, has soundness, has all that goes to make a dog, but he is not large. Again, I sound the bugle, beware of that false god—size.

In conclusion, I wish to say to Mr. Winchell I wish him to understand this is no attack on his dogs; I refer to the mastiffs as a breed. I may say also that I have seen quite a number of Black Prince's pups, and in no case has he transmitted his bad hindlegs or short body. For this reason and possessing type he will be of great value as a breeder.

CHAS. E. BUNN.

PEORIA, ILL.

New Orleans Dog Show.

THE dog and poultry show opened here under very favorable auspices on Jan. 23. The building is well adapted for the purpose, being roomy and well ventilated. The weather is bright, warm and clear, and the attendance is quite equal to the anticipation of the club. While the entries are not so numerous as expected, there are some good specimens in almost all classes, in fact notably so in St. Bernards, the showing made by the Argyle Kennels being most excellent, and a great feature of the show; their benches being always surrounded by a large number of admirers. In fox-terriers, pugs, pointers and setters many good specimens have also their admirers.

Much disappointment is felt at the absence of Ben Lewis, who had written he was coming with a large string, and from whom no explanation of his absence has been received. Many dogs he had applied for have been absent on account of being promised to him. This is much to be regretted on account of the managers' having tried so hard to make their show a success—they feel the disappointment keenly. However, with the present fine weather continued, and the great interest manifested in the show by the best class of citizens, little doubt is felt of its proving short of a success financially.

JOHN DAVIDSON.

The show was disinfected with Sanitas, and local benching was used. The papers, especially the *Times-Democrat*, devoted plenty of space to the show, and the attendance throughout seems to have been good. There were 124 entries in the dog department, and about 500 in that devoted to poultry. Mr. John Davidson judged all classes, and the work was not a difficult one for this veteran in the business.

LIST OF AWARDS.

**MASTIFFS**—Dogs: 1st, withheld; 2d, J. H. Winship's Stanley. Bitches: 1st, withheld; 2d, J. L. O'Connor's Beauty. Very high com., H. J. Cassard's San Costanza.

**ST. BERNARDS**—ROUGH-COATED—CHALLENGE—1st, C. A. Pratt's Sir Bedivere. OPEN—Dogs: 1st, C. A. Pratt's Prince George; 2d, L. I. Doize's Lord Malcolm. Bitches: 1st, C. A. Pratt's Rustic Beauty. Very high com., Mrs. A. S. Wheeler's Ruby II. Com., H. J. Weinmann's Sassy. Puppies: 1st, withheld; 2d, C. P. Ellis's Grover Cleveland. Very high com., L. P. Gilbert's Paris. High com., C. E. Kells, Jr.'s Gerould.

**ST. BERNARDS**—SMOOTH-COATED—Dogs: 1st, C. A. Pratt's Alton II. Very high com., L. I. Doize's Don L. Bitches: 1st, C. A. Pratt's Belle; 2d, L. I. Doize's Belle.

**DEERHOUNDS**—Prize withheld.

**GREYHOUNDS**—Bitches: 1st, R. D. Williams's Maid Marion; 2d, and high com., Chesterford Park Kennels' Chesterford Alice and Chesterford Fredica.

**FOXHOUNDS**—CHALLENGE—1st, R. D. Williams's Commodore. OPEN—Dogs: 1st, withheld; 2d, R. D. Williams's The Admiral. Bitches: 1st, R. D. Williams's La Joya.

**POINTERS**—Dogs: 1st, Eldridge Kennels' Rush of Lad; 2d, F. F. Myles's Roswald. Very high com., J. A. McIlhenny's Tomo. High com., Mrs. G. D. Fisher's Fisher's Nero. Bitches: 1st, Leinster Kennels' Bess Graphic; 2d, G. D. Fisher's Fanny L. Very high com., L. J. Meader's Lady Blanc. Puppies: Very high com., F. J. Wilz's Fritz.

**ENGLISH SETTERS**—Dogs: 1st, F. F. Myles's Modoc; 2d, B. A. Michel's Ucaas. Very high com., Chesterford Park Kennels' Chesterford Surprise. High com., G. H. Bernou's Spokane and F. F. Myles's Jesse James. Bitches: 1st, J. W. Barker's Belle McLean; 2d, Chesterford Park Kennels' Chesterford Jennie.

**IRISH SETTERS**—Dogs: 1st, W. L. Washington's Kildare Beverly. High com., J. J. D'Aquin's Gumbo. Bitches: 1st, W. H. Eakins's Bessie Finmore. Puppies: 1st, W. H. Eakins's Bessie Finmore.

**GORDON SETTERS**—Dogs: 1st, Dwight Kennels' Heather Lad. Bitches: 1st, Dwight Kennels' Dwight Effie. Puppies: 1st, Dwight Kennels' Dwight Effie.

**COCKER SPANIELS**—CHALLENGE—1st, G. Bell's champion I Say. OPEN—Dogs: 1st, G. Bell's Troubled. Very high com., Larry Wilts' Don Lee. High com., J. A. McIlhenny's Prince Mac. Bitches: 1st and 2d, G. Bell's Realization and Patti. High com., J. A. McIlhenny's Princess Mac. Puppies: 1st and 2d, G. Bell's Troubled and Queen West. Very high com., Miss Ada Wilts' Sophia Harrison.

**COLLIES**—Dogs: 1st, Mrs. David Morgan's Fordhook Comus; 2d, Chesterford Park Kennels' Chesterford Bruce. Bitches: 1st, Chesterford Park Kennels' Chesterford Bess. Puppies: 1st, Chesterford Park Kennels' Chesterford Bruce; 2d, L. N. Schoenfeld's Bonaparte.

**BULLDOGS**—Dogs: 1st, P. E. Mary's Bully.

**BULL-TERRIERS**—CHALLENGE—1st, Luzboro Kennels' Crisp.

**BEAGLES**—Dogs: 1st, Middleton Kennels' Adam. Bitches: 1st, Middleton Kennels' Snow.

**FOX-TERRIERS**—Dogs: 1st, R. E. Fishburn's Glendon Spark; 2d and very high com., Leinster Kennels' Dixie Tartar, Jr., and Shelby New Forest. High com., C. J. Michler's Regent Box. Com., W. H. Collins's Hotfoot Dodo and C. R. Kennedy's Regent Boy. Bitches: 1st and very high com., W. H. Collins's Hotfoot Flurry and Hotfoot Viress. 2d, R. Rogers's Rosalind. High com., J. Chittenden's Blemton Queen. Com., Leinster Kennels' Wilton Leah. Puppies: 1st and 2d, E. G. Olden's Infanta Stipend and Driftwood Vinnie. Very high com., W. H. Collins's Hotfoot Daisy. High com., Leinster Kennels' Vi. Com., W. H. Collins's Hotfoot Dodo and Hotfoot Gem.

**IRISH AND SCOTCH TERRIERS**—Dogs: 1st, Chesterford Park Kennels' The Colored Preacher.

**BLACK AND TAN TERRIERS**—1st, Chesterford Park Kennels' Rochelle Oolah.

**PUGS**—CHALLENGE—1st, A. H. Parker's Cassia. OPEN—Dogs: 1st, German Howard Pug Kennels' Dixie Drummer; 2d, A. E. Shaw's Dixie Penrice. Bitches: 1st, Mrs. C. J. Michler's Lady Treasure; 2d, German Howard Pug Kennels' Sateen II. Very high com., T. W. Castleman's Coquina. High com., C. J. Michler's Baby Ruth. Puppies: 1st, A. Alouzo's Bon Mot; 2d, German Howard Pug Kennels' Young Penrice.

**BLENHEIM AND KING CHARLES SPANIELS**—1st, J. A. Wilts' Dottie.

**ITALIAN GREYHOUNDS**—F. H. Hoy's Idiom.

SPECIALS.

For largest number of dogs in care of one handler, first withheld; second, T. A. Howard; third, E. B. Elliott.

DOG CHAT.

Detroit Dog Show.

Exhibitors will have to be careful this spring. The premium lists for the early shows are coming out pretty well together and well ahead of time. FOREST AND STREAM, however, will post the time for entries closing, so that no one need be left in the cold. The City of St. Straits Kennel Club's premium list for their second annual show is the next to command attention. It is an easy one to review. The prizes are liberal enough in the more popular breeds, though they fall off in the small terrier classes and some of the other breeds should have had the sexes divided. Mastiffs, St. Bernards, Great Danes, pointers and setters (with the exception of Gordon setters) and collies, get \$15 in each challenge class and \$15, \$10 and \$5 in open classes. The first three breeds mentioned also have puppy classes, with \$10 and \$5 as prizes, with sexes competing together. Other breeds get \$10 in challenge classes and \$10 and \$5 in open, and we are pleased to find that no money is wasted in puppy prizes. Field and cocker spaniels and foxterriers are the only breeds where challenge classes are divided, and in poodles, Irish water spaniels, bloodhounds, Dandie, Skye, Bedlington and Scotch terriers sexes compete together in open classes, and do not aspire to the dignity of challenge classes. Mastiffs and St. Bernards, bloodhounds, Russian wolfhounds, Great Danes, pointers, English setters and collies get kennel prizes of \$15; the others must be content with \$10. The spaniel specials are good and chiefly cash. The Mastiff Club has also done well by the show. Fox-terriers get a silver trophy from Mr. G. Bell and also a \$100 cup from H. Walker & Sons. Handler prizes, which seem to be a necessary adjunct to almost every show nowadays, are \$25 and \$15 in value, for having largest and second largest number of dogs respectively. The judges are: John Davidson, Monroe, Mich., for hounds, grey hounds, pointers, setters, dachshunds and beagles; James Mortimer, New York, mastiffs, St. Bernards, great Danes, collies, deerhounds, bloodhounds, fox terriers and Irish terrier; Chas. H. Mason, Philadelphia, wolf hounds, spaniels, poodles, all terriers (except fox and Irish), King Charles spaniels, Italian greyhounds, bull dogs, pugs and miscellaneous. Mr. Samuel Brenton will be the veterinarian. The bench show committee is composed of George M. Hendrie, chairman; Thos. Blake, Louis Hilsendegen, Guy D. Welton, C. A. Parkinson, W. Howie Muir, Thos. C. Quellette and Chas. Thurman.

which is an earnest that the dog men will be well looked after. Entries close Feb. 21, the second day of New York show, and must be made to Guy D. Welton, 6S West Woodbridge street, Detroit, Mich. The fee is \$3. An important fact that Canadian exhibitors must remember is that all dogs coming from Canada must be consigned to E. B. Welton, Detroit, for bonding through customs. The American, National and United States Express Companies will carry dogs under the usual conditions, and exhibitors should remember the show begins on Wednesday morning and closes the Saturday night following. Enclosed on a separate leaf are a number of cash specials for different breeds that will probably be greatly increased before the catalogue is printed. In pointers, English and Irish setters, the club gives a \$10 special for best four with field trial records. We should suggest that this be altered for dogs that have run at public field trials.

CHAS. E. BUNN.

PEORIA, ILL.

New Orleans Dog Show.

THE dog and poultry show opened here under very favorable auspices on Jan. 23. The building is well adapted for the purpose, being roomy and well ventilated. The weather is bright, warm and clear, and the attendance is quite equal to the anticipation of the club. While the entries are not so numerous as expected, there are some good specimens in almost all classes, in fact notably so in St. Bernards, the showing made by the Argyle Kennels being most excellent, and a great feature of the show; their benches being always surrounded by a large number of admirers. In fox-terriers, pugs, pointers and setters many good specimens have also their admirers.

Much disappointment is felt at the absence of Ben Lewis, who had written he was coming with a large string, and from whom no explanation of his absence has been received. Many dogs he had applied for have been absent on account of being promised to him. This is much to be regretted on account of the managers' having tried so hard to make their show a success—they feel the disappointment keenly. However, with the present fine weather continued, and the great interest manifested in the show by the best class of citizens, little doubt is felt of its proving short of a success financially.

There were 124 entries in the dog department, and about 500 in that devoted to poultry. Mr. John Davidson judged all classes, and the work was not a difficult one for this veteran in the business.

The Nicholls—Mills Suit.

The *Toronto Mail* of Jan. 19 reported the recently decided Nicholls—Mills case as follows:

"A decision has been rendered by Judge Lynch in the case of H. A. Nicholls of Chicago and T. Wesley Mills, of Montreal, which is the close of a very peculiar case. About a year ago Dr. Mills, who was then president of the Canadian Kennel Club, owned a bitch of the great Dane breed named Minerva's Fawn and Mr. H. A. Nicholls of Chicago had a dog of the same breed named Melac, and Dr. Mills, desirous of obtaining the services of the dog, wrote to Mr. Nicholls on the matter. The Chicago gentleman replied that the services of the dog would cost \$50. Dr. Mills replied that that amount was more than he could afford to pay, to which Mr. Nicholls replied that, in the interest of improving the breed of dogs in Canada, he would give the services of Melac for a choice of two pups out of Fawn's litter. The dog was sent to Montreal, and in due course of time Fawn gave birth to a litter of thirteen. Dr. Mills gave no intimation of this fact to Mr. Nicholls, and when the latter gentleman wrote repeatedly for information, Dr. Mills ignored his letters and made no reply. Mr. Nicholls, feeling that his courtesy had been ill-requited, sent an agent to Montreal to investigate the case. He made a demand upon Dr. Mills for the choice of two pups, and upon his being refused placed the matter in the hands of Mr. Greenshields, the well known lawyer. The case was ably argued before Judge Lynch. It appears that Dr. Mills sold all the litter except one bitch and two dogs, the former worth \$40 each and the latter worth \$50 each, and the judge decided that Dr. Mills should give Mr. Nicholls the bitch and one of the dogs, and if the defendant neglects to deliver the bitch and one of the dogs he shall pay to the prosecutor \$90; or if he keeps the bitch and delivers one of the dogs he shall only pay \$40. The conduct of Mr. Mills in this peculiar transaction has elicited some pretty sharp criticism from members of the Kennel Club."

We are in receipt of a letter from Dr. Mills, in which he writes: "You may state on my responsibility that I have directed my legal adviser to take an action for damages for libel to the extent of \$10,000 for statements made by the *Toronto Mail* in a case in which I was concerned in court. It is being circulated, and this may tend to neutralize very damaging statements. The article in the *Mail* is a tissue of falsehoods, published, I believe, at the instigation of some ill-disposed person."

Field Trial Classes.

Instead of confining the Field Trial classes which were instituted by the Westminster K. C. to winners of field trial records, would it not be better for some of our best shows to so word the conditions for competing in this class that any dog having acknowledged field merit and training may stand a chance of winning. This may be done by field trial judges awarding certificates of merit to dogs which, though they fail to get into the money, show undoubted merit in their work. In dog breeding and in many other conditions of life the rule of the greatest good to the greatest number should obtain. This idea of "working" classes first originated with the English Kennel Club, and such certificates will be given for the first time at the coming Kennel Club and Pointer Club trials to entitle them to compete in the proposed "working" classes at the Kennel Club shows. If these prizes are made valuable, pointer breeders who breed for show honors only will be induced to give greater attention to field qualities, and we shall not see so many pointers and setters, whose only claim to admiration lies in the fact that they are handsome, or as "C. H. B." in English *Kennel Gazette* puts it in reviewing the pointers of the year in England, "Sportsmen would take more interest in dogs, which they were satisfied knew their business, and we should see fewer handsome pointers degraded into mere prize-winning machines." This remark does not apply perhaps so forcibly to pointers in this country, as many of our best are trained, but to the setters it is applicable. We make the suggestion that at the field trials this month the judges be instructed to award such certificates, and that the Mascoutah Kennel Club so

alter their field trial class conditions that any good-looking certified working pointer or setter may have a chance to win in its particular breed class, and if a field trial winner "gets there" at the finish all the better. The Lorillard medals were very good in their way, but similar prizes given at dog shows would have a more far-reaching effect.

The entry fee for the Mascoutah Kennel Club's show is \$4, and entries close the day after New York show. Mr. John Read will superintend.

In his remarks about the New Orleans show, Mr. Davidson alludes to the disappointment caused by Ben Lewis's failure to bring down a string of dogs he had promised. In justice to Mr. Lewis, we may say that he worked hard to get a good string together and had nearly seventy dogs promised. The sudden death of his brother-in-law just before the Saratoga show, however, upset his arrangements. By the way, Ben Lewis, who has "crated" more show dogs than probably any man in America, has generally succeeded in making friends with the baggage masters, and so getting from show to show without much expense. His Saratoga trip, however, nipped him hard, the railroad authorities referring him to the express companies, and they started him off with an express bill of \$56, which, with other personal expenses at the show, would leave little on the profit side of the ledger for that trip. This arrangement between the railroad and express companies, we are afraid, is going to hurt the entries at shows this spring, and unless some of our most influential exhibitors, such as Col. Hilton, August Belmont, Thomas Terry and others, take up the matter, we fear little can be done by the A. K. C. to lessen the burden. The express companies have a good thing, and they know it.

#### Pugs.

In the review of this breed in the *Kennel Gazette* (Eng.) "Verites" remarks that the past year will be remarkable for the number of good pugs which have been sent to this country from England. These include Dong, that died on the way over, Drummer, (one of their best stud dogs) Finsbury Dude, Haughty Madge, Royal Dusky, etc. While this writer allows that there is a perceptible improvement in symmetry, style and color, and that English pugs are being reduced in size, he is equally certain that breeders are losing a most important characteristic of the breed, the square, deep muzzle, and advises them to give this point their most careful attention. H. W. L.

Mr. Chas. S. Hanks has heard from Fort Custer, where it will be remembered he had loaned his Russian wolfhounds Groubian and others to the regiment quartered there. One of the bitches has whelped and the other missed. Groubian they took out hunting, but he was too fat and out of condition, so got footsore very quickly. Lieut. Hughes, in a letter to Mr. Hanks says he has no doubt of Groubian's pluck, as he has already proved it by several rough and tumble fights with the dogs at the fort, and thinks when conditioned, he will be able to run down a coyote. They will try for wolves later on.

The annual meeting of the American Spaniel Club will be held at Madison Square Gardens, February 21, 1894, at 4 P. M., the second day of the show. The annual dinner will also take place during the show, and this is an event that dogmen, whether spaniel cranks or otherwise, would do well not to miss. The fun runs fast and furious and there is no formality.

#### Bull Bitch Haphazard.

Mr. John Coles, of Linden, Mass., who purchased the bull bitch Haphazard, received her from England last Saturday. That this bitch will be an acquisition one may judge from her list of winnings, which are as follows: In 1892—Cirencester, reserve and special for best bitch, never before shown; Gloucester, third in open class, first novice and special for best novice dog or bitch; Birmingham, first in open class and special. In 1893—Bath, first in open class and special for best bitch; Manchester, first in open class; Preston, first in open class and special for best bitch; Bulldog Club show, second in open class; Bristol, first in open class and special for best bitch; Cirencester, second in open class; bulldog show (Aquarium), second in winners' class; Birmingham, first in winners' class and first in open class. These are the only times she has been shown. With the Woodlawn Kennels' success in raising puppies we imagine that the prospects for this breed's increasing popularity are much brighter.

#### Bloodhounds.

At the Newark show Dr. Lougest, of the Mount Vernon Kennels, Franklin, Mass., as we stated at the time, told us that he intended giving up St. Bernards and devoting his attention mainly to mastiffs and bloodhounds, and was after some hounds in England. Now we learn that he has just completed the purchase of three—Alchemist (19,751), McCom and Kaween (20,205). He expects them to arrive from England in about three weeks. They are well known on the English show bench and are said to be thoroughly trained to hunt the clean boot. Alchemist is the winner of twenty firsts and challenge prizes at all the leading shows, and is the sire of 108 puppies out of eight bitches, including the prize winners Norfolk Matchless, Thanma, etc. He was formerly owned by Dr. Lougest and now comes back to him. The *Kennel Gazette*, in speaking of him at the Birmingham dog show of 1887, says, "Alchemist is one of the biggest and most muscular hounds I have ever seen. His body is simply perfect, good sloping shoulders, immense wrinkle, plenty of bone, good eye and leather; he has the largest ears of any bloodhound living." If these hounds should arrive safely and in time the public will see them at the New York and Boston shows, after which Alchemist will not again appear in public but will be reserved for stud purposes.

#### Manitoba Field Trials Club.

The annual meeting of the Manitoba Field Trials Club, held in the Manitoba Hotel, Winnipeg, on Monday, Jan. 15, was received too late for publication last week. There was a good attendance present and an enthusiastic meeting was the result. After the usual routine business had been disposed of these officers were elected for the ensuing year: Patron, C. C. Chipman, Esq., Commissioner of the Hon. Hudson's Bay Co., Winnipeg; President, F. G. Simpson, Winnipeg; First Vice-President, John Woolton, Manitou; Second Vice-President, D. M. Telford, Winnipeg; Secretary-Treasurer, R. J. Gallagher, Winnipeg; Managing Committee—W. F. Ellis, Manitou; F. W. Scott, J. H. Rose, Dr. Dalgleish, Winnipeg; R. Adamson, Virdon; Auditors—T. L. Peters, Alex. Clarke, Winnipeg. It was decided to hold the next trials of this club at Morris, Man., on Wednesday, Sept. 5. The selection of a judge, the arranging of prizes, stakes and other business in connection with the holding of the trials, were left in the hands of the managing committee and will be made known at a later date. The outlook is very promising, as the officers elected by the club are all active workers and take great interest in everything pertaining to canine matters. There is every reason to believe that this will be by far the most successful season in the history of the club.

#### Special Car for Western Shows.

Ben Lewis and others were talking at Saratoga of chartering a special car for the circuit of Western shows, and in view of the recent move on the part of the railroad and express companies, this would seem to be almost necessary. By this means Mr. Lewis and others could land their dogs in Phila-

delphia in good shape from the St. Louis show. Unless something of this sort is arranged it will be almost impossible to hold the dogs in good condition for so many shows. Having a special car, dogs can be exercised and properly attended to while on the journey. Arrange the boxes along each side of the car, leaving a good wide alleyway down the middle, covered thickly with sawdust, and the dogs could travel to San Francisco without discomfort if the proper man looked after them. In 1886 we took 65 dogs in this way to Cincinnati, the car being provided through General Shattuck's influence, and the journey was made without the least discomfort, the dogs being fed and watered regularly and properly exercised. We should think it would be to the interest of these Western clubs to unite in the expense of such a car, the clubs pay half and the handlers and owners the balance. It is as much to the club's interest as the exhibitor's. Many exhibitors in the East would send to these shows under this arrangement who would not trust their dogs to the express companies so far West.

The Boston Terrier Club will give to the classes at the W. K. C. and New England Kennel Club shows \$40, to be offered in four prizes of \$10 each for best dog and bitch and best dog or bitch bred and owned by exhibitor, and best kennel. The W. K. C. competition is open, that at Boston is confined to the Boston Terrier Club. The new officers are: President, R. J. Clark; Vice-President, Arthur Mulvey; Secretary, Dr. H. P. Rogers; Treasurer, W. C. Hook. The above-named, with Dwight Baldwin, W. H. Chalm and D. J. Colburn, form the executive committee. Mr. Chas. I. Nesmith, of Reading, has been elected to membership.

Dogmen are often amused at the gush of the average daily reporter when assigned to do a dog show, but the reporter of the *Times Democrat* of New Orleans seems to have been imbued with the right sentiment, when he wrote the following in his description of the show just held in that city: "Old dogs, in this ever-moving world there is a big place for you all, and even the forsaken yellow cur, adrift upon the cold city streets has some friend, some hand that would give it sustenance if it could. Your love and faithfulness has made many a bright spot in a life's history, and, who knows, maybe there's something for you in the other world. As an old man once said: 'Hereafter would be kinder lonesome without dogs.'"

We are rather surprised that Mr. Hanks' letter, asking some of our Russian wolfhound breeders to discuss the much vexed question of type in those hounds, has brought forth so little. It is certainly true that this subject should be settled. There is some difference in the type of these dogs, and we do not think that breeders should lose sight of that distinctive and peculiar appearance that most of the dogs imported direct from the Russian kennels seem to possess, in the striving to breed merely for greyhound make and shape.

We are always glad to hear from Mr. W. H. Child, and this time more than ever pleased to find that our "par" regarding his selling off his dogs is not entirely true. He sold his beagles only. "I hope the time is far distant when I do not own a dog. I still own an excellent Irish setter bitch, and have a promising cocker that I am very anxious to try on game." We believe Mr. Child has purchased some beagles from Mr. Wixom, and he hopes before Nov. 1 to have a "covey" of these merry little hounds. His many friends will regret to hear that he has now been laid up two and one-half years this month, and is still only able to sit up a few minutes each day. If good wishes brought back good health Mr. Child would soon be among us again.

Mr. Chapman speaks of a daughter of his charming little beagle Butterfly, by Fitzhugh Lee, 8 months old, that will come out at the New York show, and she must be good if as he says, "she can beat her mammy now."

#### Finglas Changes Hands.

Mr. W. L. Washington, of Allegheny, Pa., has bought the noted Irish setters Finglas, champion Ruby Glenmore and Dick Finglas (Finglas—Ruby Glenmore), a 20-months-old dog that is said to be a good one. Finglas and Ruby Glenmore are too well known to require further mention at our hands. Mr. Washington intends to exhibit again, and with the above purchases and a number of dogs he already has in his kennels, he expects to add some interest to Irish setter competitions this spring. Finglas will be placed at stud, presumably in FOREST AND STREAM.

#### "Bob."

We shall be able to offer in a week or so copies of the autobiography of the fox-terrier, "Bob," by C. A. Sumner, secretary of the Southern California Kennel Club. When Mr. Sumner wrote the copy he had no intention of going to press, as it was simply for home circulation, but his friends so bothered him for a set of the photos that he went to the printer, and with the help of Mr. Pariser, the booklet is the result. It does not matter whether the reader is interested in fox-terriers or other dogs; it appeals to any one who loves dogs and can understand the quaint humor that runs through "Bob" from nose to tail. The reproductions from photographs alone are worth the price, \$1.50.

As a matter of news we may say that a person high in authority in the National Beagle Club has been disqualified by the New England Beagle Club for non-payment of entry money, and the matter is about to be placed before the A. K. C. There must be some mistake here, as it seems a very foolish business.

#### Canadian Kennel Club Meeting.

An important meeting of the executive committee was held at the Queen's Hotel, Toronto, Canada, last Friday afternoon, President J. S. Niven in the chair. The other members present were Dr. H. S. Griffin of Hamilton, Ont., C. A. Stone, J. S. Williams, R. W. Boyd and Secretary Donovan of Toronto, and S. F. Glass of London, Ont. The question of affiliating with the A. K. C. was the subject of much discussion, but nothing definite was done further than referring the matter to a committee composed of Dr. Griffin, F. S. Wetherall of Compton, Que., and T. G. Davey of London, Ont., who will confer with the committee appointed for the purpose by the A. K. C. The case of Mr. Goodman against Dr. Mills in which judgment was given for H. L. Goodman, also came up, but no action of a disciplinary nature was taken until investigation shall show if the published accounts are true or not. A number of new members were proposed.

Mr. Bousfield, the owner of the Bay City Kennels, in view of the hard times, has reduced the fees of St. Augustine and Lord Dante, the well-known St. Bernards, so that those at a distance can afford to avail themselves of this good blood. St. Augustine has been doing good work at stud; the Bay City Kennels have now a promising litter by him. Alta Kennels, Santa Rosa was bred recently to Lord Dante. St. Augustine was out of shape when shown at Toronto, but Mr. Bousfield tells us he will be in the "pink" when seen at the spring shows. All the stock are doing well, and Mr. Bousfield looks forward to a good year.

The Philadelphia Kennel Club will have a special show committee composed of the following members: G. H. Thompson, Charles T. Thompson, J. J. Schellenburg, P. Walsh, G. Schreiber, H. G. Sinnott and Dr. L. C. Sauveur.

The dogmen should not suffer under this direction. F. G. Taylor, Dr. Davis, L. Finletter, Dr. A. Glass and Dr. Littleton will form a field trial committee. We remarked a couple of years ago that the P. K. C. had come to life again, they have done more than that, they have been born again.

The Saratoga show clearly demonstrated that when chickens and dogs are exhibited in the same building, the dogs claim almost the entire attention. Judging from the attendance at Saratoga the club would scarcely have had fifty people to look at the poultry alone. There would have been a much larger attendance but for a revival meeting of fervent proportions that was under way during the week. "Our only German" was bewailing this fact, and remarked that he would rather listen to a good dog than a bad preacher any day.

In justice to Mr. Haldeman, who is seemingly being made the scapegoat, on both sides of the Atlantic, for the collapse of the *Fanciers' Journal* at the expense of the real truth, a little light should be turned on. Previous to Mr. C. H. Mason's occupation of the editorial chair the subscription list was 784, within sixty days after this the list had fallen off over 200. It is time that a lot of this garish foolishness should be stopped and truth be known. There is a slight difference between guerrilla journalistic methods and sober editorial work. They don't mix.

Mr. W. Stewart Diffenderfer has sold the rough St. Bernard bitch Mascot Bernie by Sargano out of Fless, winner of first, Baltimore, 1893, to Messrs. Woodin & Hoyt, The Heights, Berwick, Pa. This is a good bitch and should do well for her new masters, as she is both a breeder and a winner. Mr. Diffenderfer has now about closed out his St. Bernards, having only a few small pups out of Bernie left.

It was stated at Saratoga that Mr. William Marshall, of Scotland, will accompany his brother John Marshall when he returns from his visit to the old country, in time for the New York show. Mr. W. Marshall is well known as the breeder of Scottish Prince and other good ones; Altonette is also one of his breeding. He breeds them, and Mr. Sydney Smith brings them to the front.

At a meeting of the farmers of Chester county, Pa., under direction of the State Board of Agriculture, the following resolution was proposed and adopted by Henry L. Brinton, R. H. Hough and J. W. Hickman: "Whereas, the farmers of Chester county have suffered great damage from dogs being permitted to run at large; therefore, be it resolved, that this meeting demand at the hands of the Board of County Commissioners such a tax levy upon dogs as will give ample protection to sheep husbandry, even to the full maximum limit of the late act of Assembly, approved the 25th day of May, 1893. Resolved, further, that we urge upon farmers to consider their interests in the matter, and aid in enforcing the law against irresponsible persons and others who seek to evade it."

A bill will be introduced in the House at Columbus, Ohio, which provides that the sheriff of each county shall keep a certain number of bloodhounds for use in tracking escaped criminals, and in detecting petty thieves. We do not know whether these are to be the English bloodhound or the heavy Southern hound. The purpose is good, and either will do.

A well known whippet, Sally, has just been purchased by an English fancier, Mr. Craven. She is a big winner in whippet races, and the fact that she was bred in Philadelphia, where she won several handicaps before being exported to England, is our excuse for mentioning the fact of her transfer.

The great Dane, Ulric, has been sold by Mr. R. T. Martin, owner of the Rosemont Kennels in Ireland, to a fancier on this side the water. Ulric has been a big winner at the best shows, and Mr. Lloyd says that he is also a most companionable dog.

Among our "Specials," which are becoming so popular among dog breeders, as they recognize them as a sort of "quick delivery" system, we find that C. E. Bunn offers mastiff pups for sale; H. N. Howell, pointer dog Valentine, field trained; Meadow City Kennels, well bred English setter pups; W. I. Baker, well bred pointer dog; Geo. Douglas, choice cocker brood bitches; J. Feulner, English setter dog. J. F. Kelly wants dogs to board, and a trained pointer. In the stud C. E. Bunn places his noted mastiffs and E. A. Cook the well-known smooth fox-terrier Raby Trigger, whose services should be eagerly snapped up at the low fee of \$10.

Messrs. L. & W. Rutherford will have their annual sale of fox-terriers on the afternoon of the last day of the New York show. They will put up about 80 terriers.

"Uncle Dick," known in other departments as J. Otis Fellows, has been taking a hand in the discussion about the "bore" of a 22-cal. ball, in another department of FOREST AND STREAM, and his letter in answer to "Diamond Walt" has brought him letters from all over the country about rifles to use. This week letters come from Montreal, North Dakota and Louisiana. There is no "choke" about FOREST AND STREAM, it "scatters" all over this country. By the way, Mr. Fellows has been accused of doing too much work at the Saratoga show. He had to do something, for he tells us that he started the show with seven men and an assistant "super," but other influences cut this number down to two boys by Friday A. M., and they had to do all the work on the last day.

England will hold a toy dog show at the Royal Aquarium, London, in May. The Toy Spaniel, Pomeranian, Schipperke and Pug clubs join forces.

#### The A. K. C. and C. K. C.

The statement published in other journals that the A. K. C. had telegraphed to the City of the Straits Kennel Club not to honor the Canadian registration in accepting entries of Canadian dogs requires explanation. This telegram was sent in answer to one from the Secretary of the Detroit club asking whether Canadian Stud Book registrations would be recognized, and paying for a telegram in reply. The A. K. C. answered that as all relations with the C. K. C. had been severed, Canadian dogs must either register or list with the A. K. C. before entering.

The Philadelphia Kennel Club has applied for admission in the A. K. C. and this application will be passed upon at the annual meeting.

#### Mr. Harrison Buying Greyhounds.

We knew that such a keen rider and sportsman as Mr. Mitchell Harrison would soon become a convert to the sport of coursing, and we were not surprised to hear he had formed a partnership with Mr. Sam W. Vidler in the Broadmoor Kennels soon after his arrival at Colorado Springs. The kennel now consists of Benarita, Lady Graham Glendyne, two bitches by Lord Neversett—Partera, Voltaire, Van's General, and a thirteen-months dog by Lord Neversett—White Lips. This is the nucleus of a first-class kennel. The dogs will be run at the Altcar meeting next month. If Mr. Harrison goes in for coursing as keenly as he did for collies, his accession to the ranks of coursing men is a good step forward for the sport in this country.

**Russian Wolfhound Type.**  
*Editor Forest and Stream:*  
I was glad to see in a contemporary reply to my letter of two weeks ago. A little public discussion of the much mooted question of the type of the Russian wolfhound will undoubtedly be of the greatest benefit to all of us who have become interested in this breed of dogs. This correspondent and I at the first go off are now ready to lock horns, and a still further discussion by other admirers of the dog may bring out other differences of opinion which will eventually crystallize into something tangible and may result in a standard being established so that we will all know what to breed to. My controversy is in his saying that we should judge the dog on greyhound lines. I say no, not by any means, and why? First, because it is falling into an error which the best breeders of Russia are trying to eliminate, and by the best breeders I refer to the Imperial Kennels, Col. Dietz, Prince Galitzin, Grand Duke Nicholas, and Mr. Karacoff. I mention these names as authority in order to get at the bottom of the matter, as the question might properly be raised, either that I am mistaken about my authorities, or the type which I claim they advocate is not being bred by them. Second, I say that the English greyhound cross is not a true Russian type.  
It is a fact not generally known that these dogs are zealously guarded in Russia, and that few kennels can boast of having the pure breed. A dozen kennels would probably include all the kennels of pure-bred wolfhounds in the whole kingdom of Russia; as many kennels, but not those now considered the best ones, are known to have crossed their dogs with the English greyhound with the hope of gaining speed, thus of course taking away the pure-bred type. I cannot state too forcibly how I was impressed in Russia with this feeling among the best breeders against such crossing. Indeed it is quite a usual thing to see on the streets well-grown, handsome dogs, that readily would have passed for good ones if it were not for being so crossed. It is because of this crossing that shows the greyhound type that many a dog has been purchased very cheap in Russia and exported to this country and England. It is such importations that we ought to guard against, and yet we cannot if we judge the dog on greyhound lines.  
Another reason why I object to judging on greyhound lines, and to my mind a very strong reason, too, is that it is not in accordance with the standard as adopted in Russia, and surely the Russian standard must be the "best Russian type," which is what this correspondent calls for. Yet if we do not take the real Russian type, which he later in his article seems to object to on the ground that we are not showing the dog or judging him in Russia, we shall also have to turn our backs on the English standard, which is practically the same. The result, therefore, will be one standard for Russia and England, another for America and perhaps still another for Australia and Timbuctoo. Surely it is better for us all to pull together in this matter, especially as we have now nothing to undo. Surely it is better to have a friendly rivalry between the English and American breeders, which must be of benefit to both. Surely it is as easy to judge the dog here on Russian and English lines as any other imported dog.  
One word more and I have finished. We have only to look at the young stock now being exhibited, most of them out of good imported bitches but mated with dogs built on greyhound lines, and we cannot but notice that we are getting further and further, not only from the type of the imported stock, but are also getting dogs not nearly as graceful in carriage or as beautiful in outline. Thanks to others the ball is now rolling. Will not the other breeders and admirers of the dog give their views? Let us get at this in the right spirit, and the result of our combined opinions will go far toward establishing a standard in this country, and put us in a position to breed as handsome and as useful a dog as ever graced the bench. Just one more word. Will this writer give the "eminent authorities" he speaks of advocating the greyhound type, so that we may have a dig at them if necessary? I inclose herewith a copy of the English type of Russian wolfhound, which was published in the *British Fancier* since my other letter. By publishing it in your paper it will not only be of benefit to those interested in the breed, but will give an opportunity to discuss why or why not the English standard should be adopted in this country.  
CHAS. STEDMAN HANES.  
Boston, Mass., Jan. 23.

**POINTS OF THE BORZOI AS DEFINED AND ADOPTED BY THE BORZOI CLUB.**  
1. *Head.*—Long and lean. The skull flat and narrow, stop not perceptible, and muzzle long and tapering. The head from the forehead to tip of the nose should be so fine that the shape and direction of the bones and principal veins can be seen clearly, and in profile should appear rather Roman-nosed. Bitches should be even narrower in head than dogs. Eyes dark, expressive, almond-shaped and not too far apart. Ears like those of a greyhound; small, thin and placed well back on the head, with the tips, when thrown back, almost touching behind the occiput.  
2. *Neck.*—The neck should be carried somewhat low, with the neck continuing the line of the back.  
3. *Shoulders.*—Clean and sloping well back.  
4. *Chest.*—Deep and somewhat narrow.  
5. *Back.*—Rather bony and free from any cavity in the spinal column, the arch in the back being more marked in the dog than in the bitch.  
6. *Loins.*—Broad and very powerful, with plenty of muscular development.  
7. *Thighs.*—Long and well developed, with good second thighs.  
8. *Ribs.*—Slightly sprung at the angle of the ribs; deep, reaching to the elbow and even lower.  
9. *Forelegs.*—Lean and straight. Seen from the front they should be narrow, and from the side broad at the shoulder and narrowing gradually down to the foot, the bone appearing flat and not round as in the foxhound.  
10. *Hindlegs.*—The least thing under the body when standing still, not straight, and the stifle slightly bent.  
11. *Muscles.*—Well distributed and highly developed.  
12. *Pasterns.*—Strong.  
13. *Feet.*—Like those of the deerhound, rather long. The toes close together and well arched.  
14. *Coat.*—Long, silky (not woolly), either flat, wavy, or rather curly. On the head, ears and front legs it should be short and smooth. On the neck the frill should be profuse and rather curly. On the chest and rest of body, the tail and hindquarters, it should be long. The forelegs should be well feathered.  
15. *Tail.*—Long, well feathered and not gaily carried.  
16. *Height.*—At shoulder of dogs, from 26in. upward; of bitches, from 24in. upward.  
*Faults.*—Head short or thick. Too much stop. Parti-colored nose. Eyes too wide apart. Heavy ears. Heavy shoulders. Wide chest. "Barrel"-ribbed. Dew claws. Elbows turned out. Wide behind.

The attention of all judges of this breed at dog shows is earnestly requested to the club standard, as by this means alone can the ONE (true) type be preserved.

**Gordon Setter Club.**  
*Editor Forest and Stream:*  
The annual meeting of the Gordon Setter Club of America will be held at Madison Square Garden, New York on Thursday, Feb. 23, at 7:30 P. M. (the third night of the dog show), for the election of officers and members, and the transaction of such other business as may then come up. Members are requested to send in their annual dues, \$5, and the names of those to be proposed for membership, to the undersigned.  
In addition to the cash prizes in the Gordon setter classes, already announced by the Westminster K. C. (some \$300), the Gordon Setter Club offers \$5 each for the best and next best dog and bitch in the open class, belonging to a member of the Gordon Setter Club. Also, the *American Field* silver vase, for the best Gordon setter shown, which has been the property of a member of the Gordon Setter Club for six months previous to the closing of the New York dog show entries, to be won three times, not necessarily continuously, before becoming his property. L. A. VAN ZANDT, Sec'y.  
YONKERS, N. Y.

**Dogs are Property in Kentucky.**  
*Editor Forest and Stream:*  
A special dated Harrodsburg, Ky., Jan. 2, states that Ivan Harris was up in the police court the previous day charged with felony in the stealing of a dog valued at over \$20, and the proof being positive, Judge T. M. Cardwell held him over in a bond of \$200 to await the action of the Grand Jury in February. The Court of Appeals of Kentucky, in a recent decision, has laid it down as law that dogs are property.  
EDWARD WICK.  
CINCINNATI, O.

**KENNEL NOTES.**  
Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.  
NAMES CLAIMED.  
Prepared Blanks sent free on application.  
*Red Riding Hood.* By C. F. Gentz, Jr., Grand Rapids, Mich., for red dachshund bitch, whelped June 12, 1893, by Hundesport's Zaenker out of Lina L.  
*Sally Kent.* By C. F. Gentz, Jr., Grand Rapids, Mich., for black and tan dachshund bitch, whelped July 20, 1893, by Hundesport's Bergmann out of Polly (Hundesport's Zaenker—Lina K.).  
BRED.  
Prepared Blanks sent free on application.  
*Lass of Kippen—Coronet.* E. G. Duncle's (Brookton, Mass.) pointer bitch Lass of Kippen to G. W. Lovell's Coronet, Nov. 7.  
*Sally Kent—Ridgeview Faust.* A. M. Hopper's (East Orange, N. J.) pointer bitch Sally Kent (King of Kent—Westminster Sal) to Victoria Kennels' Ridgeview Faust (Beppo III.—Lady Norrish II.), Oct. 22.  
WHEELPS.  
Prepared Blanks sent free on application.  
*Sally Kent.* A. M. Hopper's (East Orange, N. J.) pointer bitch Sally Kent (King of Kent—Westminster Sal), Dec. 19, nine (four dogs), by Victoria Kennels' Ridgeview Faust (Beppo III.—Lady Norrish II.).  
*Duchess.* J. B. Blossom's (New York City) Irish setter bitch Duchess (champion Dick Swiveler)—Yuba, Jan. 4, eleven (four dogs), by Dr. Wm. Jarvis's imported Signal (Muskerry—Nancy Lee).  
*Grove Duchess.* Chatham Kennels' (Boston, Mass.) bull-terrier bitch Grove Duchess (champion Baron—Dutch Rose II.), Jan. 2, six (three dogs), by John Moorhead, Jr.'s champion Streatham Monarch (Streatham Flyer—Trentham Baroness).  
*Belle of Surrey.* J. G. Lipsett's (Roxbury, Mass.) bull-terrier bitch Belle of Surrey (Comet II.—Rose), Dec. 17, seven (five dogs), by Chatham Kennels' Chatham Prince (Hinks—The Shrew).  
SALES.  
Prepared Blanks sent free on application.  
*Rhoda—Breeze Gladstone.* H. C. Higginson's (Newburg, N. Y.) English setter bitch Rhoda (Bob Toombs—Vic Gladstone), to F. G. Taylor's champion Breeze Gladstone (Gladstone—Sue), Nov. 22.  
*Katie of Lansdowne—Ben Hur of Riverview.* F. G. Taylor's (Lansdowne, Pa.) English setter bitch Katie of Lansdowne (Breeze Gladstone—Nellie Benon) to F. G. Taylor's Ben Hur of Riverview (Ben Hill—Dec. 2).  
*Glady's Kent.* Blue belton English setter bitch, whelped Feb. 9, 1893, by Kent II. out of Countess Addie, by A. D. Fiske, Worcester, Mass., to Mr. Barstow, Providence, R. I.  
*Duke and Alice.* Black and tan dachshund dog and bitch, whelped June 12, 1893, by Hundesport's Zaenker out of Lina L., by Chas. F. Gentz, Jr., Grand Rapids, Mich., to M. H. Wangerin, Scott, Wis.  
*Duch.* Black and tan dachshund bitch, whelped June 12, 1893, by Hundesport's Zaenker out of Lina L., by Chas. F. Gentz, Jr., Grand Rapids, Mich., to T. H. Noble, Elk Rapids, Mich.  
*Red Panny.* Red dachshund dog, whelped June 12, 1893, by Hundesport's Zaenker out of Lina L., by C. F. Gentz, Jr., Grand Rapids, Mich., to W. Loeffler, Milwaukee, Wis.  
*Al De Ber Bazzard.* White, with sable markings, rough collie dog, whelped Aug. 25, 1893, by Bendigo out of Patient, by Al De Ber Collie Kennels, North Attleboro, Mass., to A. P. Howard, Georgetown, S. C.  
*Al De Ber Bendigo and Al De Ber Charlie.* Sable and white rough collie dogs, whelped Aug. 25, 1893, by Bendigo out of Patient, by Al De Ber Collie Kennels, North Attleboro, Mass., to J. A. Long, St. Louis, Mo.  
*Al De Ber Ben.* Sable and white rough collie dog, whelped Aug. 25, 1893, by Bendigo out of Patient, by Al De Ber Collie Kennels, North Attleboro, Mass., to C. W. Ballard, New York City.  
*Star.* Black and tan Gordon setter dog, whelped Feb. 25, 1892, by Star of the East out of Rownell's Dream, by C. T. Brownell, New Bedford, Mass., to G. K. Hazeltine, Concord, N. H.  
*Romeo.* Black and tan Gordon setter dog, whelped Aug. 26, 1893, by Doctor out of Queen Noble, by C. T. Brownell, New Bedford, Mass., to W. E. Collins, Chester, N. J.  
*Jack.* Water spaniel dog, by Eberhart Pug Kennels, Cincinnati, O., to Fred Walker, same place.  
*Dorothy.* Apricot fawn pug bitch, whelped May 5, 1893, by Happy Toby out of Midget Nellie, by Eberhart Pug Kennels, Cincinnati, O., to G. W. Nitraver, Middletown, Pa.  
*Ben Hessen—Maid of Kippen whelps.* Liver and white pointers, whelped July 31, 1893, by J. O. Gabriel, Westover, Pa., a dog to L. W. Roney, a dog and bitch to H. C. Trexler, a bitch to B. Hufford, all of Allentown, Pa., and a dog to F. Curtis, Reading, Pa.  
*Hundesport's Znenker—Lina L whelps.* Black and tan dachshunds, whelped June 12, 1893, by C. F. Gentz, Jr., Grand Rapids, Mich., a dog to L. Fuelling, St. Joseph, Mo., and a bitch to Dr. E. Guenther, Newark, N. J.

**ANSWERS TO CORRESPONDENTS.**  
There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.  
T. W. T., Boston, Mass.—You will find cocker spaniels of the best strain advertised in our business columns.  
C. C. H., Macon, Ga.—You will find the best pointer and Irish setter kennels advertised in our business columns. It would be invidious on our part to make a selection.  
G. M. S., Iva, Va.—It would be invidious on our part to recommend any one breeder of great Danes or bloodhounds. Consult our advertising columns or advertise for what you want.  
J. K., New York City.—Greyhounds have been known to work out the trail of a hare, but it is a most uncommon occurrence; the average greyhound has no idea of using his nose for such a purpose.  
S. H. J., Portchester, N. Y.—There are two Tramps registered in the A.K.C.S.B., Vol. V, viz. 7,735 and 10,902; 7,735, by Bacchanal out of Warren Lady, litter sister to Clip (7,708); 10,902, by Viper (10,903) out of Vixen (10,966), Nettle (9,946), by Wick out of Nettle.  
P. A. H., West Medford, Mass.—Is the black cocker spaniel bitch Topsy registered in the A.K.C.S.B.? And if so what is her pedigree? Ans. Topsy, (A.K.C.S.B. 11,554) by Ober out of Black Garrie, by champion Obo II. out of Critic; Ober, by Obo II. out of Critic.  
W. L. C., Philadelphia, Pa.—We are afraid you can do nothing for the fox-terrier's ears. At the same time, one can never tell much about how the ears will be eventually carried during the first six months of a puppy's life, though there is little, if any likelihood of a prick eared one getting them down any time unless cut, and this of course is out of the question for us to advise. Tampering with the ears of any dog will render you liable to disqualification, if the dog is shown.

N. A. W.—Is there such a thing made as a dog shoe, and if so will you kindly give me the address of some dealer from whom I might get them. Ans. We know of no one who manufactures dog boots. You can make them yourself, however, by taking a piece of soft leather and bending it up around the dog's foot and tying it just below the pastern.  
R. G. De P., Jamestown, N. D.—We should say that a cross between a deerhound and greyhound would be the best for hunting wolves; though strong specimens of either breed have been known to make good wolf dogs. You must, however, use at least two dogs to tackle a gray wolf. The Russian wolfhound is also supposed to be a good dog for the purpose, but those over here have not yet been sufficiently tried on this game for us to recommend them.  
D. J., Exeter—I have a valuable setter which has some trouble in his ears, commences shaking his head with a rolling motion, resting after each turn and gradually increasing speed, ending with violent shake. He is now very hard of hearing, and is I fear growing worse. Several other dogs in this vicinity are similarly affected. Ans. Wash the ears out with hot water. Pour a little of the following lotion in twice a day:  
℞ Liq. plumbi-sub-acet. .... 3 iij.  
Tr. opii. .... 3 ii.  
Aq. ad. .... 3 iij.  
Mix. Lotio. Use as directed.  
W. H. S., Chillicothe, Mo.—1. I have a thoroughbred blue belton bitch. I am not positive, but think she is in whelp to one of her pups; if so, will the pups be any good? I know they are inbreeding them now but don't know how close the relationship is. 2. Where can wild rice be bought, and what time of year should it be sowed? Ans. 1. This is often done to preserve type, and in your case probably the pups will be as strong and vigorous as any others. 2. In the proper season the names of several reliable dealers will be found in our advertising columns. The seeds should be sowed in the fall as soon as it is ripe. If kept it soon loses its vitality.

**Hunting and Coursing.**  
*Editor Forest and Stream:*  
In reply to your article which appeared in issue of Jan. 20, headed "Pade." You say: "For fear that an erroneous idea may become general, owing to the writings of those who have not seen the dog, and who were not present when he ran at the trials, we may say that we believe it is a general opinion of those who saw Pade at Nanuet, that the picture as published in *Turf, Field and Farm* is no more like him than chalk to cheese. The rough sketch we published in our report of the trials, conveyed a better idea of the point on which the club based its decision." The picture that appeared in your contemporary (though I have not seen it), was taken from a true photograph of Pade, and we all know a camera is not prejudiced in its work. You say, "The rough sketch you published in your report of the trials conveyed a better idea of the points on which the club based its decision." Now I will ask you a question: was the picture in your report, representing to be a rough sketch of Pade, not an old cut you had in the office to represent a dachshund. I would think so, as it seemed to represent a dog of solid color, and did not Mr. Lacy say in same report, Pade's "color is a sort of dirty fawn shot with dark hairs." Now if Mr. Lacy could not carry in mind Pade's form better than he did his color (which is fully one-third pure white), can one be duped so much as to be made to believe his prejudiced pencil could beat a camera in giving a true reproduction of self. You say, "The dog photographed shows a dog deeper and shorter than the dog that ran at Nanuet, in fact, there is little similarity." Do you insinuate I have substituted another dog to procure the photograph I claim to be taken from Pade? I don't see where there was anything informal in Pade's entry. I gave his sire and dam and name of breeder. What more is required?—and I deny having said Pade was not a pure beagle. What would be the use of me refusing to withdraw him if I had acknowledged him not to be a pure beagle? did say I would not use him in the stud to produce show dogs, but when one wants to cut down height and breed beagles for giving sport in the chase, I know of no dog so well calculated for that purpose as Pade. Here I wish to explain myself. The short leg and long cast beagle has been a very familiar dog in Maryland for many years, and are looked upon as pure as the taller and more compact formed ones. The low, long cast type has many admirers and was many years ago encouraged by breeding. And by-the-by, they in my opinion have not made so great an error as some would have us do now, i. e., breed dogs so cobby as to destroy all action and usefulness. The type of beagle like Pade was bred by Mr. Remus Dorsey, of Maryland, at least fifty years ago, and by Mr. Jones, from whom I bought Pade, who was a breeder over thirty years ago. They traced back to the importations of Judge Anthony M. Johnson, of Howard county, Md., and George Morris of Philadelphia, Pa. I don't want to be misunderstood. I don't claim Pade to be a typically formed dog, yet he is a very attractive-looking dog, and is classed by the sportsmen of Maryland as a pure beagle.  
You also ask me if I "would like that type of beagle perpetuated." I most assuredly do. You need not cross that type on your bench show form unless you please, and even if Pade is used considerably in the stud, how much more harm will he do than several champions we all know that can not, or will not, run a rabbit well enough to tell which end of the trail the dogs are on. They have great attractions to those who know no better with win after win to their credit, and when you use him on the hunt or chase you find he is not worth one cent. Men that are so conscientious as to forewarn parties not to infuse such blood as Pade's in the veins of their dogs, should lay aside their conscientiousness enough to induce people to breed from perfectly worthless dogs, because they may have enough wins to entitle the dog to be a champion, and at the same time is not worth the powder and shot to kill him. Breed the dogs that can make out quickly a little tangle in a trail, and one with the nose, judgment, ability and willingness to do it, transmit those qualities, and you will find out the beagle will become far more popular than he is to-day among the sporting class. The beagle is a dog of the chase, and that instinct should be cultivated by breeding to such dogs as have all the qualities of a sporting dog. Here is where so much harm is done. They will breed a good running bitch to champion so and so because he is an old rounder, and has picked up win after win, which looks very nice on paper, and if you knew as much about his qualities, as a loafer on the hunt and chase, you would be more disgusted than pleased. Referring to your estimate of Pade, I would imagine it would have but little weight, as you have shown a one-sided and misleading account of all connected with the dog.  
POTTINGER DORSEY.  
NEW MARKET, MD.  
[We find nothing in the above letter to alter our opinion of Pade as a beagle, such as the members of the National Beagle Club would desire to have run at their trials. Such a dog is at variance with the standard, which standard the N. B. C., as a member of the A. K. C., and in fealty to its constitution, must uphold. It was just such indiscriminate breeding and lax ideas that has brought the great diversity of type and malformation in most of the American foxhounds of to-day—breeding for nose and pace and nothing else. The strain of beagles Mr. Dorsey alludes to above as imported may have been pure enough, but the very evidence of any one's senses who has spent any time in the Southern States will show that while such dogs as Pade may be called beagles, they may be no more like the original strain, through careless and indiscriminate breeding, than the general run of American foxhounds of to-day are like the original English hounds from which they are said to be descendants. Dogs like Pade can be seen around the negro cabins

in the hills of North Carolina and their form is derived probably from a mixture of pretty nearly every cross-roads dog that are near a size and have enough hunting blood in them to give tongue on a trail. It is natural that Mr. Dorsey should uphold his dog, especially as the dog is a good rabbit hunter, and we do not for a moment insinuate that any other dog was substituted to make the picture. Knowing Mr. Dorsey, we may at once drop that side of the question. What we meant is that the dog is so placed that his crooked front is not discernible, and that he looks deeper and not so long as the dog seen at Nanuet. The camera is not always true and may be made to flatter a dog as much as it may be made to caricature him. Before leaving this part of the subject we may ask why Mr. Dorsey refused to have the dog photographed at Nanuet; the dog was there, Mr. Dorsey was there, and our camera was there. Mr. Dorsey had no such scruples when we "snapped" him with champion Lee II. the year before. That reminds us that another question may be asked. Mr. Dorsey's Ch. Lee II. is acknowledged to be a good field dog, and his title proclaims his place on the bench. Now, which type of beagle would Mr. Dorsey rather perpetuate in his capacity as an official judge of the N. B. C., which he was at the time of the field trial? It is possible to get such types as Lee's, combined with field qualities, then why not aid the N. B. C. in its good work rather than bring forward a dog like Pades, whose ancestors rest under a cloud, as practically admitted in the evidence. It is to get dogs of the type of Lee II. (of course he is slightly over size, but that is outside this question) and to frown upon the Pades, that the N. B. C. has its being.]

#### That Foxhound Standard.

Mr. L. W. Clute asks us what is meant by "the drops short and well folded in" in the standard of the foxhound head as arranged by the Brunswick Fur Club. We confess to ignorance on this point unless it alludes to the nostrils. Speaking of foxhounds reminds us that, like a good sportsman, Mr. Clute does not wish to sail under false colors and corrects the mistake we made in saying in our Saratoga report that he had bred and raised the large Workman-Lill litter. Messrs. C. Whitney Tillinghast, Jr., Joseph H. Harrington, Geo. B. Harrison and Frank W. Edmonds own the "Governor's" kennel and raised the pups, although Mr. Harrington is entitled to the chief credit, as he took personal supervision of them until they were old enough to be taken away, when each of the other men took two pups, leaving six at the kennels, where, together with Lill, the mother, they have been looked after by Mr. Harrington. To Mr. C. McChesney we are also indebted for correct information on this subject.

#### American Foxhound Club.

The American Foxhound Club was organized at the Saratoga show, Jan. 10. Little real business was done beyond the election of officers and enrolling of members. There was a good deal of discussion regarding a standard, and Mr. Lyman W. Clute tells us that he expects to issue this in two or three weeks. The officers of the club are as follows: President, Lyman W. Clute; Vice-President, Jo. J. Harrington; Secretary, Geo. B. Harrison; Treasurer, Dr. H. T. Thurber. Members: J. Otis Fellows, Chas. W. Tillinghast, Jr., F. W. Edmonds, Calvin S. McChesney, A. T. Phelps, Wm. Tallman, C. S. Wixom, F. B. Zimmer, Tracy Gould, H. W. Lacy.

#### HUNTING AND COURSING NOTES.

A quarterly meeting of the National Beagle Club of America will be held at Madison Square Garden, New York city, on Feb. 22, at 2 P. M. Members are earnestly requested to attend.

### Yachting.

#### THE FIN-KEEL SCARECROW.

(Concluded from Page 84.)

THE amateur boat builder of to-day little knows how much he has to be thankful for, and what immense advantages he enjoys over the preceding generation. Our own experience extends back to a time when the whole literature of boating and yachting that was available, or at all suitable to the wants of the young amateur, was included in a few brief articles in the English boys' books and annuals of sports, these articles being remarkable chiefly for their entangled woodcuts and ingenious misinformation. At this same date, at least about New York, the sources of practical information were as barren as the literature of yachting and building; and the enterprising amateur who loitered too long about the door of a South street boat shop was not infrequently invited in forcible language to move on, the invitation being accompanied by indications of a use of force on the part of the jealous builder against the intruder who was "stealing his trade." In our own jack-knife days, after perpetrating several wooden lilels on the art of naval construction, we were fortunate enough to enjoy the favor and acquaintanceship of an old-time New York boat builder, whose virtues as a man and a mechanic were polished rather than dimmed by a devotion to a certain flat bottle, and his subjection to "the controlling influences of drink." Under his kindly and generous guidance we were inducted into the mysteries of the craft, the technical terms, the making of molds and the bending of timbers, and even to the crowning one of "spiling off" and setting a garboard. What we then learned is all within the reach of younger amateurs to-day through "Canoe and Boat Building," and all branches of designing and building have been fully treated by able writers.

Published designs, practically unknown in the days of our amateur apprenticeship, are now abundant, and the course of the amateur, what with the many improved tools of comparatively recent manufacture, and the available assortment of materials and fittings, is indeed an easy one. One of our early essays in a timbered and planked boat, after various experiments in the scow and bateau line, was a Rob Roy canoe from Macgregor's description; and we remember yet our disappointment on procuring the American reprint of the English edition of the "Rob Roy in the Baltic," to find that the American publishers, presumably through motives of economy, had not reproduced the designs of the canoe which appeared in the original book.

Whatever disadvantages may be justly laid to the score of modern yachts and small craft with long ends, this much must be said in their favor, that they are easy means to build, the beam is moderate, the whole form is full and fair, without the humps and hollows of the old fine-bowed craft with full quarters, the timbers are easily cut or bent, and all of the fore and aft members, the clamps, plank sheers, wales and planking, come into place easily and with little bending and distortion of the wood. The present model, whose lines and sail plan appeared last week, is no exception from the general rule in this respect, and is excellently adapted to the wants of the amateur, giving a most serviceable boat when completed, and offering no special difficulties in the construction.

The scantling which we give will undoubtedly seem light to those unaccustomed to modern building, and there are many of the old class of boatbuilders who, if called on to build, will at once propose to double all of our sizes; but if the work and material are as good as they should be in a small pleasure boat, there need be no fear of the strength. We may say to those unfamiliar with light work that the present scantlings for an 18ft. boat are heavier than some of the 31ft. racing boats.

Reasonably light weight is of importance in any small craft unless intended for fishing, lightering or the roughest class of work, and every effort toward it should be made, in proportioning all parts to the work they must bear. In selection only the best of material, in fitting every joint to a perfect bearing and in using plenty of fastenings, screws or riveted nails, and setting them in the most careful manner. Strength can never be obtained through the use of inferior wood in large pieces and held by few and cheap fastenings, while this method involves a weight which is fatal to a boat, even if she be intended for cruising and general use rather than racing. The following sizes are given on the assumption that no sappy, grain-cut or knotty wood will be used, that the clamps, plank sheers and wales,

with most if not all of the planking, will be in single lengths, and that every joint will be carefully fitted and fastened.

#### SCARECROW—TABLE OF SCANTLING.

Deck.....	3/4	3/4
Coaming.....	3/4	3/4

\*Two frames at mast, the frame at runner plate and each bulkhead frame will be sided 1 1/4 in. in the larger boat and 1 1/2 in. in the smaller.

The first step in the construction will be the "laying off" of the lines full size on the floor; if the floor is rough and dirty, common roll detail paper or even the cheapest kind of roll building paper may be tacked down. The waterlines in the sheer plan, and the stations, will first be drawn in, using a chalk line and straight-edge, then from the table of offsets given last week, the various curves of the keel, stem, half deck, waterlines and sections will be laid down. All of this work is best done to the outside of the planking, though it is quite common to consider the inside only; however, the builder's chief aim is to get the outside, not the inside, of the boat, like the design, and this is best done by laying down the outside of the boat, just as she will be when completed.

The main rabbet line is then drawn on the stem in the sheer plan, being the intersection in the half-breadth plan of the various waterlines and the line representing the half-breadth or thickness of the stem, each of these various intersections being squared up to its corresponding waterline on the sheer plan. A mould for the rabbet is then made, of 1/4 or 3/8 in. pine. The inner rabbet line is not shown in the plans, but may be drawn in by laying off the thickness of the planking on each of the waterlines in the half-breadth plan, and noting the intersection with the side of the stem. The details of this work are very fully given in "Canoe and Boat Building for Amateurs," and are too lengthy to reproduce here.

For building with steamed frames special moulds will be needed, one at each alternate station, or at 0, 2, 4, 6, 8, 10, 12 and 14; fewer moulds are often used, but the work is more difficult for the amateur and the results are apt to be less satisfactory, and in the end the time of making a couple of extra moulds will be well saved. In laying down, the waterlines of the half-breadth plan and the diagonals may be run in from the table of offsets with a long flexible batten, then the true widths on these lines at each station may be laid off on the body plan, marking each width on the edge of a thin wide batten laid on the floor and transferring it to its proper place in the body plan. As a result the lines in each of the three plans should show fair and true, very slight departure from the original spots being necessary. A certain amount of error in enlarging eight times, as in the present case, is inevitable; but the original drawing was carefully made, and the lines on the floor should show very fair if carefully laid down.

The thickness of the planking must now be deducted from each of the sections in the body plan for which a mould is needed; a line being drawn 5/8 in. (3/4 in. for the smaller boat) inside of the section. The moulds will be cut out of 1 in. pine or other soft wood, to the outline of the inner line, and properly braced together and jogged to fit across the keel.

The keel should be of clear, straight-grained white oak, the grain running so that any edge points aft. The widths of the keel vary, being greater amidships, as shown, and diminishing toward each end. The thickness is also diminished from Sta. 7 aft, being 1 in. extreme thickness, 3/4 at the rudder post and 5/8 at the transom for the 18ft. boat. The stem should be cut from a knee or crook of hackmatack or oak, sound and solid at the head where the jibstay is secured. It will be marked out from the sheer plan, the rabbet marked and partly cut, and the sides outside the rabbet beveled away to a thickness of about 1/2 in., leaving some wood for the final finishing. The upper 6 in. at the stem head is usually left square, to be beveled away after the gam mon iron, if one is used, is in place.

The construction of the centerboard or fin trunk is somewhat unusual, and was devised to fit these little boats; in place of the usual bulkheads just the length of the trunk, one piece of oak plank is used, the lower side cut to fit the curve of the keel, and running as far forward and aft as its depth will admit. The depth shown is 4 1/2 in., the thickness being 2 in. and the length over 12ft., thus stiffening the middle half of the keel very effectively and compensating for the small size of the keel itself. This combination keelson and bedpiece is fitted to the keel, canton flannel soaked in thick paint being laid between the keel and the keelson, and the keel is fastened with screws, nails or through bolts to it; then the stem is fitted and a few fastenings put in to hold it, and an "anchor stock" of oak, 1 in. thick, is fitted, as shown, over the joint of keel, keelson and stem, and fastened by through rivets. In a larger craft it would be desirable to continue the keelson further aft, at least beyond the rudder trunk, but in the two sizes under consideration it is not necessary.

The frame may now be set up on the stocks and shored to the exact curve of the keel in the sheer plan. The moulds are next fitted and shored in their proper positions, the spacing being marked on the keel from the drawing on the floor before the keel is set up. The moulds must be so placed as to leave room for the bent frames beside them. The last section shown, at Sta. 14, may be solid, of 3/4 in. oak, and should be shaped with special care as it will be left permanently in the boat. It will make frames, floor and deckbeam in one, the round of the deck being worked on the upper side; and when fitted will be screwed to the keel strongly. If its exact shape and bevel be determined, either by laying it off on the floor or by battens sprung over the moulds after they are in position, it will be a great aid in getting out the sternpiece or transom.

The transom is not made square across, but the after face has 1 in. of round athwartship; it must, however, be worked perfectly straight on the line of its rake, that shown in the sheer plan and the sectional drawing of the sheer. In some cases the round has been omitted, giving a square, homely look to the stern; and in others, through lack of care, the piece has been rounded in all directions, a very unship-shape proceeding.

This piece is best worked out of a solid block of oak or mahogany, one of the flat sides being first dressed to the required round, 1 in. in a breadth of 18 in., a mould being first swept out to this curve. When the after side is thus properly shaped, the block may be set up on the keel at the proper angle, and jogged down over the keel, as indicated in the construction plan. While temporarily secured in this position, the true outline of the piece may be determined by means of battens run over the moulds and the solid frame aft, the piece first being roughed out and then, using a batten constantly, the exact outline and the correct bevel being obtained, so that every plank will fit fairly and neatly to it, and the whole counter will be symmetrical. The piece must be left wide enough for the curve of the deck at the center. After the outside and edges are finished the inside may be hollowed out, leaving at least an inch of thickness all over.

The laying off of this piece so that it may be cut directly from the solid block is a rather difficult matter for the amateur; but by proceeding in this way, first working the round of the after side, then fitting to the keel at the proper bevel, and then completing the shape by battens running fairly over the last three or four moulds, a very good job may be made. If several ribs are to be built from the design, it will pay to use one large block, from which a number of pieces, say 1 1/2 in. thick, and of the correct curvature, may be cut at one time by a band saw, thus saving labor and waste of material, as much less wood will be used than if each piece be worked from a separate block. In some cases a solid block is fastened to the keel and worked to shape, but this involves much useless weight in the worst possible place, and the construction given is greatly superior strength is needed at these points, and the frames are cut by larger fastenings. The moulding of the frames, the depth, will be 1 1/2 in. at the heels, 1 in. at the turn of the bilge, and but 3/4 in. at the head, the smaller sizes being diminished in proportion. The sweep of the sections is so easy that but one timber block will be required, and this will be made to a light shape, and sawed to the middle of the transom at Sta. 7.

The timbers will be steamed well and bent on the block while hot, then each will be taken in turn and beveled to fit the ribbands at the

SECTIONS OF HULL FOR 15ft. 4 1/2 in. L.W.L. BOAT, FULL SIZE.

SECTIONS OF HULL FOR 18ft. L.W.L. BOAT, FULL SIZE.

proper position, fitted to the keel, its curve straightened until just right, and set in place, being held by wire nails through each ribband. A very good plan for holding the bent frames to the ribbands in small boats and canoes is to use, in place of nails, a short piece of annealed iron wire say 1/16 in. diameter or under, which may be passed around the two and its ends twisted together. The wire is very cheap, and in removing a ribband each loop is cut with the pliers in less time than a nail can be drawn.

The heels of the two pair of 1 in. head timbers and those between them abreast the centerboard slot (which has not yet been cut) will be mortised about 3/4 in. into the keelson, the ends of the other timbers will butt against the keelson and be nailed to it and the keel. On the frame just forward of the fore bulkhead is a cross floor, which passes through a mortise or jog in the keelson. A similar cross floor may be worked just against each bulkhead on its inner side, but will hardly be necessary.

The absence of cross floors of oak or of iron knees is a feature of this boat which would hardly be admissible in a larger craft; but the two bulkheads, in connection with the half bulkheads to be described, have been designed to provide against any possible weakness in this direction.

The heels of all the timbers should be well fastened to the keel with clinch nails or riveted nails and burrs, and the keel itself may be further strengthened by a through bolt of 3-16 rod, run edge to edge, at each end of the slot. Cross floors of 1 in. oak are worked on two frames in the after compartment, as shown, the floor already mentioned crosses the keel just ahead of the fore bulkhead, and on the

two frames next the mast solid half floors 1in. thick are worked, well nailed or screwed to the timbers, keel and keelson; and on top of them is bolted a piece of 1in. oak, 10in. wide, with a couple of edge bolts through to keep it from splitting. The last piece forms the mast step a circular hole being cut in its center, and the keelson just beneath it is a mortise for the tenon on the heel of the mast.

After the timbers and floors are in place and faired to the ribbands, the rabbets and bevels being all right, the upper ribband is removed, a spiling taken, and the wale worked and set. It may be of mahogany or clear Georgia pine, and being needlessly heavy. The garboard will run up on the stem to near the fore end of the waterline, while it will run out on the transom aft. The planking should be planed on both sides before working; with the facilities offered everywhere by planing mills there is no longer any excuse for using rough stuff for planking, and much time will be saved by the use of clean well planed boards, in which all checks and imperfections are seen at once. The stuff for the larger size should be dressed in the mill to a full  $\frac{3}{8}$ in., finishing it a little less than this thickness after the final planing when in place; that for the smaller boat being  $\frac{1}{4}$ in. before laying.

The rabbet need not be cut to quite the thickness of the planking, involving a little more labor in the final planing, but leaving the planks thickest on the bilge and lighter at the ends. The planking must be fitted very closely to the bulkhead timbers, thick red lead paint being used in the joint and each plank drawn up to place it on copper nails while the paint is fresh. The planking is put on above and below alternately, the last plank, the "shutter," coming on the bilge. The planks will run from 3 to 5in. in width amidships, of course tapering considerably at the ends. They will be fastened to the stem and transom with screws.

When the planking is on and fully fastened, the two clamps of Georgia pine or even clear spruce, are got out and put in place at the proper distance below the wale to admit the deck beams above them, and are well riveted through the wales and the head of each timber. The sizes given are for the middle and ends, as they may taper considerably. The deck beams may be of spruce, sided  $\frac{7}{8}$ in. and moulded  $1\frac{1}{4}$ in., spaced the same as the frames. The two partner beams, next to the mast, are each sided  $1\frac{1}{4}$ in.

After the two bulkhead beams are fitted and fastened, the bulkheads may be built, two thicknesses of white pine or white cedar being used. The strips may be 3in. wide and  $\frac{3}{8}$ in. thick, one layer being fitted and lightly nailed to the deck beam and frame, thick paint being used in the joints; the strips running diagonally across the boat, at an angle of 45 degrees with a vertical line. After this layer is in place, the whole bulkhead is covered with a layer of canvas, well painted on both sides, and a second layer of wood, running diagonally in the opposite direction from the first, and crossing it at right angles, is fitted; screws then being put through the two layers into the deck beam and frame, after which both layers are well fastened together by copper nails with the points riveted or clinched, these nails being about 3in. apart. In this way the bulkhead is very strong and watertight, and not liable to warp or crack as a single thickness of wood would do. Some neat work is necessary in the fitting, and plenty of thick paint must be used. One object of the bulkheads is to give ample transverse strength to the hull, and they must therefore be well fastened.

After the main bulkheads are in, the deck beams are all fastened to the clamps, and the plank sheers and partner pieces, both of mahogany if a handsome finish is desired, are fitted and screwed to the beams and wales. A solid fitting is put in for the mast partner between the two partner beams, as shown. The after ends of the plank sheers are connected by a piece across the counter.

The hull is then taken from the stocks and the slot for the centerboard or fin is accurately laid out and cut, from bulkhead to bulkhead, and the head ledges, of oak,  $1\frac{1}{2}$ in. wide, are put in place; then the sides of the trunk are built up, of 1in. clear pine, to the required height, and  $\frac{1}{4}$ in. through bolts are driven through them and the keelson and keel and riveted outside of the keel, being spaced about 10in. apart. In this way the trunk is an integral part of the hull, while it divides the open compartment in the center of the boat into two tight compartments below the floor.

A ledge of spruce or oak about 1in. square is riveted across each bulkhead, flush with the top of the trunk, to carry the ends of the floor boards. The spaces on each side of the trunk are further subdivided by two half bulkheads in each as shown in the sheer plan of the construction drawing, each being of solid wood,  $\frac{3}{4}$ in. thick, fitted tight and well fastened to the timbers and also to the keelson and side of trunk, the latter connection being made strong by means of light metal knees in the angle, or of square cleats of hard wood through which screws are driven into the keelson and trunk on the one hand and the bulkhead on the other. If desired, limbers may be cut to connect the three sub-compartments on each side, but it will probably be better to have each one as nearly watertight as possible.

There is a slight error in the section published last week, in that the keelson is there shown as continuous from keel to floor, whereas it should be but  $4\frac{1}{2}$ in. deep, the remainder being made up by a separate piece of pine, as already described. The half bulkheads may be further secured by a screw or nail through the keel into the end of each next the keelson, while on top the first plank of the floor is of  $\frac{3}{4}$ in. oak, 3in. wide, and well screwed down to the upper edges of the side of the trunk and the ends of the half bulkheads.

It is safe to assume that the transverse strain of the deep fin, tending to split the hull in two, will be considerable, but in the boats already built there have been no signs of weakness, and the bulkheads and edge bolts through the keel, with such cross floors as are shown, will give ample strength. If, however, the construction is to be adapted to a larger size of boat than 18ft. l.w.l. a few iron floors would be desirable.

In case no attempt is to be made to raise the fin, a knee of  $1\frac{1}{2} \times 1\frac{1}{2}$ in. bar iron may be fitted in the angle between the heels of each of the bulkhead timbers, one at each end and two in the middle of the well, and a  $\frac{3}{8}$ in. screw-bolt with nut may be run through the side of each knee, of every pair, of course passing through the keelson and fin, just as a centerboard pin would do.

The arrangement of the well coaming alluded to last week and here shown in the construction drawing is an after thought, and presumably an improvement on the original plan, which included an oval well of the width shown in the construction drawings, and with the same curve, but shortened up to fit within the bulkheads, the two hatches being in the deck just forward and abaft of the well.

In the present plan the hatches occupy the same positions, but the coaming, of  $\frac{3}{8}$ in. oak, is carried beyond the bulkheads to inclose the hatches, which are better protected from spray, and at the same time may be built as honest, straightforward hatches, and not as the fraudulent and clumsy "blind hatches," which are so thoroughly unsatisfactory in use, and which no amount of care and good workmanship can make other than a disfigurement to a clean, bright deck. The coaming is supported by side pieces  $1\frac{1}{4}$ in. wide and  $\frac{3}{4}$ in. thick, let in flush on the whole deck beams, which they cross, and carrying the inboard ends of the half beams, which are jogged to receive them. The coaming is steamed and bent to shape, and is fitted to cover the end of the half beams, both in the well and around the hatches. It may be set and fastened before the decking is laid, a small filling piece being put in the space between it and the side pieces at each end.

The deck, if laid in the ordinary way, of one thickness caulked and payed, should be not less than  $\frac{3}{8}$ in. thick for the larger boat and  $\frac{1}{2}$ in. for the smaller; but if finish be no object, a dryer and more serviceable deck, and one that has much to recommend it, may be made by omitting the hard wood plank sheers and covering the whole deck with  $\frac{1}{2}$  or  $\frac{3}{4}$ in. cedar or other light wood, and over all stretching 8oz. canvas laid in paint. Still another plan is to lay a deck of  $\frac{1}{4}$ in. cedar or pine, covering it with a light canvas or drill, well painted, and then to finish with a layer of clear white pine, say  $1\frac{1}{2}$ in. wide and 5-6in. thick; making a handsome and tight deck.

The success of all double skin work depends largely on bedding the two skins of wood and the canvas between them in thick, adhesive paint, and in putting in fastenings close together, so as to make one solid structure of the boards and canvas. It is most essential in this work that all the fastenings should be promptly put in to draw the surfaces together and prevent airholes before the paint has time to set.

The coaming is made deep enough to cover the ends of the half beams, except at the extreme after end, where it is shown as fitted on top of the deck for the short distance abaft the after hatch. The hatches will be of the same thickness as the deck, and a ledge,  $\frac{3}{4}$ in. square, will be fitted on the inside of the coaming, the upper side flush with the top of the deck beams, forming a rabbet for the hatch, which may be fastened with stout thumb screws. The hatches should be strongly built and well battened on the lower side, and the fastenings should be quite heavy, as in the event of an accident they will be subjected to a heavy pressure.

The side decks are strengthened by two knees, not shown in the cross section, directly over the half bulkheads. The flooring of the cockpit may be of  $\frac{1}{4}$ in. pine, fitted closely to the sides, so as to be as nearly watertight as possible. The section of floor adjoining each of the oak pieces on top of the trunk will be fitted to lift up for stowing ballast or any heavy stores, and for removing any water, a small metal pump of  $1\frac{1}{2}$ in. piping serving to clear either of the large compartments, through the hatches, or the smaller ones through the openings left when the floor sections are lifted. A light locust post,  $3 \times 2\frac{1}{2}$ in., is fitted in the forward deck, as shown, with a pin of  $\frac{1}{4}$ in. brass rod through it for belaying the cable.

The rudder trunk will be a pipe of brass or iron, of 1in. internal diameter, the lower end being threaded like a gas pipe. The keel will be reinforced by a block of oak about 2in. thick and 6in. long, screwed to the keel, and the pipe will screw tightly into this block and the keel. On the deck and keel the ends of the pipe will be covered by round brass plates. The rudder is made of a round bar of  $\frac{3}{8}$ in. steel

or Tobin bronze, forged to the shape shown, the lower end bent and flattened out until it is only  $\frac{1}{4}$  in. thick at the extremity, tapering up into the full round of the bar where it enters the pipe. The sides of the rudder are of  $\frac{1}{4}$  in. sheet metal, two pieces, the curved stock passing down between them. The pieces are fastened together by small rivets, spaced 1 in. apart, around the entire circumference; and they are also riveted to the stock itself by three or four  $\frac{3}{4}$  in. rivets. The span in the center along the stock is filled with tar and rosin or some similar composition, to keep out the water. This makes a strong rudder, and the construction is less difficult than by other methods.

The tiller shown is of metal, but a wooden one is lighter and better. The head of the rudder stock is threaded for a metal cap 1  $\frac{1}{2}$  in. in diameter and 1  $\frac{1}{2}$  in. high, which is screwed on and carries the weight of the rudder. Through the cap and stock a  $\frac{3}{4}$  in. hole is drilled, running thwartship. Two side plates of sheet brass, 1  $\frac{1}{2}$  in. wide,  $\frac{1}{4}$  in. thick and 6 in. long, are got out, a hole for the pin being drilled near one end of each, with three holes for  $\frac{3}{4}$  in. rivets. The two plates are bolted to the cap, and the wooden tiller is placed between them and secured by the rivets, swinging freely in a vertical direction on the bolt.

The fin will be cut from a sheet of metal, either steel or Tobin bronze, the latter being the better, as it will not corrode, while steel should be galvanized unless the boat can be hauled out frequently for painting. The fin may be bolted through the trunk, as already described, or it may be fitted, as in Scarcecrow, with a flanged plate similar to a double angle iron, which closes the top of the slot and prevents the wash of water. Some provision should be made for draining all water from the trunk, the flanged plate may be bent a little below the level of the floor, forming a gutter, which will catch all water that runs along the floor when the boat is heeled from one side to the other, this water draining down at the ends of the slot.

After the deck is laid, the outside of the hull should be carefully planed off, the planking making a fair surface with the keel and stem, and all the lines running fair out to a thickness of about  $\frac{3}{4}$  in. at the outwater, which will be protected by a plate of brass or iron by way of stemband. The keel in particular should be planed fair with the planking, all corners being removed. The outside of the hull may be varnished or painted.

The lead bulb must be cast in two halves and bolted on each side of the fin.  $\frac{1}{4}$  in. bolts being used. The shape of the half bulb is shown in the sheet plan. Dimensions being given at one-sixth the entire length apart; and the full size of each of these sections, for each size of boat, being given separately. The lead may be cast in the sand or in wood. In the former case a wooden pattern will be made, exactly like the half bulb, from the full size moulds, made directly from our drawing. Lead in casting will shrink about 5-16 in. to each foot; so, to get the full weight, the pattern must be made about  $\frac{1}{4}$  in. longer than the finished size, and moulds being used a little further apart than shown in the drawing to divide up the extra length. No special allowance for shrinkage need be made in breadth and depth, other than to cut the moulds a little larger rather than smaller than the drawings. From this pattern a mould is rammed up in sand and a casting made.

If the mould is to be made in wood, a thick block will be required of some coarse pine, the outline of the bulb in length and height will be laid out on one face, allowing a little for the shrinkage, and the block will be hollowed out with gouges, using solid sections of thin board cut from the drawings to get the exact shape at each station. When this hollow mould is smoothed off it may be whitewashed, to prevent charring; a piece of plank is nailed over the hollow, and the hot lead is poured through one or two 1 in. auger holes in the plank. With the shape of bulb shown, a mould will be required for each half, as the two pieces will not reverse the work. Some lead may be saved by making both ends of the bulb alike, so that one mould or pattern will answer for both sides; but the weight will not be so well placed.

The best fastenings for a boat of this kind, if a fine finish is desired and the wood is to be kept bright, are copper nails through the planks and timbers, larger copper nails through the heels of timbers, bulkheads, clamps, etc., and copper rod in the few places, like the trunk, in which the largest nails would be too short. Wherever copper nails or bolts are used they should be headed up over copper washers or burrs; and where such through fastenings cannot be used, as in securing the ends of the plank to the stem, brass screws must take their place. The additional expense of brass screws in fine light work is not enough now to justify the use of iron, as the latter, even if galvanized, will show rust in the wood. Some lead may be saved by making both ends of the bulb alike, so that one mould or pattern will answer for both sides; but the weight will not be so well placed.

It is quite common, however, to use galvanized iron bolts, screws and nails for all except the plank fastenings, which are of copper, riveted. If the boat is to be painted, a very good job may be done by using galvanized iron for all fastenings, even for the plank. The light iron boat-nails will hold forever when driven into oak, and require no washer nor riveting, the points merely coming through the timbers above the planking.

Where the term rivet is used above it must be understood as referring not to what is known to hardware dealers as a rivet, but to a fastening, either a nail or a piece of wire or rod, which is used with a washer, over which the end is turned with a light riving hammer. The inquiry has frequently come to us for special rivets for boat work, but such rivets are not used by boat builders, the cut copper nail with a rather rough surface being much better. Wherever copper nail or bolts are used they should be headed up over copper washers or burrs; and where such through fastenings cannot be used, as in securing the ends of the plank to the stem, brass screws must take their place. The additional expense of brass screws in fine light work is not enough now to justify the use of iron, as the latter, even if galvanized, will show rust in the wood. Some lead may be saved by making both ends of the bulb alike, so that one mould or pattern will answer for both sides; but the weight will not be so well placed.

W. P. S.

### "Knockabout" Boats.

[From the Boston Globe.]

PRESENT indications are that it is the 21ft. "knockabout" and not the 21ft. racer, which will furnish the greatest amount of sport next season among the yachtsmen of the city. A few weeks ago there was a fair prospect that the 21ft. racing class might be started by the offer of the \$500 interclub challenge cup by the Hull, Massachusetts and Corinthian Clubs, but the withdrawal of the Hull Club from the matter seems to have removed the last hope in that direction, and the outlook now is for little more interesting racing in the once interesting class than there was last season. Two or three new boats are in sight, but they are not likely to be of much interest, as they are not of the class of the largest, which would be too short. Wherever copper nail or bolts are used they should be headed up over copper washers or burrs; and where such through fastenings cannot be used, as in securing the ends of the plank to the stem, brass screws must take their place. The additional expense of brass screws in fine light work is not enough now to justify the use of iron, as the latter, even if galvanized, will show rust in the wood. Some lead may be saved by making both ends of the bulb alike, so that one mould or pattern will answer for both sides; but the weight will not be so well placed.

In the knockabout class the outlook is, however, much more promising. The success of the type both for pleasure sailing and for racing under handicaps was so pronounced last season that yachtsmen's eyes have been opened to the sport that can be had at less than half the cost of a racing 21-footer. The result is likely to be a "boom" for the class and type which will result in some lively racing.

That such interest in the class is being taken by yachtsmen is amply shown by the action of the Corinthian Club in adopting a definition of a "knockabout," and in placing limitations on new boats in the class to prevent, if possible, that "out-building" which is the bane of a strictly racing class, and which, if allowed, would soon make a racing class of one which was intended only as a cruising one, with such fun as might be had from incidental racing under practically even conditions.

The Hull Y. C. also testifies to the growing popularity of the class by the action taken at the annual meeting. It was decided to build for the use of club members a couple of knockabouts in the hope that they would be the nucleus of a class at Hull, which would give some lively sport the coming summer. The hope seems likely to be realized, for several members were so pleased with the idea that they agreed to build boats to the class, and the club has agreed to build a half dozen or more boats are practically assured, and the only question now seems to be as to design and cost. The matter is in the hands of a committee from which a report may soon be expected, as they are having designs prepared upon which estimates of cost can be given. This committee will report to the executive committee, which has full power to build if it is found advisable.

The Hull plan contemplates the building of the boats from one set of designs and as nearly alike in every way as it is possible to make them. In this way not only will the cost be greatly reduced but the question of the best boat will be largely eliminated and that of best skipper substituted. More sport is expected from the races which will follow than as if different designs were represented. The boats will, of course, be built to the rule, and it is not allowed of any wide departure in model, and the Hull boats will undoubtedly be the same size, weatherly, easily handled and by no means slow craft which their Marblehead predecessors have proved themselves to be. At the club races at Hull, however, the new boats will race as one class, and any club boat built for the class must be of the same design and construction as those decided upon by the committee.

But while the Hull Yachtmen are thus taking up the knockabout, the Corinthians are not idle, and although names cannot now be given it is almost certain that additions to the fleet will be made by gentlemen who have much the same interest in the class as those about to come into it at Hull. The announcement of the Corinthian Club's action on limitations for the clubs will show them what must be built

or rather what cannot be built, and it does not take much time to get up a design for a knockabout or to build one when the design is ready.

The Corinthian rules were formulated after careful study of the questions involved by yachtsmen who had owned or sailed the boats in question. Their aim is to keep the boats what they were intended to be—knockabouts. The club's definition of a knockabout is as follows:

"A knockabout boat is a seaworthy keel (not to include a fin keel), decked or half-decked boat of fair accommodations and rigging simply, without bowsprit and with only masted and only one headsail, and capable of being comfortably managed by one man in any ordinary summer weather."

The definition is a very complete one, but without limitations it would hardly accomplish the purpose desired. Limitations have therefore been placed upon the class as follows:

"Load waterline not to exceed 21 ft.; beam not to exceed 8 ft.; crew three persons; depth adships from gunwale to rabbet line shall not be less than 8 ft. 3 in.; freeboard shall not be less than 16 in.; mast at deck not less than 5 ft. from forward end of waterline. The limits on beam, depth, freeboard and place of mast not to exclude any existing boats which otherwise would come within the requirements. The sail area shall be limited to 500 sq. ft., measured by the formula: multiply 85 per cent of the beam by one-half the sum of the gaff and the distance from top of sheave of upper throat haliard block to stem head."

The effort of these limitations will be to prevent the adding of ballast and sail, the most common means of "out-building" to prevent designing of a shallow-bulld boat after the manner of a fin-keel, and to insure seaworthiness by a liberal free board and small sail plan. About the only thing left to a man who desires to "out-build" will be in the way of lightness, but, as this cannot be carried to as great a length as in a racer, it would seem as though the rules were about what is required.

So good luck to the "knockabout." The type is one in every way worthy of encouragement. Its most enthusiastic friends predict for it that it will displace the long popular catboat for pleasure sailing, which would be a result by no means to be regretted, for fewer capsize and accidents would be likely to be reported.

W. E. ROBINSON.

### Caldwell H. Colt.

The funeral of Com. Caldwell H. Colt, Larchmont Y. C., whose death at Punta Gorda, Fla., on Jan. 21, was announced last week, took place on Jan. 26 at Hartford, Conn., his birthplace and the home of the family. The body was accompanied from the South by Lieut. Henn and Mr. A. F. Comacho, who were on the ketch Oriole with Com. Colt on his winter cruise. The coffin was borne by eight Com. Colt's old manufacturing company, the honorary pall bearers being Com. E. D. Morgan and a Secretary J. S. Y. Odde, N. Y. Y. C.; Vice-Com. A. H. Sanderson, Larchmont Y. C.; Randolph Hurry, A. F. Comacho, George A. Cornack and Augustus Mott, of New York; Louis O. Jones, of Newport; John H. Hall, James B. Moore, Dr. C. F. Beach, George H. Day and William C. Skinner, of Hartford, and Lieut. William Henn, of the British Navy. A number of other persons were present from New York.

Caldwell Hart Colt was born on Nov. 24, 1853, and inherited a very large fortune from his father, Col. Samuel Colt, inventor of the famous Colt revolver, who died in 1861. His career as a yachtsman began as a boy in the old sloop Lizzie, and later he bought the sloop Wizard. In 1881 he purchased the schooner Dauntless, with which his name has been constantly associated, as she has been in constant service at home and abroad. In 1892 he was elected commodore of the Larchmont Y. C., which office he held at his death. His mother is the only surviving member of the family.

### Royal Nova Scotia Yacht Squadron.

THE annual meeting of the Royal Nova Scotia Yacht Squadron was held at their club house, Halifax, N. S., Thursday, Jan. 13, at 8 P. M. The report of the management committee and the treasurer's statement show the squadron to have had a very successful year financially. The membership is now in the neighborhood of 250.

The rear-commodore moved a resolution "to reduce the rig allowance to schooner-rigged yachts from 40 to 15 per cent." After a lengthy discussion the question was referred to the sailing committee, to report on at a special meeting of the squadron to be called at a later date to receive this report.

The following officers and committees were elected for the ensuing year: Com. Jas. W. Starrs; Vice-Com., Frank S. West; Rear-Com. John E. Butler; Treas., A. E. Jones; Sec'y, H. M. Wykle. Management Committee: T. H. Bell, F. K. Warren, Jas. Fraser, A. A. McKay, J. Lithgow. Sailing Committee: A. W. Corgwell, M. D. G. O. Hart, Lieut. H. E. Harsh, R. A. W. G. Jones, J. T. P. Knight, John F. Starrs, M. P. Measures; F. H. Bell, H. Flowers.

### YACHT NEWS NOTES.

Mr. Edmund Blunt, late owner of Azalea, schr., died at his home in Brooklyn on Jan. 24, of the grip, after a short illness. Mr. Blunt was born in Brooklyn in June, 1842, and was a son of Edmund Blunt of the firm of E. & G. W. Blunt, makers of nautical instruments and publishers of nautical works and maps, and a grandson of Edmund March Blunt, who was also a famous writer on nautical subjects, and who in 1798 published "The American Coast Pilot," a work containing a complete chart of the Atlantic seaboard, and the outbreak of the war Mr. Blunt joined the Twelfth Regiment as a private. He afterward joined the Seventh Regiment, and later was transferred to the Fifth New York Cavalry. He became connected with Gen. Kilpatrick's staff, and while serving under him earned his title of captain, which, however, he dropped in private life after the war. Mr. Blunt was a member of the New York, Larchmont and Atlantic Yacht Clubs.

The annual meeting of the Winthrop Y. C. was held on Jan. 16, the following officers being elected: Com. W. C. Torrey, Vice-Com., Chas. A. Heney; Sec. Chas. G. Bird; Treas. Geo. E. Leighton; Messrs. Harry Hutchinson; Board of Directors, J. Stearns Cushing, Clarence H. Billings, Geo. L. Cade, Geo. A. Foxcroft; Regatta Committee, Wm. A. Garratt, Wm. Ginn, Lyman S. Weston, A. T. Bliss, Theodore P. Grant; Membership Committee, Lyman J. Gillies, John MacConnell, Jr., Albert Partridge, Quincy Kilby, Fred O. Carey, Walter T. Milton, Herbert G. Finn, Harry A. H. John G. Cuthbertson. Com. Torrey has appointed Wm. A. Garratt fleet captain.

The annual meeting of the Hull Y. C. was held on Jan. 18, the following officers being elected: Com. Lewis J. Bird; Vice-Com. Wm. H. Crane; Rear-Com. Albert L. Pope; Sec. Wm. A. Cary; Asst. Sec., Caleb Nichols; Treas., James R. Hooper; Messrs. William E. Sheriffs; Executive Committee for two years, William B. Lambert, J. Winthrop Dutton and George E. Cutler for one year; Membership Committee for two years, Norman F. Greer, Arthur J. Selridge; House Committee for two years, Stewart Jordan, Frank T. Wendell; Regatta Committee for two years, Clarence V. Souther, and for one year, Timothy E. Jacobs.

The annual meeting of the Knickerbocker Y. C. was held on Jan. 16, the following officers being elected: Com. Dr. Chas. L. Brown, sp. Tempus; Vice-Com., F. G. Pauly, sp. Flora; Rear-Com., Louis H. Zocher, sp. Liberty; Treas., Chas. R. Smith, Jr., Sec. Z. S. Crooker; Messrs. Geo. M. Rae; Fleet Surgeon, E. Ringer, M. D.; Board of Directors, Wm. L. Ward, Harry Stephen, V. J. O. Skinner, John J. Delaney. The secretary's report showed 188 active and 8 honorary members, and 77 new members elected. The club fleet now includes 3 schooners, 31 cabin sloops, cutters and yawls, 2 open sloops, 15 cabin cats, 8 open cats, 4 steam launches and 6 naphtha launch, a total of 69 yachts.

The Manchester (Mass.) Y. C. has elected the following officers: Com., A. Walpole Craigie; Vice-Com., Guy Soule; Rear-Com., Chas. Jackson; Sec. and Treas., C. A. Cooley, 3 School st., Boston; Messrs. A. Burham Jr., House Committee, E. P. Stanley, E. P. Crooker, G. A. Cooley. The club has arranged the following races: June 17, club sweepstakes; July 7, open regatta; July 27, Minot's Ledge cup; Aug. 3, 10, 17, pennant regatta; 4th week in August and 1st and 2d in Sept., Manchester Club's cup races.

The following nominations for officers for 1894 have been made by the Atlantic Y. C.: Com. David Banks; Vice-Com., P. G. Sanford; Rear-Com., Alexander E. Ketchum; Sec'y, H. V. Nash; Treas., H. C. Winthrop; Messrs. E. L. Gielow, Trustees, T. A. Arnold, E. B. Havens, N. D. Lawton, J. R. Maxwell, J. F. Ackerman and Jefferson Hogan. Membership Committee: J. C. Seely, Edmund Finn and E. J. Bergen. Regatta Committee: H. B. Howell, H. J. Gielow, John L. Bliss, S. F. Russell and G. W. McNulty.

Captain Thos. A. Welch, the pilot of the tug F. W. Devoe, which ran down and sunk the yacht Amelia in June, 1891, drawing three men, has at last been taken to Sing Sing to serve out a five years' sentence. All possible excuses and delays have been made in order to save him from a just punishment, the evidence showing that he was intoxicated at the time of the collision.

Vagrant, the new knockabout boat designed by Stewart & Binney for W. A. Harvey of Boston, and building by James McIntyre, will be 30 ft. over all, 21 ft. l.w.l., 7 ft. 10 in. beam, 4 ft. 6 in. draft, with 550 sq. ft. in a mainsail and jib and 3,500 lbs. of iron on her keel.

Natalie, steam yacht, whose mysterious movements have been reported from time to time, has turned up at Savannah, Ga. She is supposed to be connected with some West Indian or South American rebellion.

The Hull Y. C. have asked for plans and estimates from several designers for a "one design" knockabout boat, from which several boats will be built by the club, and some by individual owners.

John W. Sullivan, the builder of yacht engines on South street, New York, has purchased the balance dock at Pier 52, East River, and will use it in connection with his works near by.

Emerald, yawl, of San Francisco, once well known to the readers of the FOREST AND STREAM, has recently been seized for smuggling opium at that port.

Mr. A. B. Sands, the head of the well known firm of Sands & Son, yacht plumbers, died in New York on Jan. 12, at the age of 74.

Barracouta, steam yacht, is fitting out at Philadelphia for a cruise to the West Indies.

Atlanta, schr., formerly Calypso, has been almost rebuilt at New London.

## Canoeing.

William M. Carter.

Editor Forest and Stream:

Please find enclosed action taken by a special committee appointed by Com. Irving V. Dorland, of the American Canoe Association, to take action regarding the death of the Association's old friend, Mr. William M. Carter, of Trenton, N. J. This copy is sent you in accordance with the direction of the Commodore, and I beg to remain, with great respect, ROBERT J. WILKIN, of Committee.

BROOKLYN, N. Y., Jan. 27.

My Dear "Bob,"

Your "resolution" is excellent, and I have nothing to suggest. Dear old Carter, what a good fellow he was—so brave, plucky and cheerful, for he knew all the time that he could not last very long; he has said so to me many times. Camp was never the same to me when he was absent. We old patriarchs are beginning to drop out, but I hope I may show my white head at many a meet yet. Yours sincerely, ROBERT SHAW OLIVER.

ALBANY, N. Y., Jan. 28.

My Dear Wilkin:

I am truly sorry to hear of the death of our old friend William M. Carter. We all know in part at least that the Association owes a great deal to him for his faithful energetic management of its affairs during his term of office. Few know this so well as you, and probably you did not know all the good work that he did. But we all know what a good fellow he was, what a loyal friend, what a hearty, bright, cheery type of the true canoeist he always proved himself to be. I think the Association does well to put on record for future generations of canoeists to read its tribute of pride in his work and of affection toward the man. At the same time how difficult it is to express in a formal minute all that you feel and all that you think the man deserves. There is one thing about Carter, his memory will be fresh with us who have known him without the aid of written words. Heartily yours, E. B. EDWARDS.

PETERBORO, Ont., Jan. 25.

The announcement of the death on Saturday, the 14th inst., of our late associate and friend, William M. Carter, even after his long illness, comes suddenly upon us, and quickens us to unite with his many friends in the expression of sincere sorrow and sympathy for his bereaved mother and relatives, however vainly we strive, through a sense of our individual loss, to interpret the full measure of their affliction.

Mr. Carter was the first one to join the American Canoe Association in 1883 from lower New Jersey and the South, and was an interested and useful member to the time of his death. In 1888 he was elected secretary-treasurer of the Association. His sterling character and his incisive business methods were of the utmost advantage in placing the affairs of the Association on a sound basis, while his hearty, cheery manner rendered him personally popular with all the members who had business with him either in camp or elsewhere.

His whole life among us was one that endeared him to us, and although during the past year or two his failing health prevented that active participation in our pleasures that was his wish, his influence upon us had once revealed itself in the character and results of his work.

On behalf of the Association which he has so well served, and on behalf of its members, from one end of the continent to the other, who mourn a personal friend, we, in response to the direction of the Commodore, place on record this tribute to a faithful and efficient officer, to a true canoeist whose memory will always remain green among those who have known him.

ROBERT SHAW OLIVER, Albany, N. Y. } Committee.  
E. B. EDWARDS, Peterboro, Can. }  
ROBERT J. WILKIN, Brooklyn, N. Y. }

JANUARY 27.

### Scarcecrow's Sail Plan.

In your illustrated sketch of Scarcecrow published this week the following statement is made: "The peculiar sail plan was designed by Mr. C. J. Stevens after a long experience in canoeing," etc. Allow me to say that the only peculiarity or novelty which appears in this sail plan is the shape of the mainsail in combination with the position and manner of setting the gaff. Now, as you will probably remember when reminded of the fact, I used precisely the same kind of mainsail and gaff, set in the same way, on canoe Red Jacket at the 1886 meet of the A. C. A. In the issue of the FOREST AND STREAM dated March 10, 1887, is an account of the Flying Pontoon, built by me for the designer, W. L. D. O'Grady. Accompanying the account appears a cut, made from my sketch sent you, which clearly shows the same mainsail now said to have been "designed" by Mr. Stevens. As a matter of fact, the first sail of the kind I ever saw was furnished by me for a little sharpie built in 1879, and I have been using the same arrangement on sharpies, Bouncers, etc., ever since the latter year. THOMAS CLAPHAM.

ROSLYN, L. I., Jan. 27.

We had no intention of claiming any special originality for the mentioned, our readers probably know that in shape and general details it is much older even than Mr. Clapham claims. The full details of the rig as used in the canoe Red Jacket may be found in the second edition of "Kendall's Yacht and Boat Sailing," 1880; and, we believe, in the first edition, 1876. Though by no means new, the rig is not in common use here on canoes or small craft, and in this case was adopted by Mr. Stevens as the result of continued tests of other rigs, and with no reference to the many previous experiments, successful or unsuccessful, with a gunter-rigged leg-of-mutton sail.

### A. C. A. Membership.

EASTERN DIVISION.—Arthur M. Ashenden, Frank S. Ashenden, Thos. R. Humeston, Louis H. Lamb, Frank H. Mason, Ernest W. Makepeace, Edward J. Hoves, Asa Hall, James M. Ramage, Fred L. Bardwell. CENTRAL DIVISION.—Gardner O. Leonard, Albany, N. Y. ATLANTIC DIVISION, C. O. Buncherhoff, Brooklyn, N. Y.

### CANOE NEWS NOTES.

The annual meeting of the Springfield Canoe Association was held on Jan. 16, and the following officers were elected: Pres., E. H. Barney; Vice-Pres., J. G. Reed; Capt., E. C. Knappe; Lieut., H. D. Banks; Sec. Treas., Percy S. Gates; House Committee—W. L. Sadler, chairman; E. W. Makepeace and W. E. Parsons. The president, vice-president, captain, lieutenant, secretary-treasurer and chairman of the house of directors constitute the directors. It was voted that the association apply for membership in the New England Amateur Rowing Association, and also that the Eastern Division of the American Canoe Association be invited to hold the annual meet at Calla Shasta on May 30, 31. The hospitality of the canoe club was extended to the members of the Association during their stay, and E. C. Knappe, purser of the Division, thanked the club on behalf of the Association for its offer.

The funeral of Wm. M. Carter took place on Jan. 16 from his home, 521 South Warren street. After the funeral services the remains were taken to Paterson for interment. The funeral cortege left Trenton at 11:47 A. M. and arrived at Paterson at 2:07 P. M. The bearers were Dr. Fred Woodward, Wm. Lawrence, Robert Lucas, Fred Donnelly, Edward Anderson and Harry Allen. They were all members of the Park Island Canoeing Association, which sent a floral emblem of a canoe paddle, trimmed with smilax. The casket was of red cedar, covered with black cloth and trimmed with extension bar handle and plate of silver.

The canoeists and their friends of New York and vicinity, will hold a dinner at the Arena, 39 W. 31st street, on Saturday, Feb. 17 at 6:30 P. M. These dinners have always been very pleasant and well attended, and it is hoped that this one will not be any exception. Those desiring to attend will please send \$1.50 to C. V. Schuyler, 860 Broadway, New York, on or before Feb. 15.

The Rochester C. C. is enjoying the cold weather, ice yacht sailing being now popular on Irondequoit Bay, where the club house is situated.

The Fallside C. C., of Hoboken, held a very pleasant smoker at its club house, Hoboken, on Jan. 20.

target and the 12in. German target with the 14in. center. There is no doubt that if Mr. Hayes had made any effort in the matter, he could have made the target popular. But he is a man of large business affairs, and the shooting his hobby. He had a number of the targets printed, sent them to his shooting friends, and that was the end of his interest in the matter. Those who have shot on the Hayes target pronounce it to be better than either the standard American or the German target, especially the size of bullseye, 8in. being considered too small and 12in. too large. While Mr. Hayes holds a copy-right upon the target, he informed us many months since that the privilege of using the target was open to all riflemen who desired to adopt it. This target and the two others referred to are the best that we have seen in our experience in rifle shooting on the 200 yard range, and if all clubs would adopt one of the three or settle upon an improvement, taking the good qualities of each, it would certainly add to the interest of all who enjoy rifle shooting. We confess, however, that the possibilities of adopting a standard target by the fraternity at large are very remote. For there is no devotee more stubborn than he of the rifle, and when he becomes once wedded to a particular style of arm, target or cartridge, he is immovable.

During the shoot of the Jerseymen at Greenville Schuetzen Park last week it was suggested in the interest of rifle shooting that an invitation be extended to outside clubs who may have opportunities for winter practice to shoot a series of friendly (telegraph) matches on the 200yds. range, five or ten men a side. If this suggestion meets with favor and the same clubs who they can communicate with the Greenville Rifle Club, care FOREST AND STREAM.

Jas. Conlin reports that shooting in his new gallery in the Manhattan Club building is highly satisfactory; his old patrons have found him out and are giving him generous support. An interesting feature in connection with the new gallery is that many society ladies visit the range for practice with the rifle and revolver.

Many of the crack shots connected with the Naval Reserve will start a series of matches soon. The Columbia College students are also perfecting themselves with the rifle and revolver.

Our German-American riflemen are highly interested in the coming team match, which takes place on the Zettler ranges, 219 Bowers, on Feb. 7, between the members of the New York Schuetzen Corps, New York City Schuetzen Corps, New York Central Schuetzen Corps and the Harlem Independent Corps. These four Corps represent a membership at some 500 or more, and there is great speculation as to which team will carry off the honors.

That veteran rifleman M. Dorrier has been confined to his home and bed for the past week or more with a severe attack of diarrhoea. His physician reports that had the illness occurred in hot weather with the same vigor, Michael's shooting days would have been over. The latest reports from the patient are that he is slowly mending.

The Zettler Rifle Club is sending out programmes for its sixth annual team rifle shoot, to be held on the Zettler ranges, near Washington's Birthday. Four valuable trophies will be open for competition for the teams that enter the tournament. All clubs desiring to enter teams should communicate with Chas. G. Zettler, 219 Bowers, New York City.

We received last week a communication from H. Holden, Port Dover, Ont., one of Canada's old riflemen of thirty years ago. This old veteran, who was a prize winner as far back as 1863 in Montreal, Toronto, Ottawa and Brockville, writes us that the love for the rifle still abides with him.

At a special meeting of the Greenville Club on Jan. 29th it was decided, after a lively debate, to enter one team in the new Hudson County League.

At the meeting on Jan. 21 to organize the Hudson County Gallery League, the following board of officers were elected: President, A. W. Steuber, Our Own Club; Vice-President, C. H. Chavart, Greenville Club; Secretary, Julius Kruse, Our Own Club; Treasurer, Henry Mahlenbrock, Hudson Club. Each team will contain five men, but the members must be residents of Hudson County.

At a meeting of the Pittsburgh Rifle Club, Jan. 16, three new members were elected and the following board of officers: Geo. Hodgson, President; Jesse B. Jones, Vice-President; Deane W. Bailey, Secretary; Louis Brehm, Treasurer and Executive Officer; Geo. E. Finkler, W. C. Graebner, W. H. McClelland, D. H. Stouer, Jas. E. Carson and D. W. Frazer, Directors.

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

### FIXTURES.

Feb. 13-15.—Reading Shooting Association tournament; two days targets, one day live birds, at Three-Mile House, Shillington, Pa.

Feb. 15.—Springfield Gun Club tournament, at Pittsboro, Pa.

Feb. 22.—White Plains (N. Y.) Gun Club tournament.

Feb. 22.—Targets and birds at Dexter Park, Long Island. Trapper Mills's day.

Feb. 22.—First tournament of the Eastern New York Trap-Shooter's League, season of 1894, under the auspices of the West End Gun Club of Albany, N. Y. H. A. Kratz, Sec'y.

Feb. 22-25.—Cumberland Gun Club jubilee, live birds and targets, at Lowell, Ind.

April 4-6.—Interstate Manufacturers' and Dealers' Association's grand American handicap at Dexter Park, Long Island.

April 18-19.—Interstate Manufacturers' and Dealers' Association tournament, at Pittsburgh, Pa. Pittsburgh Gun Club will add \$300.

April 24-27.—Central City Gun Club's tournament, Central City, Neb.

May 1-6.—Arkansas State Sportsmen's Association's tournament, at Fort Smith, Arkansas.

May 2-3.—Interstate Manufacturers' and Dealers' Association tournament, at Springfield, O. Springfield Gun Club will add \$300.

May 8-10.—Ohio Trap-Shooter's League annual meeting and tournament, at Columbus, O. Ed. Taylor, Sec'y, Cincinnati, O.

May 17-18.—Newburg (N. Y.) Gun and Rifle Association's spring tournament.

May 22-25.—Knoxville (Tenn.) Gun Club's thirteenth annual tournament; first days, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weeks, Sec'y.

May 30.—Eastern New York League kingbird tournament, at Canajoharie, Chas. Weeks, Sec'y.

May 30-June 1.—Interstate Manufacturers' and Dealers' Association fourth tournament, and second annual tournament of the Michigan Trap-Shooter's League, under the auspices of the Valley City Gun Club. \$500 added money.

June 5-7.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.

June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.

June 12-14.—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Granger, Sec'y, Atlantic City, N. J.

June 14-16.—Sportsmen's Association of the Northwest, annual tournament, at Tacoma, Wash.

June 19-21.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsonnook Park, Altoona, Pa.

Oct. 4-5.—West Newburg (N. Y.) Gun and Rifle Association's fall tournament.

## DRIVERS AND TWISTERS.

The Reading Shooting Association issues an attractive programme of events for their shoot on Feb. 13, 14 and 15, to be held on Reading Grounds, at Three-Mile House, Shillington, Pa. The house and grounds are under the management of the well-known and popular Harry Matz, who will spare no pains to make everybody feel at home. Meals and sleeping accommodations will be provided at Mr. Matz's hotel. The Reading and Southwestern electric cars from Ninth and Franklin and Third and Penn streets run every ten minutes direct to hotel and grounds. The first two days will be devoted to targets, the events in order of 30, 20 and 10 per cent. The programme will be started at 10:30 A. M. each day. The third day will be devoted to shooting live birds, the events being 5 birds, \$4; 15 birds, \$10; 7 birds, \$5 entry, and a \$3 miss and out. Entries include price of birds. Four moneys in each event unless less than eight shooters.

"The Cumberland Jubilee" is the imposing title given to the fourteenth annual celebration of the organization of the Cumberland Gun Club of Lowell, Ind., the jubilee to be held on Feb. 22 to 25, inclusive. Included will also be the first annual winter carnival of 29 sportsmen of Chicago, the whole being in charge of a committee of 29 prominent sportsmen. The programme comprises both live bird and target events, as well as rifle shooting, turkey shooting and a rabbit hunt. On the first day there will be an open shoot at 5 live birds, \$3 entry; open shoot at 25 targets, \$3.50 entry, for four moneys and a silver smoking set presented by J. H. Robbins; Gammon handicap at 20 live birds, \$5 entry, open only to members of the Cumberland and Prairie gun club, prize a \$150 trophy; Prairie Gun Club Stake, open to all, 10 live birds, \$5 entry, a purse to be added by the Prairie Gun Club. Second day, \$3 miss and out, winner to take the entire pot and a \$75 silver and inlaid gold water service presented by the "Monon Route." George C. Gale Sweepstake, for Cumberland Gun Club members only, 35 live birds, entry price of birds, prize a \$100 trophy; 10 targets, entry \$1.50, open to all. Third day, Hibbard, Spencer & Bartlett Stake, 5 live birds, \$5.00 entry, four moneys and a silver bamboo rod, 10 targets, \$1 entry; banner contest for teams of 5 men each, 10 live birds per man, entry cost of birds, prize a silk banner. Fourth day, optional sweepstakes at live birds and targets; rabbit round-up over the Cumberland Marsh, starting at 8 A. M.

The chances are considered bright for a series of matches between the Kansas City expert, Jas. A. R. Elliott, and the Utica marksman, D. Rulford, who recently defeated Elliott in four out of five contests. The matches will probably comprise five matches at 100 birds each for \$250 a side each match. The first two matches will take place in New Jersey, probably on John Erb's Newark grounds late in March, the third in Pittsburgh, the fourth in Chicago and the fifth in Kansas City, Mo. Each man is confident of being able to win a majority of the matches.

On Jan. 25, the day of the team match at Earle's Hotel, on the Elizabeth road, the following sweepstakes were shot: No. 1, at 5 live birds; Last shot 4, Batch 3, McCandless 2, Folsom 0. No. 2, same: Batch 5, LaMott 4, Dovey 2, McCandless 0. No. 3, at 10 live birds: Lot 0, Koegel 9, Perment 8, Pierson 8, Woodruff 8, Batch 7, McCandless 5, Lankhaus 3. No. 4, at 8 live birds: W. Terry 8, Batch 7, Woodruff 7, D. Terry 7, LaMott 6, Koegel 6, Brantingham 6, McCandless 5, Perment 5, Heiney 5, S. Terry 5, Lankhaus 4, Hall 4, Dackerman 4.

PHILADELPHIA, Pa., Jan. 23.—At the last meeting of the Forest Gun Club, the following officers were elected for the year: President, Mr. James A. Miller; Vice-President, Mr. John C. Martin; Field Captain, Mr. Charles Irvin; Secretary and Treasurer, Mr. Wm. Morison. At this meeting it was decided to join the Pennsylvania State Sportsmen's Association. Any nearby club wishing to shoot a friendly match, can be accommodated by addressing Wm. Morison, Sec'y, 323 Ridge avenue, Philadelphia, Pa.

Last November a stake of \$20 was placed in our hands, this to be shot for at 25 targets each by T. W. Morley of Paterson, and Chas. F. Lenoue of Passaic. On the day set for the match a postponement was made, owing to sickness in Mr. Lenoue's family. That was early in December, and we are still waiting for another date to be arranged. The match was to be play or pay, and as Mr. Morley is ready to shoot at any time, we should like to hear from Mr. Lenoue as to his intentions.

At the annual meeting of the West End Gun and Rod Club, of Newark, N. J., Elmer Walmsdorf was elected President; Chas. Neigert, Vice-President; Lawrence Spahn, Treasurer; Louis Heinhausen, Secretary; Wm. R. Betschick, Sergeant-at-Arms; John O. Young, Captain; Tony Rabinovich, Assistant Captain. An important meeting will be held on Feb. 12, and every member is urged to be present.

Next Thursday will be the date for the regular monthly shoot of the Newark Gun Club on Erb's grounds, and it is hoped that the attendance will be sufficiently large to justify the holding of a meeting to decide upon a date for shooting a return team match with the Parkway Gun Club of Brooklyn, to whom they owe a match. The members of the Parkway are anxious that the match should be arranged for an early date.

Elmer E. Shaner, manager of the Interstate Manufacturers' and Dealers' Association, reports that the second tournament of the 1894 series will be held at Pittsburgh, Pa., on April 18 and 19, under the auspices of the Pittsburgh Gun Club, who will add \$300 to the purses. The third tournament will be held at Springfield, O., on May 2 and 3, under the auspices of the Springfield Gun Club, who will add \$200 to the purses.

The return match between the Parkway Rod and Gun Club and the Newark Gun Club, fifteen men on a side, ten birds each, will be shot off on Miller's Dexter Park grounds on Thursday, Feb. 1. In the previous match shot in Newark last fall, the Newark team won by three birds, consequently the Parkway have strong hopes of defeating the Jerseymen in the coming match.

The following officers have been elected by the Syracuse Gun Club: President, Harvey McClurkey; 1st Vice-President, Willis A. Holden; 2d Vice-President, Geo. A. Mann; Secretary, A. C. Ginty; Treasurer, Willard Hookway; Field Captain, Chas. H. Mowry; Lieutenant, Geo. H. Mann; Executive Committee, Chas. A. Mowry, W. Hookway, Geo. A. Mann.

The annual meeting of the Connecticut Trap-Shooter's League for the choice of officers for the ensuing year and to transact such other business as may properly be brought, will be held at Hotel Heublein, Hartford, on Tuesday, Feb. 6, 1894, at 1 o'clock P. M.

The patrons of Dexter Park are remarking that for the past three months Miller has furnished the best birds seen on any of our local grounds in many months. This is highly gratifying to the patrons and speaks well for the energy of proprietor Miller.

The River Bend Gun Club, of Nutley, N. J., has changed its name to the Yantacav Gun Club, and has elected officers as follows: President, Ernest R. Tilton; Vice-President, George L. Malcolm; Secretary, Wm. J. Berg; Treasurer, Conrad H. Ray; Captain, George Deakin.

Mr. Samuel Castle, the veteran trap-shoot of the Newark Gun Club who has been ill with a gripe for three weeks, is convalescent, and will probably take a hand in the club shoot next Thursday.

The Syracuse Gun Club has reduced its initiation fee to \$3, its dues to \$3 a year, and the price of targets to one cent each. It will hereafter shoot on Tuesdays of each week.

Wm. F. Dackerman and Wm. M. Parker, both of Elizabeth, will shoot a 100-bird match for \$150 a side, on the Elizabeth Gun Club grounds, on Feb. 22.

C. H. TOWNSEND.

## Anaconda Rod and Gun Club.

ANACONDA, MONT., Jan. 23.—Inclosed I hand you scores of our weekly shoot. With traps completely housed and a comfortable club house the cold weather does not annoy us, and unless storming hard a few of our most enthusiastic members are always on hand. Our system of shooting for the medal creates quite a rivalry, and a person has to shoot a very stiff race to hold it, as it is not confined to an individual match, but all have the privilege of entering. The weather was fair, and Mr. Cruger, the holder of the medal, shot a very stiff race up to his last five birds, but Twoby's nerve was more lasting, and he landed winner by one bird only.

Class A Medal.  
F O Cruger.....111111110110110101100-19

## Interstate Tournaments.

The fourth tournament of the Interstate Manufacturers' and Dealers' Association will be given at Chicago, Ill., May 17, 18 and 19, under the auspices of the Prairie Gun Club, at Garfield Park race track. Live birds and inanimate targets. Amount of added money will be announced later.

ELMER E. SHANER, Manager I. M. & D. A.  
The fifth tournament of the Interstate Manufacturers' and Dealers' Association will be given in conjunction with the second annual tournament of the Michigan Trap Shooters' League, at Grand Rapids, Mich., May 30, 31, and June 1, under the auspices of the Valley City Gun Club. The Gun Club will add \$200 to the purses.

ELMER E. SHANER, Manager I. M. & D. A.

## Live Bird Shoot at Erb's.

TUESDAY, Jan. 23, the day set for the 25-bird sweep on John Erb's Newark grounds, was as favorable as could be expected for the season, but the stringency of the money market or some other cause must have affected the sportsmen, as a bare handful appeared, not enough in fact to justify the starting of the above event; and consequently the day was devoted to sweepstake shooting. The birds, which were from the Kansas City lofts of J. A. R. Elliott, were a rattling good lot, all old birds of fine plumage and fit to fly for their lives. If Mr. Elliott could guarantee under all circumstances to furnish as good birds as used on this date, he should be able to place a big lot of birds in this vicinity.

Quite a number of spectators were on hand to see the big event, but although disappointed in this, they were treated to some fine work by such experts as Elliott, Fulford, Class, Hollis, Lindsley, Erb and Walters. The sport was opened by a couple of sweepstakes at 10 live birds per man, \$10 entry, three moneys, the scores being as below:

No. 1. No. 2.  
Elliott.....0231111301-8 111112101-9  
Class.....112102211-9 2311121112-10  
Fulford.....111112112-10 111112111-10  
Lindsley.....233232123-10 233232323-10  
Erb.....111021301-7 2111111112-9  
Hollis.....102212121-8 2111111112-9

The outcome of even No. 2 occasioned a dispute on the part of one of the contestants which in our opinion was entirely uncalled for as well as unjustified. Previous to the event it was understood that there were to be three moneys. Before shooting at his last bird, Mr. Hollis, the last man on the list, approached the trap editor of FOREST AND STREAM, who was acting as scorer and cashier, and asked if in case there were only two moneys, would he have the purse would be divided 60 and 40. He was informed that the conditions were "three moneys" and if there were only two winning scores third money would be added to first. Mr. Hollis went to the score and killed his bird, this leaving two classes of winners only, three men killing 10 each and the others killing 9 each. The Mr. Hollis made a decided "kick" against the decision of the cashier, meanwhile using language which to do him justice we do not think would have been used had he taken a sober second thought. The only man to side with Mr. Hollis was Mr. Elliott, while our decision as to the proper disposition of the money was upheld by Messrs. Erb, Fulford, Class and Lindsley, and by the old veteran, Mr. Jacob Pentz. Finally becoming disgusted with the unreasonable arguments advanced we turned the money over to Mr. John Erb, who soon settled the dispute by adding third money to first and giving the shooters their choice as to whether they took their share or not. It is needless to say that they each took their share. Only once before, to our knowledge, has this point been raised, and then it was raised on the same grounds, by the same gentleman, and was decided against him.

The above event came a series of three 10-bird events between Fulford and Lindsley, the first to pay for the birds. The result: Fulford.....111011122 211211111 211111111-29  
Lindsley.....023221120 202102322 132110202-23  
Then Fulford and Class had a go at 25 birds for the cost, this resulting this way:  
Fulford.....222111110 1120120121 11111-32  
Class.....222111111 222121111 12311-23

The finals of the day were at 5 birds each, \$5 entry, three moneys:  
No. 3. No. 4. Ties.

## Hell Gate Gun Club.

On Tuesday of last week thirty members of the Hell Gate Gun Club participated in the monthly shoot of the club at Miller's Dexter Park grounds. The weather was fine and the birds of first class quality, giving the shooters plenty of work to stop them within the boundary. There was not a clean score made during the afternoon. Such good shots as Donohy, Col. Voss, Lind, Egan, and Dannefeller being able to grasp only seven of their ten birds.

There was so much time consumed in shooting out the club event, that the shades of night were closing in when the last man had finished his score.

A three bird sweep by starlight with five entries followed the club event, Col. Voss by good luck in guessing the direction in which his birds had been blown, won the money with a clear score. Scores:  
10 birds, Hurlingham rules:

## Spokane Rod and Gun Club.

SPOKANE, WASHINGTON, Jan. 23.—There was a good attendance at the Spokane Rod and Gun Club shoot yesterday. The air was very frosty, but the sun shone beautiful, and all taken together, it was a splendid day for shooting, there being no wind to mar the flight of the famous bluecock. The shooting was not up to the average, with the exception of T. B. Ware, who got 23 out of 25, and who added the winner of the A class medal for the eighth consecutive time. The B class medal fell into the hands of W. D. Knight for the third time.

Following are the scores:  
Medal shoot, 30 singles and 5 pairs:  
T B Ware (A).....1111111111111111110001 10 11 10 10 11-23  
Eckhart (A).....0011011100010110101 10 11 10 11-23

## Esculapian at the Trap.

On Wednesday of last week five disciples of Esculapian met at Dexter Park to compete for honors at pigeon shooting. There is probably no city in the Union that can boast of so many physicians with trap-shooting proclivities as can the City of Churches, and of the score of clubs in the city there is hardly one that does not contain upon its membership roll the name of some resident physician. The five who were gathered at Miller's of Wednesday were fully alive to the necessity of making a good showing when facing the traps, and the rules for shooting being liberal, "go as you please," each contestant was in position to bring out his strongest points. Some of them had favorite patients whose rapid recovery depended largely upon a generous supply of pigeon blood, previously contracted for, and as a professional physician's pride it was necessary to have the birdcane patient become impatient as to the treatment. The birds furnished by Miller were of that quality that are up and away when the traps are opened, and the consequence was that the doctors were compelled to resort to what is known professionally as "heroic treatment," in shotgun parlance termed both barrels—in some instances simultaneously.

In the competition Drs. Lord and Horne got on to their birds from the start and succeeded in killing 9 and 8 respectively. The others seemed to be a little uncertain as to the necessary treatment, and resorted to some experimenting which was fatal to the accumulating of large totals and somewhat damaging to their pride as experts with the gun. The afternoon's sport, however, was highly enjoyed by all, and they no doubt returned to their practice and their patients physically and mentally the better for their afternoon's outing with the gun and birds. Scores:  
Dr Freed.....212101111-9 Dr H Berg.....002010021-4  
Dr Forst.....021010221-7 Dr Horne.....121020221-8  
Dr R Berg.....001020002-3

E. L. B., Afton, Ia.—String measurement is taken from the center of the target shot at, and not from the center of a group of shots. A's shots are several hundred per cent better than B's.

## THE ABSOLUTE PROHIBITION OF TRAFFIC IN GAME.

IN Great Britain and various other countries artificial game destruction is offset by artificial game production. Birds are bred by the million, to be killed by the million, marketed by the million, and replaced by the million. The system is that of a gigantic poultry farm. The supply is inexhaustible. Game in market is thus a legitimate article of traffic.

In America conditions are different. Here we are wholly dependent upon the natural increase, unaided by human agency, for the maintenance of the game supply. And the natural increase is by no manner of means adequate to withstand the augmented destruction. While the game stock has been growing less and less, the drain upon it has been growing greater and greater. Shooters who pursue it for sport have multiplied a thousand-fold; consumers ten thousand-fold. There is not to-day enough game for the two classes. One or the other must surrender its claim in favor of the other. The sportsman must yield to the game dealer or the game dealer must give way to the sportsman. Which shall it be?

Selfish and personal considerations aside, the answer is readily found. That interest must give way which is of least advantage to the community, and that one must be preserved which is of paramount public importance. This is to say that the game must be saved for the enjoyment and benefit of those who pursue it for the sake of the pursuit. A grouse which gives a man a holiday afield is worth more to the community than a grouse snared or shot for the market stalls. The game supply which makes possible the general indulgence in field sports is of incalculable advantage to individuals and the nation; but a game supply which makes possible the traffic in game as a luxury has no such importance.

If this be granted, public policy demands that the traffic in game should be abolished. And if public policy demand this, the commercial interests involved, although of magnitude, are not to be considered. This is advanced doctrine perhaps; it is radical; it goes to the root of the thing. But as we have said, the time has come to take an advanced position. When a political party formulates its platform, it does not confine its declaration of principle to the advocacy of such measures alone as are susceptible of immediate attainment; but going further than this, it commits every man who marches under the party banner to the support of certain other principles, the struggle for the supremacy of which must be arduous and protracted, and the triumph in them long deferred. The planks of the party platform stand for the articles of party faith; they embody a declaration of "the things hoped for," and which may not be the achievement of one administration nor of a succession of administrations.

In like manner, when we suggest this declaration, *The sale of game should be forbidden at all seasons*, as a plank in the platform of that vast party of men scattered in hosts over this country, interested in preserving the game of the continent, the suggestion is made without any optimistic delusion that such a system could be effected at once. But we do hold that the principle of the absolute prohibition of traffic in wild game is the true one, that it is the only one which is adequate, and that it is the one to which sportsmen as a class should be committed, heartily, unreservedly, with determination, courage, steadfastness, patience and persistency. The campaign must be a long one; but will it not be a campaign for that which is wise, just, and of public advantage?

## LEAD-POISONED WILDFOWL.

THE accounts of the destruction of ducks, geese and swans by lead-poisoning which are printed on another page bring to public attention a new element of danger to our wildfowl, and one for which a remedy will be hard to find.

It is easily to be seen how the birds collect the shot which seems so fatal to them. The best shooting points are on the feeding grounds, and so it is precisely on these feeding grounds that the gunner ties out his decoys and does his shooting, scattering the shot discharged from his gun far and wide over the muddy bottom from which the birds procure their food. Dabbling in the mud for food or pulling up the grass, the fowl take in this shot, which they cannot distinguish from particles of sand or gravel, and which when it passes into the gizzard, is—up to a certain point—subjected to the same digestive processes as the food eaten.

The gizzard is a grist mill. Its tough, leathery walls hold the fine gravel which is necessary to digestion and the peristaltic action of the organ keeps these tiny mill-stones moving against each other, and against the food which enters the gizzard, thus grinding the grain, seeds or grass into fine particles which are then readily acted on by the gastric fluids. Just as the food is ground up when taken into the gizzard, so the soft shot is ground into fine powder.

Lead as a metal is not poisonous, but it is readily acted on by the gastric juices, and may thus be converted into a violent irritant poison. In the human subject most cases of lead-poisoning are caused by the acetate being taken into the stomach, but there are also recorded many instances in which the dust of metallic lead has caused poisoning, and metallic lead is often detected in the tissues of individuals so poisoned. It is evident that lead dust, such as shot becomes after being subjected to the grinding process of a bird's gizzard, would be much more readily acted on by the gastric juices than the same quantity of lead taken in larger pieces into the stomach of a mammal.

The chemical change which takes place in the lead, converts it into a poison which produces acute corrosive gastritis, to which very likely may be added a certain amount of mechanical poisoning, caused by such particles of the metal as have not been dissolved by the gastric fluids, but have passed unchanged into the intestine. In the geese and swan dissected in the South, the mucous membrane of the gizzard was found to be corroded and broken down and the intestines much inflamed, the veins, gorged with black blood, showing plainly against the exterior white walls of the intestines.

The symptoms of the sick birds captured agree with those to be looked for in this poisoning. The birds are dumpy, stupid and stagger in their walk, and have little control over themselves; in other words, the brain is affected. One specimen appears to have had convulsions. All had difficulty in breathing; the respiration was interrupted and hurried; vomiting took place; there was fever.

Apparently not much has been written on this form of poisoning in animals, yet in 1853 Dr. G. Wilson, in the *Edinburgh Medical Journal*, states that he detected lead in the organs of animals that had perished from the effects of drinking water impregnated with carbonate of lead from a neighboring manufactory, and of eating grass in the blades and roots of which lead was ascertained to be present.

It may be conjectured that while wild birds which have died from this cause are by no means fit for food, there is little danger to human life from their consumption. The poison acts quickly on the affected tissues, paralyzing and actually destroying the digestive organs,

and the bird through lack of nutrition speedily becomes thin in flesh and would not be marketable.

It is evident that the condition of things described by our staff correspondents as existing in the waters referred to is one that is likely to grow worse instead of better. It is true that the numbers of birds actually known to die from this cause are not large, but the proportion of those seen must be very small in comparison to those affected and destroyed without coming under observation. Mr. Ashley Corbell, a Currituck gunner of long experience, has expressed to us the belief that during some seasons five hundred geese alone, that have died from this cause, have come ashore in his own locality.

As stated by our Chicago representative, the existence of this disease has been known in the office of FOREST AND STREAM for a year, and the reasons which we had for not mentioning it have only now ceased to exist. By a curious coincidence the examination of the Currituck wildfowl had been made only a few days, and the notes on the cases had only just been written, when it became possible to publish the interesting facts, and Mr. Hough's manuscript was received at this office.

The subject is one which is of the greatest interest to all gunners; and the naturalist and medical man as well will find in it food for thought. There are people who believe the number of our wildfowl is reduced by the gathering of their eggs for albumen, but here is an agent of destruction much more real and alarming. The actual facts, free from speculation or fanciful and absurd theories, are now for the first time laid before the public in the columns of FOREST AND STREAM.

## A THIRTY-POUND TROUT.

WE had from Dr. Nordqvist last year a little account of the game fishes of Finland—the salmon, the black-spotted and red-spotted trouts, the pike, pike-perch, yellow perch and other well known species. This week we publish a translation of a trout fishing story by a Finland angler. The charming illustration accompanying the article has been furnished by Dr. Nordqvist for our use; it was first published in the *Fishery Journal* of Finland at Helsingfors.

The trout described is the fish known in New York and some other States as the brown trout, and at the stations of the U. S. Fish Commission as the Von Behr trout (*Salmo fario*). The fish was far above the average weight, so that the feeling of triumph naturally belonging to Mr. Thesleff will be appreciated by American anglers who delight in record breaking. The bait used is a little whitefish allied to our so-called lake herring.

This plain and straightforward account of an evening's enjoyment will serve to remind us that "One touch of nature makes the whole world kin." The home of the birch, the May fly, the trout and the salmon is a wide expanse, and the divinity that woe man into this fair domain reigns over many lands.

## SNAP SHOTS.

ON many ducking grounds this has proved to be a great year for game. The fowl have come in tremendous hosts to localities where the supply has been wanting in recent years. The fluctuations of years of plenty and years of scarcity go far toward confounding some of the pet theories about game and the measures which are advocated as essential to provide for the maintenance of the stock.

Wanted in New York city—a live game protective association to hold up the hands of the district game protector and aid him in his campaign against the restaurant proprietors who serve game out of season. The field of activity is wide, there is much to do, and just now no organization of the kind to do it.

The negro with his cheap gun is an ever-present factor to be reckoned with in maintaining the game supply in the Southern States. Trespass laws intended mainly to keep off negro shooters are in many sections extremely severe.

We have prepared and shall print next week an interesting and suggestive report of the wild game which has been introduced into the various game preserves of the United States.

## The Sportsman Tourist.

### A BANQUET.

#### An Incident of Surveying Life.

AFTER repeatedly pressed invitations, the ladies had consented to come over to dine with us next day, provided we would send the skiff to bring them across the river. I pondered. "This brings on more talk," was the channel into which my otherwise unoccupied brain turned. Ladies would not deign to partake of our ordinary, everyday, morning, noon and night bill of fare. That would be inviting them to do too much. Something must be done and that right quickly. My troubled conscience took me into the store past which my route back to Camp Zenora led me. Next came a strip of brown paper and a pencil, when, by dint of more pondering, the following memorandum (verbatim) resulted: Meat, 2 cans beef, apples (for baking), 2 cans tomatoes (to stew), 1 can pineapple, 1 cocoanut and 1 dozen oranges for ambrosia, cheese (for macaroni), potatoes, 2 dozen eggs.

The ferryman landed me a mile above camp, when my tribulations began in earnest. The oranges broke out of the sack. Ditto cocoanut, to say nothing of the five cans, which a paper sack was too frail and my pockets too small to retain with safety. In a fit of desperation, I removed my overcoat from off my back, spread it on the ground, and tumbled oranges, cocoanut and canned goods into it tumultuously. Then catching it up by the four corners, I proceeded, trying, the while, to keep my grip on the other corner during my efforts to regain control of the three that were escaping it.

Next morning came. The cook was sick and obliged to call in an assistant in the person of Aunt Alexander, whose shanty stands circumscribed by a small clearing of few paces beyond a stone's throw from Camp Z. The axman, too, had to be pressed into service until it was time for him to start across for the company.

I staid in camp to direct—to "keep house," so to speak—and to make the ambrosia. We could not find the cocoanut grater, hence the need of a hatchet, a big nail and an empty tin can. The axman was provided with these and "started off right," then I left him to make the cocoanut grater while I hid the old shoes in a corner and washed off the soap dish.

Pulverizing the cocoanut on our new grater was a most attractive occupation, at the same time detracting from the symmetry of my fingers; but I got through with it and made a fine bowl of ambrosia in a milk crock, for be it known we are advancing with the times and keep a cow and a new calf pen in camp now.

The ladies came and were seated in our several chairs, while we sat on the bed. They tried to draw us into conversation, but we were too much engrossed with the weighty affairs of housekeeping to have any mind for trivial topics. In fact—more is the shame—that conversation came to be a sort of "yes'm," "no'm," "I reckon so" affair, when, fortunately, dinner was announced.

If a cook ever sets two chickens on a small dish with no gravy and too much onion not cooked enough in the dressing before me, when I am in a low chair by a high table, with company—feminine company—all around it, and a dull knife and a short fork to carve with, and no spoon to get out dressing with, and both chickens turned the wrong way for carving and cooked so soft that the breast won't slice when I can not carve anyhow, that aforesaid cook would better take the precaution to be very tolerably sick, he would.

But I'm equal to most emergencies, and blundered through. The cook hadn't cooked any macaroni, had overlooked the tomatoes, and brought both cans of beef on the table in the cans. He hadn't put enough butter in the dish, which made the guests think we were short. Some of the ladies wanted water, and I had to confess that we had but three glasses, and hence Nos. 4 to 10 (inclusive) would have to be content with tin cups. They kindly consented, though it was apparent that they couldn't quite appreciate the situation.

The axman was sent out with the beef to put it in a dish. He lost his memory and forgot to bring it back—the beef, or memory either.

"Change the plates, Hughes!"

He did. In spite of the fact that the poor ducky had never waited on ladies before and was somewhat lost, he finally got out with the plates and chicken dish and back with a crumb wiper and a plate of cake that one of the lady guests had kindly provided us with. Also in the course of time clean plates came, and Hughes was convinced that it was proper to take out the corn bread and rice, though potatoes and the fated beef that he had brought in at the last moment (on being reminded of it) had to be endured through the next course.

A long delay followed, and was finally ended by the arrival of Hughes with clean knives and forks.

"We don't need those, Hughes," I tried to say kindly, though I was mad at him for taking up so much valuable time to wash them when we didn't need them. But right here is where I made a gross mistake. I soon found that we did need them; but it was too late to recall them.

A further delay.

Softly approaching the front of the tent, Hughes motioned me out with an air combining stealth with a certain style of self-satisfaction possessed by one on the point of conveying a piece of startling news to the ear of an intent listener.

"De cook wants ter see yer," he whispered.

I went to the cook tent, where I found that his disabled majesty had sufficiently regained his health to be able to sit upright beside my crock of ambrosia, where he was getting ready to souse a heathenish kitchen spoon into the top of it, over which I had taken so much pains to round up a snow white mound of cocoanut.

"Mus' I put it in de saucers out hyer?" he queried with assumed innocence.

"Look here," I thought to myself, "this thing is beginning to weaken my nervous system." Then I replied to the cook in impressive rhetoric, and the belated crock was forthwith conveyed to the table.

"All's well that ends well," they say. The ambrosia was a success, if some did have to use cups instead of saucers.

True, there were some obstacles in the way of satisfactorily disposing of the spiritual food (the ladies worried one or two slices of orange into subdivisions of a politely

palatable size, then gave up in despair—the more timid among us in their efforts to dissect the inconveniently large slices, splattered pineapple juice and cocoanut gratings over the lady sitting on either side). With ambrosia 'tis always thus. I, however, solved the problem. To eat ambrosia and yet comply with the latest regulations and by-laws on etiquette your requisite is tact. Quietly select a slice of orange. Don't make a fool of yourself by attempting to cut it, but simply fold it. It is still too big, but that doesn't matter. Just keep your eye open. When everybody else is looking down in a fruitless attempt to cut a slice in quarters with a spoon with a flexible handle, you slip your folded slice between your teeth and chew right fast. This operation may be repeated until all the slices are disposed of.

I will close the scene with a few friendly suggestions. First, never ask ladies to dine at your camp. Again, if you should ask them and they accept, open the ceremonies by informing them that they are in camp—that camps are not houses; never were and never will be—that camp fare is for working men, not for ladies, but you hope they can endure it for about twenty-five minutes; that you have six goblets, six knives and six forks on your property list, but that three goblets are broken, one knife is retained behind the scenes for kitchen use, one fork and two spoons are lost and another fork has one and one-half teeth broken out and that you haven't the housekeeper's standby—a next-door or over-the-ally neighbor that you are trying to get even with for that quart of flour and a nutmeg that she borrowed seven weeks ago and forgot to return. Lastly, have the same kind of dinner and servants' attendance that you have every day, for if you go to putting on style, the thing won't work out right. Lastly—but not least, if your cook gets sick you have the heartfelt sympathy of

MISSISSIPPI.

### HOW THE SLEEPERS GOT EGG NOGG.

THE south bound Chicago & New Orleans limited had stopped for orders one afternoon at a small town in Mississippi, a day or two before Christmas.

The passengers gladly availed themselves of the opportunity to move about a little in the soft, pure air, for the day was an ideal one, and the earth, flooded with the bright, warm sunshine, was especially delightful to those of us who hailed from the ice-clad North.

The town was typically Southern, but most picturesque and fascinating to Northern eyes. The streets fairly swarmed with negroes—big, little and middle-sized—the women clad in bright-hued garments, the men in every degree of artistic raggedness. They had come to town to do their Christmas shopping. Standing about everywhere were their rigs—and such rigs, and such cattle! Each a masterpiece—from an artist's point of view. Mules, oxen and horses, little and big—and of every age, sex and previous condition of servitude. These were harnessed to inconceivable carts by a confused jumble of ropes, straps and chains, knots serving in place of buckles or snaps. Most of these vehicles had brought in wood, cotton or produce to exchange for Christmas goods at "de sto'." The platform at this station held a score or more of loungers, and among them was a typical white-haired old "daddy," bent with age and rheumatism, basket on arm, leaning on the traditional cane—rapt and serene. With him ensued the following:

Tourist—What have you in your basket, uncle?

Uncle (expectantly, doffing his hat)—Aigs, sah.

T.—How many?

U.—Bout er dozen, sah, I reck'n.

T.—How much do you ask for them?

U.—Fo' bits, sah.

T.—Fifty cents? Isn't that a little high, uncle? Why (at a venture), they are selling at the store over there for twenty-five.

U. (sadly)—No, sah, thutty cents! Dat's wot dey git fo' dem—an' dey won't gimme mo'n twainy cents. I done heerd as how aigs wuz sca'ce, an' I done fotch dese in—an' I gwine ter git fo' bits fer dem, or I done gwine ter tote 'm back home.

"Y' see, sah," he continued, with a far-off look in his eyes and totally unconscious of the knot of tourists and idlers gathered about him, indeed, more as if he was thinking aloud than addressing any one in particular, "y' see, sah, I lowed ter git sum Kismus gif's fo' de li'l' g'anchil'n—dah's Pete—he 'mos' fo', an' he (with a chuckle of pride)—he want er gun—but li'l' Rose—tell you, she tink heap o' her ole g'andad—Lor! she fat an' smoo'f like er baby 'possum—she put up her lip an' got tear in her eye when my gal hol's her up dis maw'n ter shake de ole dad 'day-day' wif her li'l' han's." Then, after a pause, remembering himself, he shook his old head and said, decidedly: "No, sah, dey can't git dese yer aigs f'm me less 'n fo' bits, dey can't!"

Just then a brisk, prosperous looking young fellow—passenger edged forward, and with incisive broken-like accent exclaimed: "That's right, old man; hang on to them. Don't let 'em get away from you. You're dead right, daddy, 'aigs is sca'ce' just now, and it's a bull market! Let me see 'em," he said, peering into the basket. "Wha-a-t? Fine eggs like that for fifty cents a dozen? Don't you do it, uncle! Why, up in Chicago at the Auditorium you'd get a dollar a dozen for them. Here you, John Henry," to the grinning buffet porter standing by, "can you make egg nogg?" "Yes, sir-ee, boss; I don't take no back seat fer nobody on egg-nogg, and got a big punch bowl in de buffet, too." "Got any milk?" "No, sah, but kin git it next stop." "All right, get an extra gallon," and taking the basket from the arm of the bewildered old ducky who had vainly endeavored to follow the quick, snappy talk, the brisk young man placed in his open palm a shining silver dollar just as the conductor shouted "All aboard!"

At the sight of the dollar each Ethiopian optic in the crowd grew as big as the coin itself visible in the old man's hand, and as we were hurrying aboard one inquired with bated breath of the porter if he "know'd dat gemman." "Oh," said that functionary easily, "dat's the She-Kawgo gemman wot builded de World's Fair." At this each eye in the group became more distended if possible, and a gaze of unparalleled intensity was focussed upon the young gentleman in the well-fitting brown tweed, while the mouths of the party grew positively alarming in their cavernous suggestion. All except the old man, who stood dazed in precisely the same attitude as when left by this *fin de siècle* Santa Claus. And thus they remained gazing speechless until we lost sight of them as the train moved on.

After the night had fallen "Mr. Santa Claus," as we had jestingly dubbed him, produced from his traveling-bag a bottle of smooth old Monogram and in due course appeared a brimming punch bowl of royal egg-nogg, presided over by the beaming "John Henry." A mixed committee on invitation was sent into the rear sleeper, and soon the men therefrom appeared, followed later by every lady in the car, not even excepting two tailor-made girls who had hitherto maintained a most frigid, touch-me-not expression. Formality was forgotten and all was jollity and good feeling, and especially was every phase of the little incident of the afternoon gone over and dwelt upon at length. It was the "one touch of nature." When the cups had been filled and handed around by the delighted porters, one of the party arose, and in a few well chosen words pledged a Merry Christmas to the old ducky's "Santa Claus." "And," added the gentle voice of a sweet-faced old lady, "may his every Christmas be as happy as he has made the hearts of the poor old grandfather and those two dear little black children."

L. J. M.

### MY FOUR PET SHOTS.

I.

THIRTY years, and a trifle more, have gone down the dusty way of time since the first outbreak of the hunting spirit which has ever been my best and constant love—but the scene is fresh before me. A summer day; a twelve-year-old boy; a .22 single-barreled Frank Wesson "tip-up" pistol; a flock of puddle ducks a hundred yards away, floating on the surface of the mill pond; an overpowering temptation; a shot, vaguely into space; a stormy interview with Mistress Brady, the blacksmith's wife; a dollar, mulcted from the prized hoard in my savings bank, and the first of my shots became a memory.

II.

Eight years passed. The great war was over; a people made restless by the turmoil of stirring events were pressing hard against their western boundary, and the railroads were pushing out into a vast region, almost as bare of settlement as in the day when Coronado pierced to its heart in search of fabulous Quivira. The dreams of a boyhood filled with Bonneville and Mayne Reid, were about to be realized, as I rode with a party of hunters out from the terminus of the building railroad down into the buffalo country, in that day, quite as often, the Indian country. Southward we went, across the Smoky Hill, the Arkansas and the Cimarron, far into the nameless waste now known as Oklahoma. There were some fifteen in the party, my especial friend and protector being a grizzled Scot named Brister, a veteran of the plains, with shoulders as broad as his native dialect, and a head in proportion to both.

When we made anything like a permanent camp it was the custom to send out small parties of three or four on a side hunt, rarely going far from camp, and coming in when a wagon load of skins had been secured.

On one of these occasions we were riding across the plain, Brister in the lead and I closely behind, heading for a slight rise crowned with scanty brush, from which we could get a look over the country beyond, when, as we got within easy reach, our horses threw up their heads and looked earnestly onward with pointed ears and open nostrils. Suddenly Brister wheeled his horse, calling out to me, "Inja-a-ans, la-ad, ro-on for ca-camp!" As we dashed off, a couple of arrows went by and a wild yell told that the chase was on. We were better mounted, or had stronger reasons for getting ahead, and outran them all but one fellow on a gray pony, who kept well up on the left flank, until I felt a slight shock as an arrow ripped through my trouser leg and dug into my saddle, slightly cutting the skin above the knee, and almost immediately another flashed by in front. This had to be stopped, and a couple of shots, unsteadily delivered from our galloping horses, turned him off in a wide sweep to rejoin his party. It was a mad race for camp, but we got there first; the two men we had left behind running out and opening fire as soon as they saw the coming outfit, which brought our pursuers to a stop and held them while we got our animals down into an angle of the coulees by which we were camped, so disposed that four men could defend it and pretty well prevent an enflading fire.

For several hours a lively skirmish kept up, several Indians racing by, one after the other, and sending a few arrows over our heads, but there was plenty of powder and lead in the rifle pit, and after several casualties the fun was pretty well stopped, with the exception of my friend on the white pony, who continued to dash by at intervals. Each time he got a couple of shots, but nothing seemed able to touch him. I harbored some resentment for this fellow, and four times I fired at him as he swept by, missing him cleanly each time; then I concluded I was giving him too much room, and as he came by for the fifth time I sighted close in and as my Sharp .45 spoke out he developed a sudden curvature of the spine, slipped down, a limp man, on the off side and parted company with his gray pony forever. A wild charge from the whole band followed to keep us from the body, but the rattling fire of four rifles was too much for them in the open and they broke and scattered over the plain. Our position was too strong, and toward night we got safely back to the main camp.

On my library wall, under a rack of rifles, hangs a splendid collar of elk teeth—a memory of that dead Kiowa brave.

III.

More years have gone by—few of them without their weeks of life in the glorious Rockies. Again in camp, among the western foothills of a gigantic chaos of eruptive rock, piñon, juniper, agave and sahuara.

My companion was a loved comrade of many a hunt; as gallant a soldier as ever dismounted his troop and led it up the mountain side in a bold dash at some Apache stronghold, and as true a sportsman as ever laid eye along a well-browned barrel; long since gone into the silent night where taps and reveille alike are unheard by his dulled ear.

Game was scarce where we were; a set of bad weather had kept us in camp, and as meat was running low, I started out one morning alone to try and pick up a black-tail somewhere in the mountains behind us. Several miles up the trail I picked my horse and went on afoot. It was a hopeless quest. Nothing was to be found. The bitter wind which blew on my left increased as I went higher. Presently down came a rattle of sleet, and in five minutes the landscape was hidden in a drifting fog of

snow. Down came my hat over my eyes, up went my coat collar, and with rifle jammed under my arm and hands well down in my pockets I took the back trail. I had passed the worst of the way and got within a mile of my horse when, just as I was turning a curiously regular, round hillock, which looked like the tumulus of some forgotten race, a gruff snort came to my ear, and looking up, above me towered a gigantic grizzly, just raising himself on his hindlegs. There was no time to get my rifle to my shoulder; a snap shot from the hip was all I could manage, and I dashed off to the right rear, somehow getting a fresh cartridge into place as I ran. No record-breaking sprinter could have beaten me to the top of a rocky point which stood near by, and when I got there, utterly winded and found that everything looked peaceful and no enemy in sight, I would have drawn a deep breath of content if the spasmodic state of my diaphragm had allowed, but as it was I simply sat down in the accumulating snow until my lungs and nerves had got down again to a working basis.

The only way back to my horse lay down that trail, and by that way I must go. I knew, too, that my shot must have told somewhere, and I had a curiosity to know where, so down I went, keeping a close eye ahead, rifle well to the front, ready for a fight or another footrace as the moment should decide. No sign of bear until I reached the end of my tracks, and there, right where he had stood, he lay, like the ambitious youth of poetry, lifeless amid the falling snow, so close to the tracks I had stood in when I shot that I examined his brawny chest to see if the powder had not burned him. My snap shot had caught him full in the throat, smashed the cervical vertebra and so completely unraveled the spinal cord that he never could have known he was hit.

He was a fair-sized bear, but less by four-fifths than I had expected; and the thought has often come to me that if his plan of battle had been the same as mine, and he had run away in the opposite direction, I would have gone through life with the fixed conviction that grizzly bears sometimes grow as large as Waterhouse Hawkins's restoration of *Hadrosaurus*.

IV.

One more—and on this I dwell, perhaps, more lovingly than on the others. It was not so long ago, and what can be dearer to the lover of the rifle than to recall a successful stalk and at the end its lifeless object before him on the ground.

My six weeks' hunt was over and I was back in the little settlement in the Park, putting in a few days shooting sage grouse while my guide and henchman was getting his badly rattled harness into shape to drive me by buckboard a hundred miles across the Gore Range and down the Blue River to the hated sign of civilization—the two lines of iron rail which would carry me back to my Atlantic home.

The weekly mail carrier came in and casually said that he had seen a nice bunch of antelope down by the "Big Mesa." That evening I remarked to my host that it was a long time since I had tasted antelope and I would have a try at them on the morrow.

Early morning found me traveling along the streak of soil which had been just enough specialized to earn the courtesy title of "stage road." Five miles or so brought me to the base of the mesa, which I skirted for some distance before I could find a place to get my horse to the top; then a long and fruitless search for my game, until I reached the further edge, from which a wide, saucer-shaped valley fell away, sloping up again to the base of the mountain opposite; there they were, on the far side, more than half a mile away.

Approach was not easy; there was little wind, but that little was full on my back, and that protected them across the width of the valley; a ridge ran out just behind them, but several were feeding up too near its crest to make it possible to reach them from that side.

Careful inspection showed a deep coulée running from the foot of the mesa on my left, in a winding course across the valley and below the wind, and with my glass I fixed a bush growing on its edge, from which I could get a long but open shot. Turning back, I got down into the coulée without exposing myself, and riding as near as I dared, threw the bridle over my pony's head and taking to my own legs got under cover of my bush.

During the half hour it had taken to get there, the antelope had moved off and a stretch of at least 500 yds. was between us. There were some thirty of them, and my glass showed one buck with what, even at that distance, seemed extraordinary horns, and I badly wanted him, but I am not one of those rare shots who get game at such distances; indeed, in my whole life I do not believe I have sighted it half a dozen times so far off; but there was nobody by, if I missed, so I set about it. My gun was a .50-95 single shot Winchester, made from my own specifications; no more accurate rifle ever came to shoulder, and I had shot it enough over known ranges to be pretty familiar with its drop at long distances. There was no need to hurry, so I put up my sights to the highest point, made a good allowance for the remaining distance, and the buck was not as much surprised when 312 grains of solid lead caught him in the ribs, as I was to see his side-way jump, landing on the ground. But like his kind, he was up and off in a second and before I could get back to my horse and get him up on the flat, the whole bunch was out of sight.

I knew the lay of the land moved from them to the right, so I swung that way myself to head them, quite forgetting the creek which I would have to cross and which came on me suddenly. It looked deep and cold, but it was too late to hold up, and my little white-footed bay had his blood up and I doubt if I would have stopped him if I tried. In we went with a plunge, and when that was over, it mattered little as for wetness, whether the rest of it was 2 ft. or 2 yds. deep—but we got through, and over beyond the second rise I came on my antelope, looking very sick, at the steep base of the mesa, up which the rest had gone. He started off into the sage-brush as I came up, but he was nearly done and twice I rode him to a standstill, the second time jumping off and raking him with a shot which put him down to stay.

Half an hour later I was riding across to cut the road, with all of his best qualities behind my saddle, including a pair of horns 14 in. in vertical height.

The greater part of the interval between my first and second shots found me wrestling with the classics and kindred pleasures of youth. I was always troubled over my *Virgil* and a hard nut I found in "*forsan haec olim*

*meminisse juvabit*," but it deeply impressed my budding perceptions, when at last I got it out. Since then, over the camp-fire, in comfort and in peace, in cold and in storm, sometimes too, alone and in hunger, how often has it come back to me? "Perhaps some day it shall rejoice us to remember these." B.

AT NIGHTFALL ON A SIDE-LINE.

THE frequent mention of the panther in recent numbers of your valuable paper, tempts me to relate an experience I once had with this class of varmints.

Years ago, I dislike to think how many, when our national proclivity for wanting to see foreign parts induced me to turn my back on "The Land of Cakes," my footsteps turned toward Demerara, or more properly British Guiana, in South America. Arrived in the colony, my natural inquiries turned to the hunting and fishing to be had. Of both I may have something to say later, but at present I shall relate one little hunting episode, where the tables very nearly became turned as between hunter and hunted.

The great industry of this country is sugar making, and the plantations run for miles along the banks of the great rivers and along the coast line, but hardly ever are they found back from the water front. The reason of this is that the land, for several hundred miles from the coast, is low-lying alluvial jungle, subject to overflow at any time, hence enormous embankments along the water fronts are raised and constitute the only roads of importance. The plantations generally run back from the water in long narrow strips, some of them extending deep into the jungle. The system of drainage employed necessitates large canals, or side-lines as they are locally called, which run the length of the plantations on either side, and form a dividing line between the cane fields and the almost impenetrable woods. Across these canals, late in the evening, the deer come to eat the young sugar cane, of which they destroy quite a quantity, and it was at such a place that I found myself, with several others, waiting impatiently for a shot.

Our mode of procedure was to string ourselves out, 100 yards apart, along the canal and on the field side of it, and as the deer crossed over, shoot them down. It was not very sportsmanlike, but it was about the only way that venison could be got, for to follow the deer through the tangled mass of tropical vines that constitute the undergrowth of the woods was out of the question. I had taken my stand at a point where the overhanging limb of an enormous mango tree reached across the canal and above my head. I had laid my rifle down carelessly on the ground to my right, thinking I would have plenty of time to move it to my left shoulder, from which I shoot, and little thinking how important this casual action was afterward to become to me.

As sunset approached I could hear deer or other animals moving in the jungle, but as often as they came near where I was I could hear them dash off as if in mortal dread. This was repeated several times, so concluding that I was not sufficiently concealed, and that my chances for meat were slim, and as the darkness would soon follow the few minutes of twilight of the tropic, I prepared to get up from my uncomfortable position, prone on my stomach, and to start for our horses.

At my first movement I was startled by a low, purring growl that seemed to be right by me. I gazed intently across the canal, but could see nothing. Again I made a slight movement, and again the warning growl sounded to my ears. Up the canal and down the canal I cast careful glances, but nothing was in sight on the well cleaned banks. Suddenly the recollection of the limb of the mango tree, extended above my head, flashed on my mind, and carefully turning my head without moving my body any more than I could help, I glanced upward. What was my horror to see, almost immediately over my head and crouched low down to the limb, an enormous puma or South American lion, whose fiery eyes were fixed intently on me and whose long tail was jerking backward and forward in that spasmodic way that indicates that "Kitty" is about to spring.

To say I was scared within an inch of my life is saying what every one will readily surmise, but after a moment's thought the gravity of the position seemed to steady my nerves, for I can well remember even after a lapse of many years the train of thought that flashed across my mind. It was something in this line: Here is a puma which, like the Scotchman under the tree, has come out to get some venison for supper, but owing to the scent of the puma or the sight of the Scotchman, the deer have concluded not to eat any cane at this point of the canal; therefore the puma, being the hungrier of the crowd, concludes that the moving mass under him and partly hid by the cane leaves, will do instead of venison. Now, my gun is on my wrong side for shooting (as I cannot see well with my right eye) and besides my position, prone on the ground, makes shooting overhead an impossibility. If I move, the puma will jump; and before I can regain a standing position my neck will be cracked. What is to be done?

All this time, and it seemed an age to me, I never removed my eyes from those of the puma, and I noticed with some satisfaction that he would occasionally close his. My determination was soon taken! Slowly I commenced to turn on my back, and one can hardly understand the pain it gave me to make that slow turn, never for a moment taking my eyes off the puma's. Any sudden movement on my part would have been instantly followed by the spring of the varmint in the tree, but at last I was fairly on my back and, as luck would have it, with my rifle lying on my shooting side and the muzzle toward my feet. With the same care observed in turning over, the rifle was slowly raised and, with the thumps of my heart almost making a fine bead impossible, the trigger was pressed; and without making any sound that I can remember, my ugly friend rolled from the bough, shot through the brain, and stone dead.

With the fall of the puma I sprang to my feet and clubbed my rifle, as it was a single-shot only; but the few spasmodic jerks of the creature's limbs told me that the trouble was over.

Then it was that I lost my head, and sent yell after yell ringing out on the air, which soon brought my companions to my side. As soon as a glance at the puma indicated the state of affairs, they in turn would join me in my hysterical shouts, till a sight was presented that would have staggered the appearance of a mouse in the dormitory of a female college.

The pelt went to Scotland along with other trophies picked up.

A DAY AT MAXOM'S.

THE faint, cold light of dying day was just fading in the west as I finished loading my last cartridge.

A little flutter of wind now and then rattled the loose blinds on the shutter and caused the naked branches of the magnolia, which leaned over the house, to beat a rat-a-tat against the side of the gable.

Father, who had been reading the last number of *FOREST AND STREAM* until the twilight gave place to the less steadier gleam of the fire, and who was now busy filling his favorite brier, looked up as I crimped the last shell and rose from my task with a sigh of relief. "Finished?" he asked.

"Yes," I replied, "and there will be frost enough tonight to make a good day of it to-morrow; there are a few big coveys in that lower field that need thinning out."

Here old Isiah entered the room bearing a bundle of short lengths of pine and hickory, and as he proceeded in his unrivaled style to build up the huge fire, I filled the brown bowl and drew my chair up alongside of father's. For a while we sat in silence watching the sparks so full of life as they darted fresh from the flames, winging their silent way out into the night to disappear—where? Like tiny human lives they are lost in immensity! Indeed, *Ik Marvel*, the home of philosophy is in a wood fire.

The tobacco smoke soon softened the sharper outlines and angles in the room, and the jolly iron dogs who have guarded our hearth for the last century assumed very grotesque shapes in this living background of flames.

"You are using wood powder now," said father, as he pulled a hassock toward him and rested his slipped feet upon it. "Well, in my day Hazard and Du Pont are the only names I remember in connection with clean, strong-shooting black powder; with 3½ drs. of powder and 14oz. of No. 10, a miss was seldom scored. I never looked for anything better, and would rather put my faith in it today than in your patent brands. Yes, Isiah, bring up the decanter on the right of the sideboard. You can put on a kettle of water—and turn in whenever you feel like it."

Presently a little jet of steam was adding to the misty atmosphere and the merry hum of the kettle mingled its melody with the clinking of spoons in the bottom of our tumblers as we stirred the hot "lemonade" so the "stick" would assimilate.

"You remember our old friend Jim Lillie," said father, inhaling the fragrant steam that rose from his glass, "Well, Jim and I took a trip down to Charley Maxom's long about in January some years ago. It was before Charley built his new hotel near the head of Barnegat Bay; at that time he had a small country tavern at the forks of the road, near the village of Point Pleasant, a little over three miles from the railroad station. There were lots of quail and ruffed grouse about there, but you would not be able to find them unless you had a native for a guide.

"We got to Charley's toward evening. The weather was cool and clear, and as we rode from the depot in an open wagon you can imagine how glad we were to draw up alongside of that round, white-bellied stove, that stood in the extension of Maxom's tavern. We stepped into the main building for supper. The supper consisted of fried cod, home made bread (none of that sawdust kind that crumbles all to pieces when you try to spread the butter, but moist and sweet, Mrs. Maxom always put potatoes in her bread), and a cup of tea. The cod had been taken that very day about five miles off shore abreast of Island Beach, and had only been out of the water long enough to freeze. We saw them brought in from the wagon like so many sticks of cord wood shortly after we arrived. I could have made a supper off of that alone.

"Thawed out and appetite appeased we adjourned to the extension, a very natural thing for all wayfarers to do at Maxom's. Seated and enjoying our pipes, we opened up a little talk with Charley. 'What is the prospect of getting a few birds to-morrow Charley?' 'Wa—ll, General, thar air some birds around, 'n' if you kin git Johnny Loveman to go 'long you'll be apt to find 'em. I'll send over to Johnny's and find out if he'll go.'

"We got word from Johnny that he would be over early in the morning. That point settled, and as Charley was getting our candles ready I said, 'Hadrn't we better leave word to be called, Jim?' If there was any one thing that Jim was opposed to, it was getting up before daybreak. 'Called? No, what do you want to turn out early for? We'll take our time, have some more of that fried cod in the morning and a good cup of coffee, there's nothing like having a good breakfast to start on.' 'All right, that suits me, good night.'

"But we were called all the same, for we slept a little late and they detailed one of the youngsters to walk the hall and ring the breakfast bell until he received some evidence that we were up and doing. I had been up a few minutes and was adjusting a worm screw to my cleaning rod to bore a hole through the ice that had formed in the pitcher, when I heard Jim in the adjoining room advising the bell-ringer in these words, 'See here, young man, I want you to get out of this hall P. D. Q.; we don't want any more of that music and if you come up here again I'll help you down. Skip.'

"Rigged for the day's tramp we went down stairs and steered right for the extension to see if Loveman had arrived.

"'Good morning, Charley, has Loveman put in an appearance yet?' "Wal, thar's his dorg, reckon he ain't very fur off. Here he comes."

"Loveman was a young man about 27 or 28, slim built, strong and wiry, his face was the color of an old time powder flask and covered with a mosquito proof skin.

"'Your dog, Mr. Loveman?' " "Yes, sir, thar's one of the best English pointers in this country. I have shot over him a good many years and 'though he can't hear a dern thing, I wouldn't swap him for the best high-priced dog that comes down here. It's a fine day and I may have a chance to show you some of his good points in the field.'

"After a first-rate breakfast we took our guns, dropped a few cartridges in our coat pocket and started as lightly rigged as the weather would permit to shoot out the balance of the day.

"We followed the road that ran to the south'ard of the house for an hour or more, smoking and chatting, with the old pointer trailing on behind, until we came to a break in the rail fence, and the wagon tracks told why the rails had been removed.

"'Now, Jim,' said Loveman, 'we ought to find some

birds in here.' The old dog began to take a little interest, and jogging on about twenty yards ahead would now and then look around for instructions, with his eyes fixed on Loveman.

"Ten minutes' walk along the wagon track brought us to a little clearing of about two acres of buckwheat stubble. Although we knew that our guns had been properly loaded, just as we struck the edge of the piny wood outside of the settlement from force of habit we broke barrels and looked again.

"A wave of the hand—the dog went on and turned a slight bend in the path; there he stood like a statue. You can see the picture. The recollection of that scene sends a thrill through me, and I step back over the intervening years and stand with ready gun waiting for that statue to move.

"Jim, go off to the right there a little. General, come up a little closer and keep well over to the left." Loveman walked up behind the dog, stamped his foot, the old dog went on and up got the bevy, about ten in all. Loveman killed with his right; then shifting his gun to the left shoulder, brought down a left-quarterming bird that I had selected for my own. The reports were almost simultaneous, but not quite close enough together to justify my putting in a claim. Jim got one, and after marking them down in a little piece of swamp a short distance away, sent the old dog after the dead birds. Then a few allusions were made about Loveman having 'wiped my eye,' and we started for the swamp. Loveman went through, while Jim and I took up a position where we thought we could get a shot as the birds came out. We did not have long to wait before we heard the report of his gun, and sure enough back came the birds toward the stubble. Jim and I each got a brace, the three spared kept right on.

"I had not done any quail shooting to speak of for a year or more, and I was right glad to hear a proposition from Jim to this effect: 'What do you say if we start back toward the house?' The days are short and we are about five miles away. I know of one or two fields where we are liable to find some birds on our way back, and we'll take in the pines and may get a stray grouse.' As you will imagine, I readily consented, and we started on the back track for Maxom's.

"Four grouse were added to our bag before we struck the road. As we drew near the house, coming up on the leeward side, we sniffed the odor of frying cod, and although a little familiar, it seemed to sharpen the appetite as it had on the evening of our arrival.

"Well," said Maxom, as we entered the extension, 'you did get a few birds, didn't you?'

"Is supper ready, Charley?" I asked.

"Not yet, but it will be when you get washed up.'

"Well, we can't wash up any too quick.' 'Me, too!' quoth Jim.

"After supper I skipped the extension and going to my room took up the pipe—but too tired to enjoy it, I turned in very quickly. Perhaps the bed would have been more comfortable if I had spread a blanket over the corn husk mattress, but I fell asleep thinking about it.

"We got out a little later in the morning and did just as well without going so far from the house. The country has changed since then, but I believe, if you should go down there about the middle of January and get Johnnie Loveman, that he would find some birds for you. I have a hankering after the old stamping ground, but it is no use thinking about it, still, I cannot help it, for all I know so well that I will never be able to shoot over a dog again. Oh, for a good pair of legs!"

We had long since found the bottom of our tumblers. The inane giggle of the kettle reminded us of its presence, and as father with great care and nicety as to quantities refilled the glasses with "lemonade," I could tell by the moisture in his eyes that the memory of the dead days had distilled the tears from his heart, which, like dew on fading flowers, awakened for the moment the slumbering life within. And so—good night. THE GENERAL.

#### "PODGERS" COMMENTARIES.

SAN FRANCISCO, Jan. 26.—Why don't I write? Well, I don't exactly know myself, unless it is because I am getting torpid, or have nothing to write about that would interest. You see, I have not been out after bears or game of any kind, except quail on toast at a restaurant, hence have no "wise saws or modern experiences" to quote; in fact, I am ashamed to say that I have not wasted a cartridge in the pursuit of even a duck or a snipe, as plentiful as they have been, and as exceptionally good as the shooting has been this season. So much for a combination of laziness and the confinement of office work. The nearest to indulgence I have come has been to furnish up my guns occasionally and make a mental resolve to drop business and go after canvasbacks that very week, but there are no fewer of that species for all me.

The winter shooting has been glorious, and the bags made of mallards, sprigs, spoonbills and canvasbacks have been heavy and most satisfactory. Quail, also, have been abundant, so I have had no excuse. But, *entre nous*, as one gets older and more indolent it requires more effort, and then, his enthusiasm has in a measure toned down, and on the whole he seems willing to let the boys have a show. He don't want to be a pig and have all the fun.

As to writing, it is about the same thing again. There are so many aspirants for literary fame, and who like to record their doings, that it is mean in us old stagers to occupy the space that they might otherwise have to air their bear stories and experiences. To give the boys a show is no more than fair. Besides, readers get very tired of too much of one sort and kind. "Variety is the spice of life," as the chap said who kissed the cook—and of course, with that retributive fatality that accompanies evil deeds, was caught at it by his wife, the moral being that a man should not kiss cooks, or if so inclined, should have no wife, as the combination don't work well, ending, as it universally does, in the discharge of the cook, as all of the readers of the FOREST AND STREAM who have tried the experiment know. In extenuation, it may be said that there is now and then a mighty good looking cook. I don't know that this digression can be said to come under the head of legitimate sports that are the proper calling of the FOREST AND STREAM unless it is admitted that there is some fun in it. We might take a vote on it from your readers.

I have read some very good articles in the recent numbers of the FOREST AND STREAM from new contributors.

Mr. Perry's trip down the Patuca is very interesting and has the merit of a new field, and of being instructive as well, for we know very little of the country he described. And what a paradise it must be for the impecunious in these hard times, where a cotton handkerchief will pay board for a month and a string of beads win bright smiles from the belle of the village. Think of that, ye Benedicts, who cannot reconcile madam after a little domestic difference under a sealskin or one of these new "humplers," that spread a woman out to such dimensions as would astonish nature and discourage her from ever again undertaking to create another "female form divine," if her work is to be so caricatured. The fashions of the belles that Mr. Perry described down on the Patuca have the merit of simplicity at least, and on the principle of beauty unadorned should meet the requirements of the climate, at least.

I see the Catawampus Club scribe continues to record the doings of that enterprising institution. Somehow it does not appear to strike the best field for its operations, the record of game and fishing is meager. Why not light out for a better location? I know of places that will discount that one all hollow and are easier to reach. To think of a whole day resulting in one or two ducks, when here, for instance, if a shooter does not bring home a couple of dozen mallards and a half-dozen canvasbacks he is ridiculed. But then this is a civilized country where the geese fly low and I suppose we should sympathize with you poor benighted folks who know no better than to live where you do.

I take off my hat in humble deference to Mrs. Lucy J. Tomlin for her advocacy of giving women a chance to enjoy some of the sports that men so selfishly monopolize. Why should they not accompany their husbands and brothers in their expeditions, and have a taste of camp life? What could be pleasanter than on returning from a long tramp to be greeted with the bright cheery smile and welcome, to say nothing of the chances of a smoking repast having the merit of a degree of cleanliness that the average man cook considers quite a secondary matter, and not in keeping with camp theories, which include the acquisition of the proverbial peck of dirt the first few days. I suppose some woman in reading my argument will say, "That's just like a man; he only thinks of a woman as a cook, and see how his selfish nature crops out." I deny the charge *in toto*, for I am not a believer that a woman should be a good cook to be a treasure. Callow editors of country newspapers dwell on that sort of rot, just for buncombe, but there is not a man of any degree of decency who wants to be met on his return home by a red-faced dishevelled object, redolent of fried ham. It takes away all the sentiment, but in camp "things is different;" there she takes to it for fun. I am supposing of course that there is a man-of-all-work to do the chores and general skirmishing; but she can oversee and boss the business. And what a difference! Your coffee will have the genuine flavor. The meat won't be burned to a crisp, and the roast duck won't need to be sent to the barber's shop to get shaved, the slap-jacks won't taste of the last bacon fry. Then again, how nice to have them around. They make the camp sunny and cheerful, and moreover, keep the man animal on his good behavior. He washes himself and combs his hair. But aside from all these disadvantages to the man, there is to be considered the real pleasure it is to the woman, and surely she should be gratified. When I see a woman showing any taste for boating and outdoor sports (I don't call baseball a legitimate evidence, that is only an opportunity to "mash") I want to take off my hat to her. There is at once a bond of sympathy between us, although she may not be aware of that fact, but she could have my corner seat in the street car with pleasure. So I say, there should be a general uprising of women who can or would enjoy camp-life if they had the chance. Let them rise in their might and strength and insist on being recognized, and we all know what the result would be. The man would give in, surrender, for he is as we know at heart an arrant coward where women are concerned; and all she has to do is to say, "The next time you go to camp I am going;" and you can hazard your best patent leather she will go. I would suggest to the madam that next Christmas a gentle hint that instead of a sealskin this year it would suit better to have a nice little 16-gauge hammerless and a split-bamboo. You will be surprised and edified to see with what alacrity "hubby" will take to the idea, for there is novelty in it. He is so tired of that same old gag of a sealskin every year (last year's one having gone out of fashion) that the new departure will strike him favorably. Again the cost of the gun and rods will not amount to half the cost of the garment, over which fact he will chuckle, and say to himself, "got off easy this year."

Now that Mrs. Tomlin has started the ball, I hope other ladies who have similar tastes (or would have if they had a show) will not allow the idea to rest, but will keep up the agitation. Let every woman disposed to favor this new departure come out squarely and give her views. The editor of the FOREST AND STREAM won't dare to refuse to print anything you send. He knows better than to do otherwise, for he has had experience no doubt and knows the folly of attempting to oppose the will of the gentler sex that can be much otherwise than gentle if irritated (bet ye). Let us hear from the supporters of Mrs. Tomlin's suggestion.

I see that the Broome county (N. Y.) supervisors have passed an edict to protect all fur-bearing animals, which, as you say, extends immunity to cats, dogs, coons, skunks, etc. It is fortunate for the industries of Connecticut that its officials have not the same views as to what constitutes legitimate protection, as a similar one would give the death blow to what at this time constitutes a thriving and profitable business in that State, which, in the vernacular of the gentlemen pursuing it, it is called "skunkin'." On one occasion as I was out after chestnuts, in the vicinity of East Lime with a party of ladies, our sense of smell was suddenly outraged by an all too familiar odor, and the ladies applied their handkerchiefs and were irresolute as to which way to run, so we pursued a path we were on, but the odor grew stronger as we proceeded. A halt was called, and I was detailed to go ahead and spy out the ground, and the safety of going on. Presently I struck it heavy, and at the same time an old chap with a bag over his shoulder, and two measly mangy dogs following. At this point the odor was almost overpowering, and I hailed

my neighbor and remarked, "Some danger around here, I reckon. We must be close aboard the essence peddler." Whereat the old chap chuckled, and remarked, "Ain't no skunks around; it's me and the dogs you smell." I said, "For Heaven's sake, have you had an encounter with one? Again the old fellow chuckled and answered, "A counter with em? well I guess so. That's my business, I am what we term up here a 'skunker.' Me and General Grant, and General Lee have it hot and heavy with 'em every day, I ain't had no luck yet to-day, but I guess we will have 'em fore night, won't we, General?" addressing his remark to one of the dogs, who rolled up a pair of inflamed eyes, and wagged a mangy tail faintly.

I said, "How came you to name your dogs after such distinguished men, for such a business? It is not very complimentary." "Wall!" said he, "some folks might say so, but them are dogs is such fighters, I had to name 'em arter them kind of fellers." During the talk I had edged around to windward. I said, "What do you do with your game when you get it?" "What do I do with em? Skin 'em of course, and sell the skins for 50 cents apiece, and make right smart of money at it too. I made \$3 last week." Who buys your skins? "Peddlers from the city." "And what is made of them?" The old party laughed long and loud at my ignorance. "What do they dew with 'em? Why, make up for the wimmen to wear, and sell 'em to 'em, and call 'em Connecticut sables, or some other way-back name; and they ain't none the wiser."

I went back and told the ladies that the trouble could be laid at their door, as the cause of all our woes was a missionary in quest of tribute to their decorations, whose labors would probably materialize in the shape of a Christmas sealskin. There was an indignant protest from the whole bevy. The best of it was, however, that one lady of an inquiring mind on arriving home learned to her horror that she was wearing a Connecticut sable herself, and had been since her last birthday.

It is evident that the Supervisors of Broome county, New York, are stupidly ignorant of an industry that they could turn to great profit individually and at the same time relieve their neighbors of unpleasant nocturnal visitors to their hen roosts. Three dollars a week is not to be despised, to say nothing of the odd (cents) to be added, and how welcome the industrious supervisor will be when he comes home to the bosom of his family after a hard day's "skunkin'." It is a bare possibility that the supervisors of Broome county may discover their mistake and rescind the "taboo," so far as relates to Connecticut sables, and turn their attention seriously to the industry.

## Natural History.

### BREEDING QUAIL.

Editor Forest and Stream:

The recent communications on the hatching of quail (FOREST AND STREAM, Jan. 13 and 27) are very readable and interesting, but, if the writers will pardon me, they present nothing that is especially new. It is not an unusual or difficult thing to hatch the Virginia quail under a bantam hen and to bring them to maturity. It is not quite so easy, but still not to be regarded as difficult, to hatch them under the parent bird from eggs laid in confinement. Some of my own quail hatched in this way about 1885 lived in my coops for more than two years, and were always bright and healthy.

But the singular fact in all these experiments, and I have known of them in some form for at least thirty years, is that so far as I have been able to learn, we have never succeeded in breeding beyond the first generation reared in confinement. Just why this is true, it would be hard to say. There is no trouble in inducing birds that have been reared in a coop to mate and lay, and the eggs are all of them fertile—at least they were in the case of the pair of quail which I mated, both of which had been raised in the coop, and which were not related. But the hen refused to sit, and from what I can gather this will be the case with a majority of the birds so reared.

Here is another obstacle to the extended rearing of quail in confinement which many of those who plan to enlarge their operations do not seem to take into account. Quail are not polygamous as are the grouse, but pair off like our song birds. Hence to secure successful breeding each pair of birds must have a separate inclosure. A male quail caged with two hens during the breeding season will mate with one and fight the other, and in time will kill her if she is not removed. With half a dozen or so in one inclosure you will get a number of eggs, and they will be fertile, but none of the female birds so situated will sit. Bantams are poor mothers for young quail compared with the true mother. Lastly, there is no good reason why young quail hatched in confinement should not come to full maturity, provided always they are hatched early enough in the season to become well feathered before the nights grow chilly, and given proper food while they are chicks.

JAY BEEBE.

TOLEDO, O., Feb. 3.

### Surmises that it was a Lynx.

Editor Forest and Stream:

A correspondent in the current issue describes the tracks and voice of an animal and desires its identification. I have an opinion that the animal is a lynx.

PINE TREE.

## Camp-Fire Flickerings.

"That reminds me."

THE anecdote told by the Rev. G. W. Brown in Camp-Fire Flickerings of Feb. 3 reminds me of some snake stories I heard last summer while waiting for my train at Gunpowder Station, P. W. & B. R. R. I was entertained by several of the boatmen and fishermen who live near there relating to snake stories. Each vied with the other in telling the biggest snake lies, all of which I took in as though I believed them, leading them on by remarks and questions. After several rather mild anecdotes, one of the men said: "You know that burnt-out tree that stands along the railroad near Magnolia? Well, me and my boy was hunting pa'tridges up there one day when one got up between me and the boy, and I hollered for him to lay down so I could shoot; but he said, 'Not much, pap; there

is a big blacksnake right here.' I went up to him, and there was the biggest blacksnake I ever seen. I threw a stone at him and he ran into that holler tree. I told the boy to git some greasy waste from the track and we would smoke the snake out. We built a good fire in the tree and went on with our hunting. The next morning I was a-passing that tree and noticed a lot of snake bones on the ashes. I raked them up and they filled to the brim the water bucket I was a-carrying."

Then old man Brummell spoke up. "That ain't nothin'. I kin show you a tree down in Gum Swamp that has a bigger den than that in it. I'll bet you a hundred dollars I kin take you ther' now, and ther' will be a blacksnake on every limb and a dozen with their heads a-stickin' out of a hole in the trunk."

Then Jim Camper spoke up: "I'll tell you a snake story. One day me and Tom Gray was cuttin' wood up on Laurel Ridge, and we downed a big black oak. It had a hole near the fust crotch, which I thought was a squirrel den, but if it was there weren't none in it. I crosscut the log 4ft. below the hole and noticed something strange looking in the bottom of the hole, which ended just where I cut, and I found it was the tail of a blacksnake. The weather was awful cold, and I knowed that snake was dead, but I wanted to see him anyway; so I cut a long slit from the hole down and got him out. He was a buster, and I cut him in three pieces with my ax. His insides was solid ice; you could see the ice crystals like all through his flesh. I threw the pieces down by another tree, and after a while when the sun got on 'em, I swear, all them pieces began to wiggle."

I said, "Pretty good, Camper. Who is next?" Norell the track walker spoke up: "Did you ever see snakes balled? Well, one day late in the fall I was a-huntin' black ducks in Sunday Ma'sh and went ashore to get a drink of water; right on the bank of the ma'sh there was a ball of snakes as big as a flour barrel and they was a-squirming and rolling around just like a football."

I asked him what kind of snakes they were, and he said, "Ev'ry kind of snake I ever see, blacksnakes, vipers, water snakes, garter snakes and corn snakes."

The next narrator was telling a marvelous tale of how he was charmed by a snake one day while fishing on the bank of a stream, but as my train came along I did not hear whether the snake swallowed him or not. E. A. R.

BALTIMORE, Feb. 3.

Game Bag and Gun.

CHICAGO AND THE WEST.

[From a Staff Correspondent.]

CHICAGO, Ill., Feb. 1.—To-day is the last day of the legal season for selling grouse, quail or venison, no matter where they come from. Illinois grouse, quail or venison cannot be sold at any time. City Game Warden Chas. H. Blow asserts that all found violating the law will be promptly prosecuted. The Chicago Tribune gravely states that after Feb. 1 it will be unlawful to kill any "robin, bluebird, swallow, martin, mosquito hawk, whippoorwill, cuckoo, woodpecker, catbird, brown thrush, redbird, hanging bird, buzzard, wren, hummingbird, dove, goldfinch, mockingbird, bluejay, bullfinch, thrush, lark, cherry-bird, yellowbird, oriole or bobolink."

The Tribune should add that it is also unlawful to kill any of the above-named birds before Feb. 1.

Daily Press Makes a Discovery.

The San Francisco Chronicle has made the startling discovery that Wm. Weavey, of Durbin, N. D., has made a discovery, the same being the raising of "cattleoes" from a buffalo and Polled Angus cross. It adds the usual story about the excellence of the breed. No apologies are made to Buffalo Jones or others, who might be able to help the discovery out a little.

From Kansas.

Mr. Charles J. Mitchell, of Independence, Kans., says: "Can you tell me a good place for duck shooting in either Craighead, Poinsett or Mississippi counties, Ark., that is not occupied by a private club?"

The new law on quail has been fairly well observed here, and as a consequence, a good many more birds are to be found to-day than this time last year. The winter has been exceptionally favorable to them, and I think a year or two more of close season, if the law can be enforced, would give us good shooting once more. But I am afraid that as soon as quail get fairly abundant again, the law will be ignored, as there seems to be no real interest in game protection here. I rather think the rest the quail have enjoyed this season is due more to the scarcity of the last two or three years than it is to the new law."

Can some of our Arkansas friends answer Mr. Mitchell's question? I am not familiar enough with the county lines. As to the Kansas quail and their protection we may suppose the result of "protection" will be there, as elsewhere, much cry and little quail, until finally the scarcity teaches its lesson, the rare becomes valuable and the protection begins to protest. THE FOREST AND STREAM editorial "plank" of last week is the only one. Hold out to stop the sale of game altogether. We will come near to that before we prevent extinction.

Has a System.

In an issue of early November "Hoodoo" had the following comment: "In your last issue Mr. Hough describes, among other things, a group of mounted lions at the World's Fair, two of which were 'kittens,' which he astutely surmises (because of the difference in their color) 'were not of the same litter.'" Going on "Hoodoo" cites a fable as proof that mounted lions never have more than one kitten at a clatter time, and the editor of FOREST AND STREAM corrects him by showing that the fable is away off. There is only one more gentleman to be heard from on this point and that is the intelligent compositor, saving, perhaps, the proof-reader with the eagle brain. In my description I did not write "mounted lions" but "mountain lions," meaning the American big cat, panther, cougar, puma or California lion, etc. I allow this latter animal often has a whole flock of little cats. I have an infallible system by which I can always lay hands on anything in my desk. That is how I happened to answer the above criticism so soon since last November.

Will Move.

On May 1, the firm of A. G. Spalding & Bros., so long

known here at 108 Madison street, will remove to 149-151 Wabash avenue, a thoroughfare until recently given over to wholesale houses. Large and better quarters will be secured by the change.

Feb. 2.—Mr. W. B. Wells, one of the most enthusiastic and thorough-going as well as one of the best known sportsmen of Canada, arrived in this city to-day from his home in Chatham, Ont., on his way to the Southern field trials of New Albany, Miss. Mr. Wells has along a string of good youngsters, and will do a little shooting after the trials, either at New Albany or further South. He thinks the birds still abundant enough in his country to secure the future for them and to make certain the success of the International trials next year, although the numbers have been much cut down by a combination of causes. At the FOREST AND STREAM office, Mr. Wells happened to meet Mr. W. L. Wells, of this city, whose friends also call him "Billy." The two fell to discussing family trees, and came very near proving that they both had a common ancestry somewhere or other. Anyhow, they are both red hot sportsmen and good people, and therefore related closely in a good way. E. HOUGH.

909 SECURITY BUILDING, Chicago.

PROHIBIT THE SALE OF GAME.

DANVERS, Mass., Feb. 3.—Editor Forest and Stream: I read with a good deal of satisfaction the article in your last number that suggested a law to stop the sale of game birds at all times of the year. I think this would be a step in the right direction toward preserving game. I know it is a large undertaking and cannot be done at once, but if every sportsman in the country should make this something to work for it could be accomplished. I do not want to deprive of game any one who cannot shoot it, but the ones that do not shoot it are the ones that are to be blamed for the rusting state of the game laws; they don't hunt but want to be able to buy game at any and all times, and are willing to pay an extra price to get it out of season, thereby holding out an inducement to men who are willing to do anything for money, to kill any kind of game they can find and at any time of the year they can find it. I hope some of the sportsmen will agitate this matter. A. W. B.

LIMA, Ohio.—Editor Forest and Stream: When I read the article written by McClintock in the last issue of FOREST AND STREAM, on the taxation of firearms, ammunition, etc., that go to make up the outfit of a sportsman, I was surprised at the stand taken by this correspondent. It looks to me that he wishes to protect the game for a favored few, the rich, those that are more abundantly blessed in this world's goods than the majority of the lovers of the rod and gun.

The tendency of the country is already toward the European plan of game preserves, in which the rich only can indulge and the poor assist only by camp drudgery and carrying game killed by their superiors (in riches only). What was more disgusting than the large drive for hares, given by one of the monarchs of Europe lately, where a large number of peasants were required to drive the game into a small space, and numerous attendants to load the guns as they were fired. Thousands of hares were killed in this manner. In his enthusiasm of wholesale slaughter this king exclaims, "What glorious sport." Is this sportsmanlike? How much more skillful and sportsmanlike if each hare had been given a chance for his life. Suddenly started from his cover, he makes rapid strides for another known cover, but if the hunter has not lost his wits, and with sure aim is as suddenly stopped by a charge from his favorite gun. With what pride is he consigned to the game-bag can only be imagined by those that have been there.

But again to my subject. If Mr. McClintock wishes to see the game preserved, let him petition the Legislature of his State to prohibit the sale of game. There is where the danger lies, and not with the sportsman that spends his two weeks' vacation in the woods after deer, or a day off during quail season in the field. Let every State make laws prohibiting the sale of game, and also let the hunter have his game to take home with him. If there was no market for game the market-shooter would seek other avocations. It is the market-shooter that depletes the game. The sportsman that hunts for the pleasure in it, would kill only enough that could be used in camp and at home. The market-shooter does not hunt for the pleasure he derives from it but for the money he makes.

Hundreds of deer and thousands of quail and other game are destroyed by being kept too long in the markets. In this way, the Indiana Game and Fish Association reports, that the least possible estimate on the number of quail that was destroyed in that State alone was 17,000 dozen. The dealers would buy them up, especially those small country dealers, a few at a time, until the required number for shipment was secured, and by the time they reached their destination they were unfit for use.

Let Mr. McClintock watch the stations on the railroads leading into the hunting districts of this State. He will be surprised at the amount of game that is shipped to the game dealers of Detroit. He will also be surprised at the large amount of this game that is unfit for use. In one carload of 200 deer saddles it was stated to me that there wasn't one fit to use. This I can substantiate by a gentleman who saw it. What is done with all this meat that goes to Detroit is asked by many. All the game is shipped there that is for market. Is it possible that the law of this State prohibiting the exportation of game out of the State is made for a favored few? Game shipped to other States as "poultry," "veal," etc.? Surely Detroit people cannot consume all of the game that is shipped into that city.

I say, let every State pass laws prohibiting the sale of game. "In union there is strength." These ideas of prohibiting the sale of game have been expressed in the meeting of the National Game and Fish Association which has recently organized and in which I heartily concur. There being no market for game the market-hunter will not hunt, and the sportsman will only kill enough for his own use.

The majority of sportsmen are men of limited means, and to put such an exorbitant tax on their hunting outfit, means that they must forego the pleasure of a vacation in the woods, therefore, they are "chained to business" the year round. Because, "no gun no vacation." But the rich man, with his \$400 grade double barrel, or his fancy repeater, has the good time. Why? He has plenty of money and guns, and has the man of limited means to run his business while he is gone,

This is a free country. The poor man should have the same privileges as the rich one when it comes to a vacation in the woods, along the stream, or afield. The President of this country cannot command a boatman to row his boat on a duck hunt without compensation to the boatman. We are his equals when it comes to rights and privileges.

Put a tax on firearms, etc., and the rich man has the advantage over the poor man, although the poor man is as much of a sportsman at heart as the rich man. If Mr. McClintock has more money than he knows what to do with, instead of putting it in taxes on his own guns, buy another gun and present it to some poor sportsman that is "tied down to business" for want of a gun.

A member of the Legislature of this State has introduced a bill to prohibit the sale of quail. Make the law on all of the game, gentlemen, and Ohio will be first to lead in the right direction for the preservation of game. SELMO.

CONCERNING A HIGH TAX ON GUNS.

ROCHESTER, N. Y.—Editor Forest and Stream: I have been for many years a reader of FOREST AND STREAM, always with interest, often with pleasure and occasionally with indignation. As for instance, I notice in last week's issue a proposition to levy a tax on guns and ammunition so high as to be absolutely prohibitory of the privilege of any but the rich bearing arms. To enact such laws is to say to the working man that he must forego the right to go to the woods and streams for such relaxation or recreation as may be found in communion with nature in her wildest—and to most of us her pleasantest aspects. It is to say to him that he shall have no escape from the debts, duns and deviltries of this working world. It is this spirit that gives England her game laws and fills her jails with poachers. E. P. HALBERT.

MISSISSIPPI.

TRENTON, N. J.—Editor Forest and Stream: In looking over my last "STREAM" I read the article on taxing guns and it set me thinking. I have been led to believe by meeting sportsmen both in the field and on the stream that they are as a rule broad-minded and large-hearted, when here comes along a man who, if I can read aright between the lines, thinks that the pleasures of the field and stream should be preserved for only those who are wealthy, for surely no one would advocate such an un-sportsmanlike and undemocratic idea unless they possess more than a fair share of this world's goods. But how about us poor fellows? I know, and in fact we all know, that such a law would shut out a good many men who, I am satisfied, are as true sportsmen as your correspondent, men who look forward through many weary months with a joy only known to the sportsman to the short two weeks' vacation that they are allowed during the year. And how carefully they look after the small amount of money they can spare from the family use for this outing. Now a tax of \$20 would spoil the whole trip. Personally if they keep the tax from my rod it would not be such a hardship to me, as my friends say I see a bass or pike in every mud hole. But I do like a few days' gunning, and if such a law was passed I would have to do as a thousand others would, just sit on the fence and watch the sport. JERSEYMAN.

HARRISBURG, Pa., Jan. 29.—Editor Forest and Stream: In your issue of Jan. 27 I note an article from Ann Arbor, Mich. I have been a constant reader of your valued columns for nearly twenty years, and in all that time I have never yet seen anything in print to equal that heartless and senseless article. Think of it, you American sportsmen who have to work for a moderate salary. How you have worked every day through the long, hot summer so you could get a few days off in the fall to go into the woods or fields with your dog and gun, and this Michigan man wants to crush out this one bright spot in your life by a tax or rather a robbery of \$20 on your gun, which you had to save your hard-earned dollars to buy. And what more? He says you should pay a tax of one cent for every shell that you shoot in it. Think of it, you men who love to hear the crack of a breechloader. No TAX.

THE .22.

ONE of my friends is often trying experiments with rifles, of which he owns half a dozen or more. Living on a farm and owning a good deal of live stock, several of the experiments have proved disastrous to cattle or hogs. One day he took a shot at one of the horns of the old bull, "just to see the bull shake his head and to hear the bullet sing." A valuable cow stood four or five feet beyond the bull, her head about opposite the bull's hips. Her head being about on a line drawn at an angle of 45 degrees to the line followed by the bullet, when the shot was fired the cow fell, to the great surprise of the shooter, and died in a few minutes. Careful examination, both before and after skinning the cow, failed to show any wound; but some months afterward, after all the flesh was gone from the skull, a narrow hole, a mere slit half an inch long, was found in the center of the forehead, and the flattened bullet was found in the skull cavity. No doubt the bullet had been flattened against the bull's horn and had struck the cow's head edgewise, making so small a wound that no blood flowed out, and leaving no visible mark. The bullet came from a .22 short cartridge.

Another of this man's amusements was shooting hawks and crows with a .50 express, "just to spread 'em wide open." One day a hawk alighted on a gate post 50 yds. from his house. Half a mile away, and right in the line of fire, stood a neighbor's house. He could not move, for the hawk would fly. Sighting at the hawk, he noted that the line of sight struck the ground some distance short of the house, and concluding there was no danger, fired at the hawk, and was surprised at missing it and that no dust cloud appeared where the bullet ought to have struck the dry ground. His neighbor was surprised, too, for the bullet entered the side of the house about four feet above the floor, passed between two people who were within three feet of each other, and was stopped by a stud in a partition wall. Examining the gun, he found that the sights were set for 700 yds., and then he remembered that the day before he had been shooting at long range from his front porch, and one of his workmen calling him, he had set the gun in the house and forgotten about the sights. The incident convinced him that it was not safe to shoot such a gun in a settled country, except at a well-backed target. O. H. HAMPTON.

## THE POWDER TEST.

Editor Forest and Stream:

The report of the powder and primer tests conducted by Mr. Armin Tenner, published in the December numbers, makes very interesting reading, as it deals with subjects of paramount importance to sportsmen who love the gun. At the same time it is somewhat of a disappointment to me, as I had been led to believe the tests would be carried on in a thoroughly scientific manner, and the results collated and discussed so carefully and concisely as to command the respect at least of all critics, if not to insure unqualified acceptance, which is rather too much to expect. A close study of the paper impels me to say at this late date that, whether the tests were well done or not, the published results are incomplete in accompanying detail which is necessary for a reader to have at hand to correctly draw his own conclusions. To specify, I may mention the following omissions which occur in some instances: Weight of powder charge; whether all powders were weighed or measured, or were some weighed and others measured; details of loading; density, humidity and temperature; and there are many errors in the tabulated results, either of calculation or typography.

The most remarkable point about the paper is the rating given the various powders by an arbitrary system of points of merit. There are fourteen qualities, with a possible rating of 200 points for each powder. Information is given to determine only nine of these qualities of the fourteen, the remaining five, or 36 per cent. of the qualities, which are credited with a total of 44 points of merit, or 22 per cent. of the whole number possible, are very considerably determined for us by Mr. Tenner. He has also omitted a cold test, which is of greater importance, practically, than the heat test, which is given 15 points; for while a sportsman in this latitude frequently uses ammunition in winter at a temperature of 10° above zero, Fahr., he rarely ever stores his shells in the kitchen range or subjects them to a temperature of 205° before going shooting.

He also has an unpleasant way of making statements at variance with his published results. I will specify two cases. First, his statement on page 496, that in these tests the patterns made with nitro were superior to those of black powder. From Table "C," comparing the average results of what he calls "service charges," we find the average pattern of 3drs. of FFFG and 3drs. of FFG black powder is 221 pellets, or 60% of pellets in the charge. The average pattern of 3drs. of nitro loaded in shells which are subsequently shows are the best—namely "Smokeless"—except in case of Walsrode, which is taken at 29grs. in special shells, is 179 pellets, or 49% of charge. Second, he states in his report, and subsequently sticks to it when criticised by Mr. von Lengerke, that the difference in arrival of the pellets of shot driven by coarse or fine grained black powder, does not "practically cut any figure" in shooting at quattering birds. Referring to Table "A" we find the velocity of 1½oz. of No. 7 shot propelled by 3drs. of FFFG powder is stated to be 890ft. per second. To travel 40yds. at this rate would occupy  $\frac{1}{1000}$  of a second, during which time a cross flying bird going at the rate of 60 miles per hour, or 88ft. per second, would fly 11.9ft. The velocity given to the same charge of shot by 3drs. of FFG powder is stated at 812ft. and 788ft. per second, the average being 800ft. At this velocity the shot would require  $\frac{1}{1000}$  of a second to travel 40yds., during which time a cross flying bird, at the above mentioned speed, would fly 18.2ft. Therefore, it would be necessary to lead a cross flying bird, at a distance of 40yds., the difference between 13.2 and 11.9ft., or about 16in., more when using coarse than when using fine grained powder. If the powder charge were the same in each case the difference would be still greater, as it would probably be if there was a greater difference in size of grain than one number. This does not take into account the quicker ignition and combustion of the finer grain, which would, no doubt, occupy less time in starting the charge and sending it to the muzzle, from which point Mr. Tenner's velocities are computed. Two-thirds of this distance, or 11in., would be the difference if the bird were flying forty miles per hour, and not 2 or 3in., as erroneously stated by Mr. Tenner. As to the speed of birds I am convinced from watching their flight from fast moving trains, the speed of which is known, that sixty or more miles per hour is only an ordinary gait for many game birds.

His treatment of the results to determine nine of the fourteen qualities of the various powders, is also, in some cases, as open to question as the above-mentioned instances. I cannot judge of the way in which he handled the remaining five qualities, as he did not give the facts.

If a man is scientific in his tests and accurate and conclusive in his judgments, I think no one can complain if he does show that one powder is better than another, or that a certain powder is poor trash. But if he does not come up to this standard, if his tests and statements and way of reasoning and conclusions are open to just criticism, then I say publishing such a report inflicts an inexcusable injury to some manufacturers and furnishes false capital to others.

T. H. G.

Editor Forest and Stream:

After carefully perusing Mr. A. Tenner's reply to my criticism upon his powder tests, and knowing that the subject under discussion is of general interest to your shooting readers, I beg leave to once more trespass upon your columns and good nature.

I am not fishing for compliments, but I wish to thank my worthy antagonist for his gracious and complimentary references to me personally. I certainly appreciate his fairness and gladly acknowledge his superior scientific knowledge of ballistics, although we differ widely as to the ballistic merits and practical values of certain explosives.

Unlike some blackguards and nincompoops, who imagine themselves experts on ballistics, although in reality they know not the very beginning of the A B C of explosives, Mr. Tenner confines himself to arguments and alleged facts and figures and refrains from personal abuse.

Nobody can appreciate more thoroughly than I what a thankless task it is and how much labor is involved in preparing, conducting and chronicling the results of ammunition tests of such wide scope as those held at Chicago and Carney's Point. It was therefore very reluctantly that I took exceptions to Mr. Tenner's deductions, but as he is endeavoring to establish an American testing institution for arms and ammunition, of which he is to be Superintendent and naturally a person in authority whose

opinion and word would carry a great deal of weight, for or against certain articles, I must take exceptions to his acting as judge and jury at the same time and giving a verdict upon disputable evidence, instead of letting others draw such conclusions as the alleged results seemed to warrant. Under the circumstances, his tests looked decidedly like an attempt to make capital for one powder at the expense of others.

The reasons for my exceptions were stated in a general way in my first letter. They were that the alleged results obtained at the above tests lacked uniformity to such an extent as to leave a well-founded doubt regarding the accuracy and reliability of the instruments there used or their manipulation. Secondly, I claimed that as the Walsrode cartridges tested were furnished by very much interested parties, and the E. C. and Schultze cartridges tested were loaded on the ground during the trials by parties who had no interest in their proper performances, the comparative test could not be a fair one. Last but not least, I objected to the manner of allotting and compiling the figures of merits.

In his reply Mr. Tenner says that the variations, which I called abnormal both as regards initial pressure as well as velocity, were solely due to the behavior of the powders or that the latter behaved as powders are likely to behave.

If this were true what would be the use and purpose of a proof house and testing institution? It would be simply impossible to establish unalterable facts and permanent figures and principles as regards the actions of explosives and the limit of safety of our shotguns if even our old and generally accepted reliable black powders really did vary thousands of pounds in bursting strain and hundreds of feet in velocity under normal and favorable conditions.

As a practical trap-shooter and field sportsman of some experience, I think better of our modern shotgun explosives such as Schultze and E. C. When properly loaded I know that when my aim is correct my ammunition in a good gun will do the rest. Thousands of other practical men feel the same confidence in the above powders, and the wonderful scores put up at the trap and in field shooting all over the world show how reliable and even the actions of our modern explosives are, even under vastly different conditions as to load, temperature, hygroscopic and atmospheric conditions. Mr. Tenner himself must have only changed his mind about the above since his tests, for he very emphatically expressed his belief and conviction to me in one of several very pleasant conversations, that any excessive variations in results with the above powders were not the fault of the powders *per se*, but were caused by other attending and preventable disturbing conditions.

Mr. Tenner misquotes me when he asserts that I said "Dead Shot" was the most even and reliable black powder in the world. I said one of the most even powders, etc. Very few kinds and grades of sporting powders have been manufactured in larger quantities than "Dead Shot," and very few enjoy as good or better a reputation for reliability and evenness. The largest ammunition manufacturers have adopted it and are willing to pit its evenness against the world.

According to the figures of the test, "Dead Shot" is credited with by far the most even bursting pressure, which emphasizes the fact that something was wrong when debited with a variation in velocity of 136ft. in only a five shot trial. The very next series of tests made with "Orange Extra" FFG, a similarly excellent powder and one which closely resembles "Dead Shot" in every respect, shows only a variation of 13ft. in velocity.

I have taken these black powders as examples because authorities the world over know what they are, and that they are more reliable than what the figures of the test would indicate. Why and how the results of the tests, especially as regards all other powders but Walsrode, were made to differ so much from tests made by other parties in equally or still more favorable position to be exact, can of course only be conjectured now.

We all agree that the results of loaded ammunition is much influenced by the manner of loading, and this is especially the case with nitro explosives.

For this reason did I ask for, and I notice other parties made the same request, the details of what kind, etc., of wadding were used during the trials.

I wish all those readers, who have kindly followed the controversy, to take special note of this most important point, as nothing influences desirable or undesirable results as much as the kind and combination of the wads over powder in a shotgun cartridge. It is by means of the skillful selection and use of various kinds of wads that the loader can increase or decrease initial pressure, increase or decrease velocity, vary the recoil, control his pattern to a great extent, counteract the violent actions of excessively strong primers or excessive loads, prevent to an extent hang or slow fires with weaker primers, cause or prevent balling of shot, etc. In short it is the superior judgment of the loader in selecting and manipulating the wadding, which is born of extensive practical experience and knowledge of the scientific laws of ballistics, that makes the best and loaded cartridges more valuable than the sometimes excellent machine-loaded ammunition, which latter I should prefer at any time to hand-loaded ammunition of non-experienced and unskillful parties.

My scientific antagonist kindly says that I command an amount of general knowledge in the premises rarely found by persons of my line of business and my calling.

If this be so it has been my good fortune. For Mr. Tenner's information, not in a spirit of brag, I will say that my opportunities for learning have been very favorable, as there is probably no man in or outside of my line of business in this country who has the same amount of experience in the combined practical and scientific study of shotgun ballistics, coupled with hard, practical, commercial experience, especially as applied to nitro powders and nitro powder ammunition.

But to resume. Mr. Tenner did say, not less than sixteen times in his report, that "U. M. C. wads were used," but as this company manufactures nearly all kinds of wads, for which there is any demand, the simple statement U. M. C. wads was of no value whatever to those seeking enlightenment. However, the desired information has now been added by Mr. Tenner, and he says that "a trap wad, a first quality white felt and a black edge wad were employed for all nitro powders" except Walsrode, which cartridges were wadded with the special elastic, thick Express wad most suitable to the powder's condensed charge with its condensed pressures.

Although distasteful to me, I am compelled to flatly contradict Mr. Tenner's statement, and will here suggest that if he is in error in this most important of all factors for proper working of Schultze and E. C. powders, he may be in error as regards other points that I have taken exceptions to.

The fact is that it is simply a physical and mechanical impossibility to so wad most 12-gauge 2½in. shells with 3drs. of the above powders and 1½oz. of shot and load and crimp the shell properly. Moreover I am informed by one of the eye witnesses that the cartridges were not all so wadded.

Should I in spite of the above assertion be wrong, and Mr. Tenner's statement be correct, and the above loads have actually been crimped and forced into such a shell, then it would not be any use to continue this discussion, as the mysteries of the unusual results of Mr. Tenner's tests have been satisfactorily cleared away. A 12-bore 2½in. Nitro Club shell will only hold about ½oz. of shot with above-mentioned wadding and powder charge properly loaded, leaving from ¼ to ½in. for crimp, which Mr. Tenner himself admits is absolutely necessary.

It is to be regretted that, after all the exhaustive and thankless labor, the little extra trouble of stating in detail the exact manner of wadding with each series of trials was not gone to, as this, if we accept the results as correct, would have been the most interesting and, for the general shooter, most instructive feature of the whole trials.

The best and most just basis and methods for allotting to the several desirable qualities of gunpowders certain parts of the total figures of merit settles down to a question of difference of opinion, as Mr. Tenner himself says. Was it not, therefore, unwise and rather invidious of one who is striving for the management and establishment of an institution of authority to arbitrarily force his own private opinion on the American public beforehand? And, although I personally think none the less of Mr. Tenner's honesty and sterling integrity, is his course not likely to discredit him in many quarters and thereby curtail the amount of possible and visible good he might, and I dare say will, do through the proposed Testing Institution?

But let us go a little deeper into the manipulation of figures of merits, upon which is based Mr. Tenner's individual personal opinion, which some people mistake and advertise for solid rocks of facts, and see whether these rocks won't melt like so much rock candy in a moisture test.

Throughout his tests Mr. Tenner seems very solicitous about the safety of the powder tested. To make comparisons possible, it is necessary to form some basis to start from. No better basis can be found than the action of a good black powder, as every shooter is acquainted with the nature of such powder and all of our guns and shells are adapted to its use.

It seems, therefore, desirable that a powder's bursting pressure should not vary excessively within a difference of a few grains in quantity used, even if the prescribed normal load should vary some from that of black powder because various grains and grades of black powder vary very materially.

This is certainly a point of importance.

Very much varying results are often obtained with powders, especially nitro powders. At the same time they are generally caused by differences in attending loading conditions, at least this holds good with such powders as Schultze and E. C., which, if they did not, would not have practically driven high-grade and high-cost black powders out of the market. Such variations are generally to be laid to either the manner of loading, differences in quality of wads, primers, shells, etc.

Shotguns are being used for widely different purposes. Sora rail shooting is certainly very different work from stopping ducks and geese in the bays or on the prairies. Again, a man is not apt to load his gun for a live pigeon match in mid-winter at 81yds. rise with a 21yds. boundary as he would for summer woodcock shooting. It is therefore desirable that a powder charge can be effectively varied according to its use as well as the gun or the shooter's weight and strength.

With black powders, as well as Schultze and E. C., this can be safely done and often advantageously in loads from 2 to 4 drams by measure for 12-gauge guns, and this is not only desirable from a practical standpoint, but a merit from a ballistic view.

Now, let us see how Walsrode acts in this respect. The smallest load advocated is 29grs. and the heaviest 31grs. It is an indisputable fact that neither smaller nor heavier loads than above, which represent about 1½drs. by measure, can compare with the above-mentioned powders in pattern and penetration. But to its safety about which Mr. Tenner is so solicitous:

Everybody is liable to make mistakes. We all do it. Nor do we all see alike, and although the agents of Schultze and E. C. recommend from 2½ to 3½drs. by measure as the best loads, a great many people use ¼, ½ or even a whole dram more through ignorance or contrariness, and many point at the good results they get to back up their action.

What now would happen with Walsrode if a shooter should get ¼ or ½dr. more powder into his gun? We'll let the learned linguist and the "expert of 30 years' standing" of the Walsrode Co. answer this question. His circular reads as follows: "The Walsrode powder has the peculiarity to develop in increased charges a volume of gas out of all proportion to the increased charge." I need no better authority, and will simply add that an increase of ¼ or ½dr. by measure of a "winter load" used in summer will most certainly strain or wreck the gun, and certainly endanger the shooter's safety.

How much now does Mr. Tenner consider the superior safety of E. C. and Schultze worth more than Walsrode? Just one or two points out of the total of 200.

The solicitude of Mr. Tenner for safety seems only to run high in figures when he finds the bursting strain of Schultze increased more than Walsrode after the cartridges have been baked like Boston beans in an oven.

It looks like another inconsistency when Mr. Tenner allows 30 points out of the 200 for least bursting strain in proportion to velocity, when he allows for actual velocity only 20. Yet it is velocity combined with sufficient pattern which does the work for which gunpowder is intended—killing. Ninety per cent. of the practical shooters look for this, first, last and all the time.

Under the first named head, Mr. Tenner credits American wood powder with 20 points, whereas he allows Schultze only 24. I have gone to the trouble of compiling and averaging the various series of velocity and

pressure tests which can fairly be compared. The figures represent all tests made with the standard charge of 3drs. in Smokeless, Nitro Club, Rival "W," and Rival common, Rapid, Climax and Eley shells.

The total averages are as follows and comprise every shot fired during the test when these powders were shot under alike conditions in all the shells mentioned:

	Bursting Strain.	Velocity.
Hard grain Schultze.....	795lbs.	839ft.
Regular Schultze.....	691lbs.	804ft.
"E. C.".....	612lbs.	788ft.
American wood powder.....	559lbs.	745ft.

Nobody nowadays is afraid to use black powders, and very few people have any hesitancy about the above named powders. If we accept Mr. Tenner's figures as correct, a charge of 3½drs. FFF Dupont's black powder, with 1½oz. of shot, gives a mean bursting pressure of over 9,000lbs. and occasionally goes above 10,000lbs. We further read in the Prospectus of the American Testing Institution, "The proof house charges for a finished gun are 6½drs. Dupont's FFF black powder and 1½oz. of shot No. 7 for 12-bore. Any substantially built gun ought to resist and withstand the strain developed by such a load, and no manufacturer or dealer should hesitate to see a gun subject to such a test."

In another place the same author writes that 6½drs. of Dupont's FFF and 1½oz. of shot gave a bursting strain of 16,170lbs. to the square inch, and that very few guns would prove strong enough to withstand such a strain for any length of time. He thinks that 75% of the above figure, or about 12,125lbs., should be as much as the ordinary shotgun should be subjected to.

"For 12-bore guns the most advantageous velocities are those between 300 and 900ft.," writes expert Tenner, and we certainly agree fully on this point, as we also do on the following sentence: "The velocity should never drop below 775ft., because all figures below cease to represent the desirable killing force."

How then, taking all of Mr. Tenner's figures and his sentences in good grace, could he give American wood powder 29 out of 30 possible points for least bursting strain in proportion to velocity, and the Schultze powder only 24? The bursting strain of Schultze powder is less than one-half of what he says a dealer or gun manufacturer could not object to have his gun subjected to.

In reply to my reference to the above impractical rating Mr. Tenner says, "I hold that the lower the gas pressure is in proportion to the velocity and provided the latter is equivalent to a satisfactory penetration, the higher such a powder ought to be rated." Does the above 745ft. represent a satisfactory penetration? I have quoted the gentleman's own negative answer before.

In this connection, I draw Mr. Tenner's attention to the fact that part of the "extraordinary score done with American wood powder," which is being advertised lately, was done with 54grs. by weight or 4½drs. by measure in a 12, 3½in. No. 3 primer shell. I make mention of this only to show that the proposed proof house charge of 4drs. of this powder would hardly prove anything, although 4drs. of some powder of same name, issued last year, would have been more than strong enough in this respect. It seems, however, that Mr. Tenner was not furnished with both kinds by the manufacturers.

From the various little contradictions, I judge that the author is not quite clear in his own mind what to think of the nitro powders, and the following parallel confirms me in this belief. Mr. Tenner writes:

All nitro powders when tested under different conditions show great variations.	The same reason which prompts the sportsman to substitute a smokeless powder for black powder in the shotgun, let it appear desirable for the hunter to use if possible the modern propelling agent instead of black powder in the sporting rifle. The superiority of the nitro powders over black is even more marked in connection with the rifle than with shotgun ammunition.
Nitro powders have a good deal in common with tamed wild beasts. A wild animal tamed and brought up in captivity may appear docile and gentle for a long time, but its wild nature is liable to show itself at any moment. A smokeless powder, too, may behave well right along, but it is nevertheless more treacherous in its actions than the black powders.	As a rule, the shooting is more accurate, the variations are smaller with the nitro powders than with black, the penetration showing about the same values in both cases.
It will occasionally happen that the regular service charge of a nitro powder produces a bursting strain far higher than the average gun barrel can stand.	

Which is it, please? Wild unreliable animals, or more accurate and even than black powders? When writing the wild animal likeness, the author must have had Walsrode powder in mind, because he has had more experience with it than the others.

Then, when writing the other side of the parallel and probably feeling a sting of conscience for promiscuously including all nitros in his "Hagenbeckial" description, he flops over further in praise of nitro powders for rifles than I would like to do myself.

But I will assist Mr. Tenner to find his equilibrium and at the same time a good excuse for his wild animal fear as applied to such condensed powders as Walsrode.

The London Field on Jan. 13, '94, editorially quotes some powder tests lately made by the "German Institution for Trials of Arms." This test established the fact that although less than 1½drs. by measure, the proper equivalent charge of Walsrode to 3drs. of black powder, gave 362% greater bursting strain than 3drs. of coarse-grain black powder, it, nevertheless, gave 29ft. less in velocity. Compared with a fine grain of black powder, it gave some 20% greater bursting force but 139ft. less initial velocity. Great ballistic merits these! All the five or six different powders were tested up to double loads with the exception of Walsrode. The report refers to this as follows:

"The double charge of Walsrode was not tested because the anticipated pressure (about 2,200 atmospheres or 14 tons) was considered hazardous for the apparatus and its attendants."

This ferocious wild charge consisted of just about 2½ drams by measure, and the force gauge, in which it was not trusted, is many times stronger than a good gun.

Very desirable qualities these from a practical point of view. The following remark of my learned and friendly antagonist rather staggers me: "From his statement I am led to infer that Mr. Von Lengerke believes that Curtis & Harvey's, or any other equally good grade of black powder, will produce a higher bursting strain than the cheaper grades of black powder. If his crusher gauge has shown him such to be the case, I can only advise him to drop it, as it has deceived him for once, etc."

Very much obliged, of course, but I can hardly believe that I have been deceived all these years and hundreds of others besides me. Mr. Tenner has evidently made a

little "break," and not having had much experience with our various kinds of black powders, his theories have misled him, and I think I can see how it came, because I know very thoroughly the difference in manufacture and materials which cause high and low pressures of black powders for shotguns and rifles.

May be that the rather high pressures of the DuPont FFFG powder which he tested also helped to mislead him. This powder I am satisfied was a special kind and not the ordinary FFFG DuPont's Rifle.

I most certainly assert that such powders as Curtis & Harvey's, Hazard's Electric, Orange Lightning, DuPont's Diamond Grain, etc., give a considerably greater bursting strain, load for load and in corresponding size grains, than the cheap grades of black powders, such as "Dead Shot," Orange, DuPont and Hazard's FG, and other grain powders. All tests I have ever made have proved this beyond the shadow of a doubt.

The initial pressures of the first-mentioned high grade powders are, according to the apparent comparative and obtainable figures, from 25 to 50, yes, and in certain instances 100 per cent. greater than the so deservedly popular and cheap grades of American black powders.

This fact is so well known that our leading rifle and ammunition manufacturers directly warn against the use of the above strong black powders in their rifles.

Concluding my letter, I will say that I have nothing but the friendliest regards for Mr. Tenner, and believe that our differences of opinion are honest and conscientious.

Several of the questions at issue should be easily settled to the thorough satisfaction of both of us as soon as Mr. Tenner has finished the necessary preparations and work on his testing grounds, and the grand army of American sportsmen and the trade will take care of the most satisfactory powders for practical use and commerce.

JUSTUS VON LENGERKE.

## LEAD-POISONED DUCKS.

[From a Staff Correspondent.]

CHICAGO, Feb. 1.—The Galveston (Tex.) Daily News has put out a story about lead-poisoned ducks, which I copy in full here:

### CONDEMNED DUCKS.

A citizen who occasionally shoulders his breechloader, draws on his rubber boots and goes forth to slay wild ducks in the lakes and bayous near Galveston, met a News reporter yesterday, and the conversation turning on field sports and duck shooting, the citizen asked:

"Do you know that a most wonderful discovery has recently been made by the owners of the famous Stephenson's Lake hunting ground respecting the condition of certain kinds of ducks found there during the hunting season of each year? Well, there has been."

"Readers of the News will no doubt remember that a short time ago mention was made of the fact that the Health Inspector of this city had condemned as unfit for food a lot of ducks offered for sale by a hunter from the vicinity of the lake above mentioned. Now there was nothing strange about this. From the general appearance of the ducks the inspector most likely saw at a glance that they were unfit for food, and he did his duty by condemning the lot. It was not necessary that he go any further than this, and probably he himself did not know the true condition of the ducks at the time he condemned them. But on just what was the matter with those ducks hangs this strange tale. The ducks condemned may have been killed or they may have died a natural death; but be that as it may, at the time they departed this life they were either victims of lead poisoning or were suffering from its effects."

"It is very easy to imagine that a duck might get a lot of shot fired into him and not be killed dead, and afterward suffer from the effects of lead in his anatomy, and which may eventually cause his death, or may eventually get well and hearty again. Such a duck would certainly be unfit for food if killed while suffering from the effects of his wounds or the effects of lead poisoning. Now the ducks rejected by the inspector had not been killed at all, nor were they dead, but they were going further than this, and probably he himself did not know the true condition of the ducks at the time he condemned them. But on just what was the matter with those ducks hangs this strange tale. The ducks condemned may have been killed or they may have died a natural death; but be that as it may, at the time they departed this life they were either victims of lead poisoning or were suffering from its effects."

"It is very easy to imagine that a duck might get a lot of shot fired into him and not be killed dead, and afterward suffer from the effects of lead in his anatomy, and which may eventually cause his death, or may eventually get well and hearty again. Such a duck would certainly be unfit for food if killed while suffering from the effects of his wounds or the effects of lead poisoning. Now the ducks rejected by the inspector had not been killed at all, nor were they dead, but they were going further than this, and probably he himself did not know the true condition of the ducks at the time he condemned them. But on just what was the matter with those ducks hangs this strange tale. The ducks condemned may have been killed or they may have died a natural death; but be that as it may, at the time they departed this life they were either victims of lead poisoning or were suffering from its effects."

"These hunters, by actual examination, claim there are no shot in the bottom of Stephenson's Lake, and by actual experiment have proven that the water in this lake possesses peculiar chemical properties which will dissolve the largest duck shot in a few weeks and a bar of common lead in three months' time. The hunters agree that the ducks get the shot while feeding at the bottom of lakes as above stated in various parts of the United States, and as soon as one is seriously affected with lead-poisoning, he packs up and puts out for Stephenson's Lake, whose waters he knows will soon restore him to health and strength again, and this may be true. The owners of the lake have hunters engaged who have been at the business of shooting canvasback ducks each season all their lives, and these experienced hunters can tell a sick duck about as far as they can see him, and such are never allowed to be shot at. It is only once in a while that such ducks come to this market, and then they are brought in by some scamp who hopes to sell them but who generally fails, as the dealers are always on the lookout and will have nothing but what is first-class."

### Not Imaginary.

The News article is absurd in some points and the market-shooters who found the wonderful chemical properties in the waters of Stephenson's Lake were, no doubt, having a little fun with the News man, but a Chicago contemporary simply displays its ignorance when it speaks of "the whole thing as the production of the imagination of some one who wished to create a sensation." It is not an imaginary case by any means. Far from being produced for a sensation, it was just the other way with the men who had the facts. It was solely a feeling of courtesy to these men, who entertained me and gave me their confidence, which prevented me from telling all about these lead-poisoned ducks more than a year ago. Since the thing has been sprung by the Galveston paper I can now take the matter up and enable the sporting public to have the facts ungarbled and correct. The sporting public always has to come to FOREST AND STREAM for that sort of information.

### More Than a Year Ago.

There is, and has been for more than a year in the office of FOREST AND STREAM the gizzard of a canvasback duck, showing still in place a number of shot, many of which are ground nearly flat by trituration. The interior lining of the gizzard seemed to be dried up, burned out and diseased throughout. The lower intestines of the bird were also apparently diseased, and were discolored with a greenish hue. The feathers about the vent were stained a greenish color. This gizzard I myself last winter took from a canvasback duck which the noted market-shooter, Billy Griggs, and myself picked up dead in the lake near Bud Stephenson's house. This was 25

miles northeast of Galveston, in what I believe to be the best canvasback country now left in America.

I sent the gizzard in with the account of how the bird was found, and with the reasons for non-publication of the story. At that time the facts were entirely secret so far as known to those who had them. No lead-poisoned ducks had ever been heard of. No one knew that such ducks had ever been sold in the markets. Billy Griggs told me, and I believed him, that his party never picked up and sold these birds, but that he believed that another outfit had gathered up and shipped barrels of them. I know that there have been barrels of canvasback ducks which have come up from Galveston this fall, and which have been sold on South Water street here, in which the birds did not have a shot mark on them. I offer this fact without comment, and when it came to me I said nothing of what I knew about the ducks found dead on Lake Surprise and Stephenson's Lake, in the Galveston country.

Billy Griggs told me of these lead-poisoned ducks, and said he hoped we would find one. We did find the one above mentioned, lying dead at the edge of the rushes, and as he picked it up Billy remarked, looking at the discolored vent, that he would bet all he was worth that we would find shot in the gizzard. We did find the shot, and they can no doubt be seen in place to-day in the FOREST AND STREAM office in New York. Griggs told me they often saw ducks too sick to fly, and sometimes found them just on the point of death. He said that tons of shot had been fired into those waters, and he was of the opinion that the shot lodged in the roots of the celery and so were taken into the system by the birds, or that possibly the birds sought for the shot, taking them to be fine gravel. He said he had found old percussion caps in some gizzards. This was the actual story of the market-hunter to me. If the story about chemical action was really told to the Galveston News man, it was probably told by the Barrow outfit, and with the intention of conveying the belief that only good healthy canvasbacks were shipped from Galveston. Knowing what I do of Griggs and Stephenson, I do not believe that they would ship ducks which had been thus diseased.

### The Discovery Still Older.

The Chicago contemporary—which by the way is the American Field—is so little acquainted with actual news that when it does see a chunk of it it gets scared and shies. I have shown that this news is not very new in knowledge, but must go further and show that it is still older than would seem from the above alone. I thought I was among the very first to get hold of it, but it seems that such was not the case.

This winter I was again in Texas—in fact am just back from the trip—and though I was not at the Galveston country, I heard of the lead-poisoned ducks of Galveston, even so far away as San Antonio. Mr. O. C. Guessaz, one of the best known shooters of Texas, and the president of the State Sportsmen's Association, told me all about the whole subject before I had time to open my mouth (Mr. Guessaz, let me also note in passing, is the most popular man in San Antonio, and a hustler from away back yonder. As he will be the FOREST AND STREAM representative at San Antonio, the many readers of this paper will have a good chance to get acquainted with a good man).

Mr. Guessaz, then, told me that a year ago last winter, or two years ago from now, he and some friends were shooting on their favorite grounds near Galveston, and on Lake Surprise he discovered the fact that the canvasbacks (and bluebills or *dos-gris* also) ate shot and died of it. He communicated his discovery to old Dick Barrows, one of the market-shooters of those waters, and says that Barrows at that time knew nothing of it. Mr. Guessaz estimated that thousands of pounds of shot were fired annually over that body of water. He got so enthusiastic over his find that his friends teased him by cutting open a duck and stuffing it with bits of iron. So far as I know, Mr. Guessaz was the original discoverer of this lead poisoning of ducks, although it would be singular if men observant as Bud Stephenson or Billy Griggs had not noted it in their long shooting on those waters. Billy did not say, if I remember, how long he had known of it. At any rate, the facts are now all out and are here given in print accurately and fundamentally and for the first time. Our esteemed contemporary need no longer shy at the news.

### The Canvasback Preserve.

Last fall Billy Griggs wrote and told me that the entire canvasback water over which they shot last winter, including Stephenson's Lake and Lake Surprise, had been put under patent and fenced by Col. W. L. Moody, of Galveston, and that the Stephenson and Griggs outfit, together with the Barrow outfit, had leased the entire tract from Col. Moody, thus shutting out the public entirely, although he very kindly invited me to join them again this winter. At San Antonio I found that the Moody patent on these famous waters was creating considerable indignation. I was told that Col. Moody's lease was on the basis that he got one-fourth of all the ducks killed, and in addition 20 canvasbacks each week, which latter were all sent to Gov. Hogg to sort of keep him feeling good about leased waters in Texas. It is also a fact that Gov. Hogg not long ago went down there and had a big duck shoot. As near as I can learn, only me an Gov. Hogg are in it. I'm no hog, so I didn't go there this winter. I did, however, discover some other canvasback country open to the world, as well as a whole lot of other things of which I want to write as soon as the editor of FOREST AND STREAM can turn loose about half the paper for it. E. HOGGH.

### Editor Forest and Stream:

During a recent visit to Currituck Sound I heard much of a disease to which wildfowl there are subject and which is locally known as "croup." This sickness seems to be common to ducks, geese and swans, and I saw a number of the birds so afflicted. The local gunners believe it to be a disease of the respiratory organs and on capturing a sick bird rub its throat under the impression that something is choking the fowl. Of course, the sick ones are not under observation during the early stages of the disease, but after they become so weak as to be easily captured; the symptoms are a rattling in the throat, as if there were difficulty in breathing and an occasional dribbling of a few drops of yellowish fluid from the bill, which is held open much of the time. In the geese the voice is changed, being much less resonant than in health. A "croupy" goose captured near the point of Narrows Island, Jan. 14, seemed in good condi-

tion, sleek and quite strong. It swam vigorously, but did not attempt to fly, and when caught struggled with a good deal of force. As it was being put in the boat, its head and neck hanging down, it disgorged two or three tablespoonfuls of a yellowish fluid and died. A swan caught on Brant Island a day or two earlier was brought in alive and put in the goose pen, where it lived for a short time, but was found dead one morning. At times this bird seemed to feel pretty well, dabbling in the water and dressing its plumage, but much of the time it stood or sat with its bill open, breathing hard and with the yellowish fluid dropping from the beak.

A dissection of the two birds mentioned reveals the disease from which the fowl suffers and its cause.

All the organs are in a healthy condition until the gizzard is reached. In the case of the goose the stomach and upper gizzard were filled with fresh grass, on which the processes of digestion had not begun. The posterior part of the gizzard contained perhaps two ounces of fine sand mingled with coarser bright gravel. Distributed through this sand was a small quantity—perhaps one-quarter of an ounce—of particles of lead, evidently shot. Some of these particles were large and round, others were flattened, others still were no larger than No. 10 or No. 12 shot, but were not round, but oval or bean-shaped. The surfaces of all were dull, and on close examination were seen to be finely pitted by attrition against the harder sand and gravel which grinds up the bird's food. The gristly lining of the gizzard of this goose was greenish in color and entirely different in character from the same membrane in a healthy bird. Its thinner margin was soft and decayed or corroded, easily to be pulled to pieces or rubbed off with the finger, and in some places had degenerated into a soft jelly-like mass of yellowish color. The thicker tough lining of the gizzard was also corroded and could be picked away in small pieces, while in a healthy bird it would have stripped away in a single piece from the white membrane upon which it lies. This white membrane showed here and there pinkish or purplish spots indicating inflammation. The right lobe of the liver was discolored, having a dark unhealthy look. The small intestine showed evidence of intense inflammation throughout its length, and the rectum was also inflamed.

The swan was examined a few days later than the goose and several days after its death. Its gizzard contained perhaps twenty or thirty grains of corn, which were softened, but not at all digested or even abraded. The gizzard contained no sand, but did contain a quantity of yellowish jelly-like matter which appeared to be the broken down walls of the gizzard lining. At the posterior part of the gizzard were a dozen particles of lead, two of them evidently No. 4 shot and the others small ground up fragments of shot which had lost shape and size. The tough lining membrane of the gizzard was black in color, had lost all character and could be picked off piece by piece like rotten wood or burned leather. The subjacent white membrane showed the pink and purple spots of inflammation noted in the same membrane of the goose. The small intestine was highly inflamed throughout its whole tract. The liver was absolutely black and very soft.

From these examinations I conclude that the birds dissected died from acute corrosive gastritis due to the lead taken into the gizzard.

Each season great quantities of shot are fired on the waters of this sound, and much of it falls on the feeding grounds of the wildfowl. In feeding, the geese, ducks and swans take into the stomach more or less of this shot either by accident or in the belief that it is sand or gravel. When the shot has passed into the gizzard it is subjected to the same grinding process as the grass, grain or other food, and being softer than the sand it is ground into minute particles, which at once set up an acute inflammation throughout the whole alimentary tract into which they pass. The result is that the bird dies from a poisoning which is partly mechanical and partly corrosive.

GEO. BIRD GRINNELL.

#### Seymour Garey's Lost Bear Trap.

AUBURN, Susquehanna County, Jan. 30.—*Editor Forest and Stream:* While on a shooting trip in Windham township, Wyoming county, last November, it was my privilege to meet with an interesting relic.

About the year 1830 one Henry Champion had a deer lick located about two miles from the river bluff, opposite Black Walnut. This lick was frequented by a large buck which Champion expected, sooner or later, to secure. A neighbor, Seymour Garey, hearing of the big buck that came to Champion's lick, proposed capturing the animal by means of a large bear trap, of which he was the possessor. This coming to the ears of Champion, Garey was warned not to attempt it, and it was hinted that he might lose his trap. Nevertheless Garey set his trap in the lick. It disappeared, and its removal was credited to human agency. Both men grew old and passed away, but the whereabouts of the trap was never revealed. But some of the older men of the locality still remember the circumstance, and it was often discussed among them.

Last August a friend, with whom I have spent many pleasant days afield, was traveling through the locality in the company of a man past middle age, who related to him the circumstances attending the trap's disappearance, with the remark that it was doubtless somewhere in their immediate vicinity, securely hidden for more than sixty years. Two days later some boys, while picking berries, found the trap but a few yards from where they had discussed it. It had been hidden in a large hollow log. The action of the elements and decay of more than half a century had so weakened the shell that it had fallen apart, revealing the old relic.

It is now in the possession of Damon Allen, at whose shop I saw it. It is in a good state of preservation, apparently little affected by the rust of so many years. One of the springs has at some time been broken and roughly welded. It is an interesting reminder of a class of men and customs that are fast passing even from memory.

In November, 1892, Judson Jayne was hunting among the hills one mile south of Jenningsville, and while seated on a log enjoying his lunch noticed iron among the leaves at his feet. When uncovered it proved to be a large bear trap, and the jaws came up with a vicious snap that might have caused serious trouble had it been trodden on unseen. This find was widely talked of, but no owner has been found. To whom it belonged and how it came to be left in the condition in which it was found will doubtless always remain a mystery.

BON AMI.

#### Ontario Fish and Game Commission.

At a meeting of the Ontario Fish and Game Commission, Dr. McCallum of Dixie presiding, and Mayor A. D. Stewart of Hamilton, W. G. Parish of Ottawa, J. H. Willmott of Beaumaris, Muskoka, and H. P. Dwight of Toronto, present, it was recommended that the present law in regard to snipe, quail, woodcock and partridge be continued for three years more. Also that the present law governing the close season for deer be continued, except that there should be no hunting with dogs after Nov. 1. It was decided to ask the Legislature to appoint two new game wardens for Ontario, as the four now in office are inadequate to cover the territory. The muskrat season was recommended to be fixed from Jan. 1 to March 1, but they may only be trapped during April. In regard to the fisheries question the commission decided to urge an issue in the test case now pending between the Dominion and Provincial governments to determine wherein lies the jurisdiction.

### Sea and River Fishing.

#### A THIRTY-POUND TROUT.\*

(Translated from the Swedish for FOREST AND STREAM.)

It was July 12, 1893. The wind, which for a long time had blown from the north, during the course of the day veered around to the westward. It was, therefore, with somewhat stronger expectations than usual that I went out in the afternoon to a bridge over the River Murole in the parish of Ruovesi.

It had already become calm. The sun still shone from a cloudless sky. Over the tops of the birches fluttered

A THIRTY-POUND TROUT.

thousands of ephemera, and thousands more rose up out of the stream and enveloped the angler like a cloud: In short, the weather was as beautiful as a salmon fisherman could desire.

I fastened a small whitefish on a feathered treble hook with gimp snood and made a cast. After only a couple of minutes I felt a strong pull—but nothing more. Disappointed, I reeled in the line and found that the hook was missing. I selected a new hook with double gut lure and resumed fishing. This time I was more fortunate. After a quarter of an hour's battle a trout weighing 14 lbs. was struggling in the landing net. When I undertook to release the hook, I found, to my astonishment, the first hook in its lower jaw. Thus it was the same fish which had taken the hook twice in succession.

I had intended to go home, as it has not happened for years that two large trout have been taken out of the Murole in one evening. But the resplendent natural beauties which surrounded me determined me to remain.

Again I cast out and again fortune favored me. After only ten minutes another trout lay in the grass on the shore. It weighed, however, only 5 lbs. "Ei kakasi kolmatta,"† thought I, and the sequel showed that in our skeptical day we know little about the inherited wisdom of our ancestors.

For the fourth time I baited the hook, and after I had raised an incense to show my gratitude to the divinity of the water, I cast again. Nor did I need to wait long this time before a fish struck so hard that the cigar fell out of my mouth. And then began a struggle of life and death. The reel sung shrill as a locomotive whistle when the engine is at full speed.

It was not worth while to take the line in the fingers. By degrees the run slackened and I begun carefully to reel in the line. But then the fish rushed off again on a longer run if possible. This was repeated several times, and playing the fish was made very difficult on account of several sticks that floated about in an eddy in the middle of the stream. After this suspense had lasted nearly an hour the monster took refuge behind a stone. I held a tight line, ready to give slack instantly if it should again start to run. And I waited and waited, but it showed no sign of leaving its place. Pricking sensations in the arms warned me that they were becoming numb, and gradually I began to lose patience also. More than once I was tempted to give a jerk, but most fortunately I

\* "En Trettio Skalpunds Forell: Fiskeritidskrift för Finland," No. 11, 1893, pages 159-161.

† A Finnish proverb which means: "No second without a third," or "Three things are always good."

controlled myself. Finally, when I had stood like a statue more than an hour, I hit upon a practical idea. I sent out a boat to frighten away the fish. It succeeded, too, and for an instant we saw its back at the surface of the water. But when the boat withdrew the fish went back to its former station. Once more the same means was tried, this time with better result. Now it remained off the bottom of the stream, and after very little resistance it lay in the landing net. It was then so weak that it could hardly move a fin. And my strength was so much exhausted also that I could not possibly have drawn up a small trout. Accompanied by a troop of lumbermen I carried it up to the house. It was hung on a pair of scales and found to weigh 30 lbs.

So it was the largest trout within my recollection which was caught out of this stream. As far as I know, 23 lbs. was the weight of the largest one taken hitherto. It was nearly 3 ft. long and fully 11 in. broad. In color it was dark above and profusely covered with spots. The flesh was fat and well flavored. In sex it was a female.

C. THESLEFF.

#### BLACK BASS IN FINLAND.

DR. OSCAR NORDQVIST has added to the attractions of his native country a well known American game fish, the large-mouthed black bass. Having satisfied himself that the fish is a valuable one, and can be introduced without the risk of its encroaching upon trout and salmon waters, he ordered 400 of each of our species from Herr Max von dem Borne, but was able to secure only the large-mouthed bass.

The fish obtained were six months old and some of them measured from 4 to 4½ in. in length. They were shipped from Berneuchen, Germany, on a Tuesday afternoon or Wednesday morning, left Stettin Wednesday noon by the steamer "Jakobstad" and arrived at Helsingfors, Finland, at 11 o'clock Friday night. At this stage of the journey, fifty-nine of the fish were found dead. From Helsingfors the remainder were carried four hours by rail to Järvelä, and thence more than fifty kilometers by team to the Fishery Experiment Station at Evois, where they arrived at 2 o'clock Sunday morning and were at once deposited in a small lake about 600 meters long, 400 meters wide and about 30 ft. in greatest depth.

The bass were shipped in four wooden vessels each containing 100 fish. Between Berneuchen and Helsingfors they received no special attention, the journey having occupied certainly more than sixty hours. In Helsingfors and on the way to Järvelä, the water was aerated. On the journey from Järvelä to Evois fresh water was supplied from brooks and lakes at several places to replace the water spilled in transportation. The total loss of fish was only seventy-eight—a remarkable success in carrying fish.

The lake at Evois in which the bass were planted has no outlet. The water is perfectly transparent. The bottom consists of stone, gravel and sand. The lake is well stocked with yellow perch and roach, and contains also a few pike and burbot, all of which fish except the roach are identical with fish of the same name in the United States. Our black bass has the same species among its companions in this country.

A letter from Dr. Nordqvist, dated Dec. 31, 1893, informed me that "when put in the lake they disappeared in the darkness. When I visited the place the next morning none were seen, as I believe all were alive. If some of them had died, one would, no doubt, have seen them on the bottom as was the case with some *Coregonus marina* (whitefish), which were planted some days earlier in another lake also belonging to the Experiment Station. Now the lakes are covered by ice, so I cannot get any information about the bass until next summer."

T. H. B.

#### BOSTON FISHERMEN.

THE latest reports from the Florida tarpon fishermen suggest a very dull season thus far. But old hunters for the silver king think that it is not quite late enough for good sport. One or two Boston parties have put off their Florida trips till a week or two later. A letter to Mr. C. Z. Bassett from Mr. C. A. Dean, mentions that the tarpon fishing at Punta Gorda is very dull. Mr. Dean is the acknowledged champion tarpon fisherman, but he had, up to the time of writing, taken but one tarpon. This letter will cause the Boston tarpon fishermen to wait a little longer, especially where their time is limited. Mr. D. H. Blanchard, whom the readers of the FOREST AND STREAM well know, through his efforts to lessen the amount of netting in the Canada and New Brunswick salmon rivers, a couple of winters ago, is going to Florida soon; probably as much for health and recreation as for tarpon fishing. But his fishing tackle will all go with him; of this be very sure. If he does not catch a tarpon, why, there is a plenty of other fishing. The Maine papers say that Capt. Fred C. Barker, of Rangeley Lake steamboat fame, is on his way to Boston and New York, and that he will prolong his trip to Florida, if his health permits.

Boston fishermen will be pained to learn that Mr. Geo. B. Appleton, of Appleton & Bassett, the well known Washington st. fishing tackle dealers, fell on the ice the other day and broke the small bone of one of his legs. He is now flat on his back, and will have to stay there for some days. Mr. Bassett suggests that the accident, if it must have happened, "could not have happened in a better time;" it being in the dull season of the tackle trade.

Recent letters from Andover, Me., say that Mr. J. A. French of that town, who has run the hotel camps at the Upper Dam, Richardson Lake, for several years, is not to run that well known abiding place for fishermen this season. It is mentioned that Mr. John Chadwick, who has been the Union Waterpower Co.'s agent there for a good many years, is to have full sway and take charge of the hotel arrangements. The newspapers have reports of another scheme to connect the Rangeley Lakes with the outside world by rail. It is proposed to build a railroad in from Bethel or somewhere above, to connect the Grand Trunk with Umbagog Lake by all rail. The Grand Trunk is believed to be interested in this plan. Still there is no money yet raised, and everybody knows that the Grand Trunk is not noted for building branch roads in Maine, having its great interests in Canada and the West. By the building of the Portland & Rumford Falls extension from Lewiston to Poland, Poland Springs and to Mechanic Falls, which extension is now completed, sportsmen who

have formerly made the Andover route to the Rangeleys by way of the Grand Trunk to Bryant's Pond, will be able to go by the Maine Central to Lewiston and thence to Rumford. At that point they will be four miles nearer to Andover than at Bryant's Pond, and the route over a much better road. The Government has already ordered the Andover and Rumford mails to go by the Rumford Falls route.

SPECIAL.

#### A Supervisor's Law that will not Hold.

Attorney-General Hancock of New York has given the following opinion as to the legality of the action of the board of supervisors of Livingston county, imposing a license fee on non-residents who desire to fish in the waters of the county: "Dear Sir: I am in receipt of your communication of recent date stating that the board of supervisors of Livingston county have passed an act in relation to game and fish, which appears to discriminate against non-residents of that county, and asking for my opinion as to the legality of the act. The act in question provides in substance that: 'It shall not be lawful for any non-resident of the county of Livingston to shoot game or to fish in any town in said county without first having obtained from a justice of the peace of that county a license therefor.' In reply I beg leave to call your attention to section one of chapter 668 of laws of 1892, known as the general municipal law, which declares a county to be a municipal corporation. Section 37 of the same act declares against restrictions and regulations which do not apply to all citizens alike, and is as follows: 'Any restriction or regulation imposed by the governing board of a municipal corporation within this state, carrying on or desiring to carry on any lawful business or calling, within the limits thereof, which shall not be necessary for the proper regulation of such trade, business or calling, and shall not apply to citizens of all parts of the state alike, except ordinances or regulations in reference to traveling circuses, shows and exhibitions, shall be void.' The courts might fairly hold the provisions of this section are broad enough to prohibit the discrimination contained in the resolution referred to in your communication. Boards of supervisors are authorized under the general game laws to pass such laws and ordinances as shall afford additional protection to birds, fish and wild animals, but the object of the statute is undoubtedly to permit supervisors to pass rules of a general nature, and not in favor of or against citizens of any particular locality. It is my opinion that the courts will hold the resolution referred to invalid for the reasons above stated."

## Fishculture and Fish Protection.

### THE COAST FISHERY CONFERENCE.

Proceedings of Conference Held to Consider  
the Subject of the Exhaustion of  
Coast Line Food Fishes.

OFFICIAL REPORT BY SECRETARY E. P. DOYLE.

(Continued from Page 99.)

J. M. K. SOUTHWICK, of Rhode Island, said: I will say before I have read my paper that I have prepared a more elaborate paper that was sent to the Chicago convention to be read there, but I regret to say it may be too lengthy to read here, although the subject discussed there seems to have been transferred to this locality.

#### Ocean Fisheries and Legislation.

By J. M. K. Southwick, Commissioner of Fisheries, Newport, R. I.

In discussing this question of the fisheries it becomes of the greatest importance to all that we learn all that is known or can be learned about it; and then I fear there will be much more that is unknown than all that we do know; and that with the unknown will still remain the vital points necessary in determining the important question that has called together this meeting. For ourselves, we claim no superior knowledge or experience and feel that our very limited knowledge should make us keep silent, could we do so consistently with our duty as Fish Commissioners.

We have carefully read the circular calling together this meeting and were sorry to see that it took for granted, as fact, that there was a "growing scarcity of edible fishes along our coast line from Maine to Virginia." Then it suggests a remedy—"The enactment of simple and uniform legislation," which we understand to mean restriction of the industrial fishing. Then it says, "With this object in view, and with a desire for a full, impartial and thorough examination of the whole subject"—would it not have been well to have the investigation come first? Then if it is found that a diminution has taken place as alleged, it would be very proper to look for the cause, and when this is found it strikes us it would be time to apply the remedy.

But here the crime is assumed, the guilt fixed, the party hung. What is left for "a full, impartial and thorough examination" we are at a loss to know.

Since writing the above our attention has been called to an article in the New York *Evening Post*, published with the call for this meeting. This article freely presents the case as we premised from reading the call, but it favors us with the specific statement that "striped bass and weakfish, which formerly sold for 5c. and 6c. a pound, now command 10c. and 12c." This is given to indicate the growing scarcity of these fish.

It also says that "Barnegat Bay furnishes a conspicuous example of the condition all along the coast." "This season the bay was barren of food fish." If Barnegat Bay was barren of food fish, and was an "example of the condition all along the coast," where were the market supplies drawn from?

Rhode Island is somewhere along the coast, and the weak fish were never so abundant there as the past season. "For several years, while noticing this decrease, the fishermen and pisciculturists have attributed it to some unusual cause." Their experience was that of very many others. But "active measures were taken to learn the real cause, which resulted in the experts arriving at the conclusion," etc. Now if these experts learned the real cause, why need we look further? Why did they not favor the world with their discovery? Vast sums of money and much time has been expended by the most profound thinkers of the world, and yet none of them has given us this information.

It remains for these experts of Barnegat to give us the real cause of diminution of fish in a locality. If any present can speak for them we will stop here. If not, we will pass on to note one other discovery the article reveals to us. "It has been discovered this year for the first time that menhaden and mackerel, like the striped bass, spawn in shallow water." It is of the greatest interest to learn such facts, and after so much investigation as has been had, it is of especial interest to the world to learn the fact here given.

Being a Fish Commissioner we feel much mortified not to have known this before. It is to be hoped that the discoverer will be duly honored and his name given to the world as a benefactor of the race.

If the declarations made can be sustained, then have we made some advance in investigation of a subject that has hitherto baffled the minds of all students of fishes, and it is to be hoped that the data will be given that forced these conclusions. It is felt that the fish question has not been fairly treated, bold assertions have been received as though they were demonstrated facts; and laws based upon them have been advocated as experiments which were no less than trifling with the fishing industry. In relation to the decrease of fishes in the waters of our coast, we can answer for our own State, that it is not true of scup, weakfish, butterfish, tautog and the bullseye mackerel. The latter, after being entirely absent from the coast for many years, are again with us in large numbers. As to the general issue, the aggregate number of edible fish, our statistics show a large increase, notwithstanding the declaration made in the call.

Now if it is true that edible fish come in reduced numbers to some localities, it does not follow that they do to all. Just why they favor Rhode Island we cannot tell; the State is not so small that a few ill waters, and we think that our neighboring States, Massachusetts and Connecticut, will agree with us as to the great number of weakfish the last year. On the other hand, the bluefish were scarce in our waters, except at Block Island, and we are told that the New York market had its usual abundant supply.

The question before you is of too important a character to be lightly dealt with. From any standpoint that may be taken much is involved. It deserves and should have a very thorough investigation before any action is taken. It may be said that it has had a good deal of attention for the last twenty-five years, and so it has.

But if we have not learned in that time that the increase and diminution of ocean fishes are from natural causes and independent of man's acts, then has all observation and investigation in this and other countries been in vain, and the time and money expended in that way wasted; and we are still in ignorance, but we welcome any light that the experts of Barnegat may give us. It is to be hoped that their final decision or conclusion will not place them in the school of conclusionists, so common along our coast. Fish will no more bite when they are around than when a school of porpoises are present. They have the same complaint that porpoises have.

The disease is chronic and has been from the earliest time; it is also contagious, but generally confined to the upper classes. Even commissioners are subject to it. I am not sure that they do not have it in its worst form.

The lamented Prof. Baird appears to have been cured by the scup appearing in Rhode Island in immense numbers when it was concluded that they were being exterminated.

There is but one cure for this complaint and but few are willing to take the remedy. We have a prescription that never fails, where capacity to fill conditions is found:

#### REMEDY FOR SNAP CONCLUSIONS.

- R 3 parts history of past observations.
- 2 parts personal observation.
- 1 part logical reasoning.

Take one hour each day for twenty years.

JUST RIGHT, M.D.

There are cases where it gets into the blood and controls the will power. Such cases are fatal, and although the subject be quite himself, he never attains to reason. This complaint is all along the coast; in fact, most men have it who have not the time nor disposition to look into it in its earliest symptoms. To such it is catching, and like leprosy, lasting. We knew a man who had it bad. He concluded that dumpish looking fish without legs or fins could not move; so he dumped his day's catch of scallops in a heap in the water and found his conclusions scattered when he would have gathered them to take home.

The confusion that seems so manifest as to our sea and anadromous fishes is surprising, and it is with deep interest that we await the details of the new discovery, that menhaden and mackerel are to be classed with the anadromous fishes.

The salmon, the shad, the bass and the alewife have long been classed as fresh-water spawners; but never the menhaden or the weakfish. We confess to much surprise at this discovery, and since this is declared we shall not be surprised at any assertion. But we believe it is the desire of those whose names are appended to the call for this meeting, to have a full, impartial and thorough examination of the whole subject. And in this we are in hearty accord with them.

How to accomplish this then should be the first great and impartial step for this meeting to determine. Upon the receipt of this call worded as it is, we hesitated as to what our duty demanded of us; knowing the general consensus of opinion with Fish Commissioners, we felt sure of being overwhelmed by eloquence and numbers if we stood up for the right, as we saw it.

But then it occurred to us that after all we may be wrong, since these very able gentlemen may have much to impart concerning fish that we never knew. And as they propose a full, impartial and thorough examination, perhaps they will consent to it before executing our constituents of the industrial fisheries.

If, upon such examination as proposed, it is found that they are right, we should certainly join hands with them cheerfully and "save the fishes."

MR. J. A. GITHENS, of New Jersey—On behalf of the pound fishermen of New Jersey, I wish to state that it is not the purpose to destroy fish. They are perfectly willing to act with any gentleman or any organization to keep up a good and substantial supply of fish. They are perfectly willing to do that. There have been no statements made here that have been other than the truth.

JUDGE HENRY P. MCGOWN, of New York, a member of the Cuttyhunk Club, made the following remarks:

MR. CHAIRMAN AND GENTLEMEN OF THE CONVENTION: I have no interest in the commercial fisheries; in the menhaden fisheries or any other interest, except that which every citizen has, or should have, in having a good supply of food fish. I am a rod fisherman and am interested in this matter, for the purpose of having the supply of our game fish kept up. I cannot agree with all the remarks that have been made by the Messrs. Church to-day, in many material points. I will give you my experience, and then let you draw your own conclusions. I have spent a great deal of time during the past fifty years fishing for striped bass, bluefish and weakfish. I have always been a sportsman, fond of fishing with the rod, and I have spent probably as much time as any one at it, if not more, except perhaps the gentleman who told us that he was seventy-six years old. I am not quite as old as that yet. Fish are in many respects like human beings. If we go to a place to dine and do not find what we want to eat, we are pretty sure to go somewhere else. So it is with fish; if they cannot get the food they want at one place they will go elsewhere. I can recollect the time, fifty years ago, that the locality where I reside, Harlem, when the Harlem River, East River, Big Hell Gate, Little Hell Gate and the Harlem Kills were the finest fishing grounds for striped bass, in all this part of the United States. Before the old McComb's Dam and bridge in the Harlem River were torn down, it was not an unusual sight to see daily twenty-five to thirty rod-fishermen fishing from the bridge for bass. Now why was it that there was good fishing there then? Simply because there was plenty of food such as bass feed upon, viz.: squid, shrimp and crab, in all those waters. The squid were then plenty, and at that time constituted the

principal bait upon which the large bass fed. These baits, however, have for many years almost entirely disappeared, or been destroyed, by the refuse thrown into the river, by the gas companies and by the sludge acids from the oil works.

Fish are like human beings, they get tired of one kind of bait; they have different food in different localities, while the squid were at one time the most killing bait for large bass, in the localities above named; in Buzzards Bay, where squid are abundant, the bass will not take them, either by still-baiting or by trolling, and although I have tried often, I have never succeeded in taking a bass with squid there, and have never seen or heard of a squid being taken from the stomach of the bass.

I have fished in Buzzards Bay, and at West Island, near Newport, and at Cuttyhunk, since 1860. On one occasion I took with the rod at West Island, from 12 o'clock to 5 o'clock in the afternoon, forty-nine bass, and the next morning, from 5 to 12 o'clock, fifty-one bass, in all 100 bass taken with the rod; every one of them taken with menhaden bait, the bass weighing from 7 to 32 lbs. They were taken because they liked, and were feeding upon, the menhaden. We used the refuse part of the menhaden, the entrails, etc., for chumming, and every rod-fisherman of any experience knows that bass, weakfish and bluefish will be attracted by the oily slick on the water, caused by the oil of the menhaden, and that the fish will follow the slick up to the place where the refuse of the menhaden is thrown in. At Cuttyhunk we have a record of every striped bass that has been taken with the rod since 1865; the day it was caught, by whom caught and its weight. Our record ran up as high as 7,000 lbs. in one year, some ten years ago; it ran as low as 240 lbs. in a recent year.

We caught all our fish there, until within recent years (when we commenced using lobster for bait with menhaden) with menhaden bait, and you could go out on any of the stands (about nineteen in number) when the water was favorable, and every member would bring in fish; every one of them taken with the menhaden bait. I have seen, not a quarter of a mile from the shore of our island, in Buzzards Bay, and in Vineyard Sound, schools of menhaden of the size Mr. Church has mentioned, all around the shores. I have seen bluefish and the bass rise under these schools of menhaden and feeding upon them, while thousands of gulls were hovering over the schools and diving down to pick up the pieces left. With the exception of this year, for the past three years, I have not seen a large school of menhaden in Buzzards Bay or in the Vineyard Sound. This year I saw several schools, and the menhaden were quite plentiful, so that we had no trouble in getting the bait, but there was a scarcity of menhaden bait for several years, and we have had to send to New London and Newport for menhaden, which were brought in from outside waters by the menhaden steamers, because they could not be obtained in our neighborhood, where the bass and bluefish feed on menhaden, on lobster, rock crabs and eels.

I leave it to you to form your own conclusions from the facts which I have mentioned. As long as there were plenty of menhaden, there were plenty of bass. The bass left the shores when the menhaden became scarce. As regards the weakfish, I agree with Mr. Church in one respect, about the weakfish being so plentiful some years ago; as a gentleman told me, that at the Pasque Island Club, in Robinson's Hold, the weakfish were at one time so numerous that men waded out with pitchforks and gaff-hooks, and brought them ashore.

Many years ago we took a large number of large weakfish while fishing for bass from the stands with menhaden bait. I do not think we have taken one this year, as they appear now to be feeding upon small live bait, menhaden, fry, etc. Several years ago, we took a large red snapper, a Southern fish, with menhaden bait from one of our stands.

This year the bass fishing has improved, and some fine fish have been taken. The bluefish, however, were very scarce. Late in the fall, after our club house was closed, a large catch of bluefish, weighing from 7 to 14 lbs., was reported to have been taken with the trolling line, in the tide rips.

Every fisherman of experience knows that the menhaden start from the South, in the spring, full of spawn, and follow the coast to the eastward into the sounds and bays; they are followed by the striped bass, weak and bluefish; they come up and pass outside of Long Island; some schools coming into the lower bay, and into Prince's Bay, and in years gone by, large schools of menhaden came up through the Narrows, passing through the East River, and into Long Island Sound, on their way East; and I have many times seen schools of menhaden and mackerel, in the Harlem River; something that has not occurred however, for the past thirty years.

Years ago there were no menhaden steamers; the menhaden fisheries were carried on by sailing vessels, and there were very few of them then. There was not so much harm done at that time, because these sailing vessels could not follow up the menhaden schools so closely. The trouble is this: these steam menhaden vessels, which follow up the coast of New Jersey and Long Island have a lookout, as Mr. Church has stated, and when they see a school of menhaden they will steam directly for the school and inclose and take them in their immense purse nets. If they don't catch the entire school they will break it up, and there are a very few left to enter the sounds, bays, etc. They don't allow these schools to come in around Montauk Point, as the schools are either entirely taken and broken up and scattered before they can get into the sounds, bays, etc., and within the last two or three years they have followed the schools of menhaden which happened to get around Montauk Point into the Block Island Sound and Long Island Sound down the Sound as far west as Throggs Point, the entrance to the East River. I do not wish to destroy the menhaden interests, but I would suggest this: Have some limit fixed, some distance from the shore, inside of which these purse nets shall not be used, and then a chance will be given to these fish to come into our bays and estuaries to spawn.

As to pounds and traps, I have no particular objection to them, under certain restrictions and regulations. As now used, they do not actually reduce or cheapen the price of the food fish taken therein.

You may think this a strange remark to make, but I will explain more fully what I mean. I have seen the pounds so full that the fish were actually packed and scarcely able to move about. I have seen the fish in large numbers floating on the waters and washed upon the shores, killed and smothered in those pounds, bailed out and thrown over.

This summer a man who waits on me had a lot of fish to ship to the markets in New York. I asked him how many he was going to ship. He replied that he had received instructions from New York that he could only ship a limited number of barrels of fish, and that all the other fishermen on the island had received word that we must not ship so many fish, as it would put the price down, and that they wanted to keep the price up. That is where the pound-fishermen interfere in preventing cheap fish. I have no objection to traps as interfering with bass fishing, except that the long leaders to the pounds frighten the bass, a timid fish, from the shores. I think every trap-fisherman will tell you that the striped bass are too smart to be caught in the pounds; and in my experience of over thirty years at Cuttyhunk, I cannot recollect over four instances where striped bass were reported as caught in the pounds. I asked a pound-fisherman what was the reason of this, and he stated that the striped bass seldom got into the pounds, being frightened at the leaders, and that they were the only fish that were smart enough to get out when they happened to get in. If the pound-fishermen would so arrange that the surplus of fish would not be destroyed, and not retain any more food fish than necessary to supply the market, they would be, in my opinion, a great deal better

off peculiarly, and then we would have more food fish left in the waters.

Mr. C. F. CHAMBERLAYNE, of Massachusetts, spoke as follows:

There are certain things, gentlemen, that we cannot expect here. One is uniformity of opinion. We cannot expect that the pound-fishermen will be in favor of restriction; that the menhaden oil and guano men will desire to have a limitation placed upon their business. Neither shall we expect them to agree to the proposals of the friends of fish preservation for the regulation of dangerous devices like traps and pounds. Such differences of opinion are absolutely essential and will never probably be removed until human nature shall radically change and the selfish interests of individuals will yield to their public idea of justice and equal rights. If we have such uniformity in mind, we are destined to disappointment.

A meeting of this kind, however, may well be utilized for the collection of facts, and especially for the collection of observations extended over a certain area of sea bottom for a considerable length of time and under definite and observed conditions. Such an experiment has been made in the waters of Buzzards Bay, and in the few moments to which our regulations very properly limit us I would like to state the experiment which has taken place and certain of its results in the hope it may possibly throw some light upon the value and operation of these restrictions of netting and what general benefits flow from restriction when enforced in certain specified ways and under certain specified conditions.

The conditions are these: Buzzards Bay is about twenty miles in length, running from northeast to southwest. It is about six miles wide in its widest part. It has no place shows a greater depth than twelve fathoms of water and shoals rapidly from the center to the headwaters and to either shore, being over the average area of sea bottom, about six fathoms in depth. It is entirely land-locked and free from strong currents.

The temperature of this body of water, under the influence of the Gulf Stream, is between 6° and 8° warmer at the head than at the foot of the bay, and the headwaters are from 8° to 10° warmer than the adjoining waters of Vineyard Sound. In connection with its eel grass bottom and its inflowing streams and creeks, rich in fish food, it is admirably adapted for the purposes of a spawning ground, and is as a matter of fact filled with myriads of young fry in the spawning season. There are twenty-six varieties of spawning fish and fry, sixteen of which are edible, found in the bay and presented, preserved in alcohol, to our legislative hearings. Among the young fry are bluefish, weakfish, menhaden, scup, striped bass, etc.

This evidence, introduced at our legislative hearings by our fishermen, is confirmed by the observations of the Woods Holl agent of the United States Fish Commissioner, who has established the fact that the young fry, including menhaden and the other varieties mentioned, have been taken by him at all parts of the bay for a series of years, by the aid of bolting cloth nets, so young as not to have shed or absorbed the little sacks or bags attending their earliest infancy.

In 1856, certain of our public-spirited citizens determined to try the experiment of protecting these waters from the use of nets and seines. They got an act, forbidding the use of these devices in certain towns. In 1870, this legislation was made more protective by drawing an absolute line across the headwaters of the Bay so as to include Bourne, Wareham, Marion and part of Falmouth. Within this protected zone, no moeable devices, gill nets, seines or fixed devices like pounds, traps, etc., were permitted at any time of the year.

In 1874 that line was extended further down the bay, so as to include part of Mattapoisett, and in 1886 the entire bay, 20 miles by 6, was freed from the use of nets and other movable machines. Pounds were allowed below the line established by the law of 1874, under licenses issued by the selectmen of towns. But the towns themselves voted to stop it at their "annual election" or "town meetings," as they are called. These meetings occur in March or April of each year at a time when no summer visitors appear. Every one is present of the citizens. It is absolute democracy. Yet the result of these town meetings has been such as to prevent the setting of pounds by the simple device of electing town officers pledged against it. Such for three years has been the annual course of Falmouth, Fairhaven and Mattapoisett by large and always increasing majorities of the native populations. This continued until 1893, after which a law was passed at the request of these towns themselves absolutely removing any pound, weir, trap, etc., from the waters of Buzzards Bay. The experiment of 1856 was concluded in 1893. Certain facts obtrude from this hasty sketch. In the first place, it is not, in any candor, possible to claim that these fisheries are preserved for the benefit of a leisurely class or as a matter of sport. In the next place, I think it significant that every extension of this legislative protection of the fisheries of Buzzards Bay has been made at the request of interested communities, who demanded it, to whom it had not then as yet been extended, and that no community which has ever enjoyed the benefit of that restriction has ever petitioned for its removal. In other words, the results of intelligent preservation are popular. Instead of sport we are preserving these fish for food and livelihood.

The experiment, gentlemen, of Fairhaven, one of these towns, is so thoroughly characteristic and representative as to be worth repeating. In 1889 the operation of the indiscriminate use of nets and pounds in the waters of Fairhaven had been such that the goose of the golden eggs was dead. There were no more fish for any one to catch, and the users themselves agreed that the use of traps and pounds should be forbidden for a period of three years. Such were the results of that experiment that the Fairhaven Overseers of the Poor have testified at legislative hearings that in their official capacity they were able to realize in the decreased demand for town support on the part of poor citizens that nothing had ever so largely contributed to the supply of food in that town, and especially to the destitute, as the abundance and the consequent cheapness of food caused by their preservation. A man can never get cheaper food than that he can catch for himself. Fish preservation is popular, not only because it means food, but also because it means livelihood. Our towns have grown immensely in wealth, population and comfort. One reason is that they are now able to give cheap food to thousands of people of moderate means from our large cities, who find they can live more cheaply at the seashore in a modest cottage, enjoying the health, air, bathing, scenery and cheap fish food of our shores, than in the stifling miasma of the city.
